9. The current expenses such as gardener's and assistant's salaries should be quarterly paid by the share-holders in proportion to the share *pro rata*, until the sale of such articles as the share-holders have more than they need, will pay the expenses.

10. No officer of said society shall receive a salary or preference when the articles are divided among the share-holders.

11. The share-holders shall be entitled according to the number of shares they hold, to an equal division of all that is produced and multiplied on the grounds and ready for distribution at its proper season, &c., &c.

I will abstain from a further detail of all sections and by-laws, but it will be evident to any mind that such an institution in whatever locality, would have a decided advantage over our other agricultural societies, as it will experiment and test fully everything that is best adapted to our soil and climate, and will in a few years collect from all parts of the world the choicest fruits and grape-vines, and adding those received from the Patent Office, the share-holders will soon appear in our markets with such a variety of noble fruits, table grapes, generous wines, &c., as is not surpassed by any place in the Union, a result not only gratifying to the share-holders, but also beneficial to their purses. Such results cannot be accomplished by individual enterprise, however wealthy it may be, as it has not those advantages a society has. For instance, I as an individual, would request Consuls of the United States, who never heard of me, to send me species of fruits, &c. They would hardly answer my request. But such an association could get orders from the State Department, &c.

With the above propositions and remarks I leave this matter to the reflection of every farmer, horticulturist, professional man, merchant and mechanic, as the last three mentioned are mostly in the country, possessors of gardens around their homesteads and like good fruits; and respectfully suggest that we hold a meeting in which we may exchange ideas and plans, and I am satisfied that the wisdom of many will work out a plan that will be a credit and benefit to our counties. Let us then meet for this purpose May the 14th, at Tony Oakes' Hall, Sonoma, at 12 o'clock, M. I hope that this call and proposition will be met by the friends of horticulture with the spirit it is meant to promote the interest of all, and be partial to none.

A. HARASETHY.

BEENA VISTA, April 16, 1859.

## Valuable Variety of Wheat.

A handsome specimen of Wheat, which headed out on the 20th day of April, was brought to our office this week, by J. R. McDavids, Esq., from Mission San José. Mr. McDavids informs us he brought this variety of wheat to California in 1857, from Illinois. He has grown it the past two years, and has found it to be superior wheat for flour. It is a heavy, red wheat, and has never been known to smut or rust. It has always been found to produce heavily on the Mississippi bottoms, and is known as the *May Wheat*. This wheat is earlier by two to three weeks than Chile wheat.

The sample of this wheat brought us by Mr. McDavids measures three feet high, and is beginning to head. The stalk is not heavy, but it throws from the stool many stalks, thus producing heavy crops. It stools better than any other variety known by this grower. The sample brought us was of volunteer growth, from a small lot of three to four acres. Another crop of sown wheat of seventy acres gives great promise. Last year it yielded about twenty-five bushels to the acre. This land was only plowed four or five inches. Another piece of ground that was subsoiled gives evidence of more than twenty-five per cent better crop.

We wish the neighbors of Mr. McDavids would examine these growing crops, and also look to this variety as one which will greatly benefit all, and our State largely, having thus far proved free from smut or rust. Mr. McDavids thinks if warm weather should follow the present weather, this wheat will be fit to harvest by the first of June. This is indeed a valuable acquisition to our grain. Mr. McDavids will preserve his crop for seed wheat, which will be for sale after harvest.

IMPROVEMENTS IN AND AROUND OAKLAND.—It always affords us great pleasure to speak of the improvements we notice in the places we visit. When last at Oakland, we rode to the outskirts, to view some new residences and newly improved grounds, which gave us convincing proof of the success which would attend a high state of cultivation around every homestead at Oakland. There are too many places that people call home, that look outside and inside, like some forlorn hope, or like some "banquet hall deserted." Not a tree, shrub, vine, or flower in sight of that home. Go inside, and there too a great want of those comforts that could be had at trifling cost of labor or money, and the procuring these would never impoverish.

But we intended to speak of some places we saw that *did please us*, for we noticed improvements. The splendid residence of Mr. Heath, of Green, Heath & Allen; the residence of Col. Coffey, and many others. We visited the well-arranged ground of W. H. Boyce, Esq. Mr. B. has added to his former handsome ground some twenty acres, whereon he intends erecting a new mansion this autumn. On this new ground we saw 800 as fine young fruit trees as we know of in this country. The grounds have been well prepared, laid out in fine taste, and are well cared for. The varieties of the fruit are the very best, and embrace pear, plum, cherry (apple, and pear trees, dwarf species, have been imported from France), peach, together with small fruits in abundance, making a complete garden. The original garden of Mr. Boyce is in fine order, and full of fragrant flowers in early perfection, as well as a fine lot of trees giving great promise of fruit. We saw large size pears and peaches, the fruit being large already. A handful of roses and an excellent dinner made us in good order for a further exploration. We were, however, highly gratified to hear Mr. B. expatiate upon the happiness experienced in a country life, and the home and making it what it should be everywhere beautiful and happy. Such devotion will make this place the finest in the State.

9. The current expenses such as gardener's and assistant's salaries should be quarterly paid by the share-holders in proportion to the share *pro rata*, until the sale of such articles as the share-holders have more than they need, will pay the expenses.

10. No officer of said society shall receive a salary or preference when the articles are divided among the share-holders.

11. The share-holders shall be entitled according to the number of shares they hold, to an equal division of all that is produced and multiplied on the grounds and ready for distribution at its proper season, &c., &c.

A. HARASETHY.

BEENA VISTA, April 16

## DOMESTIC SUMMARY.

Mr. Cooper, who resides on Sacramento street, Placerville, has some fine peach trees now in bloom, which grew from the seed since last spring. Quick work!

In the well known divorce case in this city, Baker vs. Baker, the Supreme Court has reversed the decision of the Court in this city, and instructed it to enter a decree annulling the marriage.

We learn from an intimation in the usual list of marriages in the daily papers, that Mr. Mooney, the "Irish historian," editor of the *Folsom paper*, etc., is married at last to "the object of his choice." So, "All's well that ends well." "Perseverance surmounteth difficulties."

A FIRE occurred at Santa Rosa, Sonoma county, on the night of the 17th, in the livery stable of J. M. Williamson & Co., which was soon reduced to ashes, together with one horse, sixteen tons of hay, and twenty-five sacks of barley. Loss estimated at about \$2500.

We are informed that Lanch Plana, Amador county, is infested with a gang of worthless Chinamen, whose sole occupation is robbing sluice-boxes. The gang consists, probably, of some six or eight, according to the testimony of the more respectable Chinese population.

The Sacramento River has been rising slowly for several days past, says the Union of the 21st inst., and attained a height of between fifteen and sixteen feet above low water mark. Parties were noticed yesterday, in the immediate neighborhood of Horton's Bulkhead, fishing for bricks, which became submerged during the night.

On Monday last, an election for city officers of Santa Rosa came off, which resulted in the choice of William Ordway, T. F. Baylis, J. N. McGune, J. Q. Sherry, and William L. Anderson, as Trustees; S. Abell, Recorder; Q. A. Cross, Marshal; L. Lamberton, Treasurer; P. Post, Assessor; J. F. Siddons, Street Commissioner.

Bees in Stockton are said to be getting unruly, and taking to the woods, instead of remaining in the nice hives prepared for them when about to swarm. A swarm from an old hive belonging to Mr. Wolf, took possession of a peach tree, from which he contrived to get them into a hive; but they staid only three or four days, when they suddenly left, and were traced in the direction of the Calaveras. A swarm from another hive left and was found in a tree about half a mile distant.

The San Mateo County Gazette is the name of the neat-looking paper recently started in that flourishing county, by Mr. William Goldrey, an enterprising type. From the second number we learn, that there are now growing upon the San Mateo Ranch, which is one of the smallest grants in the county, thirteen hundred and fifty acres of grain, nearly all of which is wheat, and bids fair for an abundant harvest. One field, of four hundred and fifty acres, put in by Mr. Dabbers, of the San Mateo Farm, is noticed as very fine.

By an advertisement in the Amador Ledger we see that Messrs. Swan & Alexander, of Placerville, says the Observer, have taken the requisite steps for pre-empting the land on which is situated the Buckeye Valley Coal Mine. The outer rim of the coal bed has been thoroughly prospected, and has been ascertained to be sixteen feet in thickness. The stratum has a dip varying several degrees from the horizontal line, and the bed will doubtless increase in thickness and quality further from the surface. A very good article of coal has already been taken out, and there is good reason to believe the supply will prove inexhaustible.

The Supervisors of Sacramento, by a unanimous vote, rejected the proposition of the State Fair Commissioners to locate the buildings for the State Agricultural Fair on the corner of I and Fifth streets, and made an appointment to consult with the Commissioners as to the selection of a better location. At the consultation, the matter was fully discussed, but nothing definite arrived at, although the general expression was for a central location; and the Commissioners finally agreed to make a new selection, and report it to the Board on the 23d. Good for the Supervisors! Try again, gentlemen of the Committee. Look to the Railroad route this time.

The State Treasurer, Mr. Findlay, furnishes the Daily Bee with the following figures, showing the condition of the Treasury, and of the respective funds. It appears from this, that the sum of \$391,315 12 was disbursed during the session of the Legislature just closed: Cash on hand Dec. 31, 1855, \$371,768 82; received, in January, 1856, \$306,938, in February, \$316 21, in March, \$2,450 08, in April, \$96,429 50; total, \$981,402 61. Disbursed, in January, \$101,340 87, in February, \$6,104 85, in March, \$108 85, in April, \$4,462 55; total disbursed, \$391,315 12. Balance, \$590,087 49. This sum is apportioned among the following funds: General \$367,769 33, School \$19,149 84, Hospital \$1,479 91, Military \$2,402 36, Library \$2,108 58, Interest and Sinking \$14,636 65, Swamp Land \$6,658 66, State School Land \$2,443 41, Registration \$202 43, Estates \$9 09, H. Smith Jr. \$3,119 29; total, \$590,087 49, which was on hand at the close of business on the 19th. Received, April 20, from the Treasurer of Placer county, \$11,559 18, making a total of \$601,646 67, which was in the State Treasury at noon of the 20th.

On Monday evening, 18th April, about sundown, the inhabitants of Monte Cristo were startled by a rumbling noise, like that of an earthquake. The earth had parted, and a large mass, about twenty-five feet in width, and a great bulk, was precipitated down the mountain-side, a distance of about four hundred feet, carrying away three dwelling houses. It was soon ascertained that four persons were missing, Mrs. Howe and two of her children, and also a little son of Mrs. B. Wright. The dead bodies of Mrs. W's boy and Mrs. B's infant were recovered the same evening. The same night, about 9 o'clock, there came another avalanche, which compelled them to fly for the night. Early next morning, the search was renewed, and Mrs. Howe's body was found with a large beam resting on her neck. The body of Mr. H's little girl had not been found. Another child of Mrs. H, a girl of seven years, was carried on the top of the avalanche and was saved, though considerably bruised and scratched. Mr. Howe had been but a moment or two out of the house, when his wife and children were, when the crash came. Three miners had just left their cabin when it was crushed to atoms. Parties had been warned of the danger. During Monday night earth and rock were tumbling down, and another slide is looked for. The flat underneath is entirely deserted. Working the tunnels has been suspended. (The above facts we gather from an "extra" issued by the Downville Democrat.)

THE HESPERIAN.—Number two of this admirable lady's magazine is before us, and is fully up to the high standard promised by the lady editor. The sketch of the life of Thomas O. Larkin, Esq., is a very interesting one, the likeness most excellent, and the artistic colored plate of the Cuckoo is worthy the work. In fact this number is highly honorable to Mrs. Day, and we really hope each issue will double the number of her subscribers.

EXPEDITION OVERLAND.—We received letters by the overland mail on Tuesday, bearing date at Rochester, N. Y., March 23d, thus more rapid than the mail by the Panama route, we receiving by steamer, through Wells, Fargo & Co.'s Express, a box of plants of the Camellia Japonica, packed at Rochester March 18th, in full bud, and reaching here ready to bloom, safe and fresh. This we call rapid and safe transmission.

## SPECIAL NOTICES.

**MRS. P. E. ROGERS—Family Sewing.** We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

**BOLTING CLOTHS** prepared for Flouring Mills, with neatness and dispatch.

The following Complimentary Notice from the Committee of Awards at the Mechanics' Fair in this city, was sent to the Executive Committee, and thence to MRS. ROGERS. This will testify her ability to please those who may be disposed to offer their patronage:

"We unambiguously request that the highest mark of distinction in your gift, be awarded to Mrs. ROGERS, as being the Best Operator on Sewing Machines. We understand that with most commendable enterprise, she was the first Lady to introduce a Sewing Machine in operation into this State, and the beautiful specimens of her work exhibited to us, show with what perseverance and intelligent industry she has mastered perfect practice of these Machines. (Signed) P. TORQUEY, Chairman, Mrs. S. B. Copeland, Mrs. R. L. Stratton, Mrs. S. H. Henry, Mrs. J. M. Devere, Mrs. H. H. Davis."

**SLEEP! SLEEP! SLEEP!** To each and all, a fair good night, And rosy dreams and slumbers light."

Sleep! Sleep! Sleep! Rest! Rest! Rest! Who is the man who doth keep A mattress the finest and best Sleep! Sleep! Sleep! Rest that refreshes most true! The rest that, while sleeping, our health doth renew, Is found on a mattress that's made of PULU! Sleep! Sleep! Sleep! Rest! Rest! Rest! Economy tells us to buy and to keep The mattress that is cheapest and best. Sleep! Sleep! Sleep! On the mattress from JACOB SCHRIEBER! If bedchambers be single, then life will not jingle Till they're married and purchase one wider! So come to J. SCHRIEBER'S, they go where, where, Those famous mattresses made of PULU! J. SCHRIEBER, Jackson street, near Hotel International.

**BOY FOR A FARMER.**—A place is wanted with some good Farmer, for an active and intelligent BOY, about nine years of age. Any person that would like to adopt such a Boy, can learn of an opportunity, by applying at the Farmer Office.

## FARMERS, BEWARE

## CALIFORNIA

## COMBINED REAPER AND MOWER,

## Peck's Santa Clara Header and Harvester!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNWARRANTED FALSHOODS.

I am now building the "Manny Machine," nor is anything of the kind being made by me, nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a Practical Mechanic, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "stump-oracle," and has been pretty well played out for two years the combined forces have been playing upon me, not openly, but sneakily and cowardly, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## CALIFORNIA

## Combined Reaper and Mower,

IS A DECIDED SUCCESS;

and unless that they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!" Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with stories and lies.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "stump-oracle" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

## California Combined Reaper and Mower,

(and not the "Manny"),

and I have Purchased the Invention called

## "PECK'S SANTA CLARA

## HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE until, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF INDISPUTABLE.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, ready for the fight whenever the fight opens.

THOS. OGG SHAW, No. 33 Sacramento street.

## Greatest Labor-Saving Machines of the Age!

## CALIFORNIA INVENTIONS!

## The California

## Combined Reaper and Mower!

The Best Combined Reaper and Mower now in Use!

WILL BE MANUFACTURED FOR THE PRESENT HARVEST, One Hundred of the "California Combined Reaper and Mower," which for beauty, strength and simplicity, has no equal in this or any other market, as it possesses many great advantages over any other Machine, to wit:

- 1st. It is much lighter; the driving wheel is four feet high, making the draft 30 per cent less than any other machine.
- 2d. The cutting part is in the rear of the machine, and the apron so constructed that it can be taken off in ten minutes for mowing.
- 3d. The grain is passed to one side with ease.
- 4th. It will cut grass as low as three inches, and grain as high as twelve.
- 5th. It can be raised or lowered in three minutes.
- 6th. It has less side draft, than any machine in use.
- 7th. It has more motion.
- 8th. You can drive slower and do your work better.
- 9th. It cuts six and a half feet in width, and has a spring-cut five feet from the ground, which places the driver in position to be able to manage his team, and see the breakers ahead in time to save the machine.
- 10th. It can be thrown out of and into gear instantly.
- 11th. The cutting part of the machine being in the rear, takes all the weight off the horses.
- 12th. The best and latest improvement of all is, that it is a California Header and Mower; therefore, any purchaser can, on short notice, obtain any portion of the machine that may break.

I have taken particular pains to select good workmen and good material, and I warrant this MACHINE to reap and mow, and to do either or both, better than other Machines in the market. Please give me a call. ALSO, all kinds of REAPERS that are in use, can be had of me at the Lowest Cash Prices.

THOS OGG SHAW, No. 33 Sacramento street.

## PECK'S SANTA CLARA

## HEADER AND HARVESTER!!

## THE UNDERSIGNED HAVE PURCHASED OF

## Edmund Peck,

All his right title and interest in, and to his newly-invented PATENT HEADER AND HARVESTER, to which was awarded, at the County Fair, held at San Jose, September, 1855, the FIRST PREMIUM, over the Illinois (or Haines) Harvester, and all other claims on exhibition.

We shall manufacture for the present harvest 500 Machines of the above description, and are ready to receive orders for the same. Parties wishing to purchase Clippers or Headers, will please give us their orders, and we will make the best Machine of the kind ever offered to the public. This Machine combines many useful improvements, and was pronounced by the Committee the greatest invention of the kind. One of the above machines cut, last season, OVER ONE THOUSAND ACRES OF GRAIN, and the expense of repairs did not exceed TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it cannot fail to take the place of all other machines of the kind. Mr. Peck has displayed great ingenuity and judgment, the advantage of which every Farmer should avail himself, and we believe the community at large will be much benefited. We have already received, through Mr. Peck, from those who saw them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in THREE DAYS, one machine cut FORTY-ONE ACRES of GRAIN, and is more than ever before cut in the State of California, by one machine in the same time.

Send in your orders. We mean what we say. Recollect the place:

33 Sacramento street.

THOS OGG SHAW, GEO. H. MONROE.

The advantages we claim the Peck Header or Harvester possess over any other MACHINE of the kind in the State, are:

- 1st. Its being a California Invention, and got up by a practical farmer, and well adapted to the wants of this country. The wheels of this machine being iron, and not liable to shrink or swell.
- 2d. It is the principle of raising or lowering. As the machine is evenly balanced, it will raise and lower it with perfect ease while in operation, requiring no delay.
- 3d. It cuts as low as any Reaper in use, and can be raised to a height of three feet, in one minute.
- 4th. Its manner in which the machine is guided, it being so constructed that a boy of ten years can guide it.
- 5th. It has no side draft, as both wheels are of a size, and the weight is equally divided.
- 6th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.
- 7th. It takes less time to propel it.
- 8th. It is more simple and is easily understood.
- 9th. More substantial and less liable to get out of order.
- 10th. We can attach stock with the machine, and in good condition, for \$250 per acre, while in the old manner of cutting, it costs at least \$500; leaving you to judge as to the saving this machine has over any others.
- 11th. This machine is so constructed as to save all the grain.
- 12th. We can cut with four horses, from twenty to thirty acres per day.
- 13th. The greatest advantage of all is, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

## Report of the Committee on Reapers, Mowers, and

## Thrashers.

The Committee appointed to examine and report upon Reapers, Thrashers, and Mowers, and Agricultural Implements, report that they have examined the GRAIN CLIPPER INVENTED BY MR. E. PECK, of Santa Clara county, called "Peck's California Clipper," and saw it operating in grain fields. The machine cuts a swath nine feet four inches in width, has an apron or elevator that carries the grain back to the sickle, which carries up an angle of about forty-five degrees the grain cut off, and throws it into another apron or elevator about two feet wide, and running at right angles to the first elevator, and drops the grain into a wagon that runs alongside the Clipper to receive it. The Clipper requires four horses to propel it, and one man to direct it, and three men to receive and haul away the grain, and a driver for each wagon to unload it, and a hand to load the grain in the wagon while it receives it from the Clipper, requiring only five hands in all. It will cut and stack TWENTY-FIVE ACRES A DAY, when the grain stands up.

It has a reel, and will gather grain well, even if it inclines to an angle of forty-five degrees in an opposite direction from which the machine is moving. It will cut within three inches of the ground or three feet high, and can be elevated or lowered instantly and without stopping the team, and gathers the grain so cleanly and perfectly that scarcely a head is left on the ground. The machine rests on two main wheels, each of which has a cog wheel fastened into the spokes about midway between the rim and the hub. One wheel drives the elevator and reel, and the other the sickle. The machine is of the most simple construction, and one examining it will wonder why such an invention has not long ago been in use. We do not hesitate to say that this machine EXCELS ALL OTHERS greatly in simplicity of construction, in being less liable to get out of order, in durability, in ease in operation, in the quantity of grain it will cut, and the excellent manner in which it performs its work.

In plain truth, in the judgment of the Committee, it is the best machine for farm use ever invented, and as it was invented by one of our own citizens, we recommend that it be called "E. Peck's Santa Clara County Grain Clipper."

We recommend a first premium to be awarded to Mr. E. Peck, for his Santa Clara County Grain Clipper.

F. D. MURDOCK, Ch. Committee.

## THRASHING MACHINES!!!

## AGENT FOR JOHN A. PITT'S

## UNPARALLELED MACHINES!

Eight and Ten Horse Powers, with Trucks and everything complete, ready to hitch on to.

## Ohio Thrashing Machines!

FOUR AND SIX HORSE-POWERS, WITH TRUCKS, AND EVERYTHING COMPLETE.

I can safely recommend the present Lot of MACHINES, as being the best that was ever imported, as they were all made to order.

## Extras!!! Extras!!!

We have on hand a full supply of all the different parts of the above MACHINES, so that in case any portion should fail, you can be supplied on short notice.

Among the many Agents we propose to have, we name a few: Jones & Hewitt, Stockton; Lovison & Co., Tehama; J. H. Wright, Marysville; A. P. Jackson, Suisun; A. W. Hawkins, Ukiah; Edmund Peck, Santa Clara; Hall, Knapp & Co., Portland, Oregon.

THOS. OGG SHAW, Agricultural Implement Manufactory, Corner Sacramento and Davis streets, SAN FRANCISCO.

## Five Hundred Pounds

## FRENCH SUGAR-BEET SEED.

AN INVOICE OF SUGAR-BEET SEED has been received at our Office, which will be sold on very reasonable terms.

We would urge more attention to this important Root Crop, as nothing can be better or cheaper for Dairy Stock, or Swine. Fifty tons can be raised per acre, easily, upon good alluvial land. This seed is fresh, of superior quality, and will be sold low, in lots to suit purchasers. Apply at Farmer Office, 120 Washington st. (up-stairs). 112

## The Celebrated Trotting Stallion

## "GENERAL TAYLOR,"

WILL STAND FOR THE SEASON, commencing the 1st of April, 1856, at HUNTER'S POINT RANCH, four miles from the city, on the San Bruno Road. Terms—\$30 for the season; invariably in advance.

GOOD PASTURAGE and STABLING can be had, if required. One thousand acres in grass, wet and low land, with abundance of water and feed, for all the stock of the year. The fields are well fenced, and every care taken for the security and health of stock; but all animals are at the risk of the owners. Pasturage, \$3 a month; Stabling, with grain and hay, \$1 per day.

P. B. HUNTER, Agent, Hunter's Point Ranch, San Francisco county. N. B.—ORDERS left at the Grocery Store, south-west corner of Mission and Third streets, will be promptly attended to. 12-3m

## The Celebrated Trotting Stallion

## Black Hawk General Scott,

WILL STAND AT THE STABLES OF F. K. SHATTUCK & CO., OAKLAND, ALAMEDA COUNTY,

At Fifty Dollars the Season, commencing April 1st, and ending September 1st, 1856—payable in advance.

## GENERAL SCOTT

Was imported by F. K. Shattuck & Co., in 1856, was sired by Vermont Black Hawk "Young Prince," his sire Old Black Hawk of Vermont, and dam by Lady Messenger. For further particulars, inquire of the undersigned. F. K. SHATTUCK & CO. OAKLAND, April, 1856. 12-3m

## Half-blood Merinos.

SPLENDID HALF-BLOOD and THREE-QUARTER blood Merino Sheep, from the well known flocks of Messrs. FLINT, BIXBY & CO., of San Jose, Monterey county, are now ready for Sale. The age, condition and price, and mode of forwarding, can be obtained by calling at the Office of the Farmer, 120 Washington st. (up-stairs). 12

## Splendid Sheep.

SEVEN IMPORTED SHEEP, of the improved breeds, Cotswold and Leicester: One full-blood Cotswold, 4 years old; Two full-blood Leicesters, yearlings; Four half-blood—the above crosses. Can be seen at the Black Hawk Stable, in this city. Persons desirous of having these valuable Sheep, can learn all their pedigree, and price, by calling on us, at the Farmer Office, 120 Washington street (up-stairs). 12

## MEDICAL DEPARTMENT,

## University of the Pacific.

THE INTRODUCTORY LECTURE to the First Course of Instruction in this Institute, will be given on Thursday Evening May 3d, next, at MUSICAL HALL, commencing at quarter before 8 o'clock. Address to be delivered by the Hon. GEORGE BARSTOW, Professor of Medical Jurisprudence. The public are cordially invited to attend. Seats free. R. BEVERLY COLE, M.D., Dean. 12a

## THE "NE PLUS ULTRA"

## SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE (Under Howe's License).

MANUFACTURED BY THE GLOBE MANUFACTURING COMPANY,

339 Broadway, New York.

MAY BE TRULY REGARDED as the "Ne Plus Ultra" of Sewing Machines, and all who are wishing to find a Machine which is capable of doing any kind of Sewing for Tailors and Housewives, with a satisfaction heretofore unknown—should lose no time in ordering one of the PATENT LEVER MACHINES, which are to occupy a similar position towards other Sewing Machines, that a PATENT LEVER WATCH (and every one knows its value) occupies towards a Lepine or other second-rate watch.

This Machine makes the "Lock Stitch," which looks the same on both sides of the fabric, and which cannot be ripped.

PRICE \$50.

In all respects equal to Machines heretofore sold at a hundred dollars and upwards. Specimens of Sewing done by the PATENT LEVER MACHINE, will be forwarded to any part of the country, upon the receipt of a postage stamp.

N. B.—An energetic and reliable Agent is wanted in every town and village of the United States and Canada, to sell the above named Machine. An advantageous arrangement will be made with the right kind of Merchant who is willing to have the exclusive agency.

Address: GLOBE MANUFACTURING COMPANY, 339 Broadway, New York.

## Ladies' Department.

## Domestic Inamorata;

OR, LIVING VOICES, FROM MEMBERS OF THE HOUSEHOLD OF THE CALIFORNIA FARMER.

"The Lords of Creation Men, we call,  
And they think they rule the whole;  
But they're much mistaken, after all—  
For they're under Woman's control."

FRIEND FARMER: Having just now perused "Gloves Off—Ourselves," I somehow felt a desire not to take off gloves, for I seldom wear any, but to take up the pen and let it run over this paper, perhaps from this moment till time to go to sleep. I don't know what it may trace, but I shall forward it to you, and you may give it to your readers, if you choose; whether it will be a "sickly sentimental" dose or not, others may decide; but one thing I have decided in my own mind, that "patient" you speak of is a fit subject for "surgical operation"—"sickly sentimentalities" of "domestic inamorata." Well, I suppose the Rev. O. C. Wheeler must have thought that as some of your lady correspondents had contended so earnestly for the domestic relationships, domestic harmony, domestic purity, and all domestic employments as God sanctioned, that we were such a domestic set of creatures that we would hardly be able to know the meaning of his effusion, when he used the words "domestic inamorata." What does he mean? By the way, I don't exactly understand "domestic inamorata." A lover! Is that the meaning of that word? I do believe it is; then, he calls somebody's writings among your numerous family of correspondents, "sickly sentimentalities of domestic inamorata." (My patience, I have to write that word so often, I shall see the form of it for some days to come.) But why? Because we have been advocating through the columns of the FARMER the righteous cause, and not only that but the righteous cause of Woman, as wife, mother, sister, friend; and urged upon mothers eternal vigilance for the well-being of offspring, that they become not marred by their course, either mental or physical. Perhaps he thinks it a sickly notion of doing anything ourselves to bring about the regeneration of a world of humanity from error and misdirection, and sits down, gloves on, and will wait for Grace, sovereign Grace, to do all?

Now, Colonel, your correspondents, a good many of them, are workers, and notwithstanding we look to be saved by grace, we expect to do the works of a righteous life as far as possible, and we never can get to living as a righteous people should live until we go to work and unlearn a great many things that these same Rev. Messrs. have been preaching, for lot these many years; a narrow sectarian spirit, which they have presumed to call preaching the Gospel. Yes, but it was their own when preached; not the Gospel of glad tidings to all mankind, the gospel of peace, a gospel of divine love. Col. Warren, after all, let us all make the best that can be made of this unkindly thrust at your valuable paper, or the women; yes, the women who delight to read it and write for it, and whose husbands like to uphold it by taking, yearly, with all its burdens, for its agricultural information—not caring whether the essays of the scientific men who speak forth in its columns, are foreigners or not. The time I think has fairly come, when men and their productions will be esteemed by the right-minded, or their worth.

Once more I shall return to this Reverend gentleman's insinuation, relative to the "sickly sentimentalities" of "domestic inamorata." If I know the meaning of those two words in each case, I would like to assure him that I think he certainly must have been mistaken in placing such an estimate upon any of your correspondents, as to apply the sickly to them; some of them are mentally and morally of a very healthy standing, though not all of the silk-fingered, silver-slipped tribe. As to our being "domestic lovers," or in his own other word "inamoratas," we will be satisfied for the world to judge of us through the FARMER. I for one am indeed a lover of all of a domestic nature that is good, useful, beautiful and true; indeed I love all that tends to make domestic happiness, to make our domestic sphere one of harmony, one of purity; so that when from it is widened out and evolved the social sphere, it will also be pure and harmonious; that when again it further widens out and mingles in, and is recognized as the universal sphere, it will still be purely harmonized; then man will not misrepresent his brother or his sister, neither envy or malice will emit from an atmosphere which is in harmony, which is refined, which is pure; the true mental power of each will be acknowledged, the religion of all respected; the prosperity and happiness of all the object and aim of all. Thus properly, harmoniously developed, there will then be no place for envy, strife or bitterness, for worldly gain; when mankind shall be redeemed, from what? from sectarianism, and a narrow, selfish spirit.

This is the work some of the writers in the FARMER are looking forward to, Unity, a Millennium, in the hope of the glorious day when the lamb and the lion shall lie down together; when man shall walk forth on the earth redeemed from all that is false, erect in the image of his God; these are such women as Edith Montross, Sallie, Grace Greenwood, Mrs. Farnham, and all the host of women who are now laboring in God's moral vineyard among the young plants. And the promise now is, that the time will come to the world when the bread now cast upon the waters will be gathered after many days. Then let us labor patiently till the day come, when falsehood and sham will be known, in stretched stiffness, from the full soul's grating sincerity, such as emanates from many of the women of the present day in their writings; no matter what such Reverend "sickly sentimentalism," or some other is! Better that, even, than schisms, for schism disorganizes and destroys all it enters into in the Religious, Political, or Social Sphere.

O, I ask to be saved from the schisms and isms, of all. And now Friend FARMER, for such you are belong to your interesting, truth-loving family of correspondents, farewell.

N. B. H.

OAKSHADE FARM, April 12th, 1872.

## Sewing Machines.

We have taken great interest in these aids to woman in her labor, and feel desirous of presenting all the facts we can, to show to our readers all the advantages which will be derived from this labor-saving implement. We now present an article from the Woman's Advocate (an excellent name for a newspaper), and present it to our readers, with the cuts to illustrate the various stitches which these machines perform; and we shall, from time to time, present the improvements which these or any machines offer in aid of woman's labor, or for her interest, improvement, or happiness; and we only hope that the ladies of our State will become the readers of our journal regularly; for we intend to present them, from time to time, with everything of this kind that will advantage them in the useful or ornamental.

From the day Mother Eve performed the first needlework, in the garden of Eden, down to this enlightened Nineteenth Century, our sex has been doomed to toil and slave with the needle, at the expense of health and life. The invention of the Sewing Machine, though long delayed, has at length afforded the needed relief, and womanhood rejoices in her emancipation from the slavery of the needle.

The subject of Sewing by Machinery is one of great interest to our readers, as numerous letters received by us (asking our individual opinion of the various patents) attest. We have found it impossible to spare time to answer all the inquiries in detail, and hence have had prepared a series of engravings, illustrating the methods of making, and merits of, the three kinds of stitches made by Sewing Machines. The article has been prepared with a view of presenting the merits of the various kinds of sewing, rather than the merits of machines. It should be borne in mind, that the *Tambour* or *Chain* Stitch, the *Shuttle* or (as some manufacturers choose to dignify it) the "Lock Stitch," and the *Grover & Baker* Stitch, by whatever mechanism contrived, are the only stitches made by Sewing Machines.

## THE TAMBOUR OR CHAIN STITCH.

This is the stitch made by most, perhaps all, of the low-priced machines, and has long been in use for working figures or marking cloth; but has not been found adequate to the wants of family sewing, on account of the inherent defects of a single-thread seam. Fig. 1 shows the appearance

Fig. 1.

of the seam when drawn up; the right end being represented loose, that the reader may trace the loopings of the thread. The stitch is made by thrusting a loop through the fabric, which is held open until a second loop is thrust through, and this second loop is held open until another loop is thrust through that again, and so on; there is a succession of loopings on the same thread, until the seam is formed. It is a mere series of loopings on the under side of the fabric, in all respects identical with the knitting stitch, and if from any cause the thread breaks, and the two pieces of fabric be pulled apart, laterally (Fig. 2), the loop must of necessity unravel

Fig. 2.

entire length of the thread. This drawing, which shows the appearance of the loops when pulled apart, will enable the reader to judge of the merits of the seam. It is strong enough while the thread remains whole, or for mere ornamental stitching; but the end of the thread must be secured, or it will unravel.

## THE SHUTTLE STITCH.

The Shuttle Machine made and sold by the *Grover & Baker S. M. Company* has a reputation that equals any; is much superior to most others in use, and will serve our purpose for illustration. Whatever is true of its stitch, is true of every other shuttle stitch. It forms a seam with two threads, by thrusting the upper thread through the fabric, where, as the needle returns, a loop is thrown out, through which the shuttle passes (Fig. 3), carrying the lower

Fig. 3.

thread, which is contained on a "bobbin," inside of the shuttle. When sufficient care is used to have the two threads drawn equally into the body of the material, this seam will be found sufficiently strong and elastic in thick fabrics, and especially in such articles as are not subject to the test of washing and ironing. There are a great many obstacles, however, to the successful accomplishment of a perfect seam, and very frequently, from rough thread, and other causes, the seam will present the appearance of the "mail-bag stitch" (Fig. 4), with one thread lying flat along the under

Fig. 4.

surface of the fabric. The sewing is liable, from the same causes, to run from a good to a bad tension. If the machine commences to sew perfectly, it may, after sewing a few inches, grow more and more imperfect in stitch, in the manner illustrated in Fig. 5. As previously stated, when the stitch

Fig. 5.

is made by a skillful operator, on thick fabrics, the threads may be drawn up and cross each other in the body of the material, so that the seam presents the same appearance on both sides (Fig. 6),

Fig. 6.

and answers well for many kinds of sewing; but on thin or delicate textures, the threads must of necessity be nearly straight, only being depressed at each stitch, allowing a departure from a straight line, equal to half the thickness of the material, and it is almost impossible to prevent it assuming the appearance represented in Fig. 4. On very thin fabrics the thickness of the threads will be equal to the thickness of the material, and when drawn up alike on both sides, the under thread is seen between the stitches on the upper side, and the upper thread is seen in the same manner on the under side; and, to make the face side perfect, the under thread must be permitted to lie straight on the surface of the material, as illustrated in Fig. 4. When thin fabrics are sewed with a shuttle-stitch

seam, great care must be exercised in washing and ironing, that all unnecessary stretching or straining be avoided. When this is done, the shuttle stitch may be made serviceable on thin fabrics. All seams made by hand, with a common needle should be fastened by the ends of the fabric to prevent ripping. Unless this be done, the fabric may be drawn apart (Fig. 7), and the stitches rip

Fig. 7.

out. It is liable to this from accidental breaking of the thread, wherever there is a strain upon the seam.

In all the various shuttle machines, which use either a reciprocating shuttle or a bobbin and rotating hook, the thread, of which only a small quantity can be used at a time (and the larger the thread, of course the number of yards is still further lessened), must be carefully rewound. This bobbin is first placed on a spooling machine, and filled with thread, and then placed inside of the shuttle, one end being passed from the side (Fig. 3), and through four or five holes on the outside of the shuttle, and held on the bed-plate of the machine (with the upper thread) until one or two stitches are formed.

## THE BACK STITCH BY HAND.

We found, upon examining the *Grover & Baker* stitch, that it bore a striking resemblance to the well-known "back stitch." Every lady must be more or less familiar with the appearance and merit of this stitch; but, for a better understanding of it, we beg to call attention to Fig. 8, where

Fig. 8.

the thread is left loose, that the reader may trace its course, showing it to be single on the right or upper side, while it is double on the wrong or under side. It is formed by passing the needle through the fabric from the upper side, and advancing it beneath a given distance, when it is passed through the cloth upward, and carried "back" again to the point of beginning, on the upper or right side, where it is a second time passed through the first needle-hole, and then passed forward the length of two stitches, and up from beneath as before. When finished, with the thread tightly drawn (Fig. 9) it has greater strength

Fig. 9.

and durability than any other seam sewed by hand—a fact we believe to be too well known to require further comment here.

## THE GROVER &amp; BAKER STITCH.

This stitch is patented and owned by the *Grover & Baker S. M. Company*, who enjoy the exclusive right to make it. A seam by this stitch is formed of two threads, sewed from two ordinary spools, as purchased from the manufacturer, the upper thread alone passing through the fabric, while (as shown in Fig. 10, where the threads are purposely repre-

Fig. 10.

sented loose, that their windings may be traced), the lower thread is curiously and ingeniously interwoven with the upper—passing both through and around it—forming a stitch of the greatest firmness and elasticity. Fig. 11 exhibits

Fig. 11.

the thread somewhat closer drawn, and serves to show that each stitch, when tightly drawn, is so securely fastened and independent of its neighbors, that, if the seam be cut or broken at every quarter of an inch, its strength and firmness are wholly unimpaired. The under or binding thread is one-half the size of that of the upper thread, and being passed both through and around it, the seam presents a most beautiful and fair stitch upon one side, and upon the other (Fig. 12)

Fig. 12.

a delicately winding thread, which lies perfectly flat, and has the appearance of being inwrought in the substance of the material, and is so elastic that no amount of washing or ironing will be likely to break it. The elasticity and compensating strength of the seam are obtained by dividing the strain between the several threads, and permitting each loop to give or yield to the force which its neighbor feels, gaining thereby a double advantage—the firm closeness of the loop, and a resisting power which equalizes the force among the many stitches of a seam, instead of concentrating it upon a solitary thread. Fig. 13 shows a side view of

Fig. 13.

the *Grover & Baker* stitch, when properly drawn up. The machine which makes it fastens the ends of the threads by its own operation. We believe there is no other machine which does this. An entire garment can be made without unthreading either needle, and if a seam be taken, immediately after it has passed from the machine, and nothing more done to strengthen the ends, it will be found impossible to rip it by drawing the two pieces of fabric apart in the manner illustrated in the above drawing.

The *Grover & Baker* machine sews silk, linen or cotton thread from two ordinary spools, as purchased in any store, and no rewinding of thread is necessary. The upper thread is, by a vertical needle, passed through the fabric, and the loop held open until the under and finer thread, carried by a circular needle, is passed through it, and held until the vertical needle is a second time passed through the fabric and loop, and another loop from the upper thread is in its turn held open as before, and so on. The two threads are thus interlocked—the lower one passing through the upper, and the upper through the lower. The mechanism producing these results is simple, ingenious, and durable, not liable to derangement, and we think, with ordinary care, might last a life-time. Its simplicity is illustrated by the fact, that the manufacturers are daily sending machines to all parts of the United States and Europe, with no other instructions for using, than are contained in a printed circular which accompanies each machine.

When sewing with silk, the *Grover & Baker* machine admits of the use of linen or cotton thread on the under side, and will still make a seam that, for strength and elasticity, cannot be equaled by one formed by any shuttle stitch, and at much less expense—linen or cotton thread costing less than silk.

## GROVER &amp; BAKER SEWING MACHINES.

## REMOVAL.

THE GROVER & BAKER S. M. COMPANY having assumed the Business heretofore conducted by

MR. S. O. BRIGHAM,

For the Sale of our Machines in this City,

Take this occasion to announce our REMOVAL from the premises lately occupied by him, to the more

COMMODIOUS AND CENTRAL STORE,

No. 118 Montgomery Street,

AND WOULD INVITE THE SPECIAL ATTENTION OF

Ladies,

And all who have an interest in

DOMESTIC ECONOMY,

And the Emancipation of the FEMALE SEX from the wearisome and overburdening Slave-work of the NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES,

The superior Excellence and unmistakable Advantages of which over those of all other Manufacturers, cannot fail to be apparent to the most casual inquirer. We have lately perfected, and introduced into this market, several

NEW AND IMPROVED STYLES,

Which, while embracing all the essential and exclusive qualities secured by the Original

GROVER & BAKER PATENT,

Have in addition many New and Valuable Improvements, and are more simple in construction; make less noise, run faster, and perform

A Greater Variety of Sewing,

than any other Sewing Machine extant. The capabilities of our Machine are not limited to any particular description of Cloth Sewing, but execute with the most wonderful rapidity and nicety, Every description of Fine or Coarse Sewing,

UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT

Can be procured of us, for either Old or New Styles of

Family Machines.

That our Machines may dispense their benefits throughout the State, in the shortest possible time, we HAVE MADE A LARGE REDUCTION from our former Rates, and with pleasure announce our Prices—from

\$75 to \$160;

Varying, according to size and finish.

For Bag-making,

And all Manufacturing where Sewing is required, our

MANUFACTURING MACHINES

stand pre-eminent, and their qualities are too well known to require comment.

Samples of Work and Descriptive Cuts of Machines, Prices, etc., sent per mail. All Machines warranted. All orders for NEEDLES, DUPLICATE PARTS, COTTON, Etc., must be accompanied by Cash. GROVER & BAKER S. M. COMPANY, No. 118 Montgomery Street, 113m

R. G. BROWN, Agent.

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

SEE THE FIRST PREMIUM

SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES

secured the FIRST PREMIUM at the Mechanics' Fair, Sept. 1853.

Wheeler & Wilson's Sewing Machines

Were recommended the HIGHEST PREMIUM at the State Fair, Marysville, August, 1853.

Wheeler & Wilson's Sewing Machines

Were recommended as the BEST FOR FAMILY USE, at the San Jose Fair, Sept. 1853.

Wheeler & Wilson's Sewing Machines

Are simple, not liable to get out of order, make a stitch alike on both sides of the fabric sewed, turn the hem, use the cotton from an original spool, by use of a NEW TENSION, and are capable of sewing the FINEST AND COARSEST fabrics, LEATHER INCLUDED.

H. C. HAYDEN, Agent,

corner Montgomery and Sacramento streets, SAN FRANCISCO.

**WHEAT AND CORN PROSPECTS.**—At a meeting of the Philadelphia Society for promoting agriculture Dr. Elwyn called the attention of the members to the fact that the wheat crops of this country were fast diminishing, so far as the number of bushels raised to the acre was concerned. He stated that in Ohio, a State but little over fifty years old, the crop has fallen off from forty bushels to the acre to about sixteen, while in the best portions of New York, where thirty bushels used to be considered a fair crop, only twelve bushels are now raised. The falling off in other States had been equally marked; but while this was the fact with the wheat crops, he was glad to know that the amount of corn produced to the acre had largely increased and was still increasing enormously; therefore, the people of this country are in no danger of starving, but he could not say so much of France and England, who would, year after year, look to this country for their supply of wheat. He considered the subject an important one, and hoped some means would be adopted to obtain correct information. It was suggested by a member that a committee should be appointed to gather statistics, but this proposition did not seem to meet with much favor, as the only possible way of getting information would be from the last census of the United States, and these were pronounced utterly worthless, as the facts were obtained by those who paid but little attention to the subject. Mr. Goven thought the only way to get the information would be by agitating the matter in each State and corresponding with each county society.

**ADVICE TO SHIP OWNERS.**—A sensible article in the Prices Current and Shipping List, on the subject of the degradation of seamen, and the consequent scarcity of men to man merchant vessels, concludes: "While the sailor continues to be treated in the manner we have referred to, it is no wonder that men should shun the ocean. Laws sufficiently stringent to prevent the evil cannot be enacted. The remedy can be best applied by owners. Let them employ good commanders and good seamen will no longer be scarce."

The latest word-coinage is credited to the New Orleans Crescent, which paper derives from the French the word "matriarch," used in speaking of a woman, in the same sense in which the word "patriarch" is used in speaking of a man. So, hereafter, instead of speaking disrespectfully of an ancient female as an old woman, we shall call her a venerable matriarch.

In "flowers are the alphabet of angels," the little cherubs and seraphs will soon be able to study their letters from a new edition of the floral primer, for this bland and delicious weather is starting every bud and swelling every sprig. Louisville Journal.

Is the hinges of friendship be moistened with the oil of simplicity, they may defy the rust of time.

## SPECIAL NOTICES.

## THE HOME OF BEAUTY.

"Creative Genius" from thy hand  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"  
What heart does not bow before the altar of Beauty, and thrill at the shrine of Genius? Inspiration can rear temples and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
And here our gods;  
But they are mortal.  
Around these festooned halls  
The good, the great, the living and the dead;  
And yet they speak—speak all:  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse;"  
But as we gaze upon their closed life,  
We know that they are silent.  
While they speak, and gaze on us,  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng;  
That we may raise a glorious song  
To all who set the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous things come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty?

Behold these flowers that grow the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned.  
Behold, O Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

**Daguerrean Gallery,**  
Corner Sacramento and Montgomery streets.

**The Oxygenated Bitters.**—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Catarrh, loss of Appetite, Fever and Ague, Heart Burn, Waite Brash, Acidity, Sea Sickness, Scoury, Nausea, Headache, Excess, and General Debility, or any disease having its origin in impure blood.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the most safe, certain and sovereign specific for the immediate relief and permanent cure of the many cruel complaints which, in some phase or form of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Greene, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug, in their nature tonic, not stimulant, retaining their virtue in any climate; they are a "Combination and a form indeed" of Medicine which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or how induced or chronic in its character, the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that this disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

**SETH W. FOWLE & Co.,** Proprietors, 13 Tremont street (Massachusetts Building), Boston, Mass.

For sale by—WILLIAM MORRILL, HENRY JOHNSON & Co., and REYNOLDS & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

**TO PURCHASERS OF FINE STOCK.**—All persons who may desire to import the best kinds of Stock—either Horses, Horned Stock, Sheep or Swine, or Domestic Fowls—can do so during the present month, and have them come out in charge of the AGENT we have just dispatched for the purpose of bringing out some of the finest Stock that can be bought. This is a rare chance, as we can save to purchasers considerable expense, while we secure great care of the Stock and an assurance of safety.

**WE ARE AGENTS OF THE BEST STOCK BREEDERS** in the Eastern States, and can secure to purchasers rare Burgundy, as we have special facilities by last mail, of the best Stock offered for sale.

GREAT REDUCTION IN THE PRICE  
OF...

J. L. POLKEMUS  
DRUGGIST

OFFICIAL NOTICE!  
POLKEMUS' DRUG STORE,  
No. 100 J street, corner of Seventh,  
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since  
the ever glorious FORTY-NINE, have suffered with  
you in three fires and three floods, and intend to live  
among you with my family during the term of my natu-  
ral life, if not longer. I return you my most sincere thanks  
for your unfailing patronage and support, which has  
enabled me to pay One Hundred Cents on the Dollar  
through all my adverse fortune. I would also give you  
a few reasons for your continued patronage, and in-  
ducements to new patrons likewise.

FIRSTLY.  
Persons in this connection will please observe that there  
is as much difference between a DOCTOR and a DRUG-  
GIST as there is between a Doctor and a Doctor, and  
rather more so between those who have plucked up the  
Drug Business and those who have devoted their whole  
life to it. To this latter class I have the honor to belong,  
having learned my business in the Atlantic States, and  
been engaged in said business for the last fifteen years.

SECONDLY.  
Believing that life is sweet to all, and that the people  
with to know where they can get their prescriptions filled  
with safety, I will hereafter fill them for  
Half the Price Usually Charged.

By other Druggists, legitimate or illegitimate, and of  
The Purest Drugs and Chemicals.

THIRDLY.  
I intend my store shall be ONE of the best, if not THE  
BEST place in California to obtain everything NEW,  
OLD and STRANGE in the Drug line, and especially to  
make it the most extensive depot for every valuable  
Medicine, Drug and Chemical. We invite prop-  
rietary of valuable and reliable Patent Medicines to send  
them along. We have a large and thoroughly fire-proof  
Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.  
We Keep Open All Night!

And charge no more for medicines than in the day time.

FIFTHLY.  
We will furnish those in indigent circumstances with  
MEDICINES AT COST! the same being attested by two  
or three good citizens.

SIXTHLY.  
Hereafter we will do a business on a CASH BASIS  
ONLY. The amounts we have lost heretofore by credit-  
ing we intend to distribute equally among our patrons, in  
the future, in the decreased price of our goods.

SEVENTHLY.  
We have received the agencies for the following valuable  
articles:  
Dr. Carl Warburg's Tincture. This article is particu-  
larly recommended for Ague and Fever, when every other  
article fails to cure. Bude's Nerve and Bone Liniment,  
warranted the best in California.  
Flower of the West, for Fever and Ague.  
Delight's Spanish Lustral, for the Hair.  
HUDSON'S CALIFORNIA GROWN MUSTARD.  
Also, agencies for all the other popular medicines too numerous  
to mention.

EIGHTHLY AND LASTLY.  
We import nearly all of our goods. We think we know  
how to import them, and how to sell them to the public  
as to price and quality. At all events, give us a  
call, and WE WILL TRY.

GREAT REDUCTION IN THE PRICE  
OF...

DR. F. G. JOHNSON'S  
PATENT SELF-REGULATING  
WINDMILL.

MANUFACTURED BY  
D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF  
ALL; and being constructed all of Iron, is without  
doubt the most perfect and durable, as well as the most  
economical Windmill in the world.

The undersigned having purchased the Exclusive  
RIGHT FOR THE STATE OF CALIFORNIA, and in this  
STATE, will manufacture and keep on hand the  
following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.  
No. 2—One to one and a quarter Horse-power.....130 00.  
No. 3—One and a third to one and two-thirds Horse-  
power.....162 00.  
No. 4—Two to two and a half Horse-power.....200 00.  
No. 5—Two and two-thirds to three and a half Horse-  
power.....230 00.  
(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

DEPOT OF MANUFACTURE,  
Nos. 90 and 92 Bush Street,  
SAN FRANCISCO.

When any greater power is required, the prices will be  
pro rata as the power is increased. They are susceptible of  
being increased to 20 Horse-power or more; and applied  
for any purpose where stationary power is needed, and  
as manageable as a Steam Engine, with no risk or ex-  
pense. Those anticipating using this clean power (the  
Windmill), should not fail to examine THIS MILL;  
such examination will satisfy them of its adaptation, and  
ability to serve their purpose efficiently and fully. It is  
unlike other Windmills that are called self-regulating;  
they have stationary Fans and small revolving Fans,  
which are dependent upon to graduate the speed of the  
mill; whereas, by Dr. F. G. Johnson's Patent the Fans  
revolve upon the arms and turn their edge to the wind  
when a gale or sudden gust strikes it; and again, a child  
can stop it at once by turning the fan's edge to the wind,  
by the use of a lever pressed upon the stop-wheel, which  
is upon the shaft. These Mills can be used for any pur-  
pose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH  
STREET, San Francisco; where the Manufacturer will  
take pleasure in showing and explaining the mechanical  
principle upon which reliance is had for their superiority  
over all other Mills known, or of which we have knowl-  
edge.

MUSIC, INSTRUMENTS, ETC.

Pianofortes, Melodeons,  
MESSRS. MILLAR & COURTAT,  
Manufacturers of PIANOFORTES and ME-  
LODIONS, Boston, have established an  
Agency for the Sale of their Instruments,  
AT  
MOORE'S PACIFIC FURNITURE WAREHOUSE,  
No. 186 Montgomery Street, San Francisco.

Mr. COURTAT will superintend the Fitting up and Tuning  
of the same. The above Instruments have been awarded the  
First Premium at the Fair of the Mechanics' Institute, held at  
Richmond, Va., 1837; and are not surpassed for tone or finish,  
by any Instruments of the kind in the United States; and will  
be offered at lower prices than ever before sold on the Pacific  
Coast.

All persons wishing to purchase Pianofortes or Melodeons,  
are particularly invited to examine those of Millar & Courtat,  
which are already in store at the above place, and are being  
received by nearly every ship from Boston, during the coming  
year.

No one will go away dissatisfied with the Instruments or  
price.

CALL AND SEE THEM.

PIANOS, MELODEONS,  
Alexandre Organs, and Music!  
Prices Greatly Reduced!

HORACE WATERS,  
No. 333 Broadway, New York,  
AGENT FOR THE SALE OF THE best  
Boston and New York Pianos and Melodeons.

The largest assortment of Music Merchandise  
in the United States. Pianos from five differ-  
ent manufacturers, of every variety of style—from those in  
plain rosewood cases, for \$200, to those of the most elegant  
finish for \$500. No house in the country can come in competi-  
tion for the number, variety and celebrity of its instruments,  
nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with  
or without iron frames, have in their new scale an improved  
action, in power and compass of tone equaling the grand, with  
the beauty and durability of the square Piano. The Press and  
first Music-masters it is highly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action of every climate.

Horace Waters' Melodeons (tune the equal tempera-  
ment), superior in each desirable quality. Can also furnish  
Princes', Carhart's, and Smith's Melodeons. Prices from \$15  
to \$185; for two sets of reeds, \$150; two banks of reeds, \$200;  
organ pedal base Melodeons, \$250, \$275 and \$300, less a liberal  
discount. Each instrument warranted to give perfect satis-  
faction, or purchase money refunded.

Alexandre Organs, five stops, \$160; eight stops, \$180;  
eight stops with percussion, \$225; twelve stops, \$255; twelve  
stops, also large, \$350; twelve with percussion, \$400; sixteen  
stops, etc., \$375.

Second-hand PIANOS, at great bargains, constantly in  
store. Price from \$30 to \$140.

Music.—One of the largest and best catalogues of Music  
now published; all Music and Musical Goods published in the  
United States for sale by this House. Also, Martin's celebrated  
Guitars; all kinds of Musical Instruments and Musical mer-  
chandise, at the lowest prices. Music sent wherever ordered,  
post paid. Catalogues sent by mail. A liberal discount  
made to dealers, teachers, seminaries and clergymen.

TESTIMONIALS OF THE  
Horace Waters' Pianos and Melodeons.

"The Piano came to hand, and in first-rate order. It is a  
beautiful instrument and no mistake."—Lee & Walker, Phila.

John Hewitt, of Carthage, N. Y., who has had one of the  
Horace Waters' Pianos, writes as follows: "A friend of mine  
wishes me to purchase a Piano for her. She likes the one you  
sold me in December, 1856. My Piano is becoming popular  
in this place, and I think I can introduce one or two more;  
they will be more popular than any other make."

"We have two of Waters' Pianos in use in our Seminary,  
one of which has been severely tested for three years, and we  
can testify to their good quality and durability."—Wood &  
Gregory, Mc Carroll, Illinois.

"H. Waters, Esq.—Dear Sir: Having used one of your  
Pianofortes for two years past, I have found it a very superior  
instrument.—[A. Gray, Principal Brooklyn High Seminary,  
New York.] Mr. Waters writes as follows: 'Preston Holloway,  
N. Y., July 23, '58. Mr. Waters—Dear Sir: I received the Melodeon  
safe and in good order; am well pleased with the external  
appearance, and the tone also. Hope I shall have occasion to  
order one or two more the present season.'

Thos. N. Y., Aug. 5, '58. Horace Waters, Esq.—Sir: The  
Melodeon you sent me was duly received in good order. I am  
now fully prepared to say that the instrument is highly satis-  
factory; and I beg you will accept my thanks for the very  
liberal terms on which you furnished me, and for the very hon-  
orable manner in which you have fulfilled, and more than ful-  
filled, all your promises. Very respectfully, &c., J. L. Smith.

"The Piano I received from you continues to give satisfac-  
tion. I regard it as one of the best instruments in the place."  
[J. L. Clark, Charleston, Va.]

"The Melodeon has safely arrived. I feel obliged to you for  
your liberal discount. Will do all I can for you in these parts."  
[Rev. J. M. McCormick, Parquetville, S. C.]

"The Piano was duly received. It came in excellent con-  
dition, and is very much admired by my numerous family.  
Accept my thanks for your promptness."—[Robert Cooper,  
Warrenham, Bradford county, Pa.]

"Your Piano pleases us well. It is the best one in our coun-  
try."—[Thomas A. Latham, Campbellton, Georgia.]

"We are very much obliged to you for having sent us such a  
fine instrument for \$25, and we shall take pains to recommend  
it."—[Frank, Held & Co., Buffalo, Democrat.]

"The Horace Waters' Pianos are known as among the very  
best. We are enabled to speak of these instruments with con-  
fidence, from personal knowledge of their excellent tone and  
durable quality."—[N. Y. Evangelist.]

"We can speak of the merits of the Horace Waters' Pianos  
from personal knowledge, as being of the very best quality."  
[Christian Intelligence.]

"While at the State Fair displayed greater excellence in  
any department than Horace Waters' Pianos."—[Churchman.]

"The Horace Waters' Pianos are built of the best and most  
thoroughly seasoned material. We have no doubt that buyers  
can do as well, perhaps better, at this than at any other house  
in the Union."—[Advocate and Standard.]

"Waters' Pianos and Melodeons challenge comparison with  
the finest made anywhere in the country."—[Home Journal.]

"Horace Waters' Pianofortes are of full, rich and even tone,  
and powerful."—[N. Y. Musical Review.]

"We find at Mr. Waters' in the Union store, the very best  
assortment of Music and of Pianos to be found in the United  
States; and we urge our southern and western friends to give  
him a call whenever they go to New York."—[Graham's Mag.]

Warehouses, 333 Broadway, N. Y. [2]

CUT THIS OUT AND PRESERVE IT,  
AND WHEN YOU WANT THE  
Best Double-Acting, Lifting and Forcing  
PUMPS  
TO BE HAD IN THE STATE,  
YOU WILL KNOW WHERE YOU CAN FIND THEM.  
THEY ARE SUITABLE FOR SHALLOW OR DEEP

House, Factory or Mining Use,  
AS WELL AS FOR  
Fire-Engines, and Irrigation.  
Prices according to size, from \$15 to \$450. Every Pump  
warranted to give satisfaction.

DOUBLE-ACTING  
COPPER PUMPS,  
Made to order, for Salt-Water, Distilleries, Etc.

## Cashmere Goats for Texas.

The New Orleans Picayune, of March 19th, says: "This afternoon Mr. Aaron Roff, of Georgia, will leave here on the steamboat R. W. Powell for Red River, on his way to Cherokee county, Texas, there to deliver to Col. Yokum, a well known citizen of that section of country, three goats of the Cashmere shawl species, purchased by Col. Yokum of Mr. Richard Peters, of Atlanta, Ga. One of these goats is a buck of pure blood; the other two are ewes of three-fourths to seven-eighths pure blood. Mr. Roff has also two other animals of the same breed, which he will exhibit or sell, as convenient.

"The Cashmere goat was introduced into this country, in 1849, by Dr. J. B. Davis, of South Carolina, who obtained them at much expense and trouble, while he was employed by the Sultan, in Turkey, in Asia. They are not the Thibet shawl goat, or the Angora goat; and naturalists, in this country, have agreed to call them the Cashmere goat. From the pure white color and silky fineness and great length of their fleece—its value eight dollars per pound, the animal yielding four to five pounds; their adaptability to our climate, without deteriorating; their crossing readily with the common goat, and retaining still their peculiar and valuable characteristics; their needing little care; their vigorous frame and frugal habits; the delicacy and nutritiousness of their flesh; their capability of defence against dogs, or other animals; they must prove the most valuable variety of the goat that can be introduced into the country.

"Mr. Peters, proprietor of the Devon Farm, in Georgia, has been eminently successful in crossing the pure blood Cashmere bucks with the common goat; and the fleece of even the fourth crosses is wonderfully fine, soft, light, long and white. We can well understand that the famous Cashmere shawl, made of precisely this wool, should be of such beautiful texture and durable qualities.

"Several animals of this valuable breed are already in Texas; and, with the admirable capabilities of that State for raising sheep and goats of the finer qualities, every addition of this kind to its stock resources, is worthy of notice."

MERCANTILE LIBRARY OF SAN FRANCISCO.—A very neat pamphlet, containing the Sixth Annual Report of the President of the Mercantile Library Association of San Francisco, together with the Treasurer's and Librarian's Reports, list of officers &c., has been laid upon our table. By these published documents we learn that the society is in a very flourishing condition.

The receipts the last year were \$12,089 15  
Expenditures 11,704 00

Balance over last year 2,563 53

Balance on hand 1859 \$2,948 59  
There have been added to the library the present year 1619 volumes. There are now 10,066 volumes in the library. The number of books taken out monthly varies from 1200 to 1700. Large donations of books have been made to the association the past year. The whole number of members of the society at present here is 1319, as follows—97 life members, 62 honorary members, 594 shareholders, 566 subscription members. This association is doing much good, and spreading far and wide, by means of its lectures, reading-rooms, and general good influence, a love of intellectual pursuits.

To OUR READERS.—We invite attention to the story of Bertha and Phoebe—as one from life in California—the sequel we will give in our next issue, and we ask the kind attention of parents to it.

Domestic Inamorata, No. 1, from the pen of a lady who understands well the motives of the lady writers of this journal. In their hands we leave the Secretary, who saw fit to attack such writers as honor our columns with their thoughts. We can only say we leave our subscribers and friend to decide the question whether that department has been worthy or not. We have received "Mother's Papers," by "Ivy Dell." We return thanks. They will appear soon.

Sewing Machines—our lady friends we know will be pleased to peruse the explanations given of these valuable helps to woman in her domestic duties.

California Notes about Locusts and Grass-hoppers. We can only say to our readers, look out for these fellows. They are like curious men and slanders. They foster and breed in the dark and underground, and hatch out by means of sunshine and prosperity, and generally go to feed upon the brightest, richest and best. Their object is to destroy. Watch their approach. Be ready to kill them in the egg. Plow them up. Expose them to the sun-light before their time. That will kill them. Choke them with cold water. That is their death.

THANKS! THANKS!—We are indebted to Hon. I. J. Stevens, Member of Congress from Washington Territory, for a case of seeds from the Patent Office, the Cork Oak Acorns. Also, valuable documents. We have received the speech of the Hon. John Minor Botts, of Virginia, delivered before the Academy of Music, N. Y.

A very curious egg was sent us by Mr. Jos. King from Pinole, Contra Costa, and is now on exhibition at our office; it is of large size, and from the smaller end proceeds a tapering substance six inches in length, somewhat larger than a pipe stem, more like an elephant's trunk in miniature than anything else.

MUSIC.—Kohler has sent us a parcel of new music. Kohler is always scattering sweet songs over our State, and this last one we have heard played by the author. "MILK OF THE VALLEY" a ballad by P. B. Nichols, Esq., is a sweet song; every lover of song should have it, especially our farmers' daughters, and it should echo around their happy homes, i. e. after all the housework is done up nicely. Good singers can work and sing too, and a sweet song like this will make the work feel lighter.

NOW FOR THE SHEEP.—Persons desirous of entering into the business of stock-raising, should give us a call, as we can lay before them peculiar advantages in the purchase of the best stock. We have some very advantageous opportunities at the present moment for purchasing Merino, Southdown, Cotswold, and Leicester Sheep, of the very highest character. An early call will secure the foundation of a fortune.

TWO DAYS AND A HALF BEHIND THE TIME.—We were amused on the morning of the arrival of the Sonora, on seeing a smart boy coming running up street, shouting at the top of his lungs, "arrival of the Sonora, two days and a half behind her time." His wit attracted notice, and its truth brought him customers.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly by Loomis, Hall & Co., Commission Merchants, foot of Washington street, San Francisco.]

Wheat, per cwt.		\$2 50 @ \$2 75	Potatoes, per cwt.	\$2 50 @ \$2 75
Barley, . . . . .	1 15 @ 1 50		do Sweet, per cwt.	50 @ 55

There has been no change in the price of Cattle since our last report. The market has been extremely dull, and very few cattle have been killed, but today there is a little better demand, and nearly all the slaughterers are busy.

We quote slaughterers' prices, as follows:  
Beef—American, first quality, 12 1/2¢; 2d quality, 12¢; 3d quality, 11 1/2¢; 4th quality, 11¢; 5th quality, 10 1/2¢; 6th quality, 10¢; 7th quality, 9 1/2¢; 8th quality, 9¢; 9th quality, 8 1/2¢; 10th quality, 8¢.  
Lard—At 15¢; 16¢; 17¢; 18¢; 19¢; 20¢; 21¢; 22¢; 23¢; 24¢; 25¢; 26¢; 27¢; 28¢; 29¢; 30¢; 31¢; 32¢; 33¢; 34¢; 35¢; 36¢; 37¢; 38¢; 39¢; 40¢; 41¢; 42¢; 43¢; 44¢; 45¢; 46¢; 47¢; 48¢; 49¢; 50¢.  
Veal—At 9 1/2¢; 10¢; 10 1/2¢; 11¢; 11 1/2¢; 12¢; 12 1/2¢; 13¢; 13 1/2¢; 14¢; 14 1/2¢; 15¢; 15 1/2¢; 16¢; 16 1/2¢; 17¢; 17 1/2¢; 18¢; 18 1/2¢; 19¢; 19 1/2¢; 20¢; 20 1/2¢; 21¢; 21 1/2¢; 22¢; 22 1/2¢; 23¢; 23 1/2¢; 24¢; 24 1/2¢; 25¢; 25 1/2¢; 26¢; 26 1/2¢; 27¢; 27 1/2¢; 28¢; 28 1/2¢; 29¢; 29 1/2¢; 30¢; 30 1/2¢; 31¢; 31 1/2¢; 32¢; 32 1/2¢; 33¢; 33 1/2¢; 34¢; 34 1/2¢; 35¢; 35 1/2¢; 36¢; 36 1/2¢; 37¢; 37 1/2¢; # CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 29, 1859.

NUMBER 13.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 120 Washington street (up stairs), San Francisco.  
Terms.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

(For the California Farmer.)

#### Tap-Root Revived.—No. 2.

In number eight of the Cultivator appeared an article which is headed "An Englishman's Views on the tap-root," in which he, too, undertakes to bolster up the "new doctrine" of the editor; but before he gets through we find him arguing and advocating both sides of the question. After carefully reading it through I cannot say that I feel much enlightened upon the subject, notwithstanding the correspondent alluded to proclaims himself to be a "landscape gardener by profession," and that for years his business has been "the removal at almost all seasons of the year, of fruit and forest trees of large size," &c., &c., both in Great Britain and on the continent of Europe. I should judge from the style of the communication that his experience had been more with shade or ornamental, than fruit trees, though he claims both. The point of his argument, as well as his own conclusions on the subject, are contained in the following quotation. He says:

"The real utility, then, of the tap-root is a very different matter from that of its convenience in a tree to be transplanted; and because tap-rooted trees whilst young have but few other roots, and because the tap-roots are nearly destroyed in taking up the tree, I would certainly prefer those trees having no tap-root, as otherwise I get no roots at all, or very few; but in re-setting such trees I would always make the soil rich and deep under the tree, and induce if possible the growth of a perpendicular or tap-root."

Here, then, he has admitted all we claim, and acknowledges the objection to the tap-root, and when he advises the enriching of the soil to induce the tap-roots to again strike downwards, he will not get one root only, but many, and the original intention of forming one "central axis, the predominant one through which the nourishment passes," is defeated, and we have instead, several strong roots with their innumerable branchlets, fibers, and spongioles, foraging in all directions for the sustenance of the tree, for "a growing plant gains a new mouth and stomach with every additional root and new leaf." I do not object to the roots striking downwards, if it is natural for them to do so; but I contend that roots can be improved by a judicious application of the pruning knife, while young, fully as much as the tree itself is benefited by the same operation; and no practical horticulturist will deny the advantage of the latter operation. Still, I know men, the owners of orchards, who, not only do not practice it, but in fact repudiate it; but they are none the more skillful on that account, and I would never think of holding them up as an example to others, for they are generally men who have stumbled into the business, and possess little or no knowledge of the business, but at the same time possess notions and a stubborn will of their own, and which it is much easier to permit them to enjoy than to try to convince them of their error. The evil caused by such examples is match to be regretted. The pertinacity with which some adhere to the long tap-root is amusing. The claim that in our long, dry summers, it is absolutely necessary in order to afford moisture to the tree, is not good, for we see the fig, the quince, and the grape, flourishing side by side with them, and these last are not tap-rooted trees.

In soils where trees can be cultivated without summer irrigation, the moisture can be preserved near the surface by keeping it free from weeds, and the soil mellow by frequent use of the horse-cultivator. In the Eastern States fruit trees will continue to grow for a number of years, showing no indication of fruiting, and if the soil is rich, no matter whether naturally or artificially made so, the case is only aggravated, and cultivators resort to various means to superinduce the formation of fruit buds, and among them is that of root-pruning, and the root always aimed at is the tap-root, "the predominant one through which the nourishment passes." Now, we profess to live in a progressive age, and in nothing has there been so much progress made as in horticulture and its kindred sciences. If a tree does not flourish, there is a cause for it, and also a remedy; if a tree grows all to wood, and seems not inclined to go to fruit, that too, can be remedied by tying down the limbs, to favor the secretion of the sap, or by a system of root-pruning. As an Englishman, the correspondent of the Cultivator ought to be familiar with this subject, as it is much practiced in his country. But I do not think we shall ever be obliged to resort to such means in this prolific climate, for with our long seasons our fruit trees make all the growth necessary early in the season, and when the flow of sap becomes more sluggish, it is secreted in the formation of fruit buds;

whereas, in countries with shorter seasons, young and vigorous trees are more inclined to the formation of growths of wood, and unless artificial means are resorted to, do not so readily go to fruit. Upon the subject of root-pruning, the Englishman in his "views" writes as follows:

"It is well known that root-pruning has a tendency to increase fruitfulness; but no one would think of cutting off all the roots of a tree to secure that object; then why insist upon destroying the one tap-root directly beneath the body of the tree, just because it happens to run downwards purposely to sustain the tree against the contingency of drought, when there are so many horizontal roots much nearer the surface, and more easily arrived at?"

From the foregoing I am led to believe that the "Englishman" is not well posted up in the practices of the horticulturists of his own country, and who by the way, excel in all these things. He then admits the advantage of root pruning; his nonsensical remark about "cutting off all the roots," I pass without notice. It is on a par with another remark he makes, that "should a tree have none other than the tap-root, I would much prefer it be left on."

To his other query, "why insist on destroying the one tap-root?" I answer, that, because it is the tap-root, "the predominant one through which the nourishment passes," and as a consequence it monopolizes all the nourishment going to the tree, and the horizontal roots (of which the "Englishman" speaks, as being so much nearer the surface, and so much easier got at to prune), they are entirely under the influence of, and subject to the tap-root, and the more you cut the horizontal roots, the more you add to the tap-root, defeating of course, the object sought to be arrived at through the medium of root-pruning. But if the tap-root is cut, the "balance of power" is then taken from it; the horizontal roots predominate, and if fruiting is not thereby influenced, it is an easy matter, with a sharp spade, to dig around, and cut off the extremities of the horizontal roots; when the object is attained. But, as I have said before, it will not be necessary to resort to any such means as that in this State; but for other reasons I advocate the theory of cutting the tap-root, on all young trees, for the reasons that such trees are much easier and safer transplanted; in fact, the only hope for transplanting some tap-rooted trees. It is also an advantage to break up the preponderance of power which the tap-root exercises over the growth and habit of the whole tree; for as previously shown, the growth of the tree will be "up, up, up," according as the root goes "down, down, down." That by cutting the tap-roots of young trees, you lessen their after-ability to sustain themselves in the soil against droughts and high winds, I deny, unless indeed, it can be proved that every "additional root and new leaf" does not "add a new mouth and stomach to the growing plant." Prove this, and I throw down my pen at once.

I have not contended that by cutting the "tap" all the roots must of necessity be horizontal or surface feeders; on the contrary, experience has taught me that the offshoots from the tap-roots, will still be inclined downward, but that in the creation of several roots, in place of one, we destroy the influence of the tap-root over the habit and growth of the tree itself. But, let us see what the Englishman says upon this subject:

"The effect of cutting off this root at the time of removal, is to cause it to be replaced by several, instead of one. And there are those who say, that this is just what they wish to secure by cutting off the main root on removal. To such, I would only say, that you are now coming over to my theory: that whereas, I advocate the growing of one tap-root, in all trees in which nature would produce it, you are providing a plan for producing more than one. Then, if one root injures the health of the tree, by penetrating a subsoil, cold, sour, or otherwise bad, what is to be the effect upon the tree that, by the shortening of its tap-root on removal, is made to send down more than one into the, so called, uncongenial soil below?"

I think I have clearly shown what would be gained by cutting the tap-root; but, in reply to his last query, I have this to say: that the tap-root of a tree will not penetrate an "uncongenial" subsoil; for when it reaches that, it will stop, and, having no horizontal roots to sustain it, it will linger for a while, sicken and die. The only hope for growing tap-rooted trees on such soils is, by cutting the "tap," to encourage the horizontal roots, which derive their nourishment from near the surface, and where the moisture can be retained by a good system of cultivation. If this will not succeed, nothing else will, till means have been resorted to, to improve the "uncongenial soil below."

The "Englishman" might have known this; for in his communication, where he speaks of the power of roots to reject or accept certain soils, he says:

"I have observed in grape borders frequently, the roots of the vine seemed to know, if I may use the term, just where the soil most congenial to their growth lay, and would seem to go quite out of their way to find it, whilst rejecting nearer soils that were uncongenial."

This then, by his own confession, settles the question; for, it being the peculiar function of the tap-root to go "down, down, down," if the subsoil is "uncongenial" it rejects it, and, as it cannot do duty as a horizontal or surface feeder, for if it did, it would cease to be a tap-root; but, in such case, the check that it would receive might

FEMALE CASHMERE GOAT.

Live weight, 102 pounds; weight of fleece, 4½ pounds; property of Richard Peters, Esq., Atlanta, Ga.

#### Chufa, or Earth Almond.

This singular tuber is exciting attention abroad, and we think it deserving of notice here. It is not only palatable and useful for swine and such quadrupeds, but it is a very agreeable edible and quite palatable for bipeds, being in flavor like a chestnut. We hope it will be well tried this season, and reported upon. The following analysis and notice of the Chufa, by Dr. Jackson, of Boston, we find in the Patent Office Report for 1857.

The Chufa, a curious, and as I believe, valuable plant, has interested me greatly, and I have made a very minute analysis of its tuberous roots, which from their composition, must be regarded as highly nutritious, both for man and animals. The following are the results:

Water	15.50 per cent.
Fibrous matter	21.45 "
Starch	27.00 "
A peculiar sugar (like manna)	12.25 "
Wax	0.50 "
Fat oil	16.65 "
Mucilage, or gum, with a little albumen	6.65 "

When these tubers are beaten to a paste, and mixed with water, an emulsion is formed, which, after straining, resembles milk in appearance. The fat at length rises to the surface, and looks like cream, while most of the starch subsides to the bottom of the vessel, but enough remains suspended to give the emulsion the appearance of thin or skim-milk. Thus mingled with water, the most nutritive ingredients of this plant may be taken as a drink. It is much used in this manner by the Spaniards, and I have no doubt will be so employed in this country. This emulsion may be sweetened and flavored so as to make it very agreeable to the taste.

The chufa tubers cannot fail to prove a most valuable fattening food for animals, and they are much relished by swine and poultry. It is practicable to obtain a considerable proportion of oil from these tubers by pressure, after which the remaining cake will still serve as a valuable food for stock, and add to the richness of the milk, if fed to cows.

#### Keep Down the Weeds.

To secure a steady and healthy growth to all vegetation, from the orchard to the flower-garden, "keep down the weeds," and keep the earth light and porous, by constant cultivation. There is no one thing so useful as to keep the earth moving: it is almost equal to manuring the soil; in fact, it does enrich, by giving fresh air, light and the gases an opportunity to penetrate down to the roots of the plants. When the earth is thus cultivated, it cannot become hard and baked. These things ought to be attended to.

#### Check in the Growth of Trees.

The late cool weather has given a check to the growth of the Pear Tree, and caused the foliage to blight in some places. We would advise a copious watering at the roots with strong soap-suds, to give a quick start. The leaves of the Peach Tree curl also. A copious watering will start a new growth; the old leaves will fall and be replaced with the new, and the tree revive. Where ashes are plenty, a peck, or even a half-bushel to each tree, will greatly aid—the alkali will stimulate them.

BACKWARDNESS OF THE SEASON.—The strawberry is the earliest fruit of the season, and this is generally the test by which we try the average of a season. Recently we visited Oakland and called on several of the growers of this delicious fruit; one and all of them have placed the season as some three weeks later than 1858. The prospect, however, is for a very large crop of strawberries; so, readers, you can all prepare for a feast. Don't your mouths water? When we tell you that we know of growers of FIFTY ACRES of strawberry vines, can't we promise plenty of fruit? Mr. Kelsey has the monster grounds of fifty acres; Messrs. Latham, of about twenty acres; Mr. White several acres, and John Smith, the original John Smith, has a fine field of them; these are all at Oakland. Alameda has fine grounds. N. W. Palmer, Dr. Nevins and others. So we feel safe in promising strawberries and cream to the million.

#### Oregon Fruit Trade.

We present to our readers a valuable letter from a gentleman connected with the large Mercantile House of Hull, Knapp & Co., of Portland, Oregon. We feel much indebted to Mr. Knapp for the kindness he has manifested to us, in furnishing so valuable a document; we can give it a wide circulation, not only in this State, but elsewhere—as we have subscribers in every State of the Union and many in Europe. We are also much pleased to publish this statement, to show the success of our sister State in fruit growing. All honor to Oregon for the great success she has attained, and the honor she has won for her splendid fruit. Although we have had some little items upon the relative keeping of Oregon fruit, in contrast to our own fruit, and have waked up our good brother of the Oregon Farmer, who came nobly out in defense of his flourishing State, yet we cheerfully give her credit, as we always have done and always will, for the advance she has made, and rapidly too, in fruit growing.

The annexed list of the Fruit trade of Oregon, is a monument to the excellence of her soil and climate, and a tribute of high merit to her Pomologists. We bid them God speed, and would suggest to them that in order to realize the greatest advantage in their trade with our State, they should look to the season when our fruit is in its greatest abundance, and so arrange as to send their fruit to our market when it would not conflict with our growers; thus they would always receive the highest value for their own fruit without an injury to us. They would thus preserve a better feeling between the cultivators of each State, by not having so sharp a competition, and by not overstocking the market. We cannot omit to remark here, that we think the fruit growers and farmers of Oregon generally would find it for their pecuniary interest, one and all, to subscribe for the CALIFORNIA FARMER, and thus gather all the news they can of their interest in our State; and at the same time would recommend to our farmers and orchardists the Oregon Farmer, an excellent monthly. Brother Walling makes an admirable journal, and our farmers would be the gainers by subscribing for it. We repeat, success to our sister State, and the cultivators and others there, also:

SAN FRANCISCO, April 23, 1859.

EDITOR FARMER: Dear Sir: In reply to your request to furnish you for publication some statistics relative to the Oregon fruit crop, I have to state, that there has never been any record kept in regard to it until the past season.

Feeling the necessity of such information, in the successful prosecution of our business, I have the past year kept a record of the amount of fruit received each steamer, to whom consigned, the prices for which it sold, etc. This information I have invariably obtained personally, of the consignees themselves, at the time of each arrival, and it is believed to be very accurate, particularly in regard to the amount received.

The fruit consisted almost entirely of Apples and Pears, and the proportion of the latter was so small that I did not keep a separate account of it. The first arrival was on July 30th, of eighty boxes of Apples, which sold from 12 to 18 cents a pound.

The following table shows the total amount that arrived here and the prices sold at, in each month of the season, from July, 1858, to April, 1859, inclusive:

Month Arrived.	Boxes.	Prices sold at.
July, 1858	80	12c@18c
August	1105	10c@20c
September	2129	7c@18c
October	4307	10c@19c
November	8244	10c@25c
December	7232	10c@28c
January, 1859	2511	7c@24c
February	1871	10c@30c
March	1411	10c@35c
April	300	15c@24c

100 boxes of the last shipment in March, were bought by George Hughes, at 35 cents a pound.

The total amount received at this port for the whole season is 29,190 boxes, which contain from 40 pounds to 75 or 80 pounds each. They will generally average about 60 pounds a box, or about 14 bushels, which amounts to over 36,000 bushels. It would be a difficult matter to make an exact average of the sales. The figures named are the extremes, very few sold at the highest figures; nor would the difference between the two extremes be always correct, for at some seasons the average sales ranged but little above the lowest figure, while at other times the majority of sales ranged nearly to the highest figure. Probably 14c or 15c a pound would be a fair average for the whole season. Taking 60 pounds as the average to a box, we have a total of 1,751,400 pounds, which at 15 cents, amounts to \$262,710.

There was considerable fruit shipped from Portland to Victoria, and other ports on Puget Sound, to what amount I have no means of ascertaining, nor have I any idea what amount was retained for home consumption. Probably the entire crop of last season would not fall much short of 50,000 bushels, which, at the prices it brought, is a very pretty item among the productions of the youngest State of our great Republic.

Respectfully, yours, J. B. KNAPP.  
No. 7 Clay street.

## Stories from Real Life.

**BERTHA AND PHEBE:**  
OR  
**THE INFLUENCE OF WEALTH.**  
BY MOTHER RUTH—NO. 11.

## THE JOURNEY.

We will pass over the scene of Bertha taking her departure from the home which had once shed joy on her young girl life, and the dear ones who had, by their affection, consecrated the spot home to her young heart; she knew not the intended lapse of time as she would again be in the home of her childhood, or when she should again be greeted with the tones of a still much-loved mother's voice, or be folded to her heart or that of her sister's again—all was undefined in her mind. All the day's journey was passed in conversation between the father and daughter. He attempting to prepare her for the probable future; and she, by all the reasoning powers she possessed, to lead him to agree with her as to what she had determined for herself. She even went so far, as to request him to gratify her with the hope that, sometime or somewhere in the future, they should live in as great style as Mr. M.

"I can hold out no such promise, Bertha," said Mr. T., her father; "I am and always have been opposed to any such senseless use of money, while there is a homeless, houseless child of want in our world; all above, or beyond, our comfort and refinement, is an absolute usurpation of what should be expended in meeting the wants of our suffering fellow-creatures, and raising them to a comfortable position as well as ourselves. Yes, Bertha," said he, "were all the wealth that is squandered in a gay and useless manner of life; in sumptuous and extravagant waste in food; in costly grandeur in house, the over-furnishing thereof, and the servants and service to make such display, used to clothe, feed and provide with home-comforts the destitute in our land, there would be a sufficiency for all to be comfortable; and none, for a time, would be overgrown with wealth, but all would be better in the end. Our surplus over comfort should always be used to prevent a production of criminals. Society makes criminals; then punishes them for being, or becoming, what it makes them."

Bertha, after a time, became silent. Much, very much, that was calculated to instruct her, the father imparted to her; but when she found him unyielding in his principles of right, she sunk into a quiet, silent mood.

The second day was passed rather gloomily; still the father failed not, at intervals, to rouse himself to converse, or attempt to do so. But Bertha had taken her stand, as she afterwards said, and she kept it.

On the third day, late in the afternoon, as they were approaching the city where terminated their journey, she was somewhat roused by being told by her father, that soon the journey would be at an end, and she would find herself among relatives whom she had never before visited; as they had been in their present place of residence only about a year, previous to which they had lived at too great a distance to think of visiting them.

When they drew up before the dwelling, Bertha exclaimed, "What a splendid building! How grand all the improvements about it! Look, Papa! All that can be seen is elegant!"

"Yes," answered the father, as he lifted her out of the carriage.

Mr. T. walked up to the door, where he was met by a servant, who said: "Company, sir? Your name, if you please."

"The old gentleman from L.," said Mr. T.

In a few moments after they had been ushered into a front parlor, the servant came in to say, "Missus will be engaged for a few minutes. There is company already seated at table."

Some thirty minutes passed, however, before the lady made her appearance.

O, how different a reception would have been hers, had she visited at the cottage! The mother of Bertha would have hastened to meet her sister, in a moment after her arrival. But I must not spend time to detail particulars relative to the meeting between the plain, honorable brother-in-law and the wealthy sister of his beloved wife, who, in spite of all her foolish pride and fashionable flummery (called by some, rules of manners), could not but meet him with a degree of respect; but she was much surprised when she saw Bertha, for she thought to have met her sister, whom she supposed was the lady who had come.

"Well," said she, "really this appears strange! How long is it since I saw sister?"

"Why," said the father of Bertha, "you remember, perhaps, that my daughter here was a very little girl when we all lived in B.; of which she has no recollection at all. You were not then married. Bertha will soon be sixteen years old."

"True enough," said the aunt; "I remember now, I have not seen her since I was married. I wished her, for a long time, to come to see me; how well I was situated in life, and what an indulgent husband I had; but, as she never could leave her home long enough to take a journey, I settled down and lost the desire that she should be a witness of my present position."

Here a servant came in to announce the table ready. They were ushered into the tea-parlor. The husband was away from home. There were several children in the room.

I shall pass over the introduction; as it has but little to do with the interest of the story. They were seated at table, with a request to make themselves quite at home, and command any attention from the servants necessary; the aunt then excused herself, and glided through richly carved folding doors into the apartment whither her company had previously gone, where she remained till eight o'clock; at which time the visitors were heard to take leave of the lady in the most cordial manner, when she came into the parlor where were the relative visitors.

"Now," said she, "I know you will not take it amiss in my leaving you so long. I am free now to be with you awhile, unless you are tired and wish to retire; if so, your rooms are quite ready. I wish my husband was here. He will hardly be

here before you leave. How soon do you purpose returning?"

"I have not determined," replied the father; "perhaps to-morrow."

He then presented her a letter from her sister, which she read.

"Poor child!" said she, "you really are mistaken, if you think that all this display of living, gives happiness. No!" said she, with a mocking laugh; "Happiness in riches! My servants are far more acquainted with happiness than I am. But I am no judge; others may find greater happiness in the enjoyment of wealth than I have; still, I could not live if I were deprived of it—it is necessary to my existence; but I am a perfect slave, and at times I am perfectly miserable. Let us think and talk of something else."

The father then stated the object of his visit to her. Bertha was taken to her room by a maid, who was ordered to attend to her comfort; which left him free to speak plainly to the aunt.

"I hope," said he, "by placing Bertha with you for a time, to satisfy her craving thirst for a more wealthy position than her home with us can give her."

The aunt was quite willing, to her credit be it said, to do all she could to favor the wishes of the parents of Bertha.

"But," said she, "Bertha must be supplied with an entire wardrobe, suitable to be a member of our establishment, and our circle of acquaintances. If you allow me, I will dress her in such style as will satisfy even her. I don't expect you to be at the expense, if you will only not be afraid of her being spoiled. I know your ideas of such expenses. I half think, you and my sister are more wise in such matters than I ever could learn to be. But, after all, it may do Bertha good. What say you? Will you allow me to try what can be done in the way of dress, to meet her wishes to appear splendidly? I doubt not, she will be eagerly sought after in marriage, for she is very beautiful."

The father was silent, but for this one time; as he afterwards said, it was a false spirit which led him to allow such a course to be pursued. How deeply he subsequently regretted this one step. He finally consented; for, what could he do but consent? If she remained in the family, she must be in appearance what the aunt's wishes dictated; and thus it was decided.

The morning after this arrangement was entered into, between Bertha's father and her aunt, she was informed of a part of the calculations of the parties; that it was their mutual desire that she should be happy.

"I don't know how being a dependant in my aunt's splendid mansion will ever make me happy," was Bertha's reply.

"O," said the aunt, "don't say a word, dear girl, about being dependant. I intend you shall have an allowance of your own, to meet all your wants; and you are only to use freely the contents of the purse, I shall see it filled. My dear husband has often wished for one of my sister's daughters, to add a charm to our establishment. I know he will spare no means, in the way of money, if that will make you happy. But you must never say a word about dependence, and you will pass as a wealthy relative's daughter."

The father had some misgivings as to the correctness of such a course, even then; and had he then listened to the promptings of the still small voice within, he would certainly have taken Bertha back with him to her own upright mother, who was the most suitable one to have the entire charge of her daughter; for, however correct the father strove to be, removed from the soul-reforming influence of his good wife, he was more easily influenced to that which he, all the time, felt to be not exactly right; indeed, something had operated upon his mind strongly, in his younger days, causing a partial inversion of the faculties of the mind, which often produced a painful action thereof; but he was, for all, a good man—his motives were correct; some misfortune had caused him, at times, to be wavering and irresolute; and this was one of the times when he did not exercise his own unbiased judgment, but consented to be dictated to by the aunt; and allowed her the privilege of making his child appear in, and act under, a false character, in order to make an impression to suit her purposes. And she was allowed thus to trifle with the future destiny of a dear sister's child.

I know not but the worldly-minded will upbraid me for thus exhibiting a character among my sex. I have only done so as a warning to others.

I shall finish my story now as briefly as possible, leaving the further history of Phebe for a future narration.

The father went home the second day. He was much depressed in spirit. The mother regretted Bertha's not being brought home again. Time passed. The uncle and aunt were rather proud of the beautiful Bertha, after she was suitably apparelled, to be introduced as their relative from L.

Soon the aunt discovered that Bertha excited much admiration. There happened, however, to be one of her most ardent admirers not exactly of their particular choosing; and yet, the aunt rather favored his attentions, because, as she said, he was "a splendid fellow, if he did occasionally indulge in large stakes at gambling establishments."

He was the son of wealth, but a profligate and spendthrift. The uncle at last, after various carriage drives, theater parties, and special and marked attentions from the gentleman towards Bertha, determined to inform the father of the probable result; for he really wished to save Bertha from the misfortune of connecting herself with the young man in marriage.

About a year had elapsed, since she had been an inmate of her uncle's house, and he had become very much attached to her; and in reality sought her happiness.

The father lost no time in repairing to his brother-in-law's; and, after learning all, determined to take his daughter home with him. She objected strongly; but, being told by her uncle that he deemed it for her good, she declared herself willing to go, as he wished to be rid of her. The aunt shed some tears, for she loved Bertha because of her rare beauty; but little she knew of

her who was her relative; and still less, of the influence toward her desolation she herself had ignorantly exerted over this young girl—woman—to entirely unfit her for future peaceful association with her pure-minded mother and innocent sisters, one of whom, older than Bertha, has had no place in my story.

Bertha came home, to mope and repine. Nothing could win her to appear other than a restless, dissatisfied, complaining creature. She refused to go out, when the others went out to Church, or anywhere else; but would go out alone.

About three months after she came home, one day after she had been out for a few hours, as she said, to call on a friend, she returned to the house somewhat excited in her manner, which was noticed by the mother. Very soon she came through the room where the mother was, with her trunk. Her mother inquired what she was going to do. She replied, to air her trunk and clothes and arrange them, to put them away; as, in future, she should use only one or two of her dresses, but have her plain ones in use.

The mother of Bertha felt somewhat anxious, on account of the visible excitement of her manner, but refrained from any expression relative to it; and only replied by saying:

"Suit yourself, my dear; your plain dresses are very becoming."

"I think so," answered Bertha; "I shall put these all away for future use, when I go on another visit to my aunt; though, I suppose by that time, they may be all out of fashion in the style of them, as one fashion so soon gives place to another in the gay world."

All the other members of the family went about their various employments, and left Bertha arranging her trunk. None had thought of the intentions of the young Bertha further, or other than she stated. After they were engaged in the preparations for supper, she came into the kitchen with an elegant riding, or rather traveling, dress on, saying, as she came in:

"Mamma, how do you like this? I put it on for you to see how it sits on me. I think it looks well on me."

The mother thought it a good fit; the sisters spoke of it as very prettily trimmed. For a moment Bertha stood silent in the door, then passed from the room, used as a kitchen department, back to the front room, where she had been left with her trunk and clothes earlier in the afternoon.

Reader, that was the last look of Bertha upon her mother or her sisters! They saw her silent pause in the middle door; it was the last they saw of her! Each one was busy, as it was near tea-time. When the father came in, he asked for Bertha. He was told she was in the front room, busy with her clothes. He went into the room; neither Bertha, trunk, or clothes, were there. Still there was as yet no particular alarm, when he came back and told them so; the girls thought she must be in her room, and had taken her trunk back without their help. One of them opened the door; but, lo! neither Bertha or trunk were there.

Whoever may chance to read this story, may themselves imagine the anguish of those parents; the almost distraction of the whole family—in one wild uncontrollable burst of grief, such as had never swelled their hearts before. All was confusion for a time.

Next contemplate the mother, amid her soul-anguish, bowing the knee; and, in her most beseeching and deeply devout strains, imploring Heaven to watch over her child; she gave her up, resigned; rose from her kneeling position, saying:

"I shall see her no more in life; and I no more impune my Heavenly Father; for I feel, to me she is lost—lost in this life! till another and less sinful world is her and my abode! For I still trust God will keep her soul pure, as when from Him it came!"

But, O! the keen agony of the father, who walked the floor while the silence of night brooded over him; no vent for his agonizing misery did he find under this terrible calamity; no tears relieved his aged heart of its overcharge of grief, in contemplating the destiny of his daughter.

Supper stood on the table at the cottage that entire night, untasted by the family. The girls retired to their room, as directed by their parents; (for there was no family altar, surrounded by supplicants that night, though prayers from the deep recesses of the full soul had been breathed forth, to ascend to the throne of Omnipotence, to guide the wanderer in her homeless course); when they were shut in to themselves, they were for a time silent, while tears flowed freely, until the oldest discovered a letter lying on the pillow of her bed.

"A letter for mamma!" said she, and ran hastily out of the room into the one where were the parents.

The father seized the letter and hastily perused its contents; and handed it to his wife.

"Just as I thought," said she, after reading it. "What can be done to save her?"

This letter informed them that she had gone with the very man who caused her to be brought home from her uncle's. She besought the family to forget her; to drive her from their hearts, and cease to love her; for she loved wealth and the pleasures of the world, and had gone with one who would place her in a position that was, in every way, suited to her most ardent wishes—one of splendor and luxurious ease. She bid them understand she intended no marriage. No; she did not intend to choose voluntarily a position, to be dictated to by any man; she intended to be free. Yes, free! She charged them not to attempt to follow her, to entreat her return; for she never should return to the home of her childhood again; that the face of her quiet, angel mother was a constant rebuke to her, passionate as she was; that she had now, by her own act, made herself a reproach to her unassuming and good sisters, indeed to all, and therefore wished them to forget her.

But this letter afforded no comfort to the sorrowing family. The father would have followed them, but no idea as to where they intended to go was he in possession of; the uncle and aunt were written to on the next day, with a faint hope that they might go to the city where they at first met; but not so. About two years after, by some means or other, the uncle succeeded in gaining some tidings

of Bertha, and informed the father, who immediately left home and went in search of his daughter.

And now comes the worst part of my story; when all that had been feared before amounts to knowledge, relative to her entire want of respect or affection for her aged parents. She was found in a gorgeously furnished dwelling, in a city which I shall not name, living a life of degradation; and to all the wild entreaties of her father, was as indifferent as if he had been a stranger.

O, I thank God! there are not many Berthas among my sex; but there are still some who can bear to bring desolation to happy homes, but few who can so wantonly trample upon the affection of parents.

The father returned to his home; the last blow had shaken his reason; he was no more the man he had been. As speedily as possible he disposed of his cottage-home, well as the family loved it; moved into a rented house in the city; his business dwindled; and, ere long, his friends discovered that something was the matter with him of an alarming character; in a few weeks he was a raving maniac. He died in an insane establishment.

Thus died Mr. T., the father of Bertha. Peace to his memory!

And now, friend FARMER, I have written this story from Real Life. I might have given it a more romantic character; but did not, as I prefer my own unimaginative manner of telling the story, and I trust that every young girl who may read it, may be able to detect the true character and spirit of the story—a warning to others, who wish to indulge in a willful course; one fraught with danger and fall of evil for the young—the inordinate love of pompous display in dress and manner of living. Bertha's starting point! The first outward breathing of such a disposition being fanned into life by a little child's common talk, who was innocent of the fire of human passion her words had kindled in Bertha's mind—no more to die; and which were, finally, to prove her destruction, and bring the father to insanity and death! Let the young be warned to put far, very far, from them, the first and most trifling inclination to indulge in such a disposition as led to Bertha's ruin; to heed no idle or childish prattling, calculated to invade the peace of mind by them possessed; to be not dazzled by the gilded trappings of wealth—they are often the outer covering, the shroud of a skeleton!

P. S. I purpose giving the STORY OF PHEBE; in which the elder daughter will bear some part, as their course (compared with Bertha's), in connection with the wealthy, noble-minded Mrs. Stirling, forms a contrast of characters in our world.

MOTHER RUTH.

## FARMERS, BEWARE

CALIFORNIA

COMBINED REAPER and MOWER,

AND

Peck's Santa Clara Header and Harvester!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNMITIGATED FALSHOODS.

I am not building the "Manny Machine," nor infringing on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a Practical Mechanic, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "STUFF-GAME," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but MEANLY and COWARDLY, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

CALIFORNIA

Combined Reaper and Mower,

IS A DECIDED SUCCESS; and

and unless they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!" Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "Manny Game" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower, (and not the "Manny").

and I have Purchased the Invention called

"PECK'S SANTA CLARA HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF ENDURANCE.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, "ready for the fight whenever the fight opens."

SEED, PLANTS, &amp;c.

SEEDS! SEEDS!!

Fresh Arrivals

AT THE  
Agricultural and Horticultural  
SEED STORE,  
NO. 108 CALIFORNIA STREET.

New Crop of 1858:

7000 lbs. Alfalfa,	100 bushels Peach Pits,
3000 lbs. Red Clover,	200 lbs. Oats Orange,
3000 lbs. White Dutch do,	White French Sugar-Beet,
3000 lbs. Timothy Seed,	Best assorted kinds;
50 bushels Blue Grass,	Onion, " "
50 " Red Top Grass,	Turnip, " "
20 " Bay Grass,	Carrot, " "
20 bus. Mixed Lawn do,	Radish, " "
500 lbs. Vetches,	Cucumber, " "
3000 lbs. Early Kent Peas,	Melon, " "
50,000 assorted Fruit Trees.	

DUTCH BULBIOUS ROOTS.

Double Hyacinths,  
Narcissus, Anemones,  
Crown Imperial,  
Dahlias,  
Ranunculus,  
Tulips, Tuberoses,  
Crocus, Iris,  
Gladiolus,

Also, a full collection of all kinds of FIELD, FRUIT, GARDEN, and FLOWER SEEDS; all of which we can warrant.

Sold wholesale and retail, in quantities to suit purchasers, at our Seed Store. Also, Pruning Shears, Budding and Pruning Knives, &c.

N. B.—All orders forwarded to J. P. SWEENEY & CO., Seedsmen and Florists, will meet with immediate attention.

J. P. SWEENEY & CO.,  
17-3m 108 California street, San Francisco.

New-York Seed Warehouse.

ALFALFA,

New Crop;  
HUNGARIAN GRASS;  
Garden, Flower, Field and Tree Seeds.

THE extensive Variety of SEEDS we offer, are grown by experienced Cultivators in the Atlantic States and Europe, and we have taken the greatest pains to secure only the Purest and best Stocks, and have no doubt they will give the utmost satisfaction.

Agricultural and Scientific Books,

WHOLESALE AND RETAIL

FLOWER SEEDS, and Collections of Flower Seeds, put up in neat packages, with directions for cultivation.

Goods securely packed, to go to any distance.

All orders by mail or otherwise (with remittances), will be attended to with exactness and promptitude.

Light kinds of Seeds can be forwarded through the mail (postage paid).

O. L. KELLOGG & CO.,  
111 SANBORN STREET.

7000 LBS ALFALFA OR CHILE CLOVER

SEED, crop of 1858;

25,000 lbs. SEED CORN (choice varieties);  
1,000 lbs. SHAKERS HERBS and HERB SEEDS;  
100,000 lbs. SEED PEAS;  
10,000 lbs. SEED BEANS, choice varieties;  
100,000 CHOICE FRUIT and SHADE TREES;

Garden Seeds.

500 lbs. Oats Orange seed;  
400 lbs. Yellow Dutch Onion seed;  
300 lbs. French Sugar-beet seed;  
300 lbs. Turnip seed, assorted;  
100 lbs. Yellow Danvers Onion seed;

100 lbs. Reddish seed;  
100 lbs. Cabbage seed, assorted;  
300 lbs. Carrot, assorted;

Grass Seeds, &c.  
20 bush Kentucky Blue Grass;  
20 bush Timothy;  
25 do Mixed Lawn Grass;  
25 do Rye Grass;  
20 do Hungarian Grass;  
20 do Mesquit Grass;  
20 do Helio Grass;  
5000 lbs. White and Red Clover;

2000 lbs. Millet;  
1000 lbs. Canary;  
1000 lbs. Rape;  
1000 lbs. Hemp;

Top Onions, Jerusalem Artichokes,  
HYACINTHS, TULIPS, LILIES, OROGOS,  
JAPONICAS,

And a variety of other Bulbous Roots.

PRUNING and BUDDING KNIVES, and

Seed Warehouse,  
110 California street.

Five Hundred Pounds  
FRENCH SUGAR-BEET SEED.

AN INVOICE OF SUGAR-BEET SEED has been received at our Office, which will be sold on very reasonable terms.

We would urge more attention to this important Root Crop, as nothing can be better or cheaper for Dairy Stock, or Swine. Fifty tons can be raised per acre, easily, upon good alluvial land. This Seed is fresh, of superior quality, and will be sold low, in lots to suit purchasers.

Apply at Farmer's Office, 130 Washington st. (opposite). [12

SALT!! SALT!!!

WASHINGTON MILLS,

Corner Market and Beale streets,

SAN FRANCISCO.

THE UNDERSIGNED DESIRES TO CALL PUBLIC attention to the SALT now prepared and furnished from these MILLS. Particular attention is paid to furnishing

SALT

Of a superior quality, for Table Use.

Merchants, Traders, Hotel-keepers, and all purchasers, are invited to give us a call, as we shall deal with them on the most favorable terms.

To Dairymen,

Also, this SALT will be found of great value, as it is prepared with reference to PURITY from all deleterious substances.

PROVISION PACKERS

will find our SALT very excellent for packing Provisions

In order that the REAL VALUE of our SALT may be known, we invite Purchasers to visit the MANUFACTORY, where we shall be happy to show them the various qualities.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, APRIL 29, 1859.

## Our Traveling Agent.

We are pleased to announce the name of Dr. H. H. WILSON as our Traveling Agent. Mr. H. will visit many of the upper Counties, and will present his claims to attention for his celebrated Seed-sower and Harrow, and will also for his California Farmer to those who have not yet subscribed, and we hope to receive a large number of new subscribers through his efficient Agency. Persons who are now indebted to us can pay him, or any of our named Agents; or can remit by mail, as money will always come safely through the Postoffice.

## A Special Agent in the Eastern States.

Mr. E. A. HAW, who left here in the steamer of the 5th inst. on a visit to his kindred, to tarry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.

We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.

We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

## The Farmer—Our City Carrier.

HAVING employed Mr. J. F. LARABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

## Special Notice.

J. Q. A. WARREN has no connection whatever with the CALIFORNIA FARMER. This notice becomes imperative now, as many persons have supposed that was the address of the Editor and Proprietor of this paper, and have so addressed letters intended for this journal, which have been misdirected.

Purchasers of stock, and all persons corresponding with the CALIFORNIA FARMER or the Editor and Proprietor, will please be particular and address as follows: Col. Warren, Editor California Farmer.

J. B. MORSE is not an Agent of the FARMER, nor authorized to receive subscriptions or money on account of this journal—nor has he been for some time past.

LETTERS BY OVERLAND MAIL.—Will our friends in the Old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

## War! War! Home Manufactures. War! War!

Our newspapers are now filled with the alarming war notices of a distinguished importing house, of harvesting machines, in this city, who are sending letters, cards, hand-bills or large posters all over this State denouncing T. OGG SHAW, the earnest and indefatigable manufacturer of agricultural implements as a violator of the patent right of Mrs. Mary Manny. Now be it known unto all men and women too (for there are women who carry on farming), to whom these presents come, greeting: that we will always do all needed honor and justice to everybody's patent, bearing the broad seal of Uncle Sam, and to which is affixed the glorious broad-spread American Eagle. But having done this, we as a public journalist, and professing to plead the cause of agriculture and farming interests generally, will not permit these great interests to be placed in jeopardy, and be silent. Neither will we permit the immense number of grain-growers to be left in the dark relative to so important an interest as the one to which we allude. It is well known to our whole State that T. OGG SHAW has been toiling for many years to establish a home manufactory for farmers and to make all the implements needed by them, and to make them of the best character. To this end Mr. Shaw has succeeded most triumphantly in making vast numbers of all kinds and of a high character. Their excellence, their improved style, their finished workmanship, and the satisfaction they have given, have won for them great reputations, so that his implements have borne off many of the first prizes at every exhibition in our State. This notice is not intended in defence of Mr. Shaw only, but of many excellent California mechanics everywhere. In Stockton, Sacramento and Marysville, and other cities, and all over the State, we feel that there is now a war to be made against our home manufactures of many kinds, by interested parties whose large interests connected with importations have induced them to overstep the bounds of prudence and justice, and thus make an attack upon our home industry, which must and will recoil upon them with terrible effect.

T. OGG SHAW has recently invented and made a Combined Reaper and Mower, which is taking the attention of the farmers and winning favor everywhere, while other parties who have imported largely the Manny Reaper, and who profess to be the sole agents here, are resorting to means, which, when fully exposed will only give to Mr. Shaw and the friends of home industry, the greatest triumph ever known. This course, designed to frighten the farmer from buying the best machine, is a poor way to help the farmer and grain grower. If Mr. Shaw has violated the Manny patent we will not shield him; if he has not, try the question quickly and say so. Shaw is the man to frighten, if he can be frightened. Shaw is the man to be served with injunctions, not the farmer! not the grain grower! But we think we see the card that is being played won't win! If the farmer can be so written to and deterred from buying the California Reapers, then the party who has imported five hundred Reapers and Harvesters, can sell them; and when he has them comfortably off his hands he can afford to withdraw his suit against Shaw, for the profits made on his importations would far exceed twenty counsellors; but he threatens every farmer that uses them. That card won't do; the farmers are too wise to be thus foolishly alarmed. No man can stop these machines in the field without first giving bonds to farmers for any damages they may suffer from the loss of their crop at harvest, and they can estimate their wheat and barley at two, three or five cents a pound, and their time also, and make the bonds sufficient to cover their loss in case they have not infringed.

And now as to this patent machine. We have dealt in agricultural machines for years; but the Manny machine is no more like Shaw's combined

machine than chalk is like green cheese, or a Jew's harp is like an Eolian harp. True the moon is pale and white sometimes, and so is chalk. A Jew's harp makes music when played, and so does the Eolian harp; the latter is by far the best, for the winds of heaven that blow freely on it, give the best tone; and so with Shaw's Reaper, for it will make music for the farmer, if the windows of liberty are not shut down, that give to every mechanic the right to improve upon any patent. Congress gives every man a right to improve upon anybody's patent, and they give a patent for the improvement too. Mr. Shaw has done this, and the chief likeness which Shaw's machine bears to Manny's is, that both have round wheels; both have knives; both have seats for the driver. But nearly every farmer in our State, after trial, will pronounce Shaw's Reaper best, for his wheel is larger—his knives cut faster, and his seat is higher; and these are ominous of Shaw's success and triumph. The more opposition he has, the faster his wheels will go. The more obstacles in his way, the keener his knives will cut; and the more people try to crush him, the higher will he be seated in the opinions of all who love the true mechanic and wish well to our home industry. We therefore call upon all the farmers of our State to come to San Francisco and call at Shaw's manufactory, look at the implements he is making, talk with his workmen, look at the new reaper, and then judge righteously between man and man.

Shaw's Reapers and Mowers will stand the test of any jury, and when this case shall come before the courts we ask a jury of farmers to come and try their own case—for this is their own case. Their interest depends in a great measure on defending the right. We appeal to the farmers to look to justice and right in this all-important case.

To show that great wrong is being done to Mr. Shaw in this matter, we believe if the present suit could be enforced (which it cannot), this party would put up the price to \$350, being \$100 more than the present rate. Every man is bound to sustain "home manufactures." The success of home manufactures increases the value of labor, and this in turn increases the value of produce.

We give the following extracts from letters received by Mr. Shaw from various farmers. They show the course taken to injure Mr. Shaw in his "home manufactures," and through him every farmer in our State, and the great industrial enterprises of the day. Every honorable mind should rise up against it and give their support to him, and they will support the right. The following we copy from letters word for word. From Susan City one writes:

"Treadwell & Co., say they sent men to examine Shaw's books so as to get the names of men who had bought Reapers and Mowers of Shaw so as to prosecute them, and the farmers feared trouble."

From Vacaville:

"Mr. T. has sent here to get the christian names of men, so as to prosecute. Farmers were not so much afraid of the final result as they were of hindering the goodness of Shaw's machine being known."

In addition, the letter says:

"Your machines must and will win the day; that is the reason they wish to stop you."

Wants to know the christian name! A christian act, truly! The letter in closing, says:

"I have sent my neighbor for another machine."

This man don't seem to be afraid. From Nicolaus one writes:

"In my round of thirty miles the farmers all say they want to see your Reapers, for Treadwell has scared the farmers nearly to death by supposing they will be prosecuted, but send up your machines. They will go!"

Don't be alarmed, neighbors. If you are prosecuted, be sure you get good bonds for the damage done in harvest time. Never mind; it will be a good sale of your wheat!

Another speaks alarmingly to be sure. He says:

"Treadwell is raising thunder up here, with your new Reaper and Mower. My neighbors have received letters threatening all that use them, to stop them in the field. He writes particularly, inquiring for the christian names of parties who bought of you two machines a few days since."

The writer says to Mr. Shaw:

"Now can't you raise it— with him some way or other [Oh, fie! neighbor! don't use such bad words. Shaw will fix things all right soon], and stop his mouth? Those who love your machines say yours is worth \$50 more than Manny's."

He goes on to say:

"I shall be down in a few days, and I will buy one of your machines."

Still another letter says:

"Treadwell is writing up to this place asking the names of parties that buy your machines, and making all the stir that can be made. I received his bill notifying me that any one selling, would be dealt with according to law, and the buyer would have them stopped in the field."

He adds:

"I have two orders for you at this time, but the parties want I should say that they will have no trouble. I tell them I am not afraid. I am going to use one myself. Tell me what to say, and send me on the machine as soon as possible."

We might publish numerous letters, all bearing the same tone, but we forbear. The above is enough to show a wrong done to two great interests of our State, and if we remained silent now, when they are in jeopardy, we deserve not to be called the friend of these great interests, "AGRICULTURE and HOME MANUFACTURES." It is not pleasant to enter into private controversies in the least, and we never do unless they jeopardize the public interests, and then we feel called upon to prove our fidelity to them.

We deeply regret to know any house, especially one of so high a standing as the one named, should take the course to which we allude, and we now make these statements upon proofs placed before us. What we publish, we state here emphatically, they are the facts which we have gathered from letters from the farmers, and many feel aggrieved and injured. Besides this, we look upon T. OGG SHAW as a public benefactor. He is a friend to the mechanic, and has given employment to a large number of workmen even during all the hard times of Fraser river times, and has done a vast deal to build up California interests. While we thus speak against a course pursued by one importing house, we can freely say we can name several

importers of harvesting machines, of whom we have never heard an unkind act against "home manufactures," nor any feeling of opposition to manufacturers, other than that which was "home manufacturers," and we take pleasure in naming such houses as Southworth & Co., J. D. Arthur & Son, J. L. Pangburn & Co., and others. Also, our numerous advertisers and friends in other States, of whom cards appear in our columns.

While we will do all we can to make known all valuable implements, whether imported or not, we feel it to be our duty to speak in just commendation particularly of home manufactures, and in doing so we know every honorable mind will sustain us; although it might in some degree, not just as agreeable to them, as if we only spoke of their particular interest. We shall watch this suit with much interest, only remarking to those who would attempt to hinder home industry, that we shall ever defend it with all our energy, for it will prove the keystone of the arch to our future prosperity and greatness.

## Our Journal in the Old States.

The California Farmer in Kentucky, Georgia, Alabama, the Carolinas, Virginia, Tennessee, Missouri, Illinois, Ohio, Indiana, Iowa, Wisconsin, etc.

While we sail under the proudest title which can be given to a paper on this coast—CALIFORNIA FARMER: the proud name of our State and the name of the noblest employment to which man was ever called, we will ever labor to make our journal deserve and win the title which has been given to it by the wise and good everywhere.

The CALIFORNIA FARMER: The true friend of California and California interests; and, when we fail to be true to this noble State, or her great industrial interests, "may our right hand forget its cunning, and our tongue cleave to the roof of our mouth." We have never sought to win favor, or a wild "hurrah" from the crowd, by truckling to creed, sect, or party. We have never bowed the knee, that "thrift might follow fawning." We have aimed, earnestly and faithfully, to work out, develop and encourage all and every enterprise—the result of which would be to raise, build up, and make honorable to the world, the State of our adoption; and thus elevate our State in the social scale among her sister States; and to make the science to which we have been educated known, honored and esteemed of all men.

To do this we have labored; and we are now satisfied, we have not labored in vain. The proof of this comes to us from every portion of our own State, from every State in the Union, and from every part of the world. It comes to us in such testimonials as the one recorded in the following letter, received from an entire stranger; but yet from a lady of great intelligence, and of moral and intellectual worth, into whose hands copies of our journal had accidentally fallen. We frankly admit we feel honored and bound to acknowledge this most honorable testimonial, especially from such a source. And, while we admire and approve the most excellent and just criticisms of the Press of the present day, we too, with that lady, know there are some Presses, eye here in California, who feel the dignity of their calling; to all such, we will always offer due homage.

The standard to which this lady points, and by which we are so much honored by her in believing our journal has attained, is one to which we first directed our aim. We have ever labored to attain it; we will still labor to do more and better—to be more worthy the high tribute paid us by our esteemed correspondent; and, while we thus express our gratitude, in courteous thanks to our stranger-friend, we will, nay we ought and must, tender our most grateful thanks to the noble host of generous patrons and friends, who have, year after year, cheered and sustained us, until from the feeble, tottering gait of the infant child, we have been nourished, fed, supported and brought into a good, strong, healthy, vigorous growth—with a strong "tap-root," which has a firm hold of the earth, to hold us upright, and with broad, spreading branches, that send out their leaves, buds and flowers; one of which we now gather, and lay before our readers. It comes from the "sunny south," from one of the great cotton-growing States, where "J. T. E." resides; and her thoughts open up before us, like the pure, white cotton from the "boll," as it bursts open to the light of day.

These compliments paid us, demand from us another remark also: For the typographical appearance of our journal (and which we know reflects just credit upon us) we are indebted to the excellent practical knowledge and ability, energy and taste, of our Foreman and Printers, who have been with us from the first issue of our journal, and to whose care we can always, with confidence, commit this important part of our journal. We never can forget, that to "whom just meeds of praise and honor belong," to them should be paid.

We now give the letter from "Alabama," who will hereafter be a regular correspondent:

"I so much admire the character of the FARMER, and I regard it as some honor to write for a paper which is conducted on principles of pure morality and practical usefulness; this is the character which is palpably stamped on the CALIFORNIA FARMER. It has taken an independent, manly stand against vice, passion, prejudice and humbug. It advocates the principles of virtue, integrity, justice and common sense. It addresses itself to the thinking, the acting, part of the people. Its aim is to supply their wants and to give them the means of improvement, in all that pertains to their best interests. Thus its patriotism is undoubted; consisting, as it does, in doing practical good to our country, rather than in ranting about politics. The whole scope and design, as well as the particular style of your paper, is such as to place its general utility beyond a question. I must speak particularly of its style; for, in this respect, it differs materially from many of the papers of the present day. Every one must have noticed a certain cant mode of expression, a vulgar sort of slang, which seems to flow as naturally from editorial pens of the present day, as smart phrases from the lips of a pert school-boy. Whether this is the effect of habit, imitation, sterility, or bad taste, I am unable to say; but that it certainly does pre-

vail to a very great extent, is a truth very much to be deplored. It is well, perhaps, that newspaper literature has but a brief existence, while such a usage obtains. What would posterity think of us, if these slang editorials were to be the only mediums through which they are to judge of the taste of the present age! If these were to be the only vehicles by which the English language were to be transmitted to future generations, how would its purity be preserved? Yes, it is well that they will perish soon. Yet I see no reason why the current literature should not be in plain, pure English, even though not intended for posterity; there are thousands in our country who have no other literature, than that which newspapers afford; they form the daily mental food of our youth; they are a staple commodity, the rich and the poor can, and do, afford them. Hence they greatly influence our mode of thinking, speaking and writing; and, for this reason, should be pure. This charge is not meant to be general, for there are some Editors who have never fallen into this vulgar habit, and whose papers (for purity of diction and elegance of style) might vie with some of the best written works in the English language. Alas! they are few. In the CALIFORNIA FARMER, I have noticed none of this peculiar mannerism of which I complain. It at least comes to us in a plain, decent English dress, neither tricked out in foreign finery, nor covered with beggarly rags, nor flaunting in all the modern vulgarity of gaudy, flaming colors; but in a good, strong dress, which will last long, and wear well; and which, if it be kept for a hundred years, will give posterity nothing to sneer at in connection with the current literature of the present age. It is obvious also, that you endeavor to make your paper of general utility, not only to the farmer, the mechanic, and the professional man, but also to the lover of general literature. The concurrence of your own judgment and conscience in these remarks, will be a sufficient evidence that they are not flattering. And to sum up the matter in a few words, I must say, sir, that I regard the CALIFORNIA FARMER as a model paper, and one of the best in the country."

## Odd-Fellows' Anniversary.

At the Session of the Grand Lodge of the United States, I. O. O. F., in 1853, it was resolved to hold a National Celebration and Festival of the Order in the city of New York, on the 26th of April, 1859, the occasion marking a decade in the history of the Order, and being the Fortieth Anniversary of its establishment in the United States. It was expected that all Odd Fellows who could conveniently do so, would unite in the celebration at New York, but for those living at too great a distance to attend, it was recommended to celebrate the day in their several localities; and accordingly, a proclamation was issued by the Most Worthy Grand Master of California, requesting all Brothers on that day to abstain from their usual avocations, and hold it as a day of thanksgiving and rejoicing. In compliance with this, on Tuesday last, the 26th day of April, 1859, the Odd-Fellows of California held a general jubilee, and in the various sections were processions, orations, and amusements suited to the occasion.

In San Francisco the occasion was one of great interest. The day was very pleasant here, as well as throughout the State, and the arrangements for the celebration were well perfected. The line of procession was formed on Stockton street at half past 11, and started at 12 o'clock precisely, under the able marshaling of Thomas D. Johns, Grand Marshal of the Day. All the Lodges and Encampments in the city paraded, and with the military escort in the following order: Mounted Brass Band, followed by the Black Huzzars, Capt. John M. Freeman, on horseback, as an advance guard. Grand Marshal, Thomas D. Johns, and Aids, American Brass Band. Escort to the Order; Independent National Guard, Capt. J. B. Moore. Subordinate Lodges: Day City, No. 71; Magnolia, No. 29; Templar, No. 17; Yerba Buena, No. 15; Harmony, No. 13; San Francisco, No. 3; California, No. 1. Chaplain of the Day, Rev. S. C. Thrall. Orator of the Day, P. G. Hon. T. W. Freeman. Poet of the Day, P. G. M. Dr. J. F. Morse. Elevator Degree Lodge No. 2. Encampments: Walhalla, No. 9; Golden Gate, No. 1. Grand Bodies: Members of Grand Encampment and Members of R. W. Grand Lodge, State of California. California Brass Band. California Fusiliers, Capt. Fred. Tittel, as Rear Guard. The procession moved through the principal streets, to the American Theatre. The side-walks and balconies on the route were filled with spectators, men, women, and children, and the city presented a holiday appearance. The display was quite imposing, the members fully equipped in their various and rich regalia, with the military in uniform, presenting a scene that was really beautiful.

At the Theatre, which was filled with members of the Order, ladies, and others, the exercises consisted of: Overture, by the Orchestra; Prayer, by Bro. Rev. S. C. Thrall; Oration, by P. G. Hon. T. W. Freeman; Fantasy, by the Orchestra; Poem, by P. G. M. Dr. J. F. Morse; Benediction, by Bro. Rev. S. C. Thrall; March, by the Orchestra. From the Theatre the procession marched to the new Hall of the Order, corner of Bush and Kearny streets, where the services of Dedication were performed, under direction of the R. W. Grand Lodge of California, which concluded the ceremonies of the day. Want of space precludes us from a more particular description of the various proceedings, but everything passed off satisfactorily, nothing occurring to mar the general good feeling, or disturb the harmony of the occasion. The day will long be remembered with pleasure.

In the evening a Grand Concert and Ball came off in Musical Hall, which was attended by members of the Order in Regalia and the military in uniform. The number present was very large, occupying both halls of the building, and dancing was kept up well into the small hours.

The proceedings in various sections of the State, were similar to those in San Francisco, and by the reports everything passed off harmoniously, and there was a good time generally. We take this occasion to notice the commendable enterprise of the proprietors of the Sacramento Union. On the morning after the celebration (Wednesday) they issued their daily on an immense double sheet, containing accounts of the proceedings had on the previous day all over the State, in a very full and complete manner. When it is stated that these consisted of eight long addresses, as many poems, besides proceedings in various places received by telegraph, forming a complete history of the event, and occupying some thirty-four columns, the Union may well say, without vanity, that "the feat is one that has not been equalled in the history of Journalism in this State, if it has in the United States."

The rates of passage by the ocean steamships, for the 5th May, are advertised as follows: By the mail steamer Golden Gate, first cabin, upper saloon, \$200; lower saloon, \$150; second cabin, \$90; \$50 in the steerage. By the steamer Orizaba, first cabin, \$150; second cabin, \$100; \$50 in the steerage.

HUTCHINGS' CALIFORNIA MAGAZINE for May, has been laid upon our table, and will be read, of course. This number is finely illustrated with new scenes in California, and is still improving in interest.

## Route to the Yosemite Valley.

At the request of many friends and subscribers, who desire to visit the Valley of the Yosemite, we republish a portion of our last year's description of the route to the Yosemite Falls; and shall add, from week to week, the most important facts we obtained by actual observation, in traveling over the route and noticing the data here registered, as a guide to travelers. Our object is to call the attention of visitors to all points of interest and importance within the bounds of our State, as well as present all new facts in relation thereto:

Travelers to the magnificent scenery of the great valley, starting from Marysville or Sacramento, will take the stage route from the latter place to Stockton; and, from San Francisco, by steamers to Stockton. Fare by steamer, including state-room and supper, nine dollars. A pleasant trip will always be made on the Cornelia, Capt. Conklin, or the Helen Hensley, Capt. Chadwick, from whom, as the commanders of these steamers, every courtesy and attention will be received, as no steamers in the world are more celebrated for good commanders and officers than those of the Steam Navigation Company.

Stockton is the first stopping-place for travelers from other cities; and a day or two can be profitably and pleasantly, as well as wisely, spent in this city. The Weber House is the largest and principal hotel, kept by Mr. and Mrs. Dillon, a first-rate family hotel. Visitors should make it a point to visit the beautiful garden of C. M. Weber, Esq., one of the highest cultivated, as well as finest gardens in the State, laid out with reference to the benefit of public as well as private taste. The walks open to the public are of great utility and service, and a place of public resort. The Court House, the Society of Natural History (in the Court House), the City Fountain (the most beautiful artesian fountain in the State, one thousand and three feet in depth, and throwing a volume of water about eight feet high, then breaking into a beautiful jet d'eau), the Insane Hospital and grounds—these are all worthy of a visit.

This being a city of windmills, the various styles are a matter of interest to view them, as by their means fountains and jets play in many gardens. The garden of Mr. J. W. Newell has one hundred small jets, one to each tree in the garden; and in other gardens the same plan is adopted. There are many very handsome private gardens; those of Dr. Holden, Dr. Reid, Dr. Bateman, Mr. Huggins, and many others. The Female Institute, under the charge of Dr. and Mrs. Collins, is a fine College, and meets with due encouragement.

From Stockton, the means of conveyance are by the stages, that leave for all parts of the interior. The route from Stockton to La Grange, via Dickinson's Ferry, will offer much for visitors to see, as connected with the mining interest—very extensive water-ditches, steam and water-power. We name the different routes and lines, with the stopping places, distances, time of starting, and the fare: Fisher & Co.'s stage line, Stockton to Mariposa, leaves Stockton every Tuesday, Thursday and Saturday, at 6 o'clock, a. m., stopping at Kerrie's, Heath & Emery's Ferry, and Dickinson's Ferry; distance to the latter place forty-six miles, fare \$6; thence to La Grange, ten miles (to take the Coulterville route to Yosemite), or to Snelling's Ranch, Hornitos, Bear Valley, and Mariposa, fifty-four miles from Dickinson's Ferry—the fare being \$10 from Stockton to Mariposa. The roads are excellent, stages number one, and drivers attentive.

For those who wish to visit the Big Trees, at Calaveras, or Sonoma and Columbia, we append the stage route of each: Stockton to Sonoma, by the way of Hamilton, Twenty-Six Mile House, Knight's Ferry, Mount Springs and Chinese Camp, a distance of sixty-eight miles, fare \$8. This line has also fine coaches, and makes good time. From Stockton to Columbia, Dillon & Co.'s stage, by way of Hamilton, Knight's Ferry, and Mount Springs. Both lines connect with a line for Coulterville. From Sonoma and Columbia, stages convey passengers to Murphy's and the Big Trees.

At La Grange travelers take the stage, which runs every other day, or take private conveyance to Coulterville. This route is along a rather barren and rocky road, with but very little to please the eye; here and there a stock ranch or general farm. Coulterville is about twenty miles from La Grange, and is quite a thriving place. The town of Coulterville appears to be a good business place. It is named for Mr. J. Coulter, the early pioneer. Coulter's Hotel is well kept, Mr. and Mrs. Coulter giving their personal attention and unremitting care to their patrons.

Those who visit the great valley can procure an outfit here; and it is unnecessary to bring eatables or drinkables from home, as supplies can be procured in the valley. Messrs. Rockwell & Co. and Cashman & Co. have excellent stores, and they will give you good articles at fair prices. If horses are wanted, go to the stables and be well fitted out. Coulterville is thirty miles from Yosemite Valley.

When passing on to the valley, visitors should be sure, by all means, to visit the Cave, some eight or ten miles from Coulterville. This is one of the most interesting sights in our State. From the Cave the road ascends the mountain. The Coulterville road for Yosemite, for the greater distance, is a good mountain road. There are but few dangerous defiles or passes, up or down the mountains, on this route. The last pass down the mountain, into the valley, is about the worst we have to meet; but, with a good horse and good courage, all goes well. Unless travelers have their own well-broke horses, we would advise mules for visiting Yosemite, and especially for ladies.

As many parties will hereafter visit this wonderful spot, and as many circumstances may occur to detain some of the party, we would suggest that those who lead should have their horses shod with one shoe, by which those who are left behind may track them. In traveling up and down the steep passes, let every one (ladies excepted) throw out such stones or impediments as may have fallen in the path. Each doing a little, the whole amount of good done will be great. Let every visitor thither be generous and carry a good supply of the latest papers and some books for general use. These relieve the mind, wearied sometimes by intense gazing upon the magnificent scenery. Travelers will find paper, pencil and memorandum book very convenient; also, a large book in which to press flowers. They will also find a haversack, to swing over the shoulder, most convenient to carry books, and curiosities which they may collect. And, by all means, take one of Lawrence & Housworth's best opera-glasses; else about half the beauty of scenery is lost. One thing is most important to ladies, however much they may object to the bloomer dress in cities, at Yosemite it is the only convenient, comfortable, or safe one, and all should adopt it, for among trees, rocks, rugged cliffs, and mountain passes, no other dress is so convenient.

From the notes taken during our visit last season, we shall give our readers such points of interest as we esteem worthy their special attention, so that they can record them previous to their intended trip; and thus be prepared to examine, and not lose the most valuable scenes by a want of information.

THE POWER OF MEDICINE OVER DISEASE.—We know of no better illustration of this fact than the wonderful effects of the Oxygenated Bitters, in eradicating from the system Dyspepsia, and all functional diseases of the stomach, and restoring impaired digestion.

## DOMESTIC SUMMARY.

Miller's Steam-wagon was tried at Marysville, on Monday last, and it is stated, ran exceedingly well.

The very best of butter is being manufactured in quantity, on several of the ranches near San Andreas.

The water in the upper Sacramento is higher now than at any time during the past two years. It has, however, opposite Sacramento, fallen several inches.

Thomas Allen, near White Rock, El Dorado county, has a heifer, which, at the age of fifteen months and two days, recently gave birth to a large healthy calf, it is said.

A lump of gold, weighing sixty-four pounds, and containing only two pounds of quartz, was taken from the Willard claim, near Dogtown, Butte county, one day last week, says the Marysville Democrat. One hundred and fifty pounds of gold were taken from the same claim on the same day, and two Digger Indians packed into town with the load.

From Lagrange, Stanislaus county, a letter to us, dated April 25, says: For some two weeks the weather has been dry and most of the time cool, with high winds, which has been hard on the crops, hay and grain; and if we do not get some good showers soon, the crop of grain will be light in this county. The hay crop is light, and by some of those best informed, I am told, the hay crop will fall short of last year; and from what I have seen, I am convinced of this.

A Bee-Tree was lately found near Vallecito. A writer in the San Andreas Independent, noticing a rich vein of quartz struck that realized over \$2,000 from three sacks of dirt and quartz, says Mr. D. E. Isbell made another strike, and one by no means common in California. He found a bee-tree with a fine swarm of bees in beautiful working order. The tree in which they were found is near the head of Murderer's Gulch, about a mile from Vallecito. This must be a swarm that escaped from some hive in the valley last season. Mr. Isbell intends to hire and endeavor to domesticate them.

We see it stated (says the Placerville Observer) that a man named Wm. Sharp, of Shasta Valley, was recently poisoned and died from eating a small bit of a root called wild parsnip. There are many poisonous plants in the mountains of California, and it is really strange that men will be so foolish as to put into their mouths things which they know nothing about. We once knew a whole camp of miners who were all made very sick, and came near dying, from the effects of eating greens made from what is known as squaw cabbage. People cannot be too careful about matters of this kind.

A miner who has been, during the last winter "snowed in" on the head waters of the Tuolumne river, arrived at this place, says the Sonoma Democrat, with a fine lot of thirty or forty skins of various animals that he had captured. Some of these skins are very valuable. Those of the black fox bring from \$74 to \$140; the silver grey from \$45 to \$50, and others prices ranging from \$10 to \$30 apiece. We believe this is the first invoice of skins or furs sent from this county since the discovery of gold.

The question, "Will water ever come?" has at last been answered affirmatively—the roaring of the fluid as it comes dashing along through the numerous flumes and ditches tells joyful news to the community generally, but particularly is its sound a welcome one to the miner. In nearly every town and camp in Sierra county, says the Mountain Messenger, the miners are either working or making preparations to go to work. The ditches in this place are running in full, and several companies are now at work on Rabbit Creek.

The promise of fruit is abundant at Centerville (says a writer in the Placerville Observer), while the late rains have made the adjacent ranches of Messrs. George Kerber and Wm. K. Crego look like promising fields in harvest. Many of our people are turning their attention to stock-raising, and tax collectors "dew say" we are the richest little town in this respect in the county—Boswell and Brown numbering something like one hundred head each, of beef cattle. In mining, several claims have been averaging about six dollars a day to the hand, and the "bone and sinew" in this place have been amply rewarded, generally, this winter.

In relation to the fruit crop in Eldorado county, the Placerville Observer says: From the lateness of the season, we have good reason to hope that the recent chilly weather is the winding up storm, and it is gratifying beyond measure to know that the long winter of 1859 has passed by without destroying the fruit crop. From present indications we shall have an unprecedented abundance of every variety of fruit. The late frosts killed a good many of the peaches, but there is still enough left upon the trees, and the crop will be all the better for not being too full. This is the first season that our Eldorado people have had a fair prospect of having a full supply of fruit of their own raising. In addition to the apple and peach crop, there will be a bountiful vintage, and several of our vine raisers expect to make many casks of wine for exportation.

## Excellent Features of the Odd-Fellows Celebration

We regret we cannot more fully notice this splendid pageant, for there were many points of intense interest, from morning till morning again. The brightest feature of the whole scene to us was the Christian character manifested in the presence of men of all nations, sects and creeds, brought together, by the genial *Friendship, Love and Truth*. Great credit was due to the Grand Marshal for the perfection of his plans, and the successful completion of them. The music, both day evening, was admirable, and the hearty interest given to the cause by woman, added to its worth, forming a link of beauty like the emblematic wreath offered from their fair hands at the gorgeous spectacle at the Theatre.

The elegant Oration of Judge Freelon, the intellectual Poem by Dr. J. P. Morse, and the grand display of the Military, all conspired to make the whole scene one of honor and glory to the brotherhood.

HOME MANUFACTURES—California Saddles and Harnesses—California Labor Wms.—In years past, all our saddles and harnesses were imported, and our Spanish saddles cost more in their stamping than the entire saddle will now cost made at the manufactory of Main & Winchester. We have often heard of \$40, \$50, and \$60 being paid for the fancy work on a saddle, but now saddles are sent from this celebrated warehouse varying in price from \$35 to \$60, equal to any that formerly cost from \$75 to \$150. Recently we saw some fine ones that were ordered for persons who were going to the older states, and there is no better way for the friends of our industry to prove the excellence of our own workmen and the advance we have made, than to buy some of these fine saddles and send them to friends in the older states, a goodly present and a good evidence of our progress as a State.

## BY THE OVERLAND MAIL.

The Overland Mail arrived on the 29th of April, bringing dates from St. Louis to the 7th and New York to the 6th inst. We gather the following:

The New York Times Washington correspondent says: "There are probabilities that a contract will be made within a few days with a New York company, for carrying the mails from New York to San Francisco, via Nicaragua. This company contemplates using the Collins steamers, and will force the transit, leaving the consequences to be taken care of by our ships of war at each terminus. Mr. Buchanan is opposed to the project, and suggests delay, but Mr. Cass urges immediate action, and the Post Master General favors the proposition."

Intelligence has been received, announcing a peaceful adjustment of the difficulty with Paraguay. The precise terms of the settlement are not stated, but it is known that ample indemnity has been conceded to the family of the person killed on the steamer Water Witch, and to the American Company represented by Mr. Hopkins.

The Sickles trial was progressing, and will probably occupy at least two weeks. A great number of witnesses have been summoned.

At New Orleans, on the 6th of April, about noon, the lower levee Cotton Press, in the four squares adjoining, numbering about twenty houses, were on fire and still burning, at the date of the dispatch. Loss nearly a million of dollars; fully insured.

The suit, involving the forfeiture of the Pacific Railway Charter, was decided in favor of the old Company, by the Marshall (Texas) Circuit Court.

The Washington Grand Jury has made presentments against A. G. Seaman, the late Superintendent of Public Printing; Gen. Cullom, former Clerk of the House, and P. D. Duval, of Philadelphia.

Great activity prevails in our Navy Yards, in getting ready vessels for immediate service.

Large crocasses have opened in the banks of the Mississippi, on the Louisiana side of Diamond Island, flooding many plantations. The river, at Vicksburg, is nine inches higher than last year.

The Suffolk flour mill, Boston, was destroyed by fire on the 2d of April, with 3000 barrels flour and large quantity of grain, etc.; \$50,000 insured.

At Columbus, Ohio, on the 6th of April, the dry house of the Tub and Pail Factory was destroyed by fire; fifteen or twenty persons were scalded, several seriously, and two, it is supposed, fatally.

In Connecticut, the Republicans have elected the entire Congressional delegation.

The Opposition have succeeded in the municipal elections recently held in St. Louis, Louisville and Cincinnati. The Republicans have carried Cleveland, Springfield and other western cities. Brooklyn, N. Y., elected the democratic ticket.

A GIGANTIC ENTERPRISE—THE AMERICAN EXCHANGE.—This immense hotel has been raised over four feet from its original foundation by means of the hydraulic power. The hotel with its hundreds of guests were pursuing their usual duties, eating, drinking and sleeping, washing and cooking, shaving, reading, chatting, etc., all busy, have been elevated in the world some four or five feet nearer heaven than usual. This hotel has thus been brought up to the grade and above it, and now looks one hundred per cent handsomer for the improvement; all this has been safely and handsomely done, and is most creditable to the engineer, who, however, always does his work well. The American Exchange is one of our best hotels, and the register tells of as liberal a patronage as any hotel. The parlors, saloons and chambers are all elegantly furnished. The table is equal to the best, and a glorious good company, always merry and happy, are all regulated by a good "Orderly Sergeant," and a mighty good secretary and cashier.

That some idea may be formed of the power required to elevate this building, we would state that the building and contents weigh about two thousand tons.

FAMILY SEWING.—The rapidity and elegance with which family sewing can now be done with the famous Sewing Machines, should awaken the attention of every family in our State. Mrs. P. E. Rogers presents her compliments to the friends of industry, and by the card in our journal, the lady pioneer of the Sewing Machines asks the patronage of her friends and the public. The samples of this lady's work have never been surpassed for finish and elegance—recommendations enough for those who desire her aid.

CULTIVATION OF THE ORANGE AND LEMON.—The citron tribe is soon destined to take high rank among the products of our rapidly progressing State. We have been preparing the history of this valuable fruit and shall give it to our readers in our next, with the best modes of culture, and hope to interest our readers and induce all orchardists and gardeners to grow this delicious species of fruit. It can be grown in every county of our State, either on open ground, or in the conservatory, or in tubs in the happy homes of all our valleys.

SPECIAL NOTICES.

THE GENUINE PITT'S MACHINE. T. OGG SHAW'S, is the ONLY PLACE where the Genuine Pitt's MACHINE, made by John A. Pitt, can be had. Farmers will please, note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. (13) T. OGG SHAW.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Colds, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it was a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly circulating in public favor, until its name and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Dr. James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED! The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Consumed Consumption, and its power as a safe, certain, speedy, pleasant and efficient remedy cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "J. B. WISTAR" on the wrapper, as well as the printed name of the proprietor.

BETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass. For sale by—JAMES MORRIS, HENRY JOHNSON & Co., and HENNINGSON & Co., San Francisco; CHAS. MORRIS & Co., R. L. McJannet & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine every where. 23

To OUR CORRESPONDENTS.—We have the copy of the continuation of the story of "Bertha and Phebe," from Mother Ruth, which will appear next week. The present week has loaded our table with valuable manuscripts, from almost every State in the Union; to each and all, we tender our warm regards for them. The steamer now due will bring us many gems, which we have been promised, so as to enable us to lay before our readers many good things. We received a valuable letter from I. D. Morley, Esq., of Lagrange, in addition to an extract published this week—the letter in our next.

"Great Facts from a Little Journal," or a criticism upon the value of foreign essays, by Agricola, will appear next week.

Thanks to the Turn Verein Society for their courtesy in sending us a polite invitation through the hands of Dr. Rabe.

On the third page will be found the story from Real Life, "Bertha and Phebe," by Mother Ruth; and, in the "Ladies' Department," on sixth page, "Mothers' Papers on Education," both worthy of careful perusal; "Travels in Mexico" will be found of deep interest. This number also presents many themes of great public importance.

THE GREAT YOSEMITE VALLEY.—We invite the attention of all our readers to the "Route to the Yosemite," and remarks connected therewith. A very select party will start at the earliest date with well qualified guides and all necessary apparatus for a most interesting trip. Many names are already registered. In our next number we shall be able to publish special advices from the Valley, as to its condition, and the time it will be safe to make the trip.

## SAFES! SAFES!!

LILLIE'S IMPROVED WROUGHT AND CHILLED IRON SAFES. Fire-proof, Powder-proof, Drill-proof, and Burglar-proof. With Lillie's Unpickable Powder-proof Lock.

The best safe made for resisting both fire and thieves, as proven in innumerable instances. As to a recent test by fire, reference is made to the late burning of the Crystal Palace, New York, at which all other Safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Chicago. Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl street, N. Y.: Dear Sir: You ask about Lillie's Safe, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned on the 27th of December last, and at that time we had one of these in our office and three in our warehouse. The safe in our office was filled with our books and papers. The safe in our warehouse was filled with our books and papers. The safe in our office was filled with our books and papers. The safe in our warehouse was filled with our books and papers. The safe in our office was filled with our books and papers. The safe in our warehouse was filled with our books and papers.

Yours, truly, BUEL & MOORE. Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of to-day is received. In reply we are happy to say the safe we bought of you last spring (Lillie's Patent) came out of the fire unharmed. In fact, in the fire, we were saved by the safe. The safe in our office was filled with our books and papers. The safe in our warehouse was filled with our books and papers. The safe in our office was filled with our books and papers. The safe in our warehouse was filled with our books and papers.

[From the Troy Daily Times, October 6th.] LILLIE TRIUMPHANT! A GREAT TEST! The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of the Lillie's Patent Safe, which could have been desired. Those who were on the ground say that it was the hottest burning they ever saw; the wares of the safe manufacturers were in an exposed situation. Lewis and Clark, and the Lillie's Patent Safe, were the only ones that remained unharmed. On overhauling the ruins this morning, Stearns & Morris's Safes were burnt out, others were complete wrecks; Lillie's alone were unharmed, except in the frying of the paint upon the inside doors. The last two could not have been arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

[From the New York Times, October 6th.] Go to the ruins of the Crystal Palace, and examine the so-called Fire-proof Safe, manufactured by Stearns & Morris, and other Sheet-Iron Safe makers, most of which are a mass of ruins. The unexpected test will open the eyes of the public. Also, examine Lillie's Chilled Iron Safe, which requires only a coat of paint to make it as good as new.

A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 23 Sacramento street.

LILLIE'S Celebrated Bank Locks, On hand, and for sale. The best Bank and Vault Lock in the world.

M. S. MARTIN, the former proprietor of the House from 1851 to 1857, will again be found at the "Old Corner."

## Ladies' Department.

## THE BEAUTIFUL WATCHER.

BY W. A. DEARBORN.

A mother stood by a dying child,  
The last of her household band;  
Husband and children all were gone—  
Gone to the spirit land.  
It slept and smiled, but a cold, damp brow  
Told sadly it was ceasing to live,  
For its smile was only in answer to one  
That a guardian angel might give.

"Mother," she whispered, "I know that ere long  
I must sleep in the grave's dark gloom;  
But papa used to call me an angel, you know,  
When he sang with me in this room.  
I must be in a dream, for I hear his voice,  
Repeating in gentle tone—  
'Bright angel come! Bright angel come!'  
Dear mother, are you alone?"

"For I saw near you such a beautiful form,  
With a face so lovely and white—  
It is near you now, and sweetly smiles,  
As it has through all the night—  
And, mamma, when you slept for a little while,  
I thought I could hear it sing—  
But I fell asleep when I shaded my eyes  
From the light with its beautiful wing."

"But it sang of a home that was far away,  
In a voice so soft and low,  
And how glad it would be to carry me;  
And I said I would like to go—  
I would be so safe on his gentle breast,  
And 'twould comfort your heart by day;  
For even though dead, I will still be yours  
When the watcher takes me away."

"My child, no form of beauty's near—  
The lamp no longer burns,  
And moonlight only in the room  
The gloom to darkness turns,  
I see no watcher by my side,  
I'm standing here alone—  
Oh, who will try to comfort me,  
When thou, my child, art gone?"

"Dear mother, one kiss! I am colder now,  
And the light to my eyes grow dim—  
And a voice like Ida's, before she died,  
I hear in a low, sweet hymn.  
The beautiful watcher you cannot see  
Not yet from my side has flown—  
'Tis dark! 'Tis dark!' She spoke no more—  
The mother and clay were alone!"

## Mother's Papers.

[We shall always be happy to make a place for  
"Mother's" Papers.]

Spasmodic training of children is generally fol-  
lowed by the same withering result, as spasmodic  
irrigating of the tender plant. The long neglected  
soil has become dry and hard, making the plant  
stunted in its growth, and apparently dying. An  
effort is made to resuscitate it, and vigorously for  
a short time a faithful irrigating, morning and  
evening, is resorted to; very soon tender little  
shoots can be seen springing up in all directions  
from the roots and from every branch; in the  
closely folded leaves far out of sight are hidden  
the buds which only require time and nourishment  
from the stalk to develop their beauties. The  
plant is getting along so finely, and the weather is  
so warm, it takes so much water, the facilities for  
applying it are inconvenient or irksome, that the  
thrifty plant is neglected. The tender vigorous  
leaves are more sensitive to the rays of the scorch-  
ing sun and the rude winds than they would have  
been had they never had the artificial watering.  
Soon the leaves curl up, the buds wither, and the  
stalk dries; the beauty and the interest of the plant  
gone. Mothers, it is so with your little girl;  
her golden hair hanging in prettily turned ring-  
lets—her mild blue eye that always looks as  
though it were swimming in a tear—her even,  
pearly little teeth, that as her tiny curved lip parts  
with dimples playing around, present themselves,  
and as often as the resemblance of her papa—the  
fair forehead which seems too well developed—the  
fine, beautifully moulded neck and shoulders—the  
fa, faultless hand and arm—its skin almost trans-  
parent—all speak of a sensitive nature. Your little  
boy, too, he is not as gentle as sissey; even in  
infancy there are many unmistakable evidences of  
the natural calling of the sexes; his cry is louder,  
more boisterous than the girl baby; his head is  
larger, more corners about it to be smoothed here  
and there by looks and words continually from  
Mother; his will seems more resolute and at times  
all effort seems to fail in the desired object; talk-  
ing persuasively, punishment in various ways held  
up before him, but all to no purpose. Did you  
ever then appeal to the honor of your boy? Do  
you remember how quick his keen eye moistened?  
His feelings were touched; he was melting in peni-  
tence; his very countenance looked "sorry,  
mamma; never will do it again!" This is the mo-  
ment to seize to make an impression upon the child's  
mind. It can be done in a few words; fewer the  
better, but they will never be forgotten. One  
scene like this awakens the child's consciousness,  
and the forgiveness granted makes him happy and  
all the more ready to yield again. Do not sup-  
pose by correcting a child once, for any fault, is  
going to suffice for it; it is not so; it is the work  
of a lifetime with the true mother. Mildness and  
firmness should always characterize the tone in a  
mother's trainings. At times this seems almost  
impossible, especially to those who have never  
thought of reproof or chastising a child except  
when angry or excited. Ah! this is the last time  
in life to correct a child. No mother of any re-  
finement could ever do it. How painful it is to  
see a coarse, vulgar woman, rudely take the timid  
little child, and give it a push, accompanied with  
cruel blows on both ears, sinking it tremblingly  
into the corner, not daring to raise its eyes in its  
parent's presence, its very spirit crushed to the  
earth. Another species of governing children that  
many most plead guilty to, and that is, to-day  
fail to notice a case of insubordination; to-mor-  
row the same case is met with severe chastise-  
ment and great wrath. The consequence of such  
discipline causes the subject to see the lack of  
justice, which is the foundation of all salutary cor-  
rection. No mother should ever instigate children

to rebel against their instructors; turn a deaf ear  
to such tales and complaints against teachers. If  
you would know more of their description, go and  
see for yourselves, or inquire of others. It would  
be far better for you to move your children alto-  
gether from such discipline, than to allow them to  
remain, bringing home tales against their teachers.  
Temptations should not be placed before children  
unnecessarily, with a promise of punishment if  
the rules are violated. They have not the strength  
of mind to resist temptations. Mothers should  
not, as a general thing, correct their children in  
the presence of others, or even allow one member  
of the family who may be in possession of the  
facts and secrets of a private reprimand, to speak  
of it in the presence of another.

"The most excellent thing of a Spartan educa-  
tion," says a historian, "was its teaching young  
people how to obey. For this reason Agassilaus  
advised Zenophon to send his children to Sparta."  
One thing above all others should be impressed  
upon the child's mind, and that is a regard for  
truth. Encourage the love of candor and frank-  
ness, and a hatred of hypocrisy. None can sup-  
ply a mother's place; none can feel her interest;  
and as in infancy she is the best nurse, so in child-  
hood she is the best guardian, the best instruct-  
ress. Let her take what help she may, nothing  
can supersede her own exertions. She must give  
tone to character; she must plant the first seed;  
the fruit, good or evil, will correspond with the  
seed sown.

We have heard in poetry how delightful it is to  
"revere the tender thought." But these instructions  
are not without their trials. And well is her care  
repaid. As she fondly takes the infant to offer it  
its nourishment; on whom does it smile so sweetly  
upon as its mother? To whom do the little boy  
and girl fly so naturally for sympathy as to their  
mother? And often in after life, does not youth  
repose in confidence securely on a mother, and  
seek the counsel of a mother's faithful heart, and  
hide its grief on a mother's tender bosom? Long  
after the grassy mound has become settled, and  
the simple head-stone tells of its occupant, does  
the child remember and heed what mother said. It  
is a beautiful relationship, and if mothers would  
secure the love and respect of their offspring, they  
must not grudge the instructions given. As pa-  
tience, perseverance and self-denial are practiced,  
so will the reward be.  
April, 1859.

THE FORGET-ME-NOT.—Untold sentiment clusters  
around this flower; and this alone makes its cul-  
ture in our flower-gardens, or in some moist, shel-  
tered nook, desirable; add to this, its intrinsic,  
modest beauty, and its easy cultivation, both in-  
doors and out. Its Latin name is *Myosotis palustris*.  
It is found in moist lands, growing wild, over all  
Great Britain and Central Europe, and when once  
it has a foothold in a favorable locality, in this  
country, it sustains itself without further care.  
We have a native *Myosotis*, which resembles the  
European, but the flowers are smaller, and the  
whole plant not so pleasing. The true Forget-me-  
not has a cluster of light blue flowers in a naked  
raceme; the corolla is tubular, five-lobed; the lobes  
nearly round, and the eye golden-yellow. Seeds  
should be sown in a warm, moist place, or in pots,  
also keep warm and moist.

A LIVING FAITH.—In a public school in New  
York, a short time since, on an alarm of fire, a  
terrible panic ensued, and many of the scholars  
were injured by rushing to the doors, and one of  
the teachers, a young lady, jumped from a window.  
Among the hundreds of children, with whom the  
building was crowded, was one girl among the  
best in the school, who through all the frightful  
scene, maintained entire composure. The color,  
indeed, forsook her cheek. Her lip quivered.  
The tears stood in her eyes but she moved not. After  
order had been restored, and her companions had  
been brought back to their places, the question  
was asked her how she came to sit so still, with-  
out apparent alarm, when everybody else was in  
such a fright. "My father," said she, "is a fire-  
man, and he told me if there was an alarm of fire  
in the school, I must just sit still."

RECIPES.—Sandwiches are a favorite dish at  
evening parties, when properly prepared. The fol-  
lowing recipe is said to be very good: Chop fine  
some cold dressed ham, say about a quarter of a  
pound, put it in a basin with a tablespoonful of  
chopped pickles, and if you like, a teaspoonful of  
mustard, with a little cayenne; put about six  
ounces of butter in a basin, and with a spoon stir  
quickly until it forms a kind of cream; add the  
ham and seasoning, mix all well, and have the  
sandwich bread cut in thin slices, upon which  
spread a little of this mixture; have already cut  
thinly intermixed with fat, either cold roast beef,  
veal, lamb, mutton, poultry, pheasant, grouse,  
partridge, etc., either of which lay evenly, and not  
too thick, on your bread; season with a little salt  
and pepper; cover over with another piece of  
bread; when your sandwiches are ready, cut them  
in any shape you like, but rather small and tastily  
and serve.—Ohio Cultivator.

HIST IN WASHING CLOTHES.—The American Agri-  
culturist asserts that the great secret of the suc-  
cess of nine out of ten of the washing fluids, mix-  
tures, and machines which have been sold over the  
country for many years past, is not so much owing  
to the inherent qualities of the articles themselves  
as to the process of soaking which they invariably  
recommend. If people pursuing the old sys-  
tem of washing, would simply take the precaution  
to throw all the clothes to be washed into water  
ten or fifteen hours before beginning operations,  
they would find half the labor of rubbing and  
pounding saved in most cases. Water is of itself  
a great solvent, even of the oily materials that  
collect upon clothing worn in contact with the  
body, but time is required to effect the solution.  
Every one is aware of the effect of keeping the  
hands or feet moist for a few hours—the entire ex-  
ternal coating of secretion is dissolved. The same  
effect is produced by soaking for a few hours  
clothes soiled by the excretory matter of the skin.

TO TAKE OUT PITCH, TAR, RESIN, PAINT, ETC.—  
If any of these happen to get on a garment, either  
linen or woolen, pour a little alcohol on the place  
and let it soak in about half an hour. Then rub  
it gently, and you will find the alcohol has soaked  
out the glutinous quality, so that it will easily  
crumble out.

CEMENT FOR CHINA AND GLASS.—With a small  
camel-hair brush, rub the broken edges with a  
little carriage-oil varnish; and if neatly put to-  
gether, the fracture will hardly be perceptible, and  
when thoroughly dry, will stand both fire and  
water.

IT seems so easy to be good natured, that it is a  
wonder anybody takes the trouble to be anything  
else.

WHEELER & WILSON  
MANUFACTURING COMPANY'S  
SEWING MACHINES.343 Broadway, New York.  
Agencies throughout the United States.

Highest Premium again awarded by the American  
Institute, at the Crystal Palace, Nov. 5, 1857.  
Also, highest Premium awarded at the Illinois State  
Fair, and Maryland Institute, Baltimore; and  
Maine State Fair.

SEE THE FIRST PREMIUM  
SEWING MACHINES.

WHEELER & WILSON'S SEWING MA-  
CHINES took the FIRST PREMIUM at the Me-  
chanics' Fair, Sept. 1858.

Wheeler & Wilson's Sewing Machines  
Were recommended the HIGHEST PREMIUM at  
the State Fair, Marysville, August, 1859.

Wheeler & Wilson's Sewing Machines  
Were recommended as the BEST FOR FAMILY  
USE, at the San Jose Fair, Sept. 1859.

Wheeler & Wilson's Sewing Machines  
Are simple, not liable to get out of order, make a  
stitch alike on both sides of the fabric sewed, turn the  
hem, use the cotton from an original spool, by use of a  
NEW TENSION, and are capable of sewing the  
FINEST AND COARSEST fabrics, LEATHER IN-  
CLUDED.

H. C. HAYDEN, Agent,  
corner Montgomery and Sacramento streets,  
SAN FRANCISCO.

GROVER & BAKER  
SEWING MACHINES.  
REMOVAL.

THE GROVER & BAKER S. M. COMPANY HAVING  
assumed the business heretofore conducted by  
MR. S. O. BRIGHAM,

For the Sale of our Machines in this City,  
Take this occasion to announce our REMOVAL from the  
premises lately occupied by him, to the more

COMMODIOUS AND CENTRAL STORE,  
No. 118 Montgomery Street,

AND WOULD INVITE THE SPECIAL ATTENTION OF  
Ladies,

And all who have an interest in  
DOMESTIC ECONOMY,  
And the Emancipation of the FEMALE SEX from the  
wearisome and overburdening Slave-work of the  
NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES,  
The superior Excellence and unmistakable Advantages  
of which over those of all other Manufacturers, cannot  
fall to be apparent to the most casual inquirer.  
We have lately perfected, and introduced into this  
market, several

NEW AND IMPROVED STYLES,  
Which, while embracing all the essential and exclusive  
qualities secured by the Original

GROVER & BAKER PATENT,  
Have in addition many New and Valuable Improve-  
ments, and are more simple in construction;  
make less noise, run faster, and perform

A Greater Variety of Sewing,  
than any other Sewing Machine extant.  
The capabilities of our Machine are not limited to any  
particular description of Cloth Sewing, but ex-  
ecute with the most wonderful rapidity and nicely.  
Every description of Fine or Coarse Sewing,  
UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT  
Can be procured of us, for either Old or New Styles of  
Family Machines.

That our Machines may dispense their benefits through-  
out the State, in the shortest possible time, we  
HAVE MADE A LARGE REDUCTION  
from our former Rates, and with pleasure announce  
our Prices—

\$75 to \$160;

Varying, according to size and finish.

For Bag-making,  
And all Manufacturing where Sewing is required, our  
MANUFACTURING MACHINES  
stand pre-eminently, and their qualities are too well  
known to require comment.

Samples of Work and Descriptive Catalogs of  
Machines, Prices, etc., sent per mail. All Machines  
warranted. All orders for NEEDLES, DUPLICATES,  
PARTS, COTTON, Etc., must be accompanied by Cash.  
GROVER & BAKER S. M. COMPANY,  
No. 118 Montgomery Street.

R. G. BROWN, Agent.

## AGRICULTURAL.

No. 125

## McCormick's Chicago Reapers!

Three Sizes—5½, 6 and 7 feet Cut,  
WITH EXTRAS FOR ALL THE DIFFERENT PAT-  
TERNS, from 1852 to 1859. (Agent for the Manufac-  
turers for the Pacific Coast.)  
2500 sold in 1855, 4000 sold in 1857,  
4000 sold in 1856, 4500 sold in 1859,  
15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim  
to have manufactured and sold anything like so large a number  
of Reaping and Mowing Machines during the same  
time, while my experience dates back to the origin of my ma-  
chine, in 1831, having been actively and exclusively engaged in  
their manufacture for the last fifteen years. I am now more  
largely engaged in the manufacture of these machines than  
ever before, and, with my improvements for 1859, do not  
hesitate to warrant my machine as a Reaper, Mower, and  
Reaper and Mower, superior to any other for simplicity, dur-  
ability and perfect working; and further to say, that farmers  
who may desire it are at liberty to work my machine through-  
out the harvest with any other, and keep and pay for the one pre-  
ferred. The position of the Raker in my machine (as patent-  
ed), upon the main frame, where there is great strength, and  
where the weight adds to the power of the machine, is the  
only right one. Other makers have to haul their Raker on the  
platform, where he must submit to having the dust thrown in  
his eyes by the operation of the reel, and to being jolted over  
the clods by the little platform-wheel over which he rides,  
necessarily racking their machine to pieces. The accounts  
in part, for the great durability of my Machines  
as compared with others.

Great Council Medal awarded my machine in London, in 1851.  
Grand Gold Medal of Honor at Paris, in 1855.  
Highest Prize at the French Universal Exhibition, in 1856.  
Highest Prize of Royal Agricultural Society of England, in '57.  
Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the *Manny*  
machine, claiming the highest honors, etc., at the French Uni-  
versal Exposition, in 1855, are known by them to be FALSE.  
The success of my machine, as indicated by figures above, is  
its highest praise; while the awards of Premiums, generally,  
are worthy of no confidence, although Reapers-makers make a  
business of laboring and scheming to secure the little Annual  
One-horse Premiums of the country. Although it may not be  
generally understood, it is nevertheless true, that these ma-  
chines have always been sold at comparatively low prices, and  
but for the boldness with which I introduced and sold them by  
thousands, for the ten years past, other smaller manufac-  
turers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and  
others, of the truthfulness of every statement I have made, and  
much more. I may further remark, that all of the Reaping  
Machines of any prominence in the country, are mere modifi-  
cations of my machine; all other manufacturers having neces-  
sarily limited experience in comparison with my own.

A single year's severe service will satisfy the farmer,  
that in point of durability, my machine is far superior to  
all others; besides several important advantages, referred to in  
my regular Annual Circular in pamphlet form, which will be  
furnished those who desire further information, by addressing  
me, or any one of my Agents.

P. S.—To correct a misapprehension from recent news-  
paper reports, I may say, that while the Commissioner refused  
to extend my PATENT of 1845, that of October, 1847, will  
not expire for several years to come, and that this has been my  
most important Patent; and further, that Reaper manufac-  
turers cannot copy more sensibly my machine than they have  
done heretofore. They must still carry their Raker on the  
back of the platform, and submit to other consequent im-  
perfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,  
Manufactured by Norris, Mason & Co.; 32 and 36 inch  
cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1859.—Sirs: J. A. & H. A.  
Pitts' Patent, dated June 20, 1857, (machine for Thrashing and  
Cleaning Grain), was only extended for a term of seven years  
from June 20, 1851. It has consequently expired. Respect-  
fully, yours,  
JOHN A. PITTS,  
SOUTHWORTH & CO., San Francisco, California.

Pitts' Patent Double-Pinion 8 and 10 Horse-Powers.  
To whom it may concern.—This may certify that we have  
a certificate of authority, of which the following is a true copy.  
A. GORDON & CO.

To whom it may concern.—This may certify that A. Gordon  
& Co. are fully authorized by me to sell the "Pitts' Improved  
Patent Double Pinion Horse-Power," in any of the States or  
Territories secured to me by letters patent. (Signed,  
Buffalo, October 20, 1853. JOHN A. PITTS.

We are this month shipping Horse-Powers of the above  
patent to A. B. Southworth, of San Francisco, Cal., which he  
is hereby authorized to sell. A. GORDON & CO.  
Rochester, N. Y., October 28, 1853.

A. Gordon & Co's Iron Planet Powers,  
8 and 10 Horse.

NORRIS, MASON & CO'S  
IRON PLANET POWERS,  
8 and 10 Horse—with full Extras.

Forty Ketchum's Mowers—Iron Frame.  
Extra Extras for all of the above Machines.

TWENTY NOYES' MILL-STONES,  
Different Sizes.

One Hundred Revolving Horse-Rakes,  
Eight, Ten and Twelve Feet.

200 dozen Hay-Rakes, 100 doz Batchelder's Hay-Forks, 100  
doz "Blood's" Mirror-Blade Scythes, 30 doz "Harris'" Silver  
Steel, 100 doz Samson's Scythes-Sheaths, 200 Thermometer  
Churns, 100 doz Peoria Plows—(to arrive for Fall Trade).  
Also, a general assortment of Agricultural Implements.  
Farmers and dealers are invited to call before purchasing.

SOUTHWORTH & CO.,  
No. 44 Battery street,  
Between California and Pine streets.

AGRICULTURAL STORE,  
J. D. Arthur. W. N. Arthur.

J. D. ARTHUR & SON,  
IMPORTERS AND JOBBERS OF

AGRICULTURAL IMPLEMENTS  
Washington Street, near Davis,

HAVE JUST RECEIVED  
by late arrivals from the East,  
and will continue to receive,  
A LARGE AND VARIED ASSORTMENT OF

AGRICULTURAL GOODS,  
Among which are the following, which will be sold at the

LOWEST MARKET RATES.

Reapers & Combined Machines,  
OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from  
6½ to 7½ feet swath.  
Burrell's, Manny's, Reel's, Atkins', and all the  
various styles.

Pitt's Thrashers,  
Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements  
for full supply of Agricultural Implements in New York and  
Boston, they will be

In Constant Receipt of Fresh Goods,  
well adapted to this market, by clipper ships arriving during  
the season, which we can afford, and

WILL SELL ON AS FAVORABLE TERMS,  
As any other similar establishment on the Pacific Coast.

Farmers and dealers will find it to their interest to call  
and see the subscribers, at their Agricultural Warehouses.

JOHN D. ARTHUR & SON,  
Nos. 3, 4 and 5 Washington street,  
between Front and Davis, San Francisco.

Colored Plates of California Fruit.  
The beautiful Fruit Pieces which were so finely pre-  
pared, at the Fair of California at the State Fair in  
1855, are on sale at the Farmer Office. Every person  
who wishes a beautiful Fruit Piece should have a copy.

Letter from E. W. F. New York.

The Season—The World and its Ways—Matrimonial Brokerage—Religious Aspects—Science of Music, etc.

DEAR FARMER: Winter is gone once more, and all hearts are thankful for a view of his back as he vanishes toward the north, pelted by warm spring rains, and becoming limp and vigorous under the genial skies of an uncommonly bland, though sunless March. Winter is gone. I'll live a thousand years, may I never see such another.

The world has been as busy as usual during its lapse; one thinks sometimes even more so. For the years thicken the plans, occupations and ways of man so that it is not an exaggeration, perhaps, to say, that the world, which means all live men and women, grows busier with every revolution of the seasons. And one must be astir early and late, to keep pace with what is coming from day to day, and month to month, to challenge one's attention. There are the questions in Art, in Science, in Ethics, in Theology, in Politics; questions of War and Peace, Political Economy, Social Reform, Human Rights (which at last have come to be understood as including Woman Rights by the argument which proves that women are human), and amid all these one finds, open eyes and quick ears serviceable—on the whole, as serviceable, perhaps, as any furnishing one can have for the times. And yet we see people get on, and thrive in many ways, whose drums are little better than the sheepskin, which is beaten that sound may be got out of, not into it, and whose eyes are—not capital, but mostly capitals, thus (I). People who will not vex themselves with deciding questions which have not that important backbone in them, but make a mush of all others, and deliver them over for the comfort of the fanatics and fools. And yet, more or less, such questions belong to every life that has been born to a plane above that of the senses. Get any slenderest ray of spiritual light into a soul, and in they march and take up permanent quarters there, demanding to be answered, at some time; if not now, on some other day.

The Lincolnshire boor told the whole story in these words: A minister sat at his bedside offering the counsel and consolation needful in the last hour, and after the mysteries of the Atonement and the efficacy of Faith had been duly set forth, he asked the dying man if now he had faith in Christ? Momentous question! which, at least, was not dishonestly answered in this wise: "Wat wi' faith, and wat wi' the earth a turnin' round the sun, and wat wi' the rail cars a fuzzing and a whizzin', I'm clean muddled, stoned and feet;" and turning his back upon them all, he looked to the wall and died. Went further on to get the answer which he could not find here.

There has been a quite remarkable book published since my last letter, by Thatcher & Hutchinson. It is entitled Matrimonial Brokerage in the Metropolis, and is a searching and faithful exposure of the various schemes which adventurers among both sexes try for the furtherance of their worldly fortunes. The author is Mr. Alfred C. Hills, an attaché of the New York press, in the capacity of Reporter for the Evening Post. Mr. Hills has made an interesting book, and he verifies its honesty upon oath, before the Mayor, it having been questioned in regard to that important element of books and men, by no less a personage than Mrs. Cunningham-Burdell, who figures in its pages as the patron of a Matrimonial Broker's Office. One word on that particular feature of Mr. Hill's work. I know the temptation was very strong to enrich his pages with a new passage in this remarkable woman's life. And as it was an actual experience with her, which he relates, conscience, honor and self-respect were fully vindicated in the relation, since the adventure befell him in the proper course of his laudable investigations; and yet I could have wished, at least, that it had not happened, or happening, I could almost have wished that a great magnanimity had taken possession of Mr. Hill's soul and locked the secret up from his pen and pages. One blushes, and is ashamed to own that womanhood may become so hardened. It is the silent hope of every true heart, when it sees a woman go through such experiences as hers have been for the last two years, that the shame and the sin are not wholly fruitless of the godly sorrow that worketh repentance, and one is staggered and keenly pained, by learning that the life which has brought such visitations upon itself, goes on from sin to sin, in the silence and obscurity to which it falls from the bad eminence it before occupied. I do not know that Mr. Hill could honestly have left this woman out of public view, seeing that she thrust herself upon his notice in the way she did, but if he could have—his book, in a commercial point of view, would have been greatly lessened in value. For this as well as for other parts of it, it will now be read by everybody, for everybody is interested in its subject, and will be more so in the exceedingly curious details it furnishes of the exceedingly curious matters it sets forth. There is another book offered by the same house, which is an excellent offset to this catalogue of follies and incipient crimes. It is a small volume entitled the Religious Aspects of the Age, containing Addresses, delivered at the first Anniversary of the Young Men's Christian Union of New York, by Chapin, Beecher, Greeley, Sawyer, and others. The book is live and sparkling with the spirit of the world's foremost thought. Many of the papers have the true note of the master souls they spring from, and touch with a potent sweep, the fine chords of aspiration thoughtful young men and women in California had this little volume, that they might see before them the religious countenance of their time, and ponder well their own part in making up its details and its light and shade.

I wished to speak of a new development, or rather a newly imported development of the science of Music, but I must defer it till another opportunity shall come, since it deserves and requires a better place and exposition than could be given it in the narrow corner left to me in this letter. I hope it will travel to California, at no distant day, and find the acceptance there, which battle will win for it here as everywhere, in time. It is the one substantial comfort of the soul, that the Truth can hinder this. Yours, E. W. F. March 15th, 1890.

CATERPILLARS.—This pest has appeared in many places in the State, and they promise to give the orchardist some trouble. When at Oakland a short time since, we saw the caterpillar upon the live-oaks there, and we would advise the citizens to give their attention to this insect early, lest they so increase as to strip the foliage from off their fine shade trees, and take away a goodly portion of the beauty of that really fine city. The question is how to get rid of them. The only certain way we ever knew was to watch their first appearance, when the nest was small, when it appears like a tuft of cotton on the tree, and then a hearty grasp of the hand would soon crush the little things. Now the worm is large, and the only way is either sawing off the branches, or with a swab dipped in strong tobacco water, to tear open the nest and remove it by means of this swab affixed to a pole. Another good way is to burn them with mops saturated with turpentine, made fast to a pole. They should be destroyed at all cost, else they will deposit their eggs the present year, and their increase will be ten thousand fold on another year, and our orchards will suffer.

THE TAP-ROOT QUESTION.—We have often been asked, "Why let the advocates of the absurd doctrine of 'tap-roots' remain without further reply from you?" Our answer is: We learned when a boy, that certain greedy fish must be allowed to play with the bait awhile, even run away with it, and when they felt sure they had it—then, then, our poor pike! How their dying throes troubled us, as they flapped about on dry land. There are certain land fish, too, that must be allowed to have the whole length of the rope, and they will—will thus dangle. "Poor Tom's a cold!" This week "number two," upon this question, we think will be answer sufficient for our purpose; if not, "number three" will come next week, and that, we think, will draw it down as deep as it will wish to go.

TO MAREMEN.—We feel it a duty to call the attention of our readers to the card of Messrs. Klepzig & Co., Gunsmiths. We have excellent proof of their skill and genius as gunsmiths. They have in their possession highly honorable testimonials of merit, medals from various societies in Europe, etc., for specimens of their workmanship. They have now on hand several orders from Europe for their best style of Rifle; and are now making some of the best and highest finished Rifles and Sporting Guns ever made. This notice is not fulsome praise, as any one will find, if he will call at their place, at 212 Washington street, above the Hall of Records. Call on Klepzig & Co.; but, don't shoot—your fellow creatures! Kill grizzlies, foxes, polecats, snakes, etc.

LOOK OUT FOR YOUR EYE-TEETH!—Dr. Burbank has now in his new office something that will make even the mouths of "old folks" water. A new set of teeth, and old ones repaired so as to be "good as new." Don't bear the tooth-ache any longer. Just sit in Dr. Burbank's chair a few minutes; and you'll say, "All well!"

STRAWBERRIES have begun to appear in market. Mr. Pillsbury sold about twenty pounds, at \$2.50 the pound. Purchased for "Winn's Fountain Head."

Wholesale Produce Report. This represents the prices paid by the dealer to the producer. (Corrected weekly by Loomis, Hall & Co., Commission Merchants, foot of Washington street, San Francisco.)

Table with 2 columns: Item and Price. Includes Wheat, Barley, Oats, Corn, Flour, etc.

San Francisco Cattle Market. April 27th. Quite a number of Cattle have been brought to market during the past week, and lower prices having been submitted to, there has been considerable more business done. York has advanced to 15c, at which price it commands a ready sale. We quote standard prices as follows:

Table with 2 columns: Item and Price. Includes Potatoes, Onions, Cabbages, etc.

MEATS. Beef—Sirloin, tenderloin, and rib pieces, etc. Pork—Ham, Bacon, etc.

Table with 2 columns: Item and Price. Includes Butter, Cheese, Eggs, etc.

T. OGG SHAW.—This indefatigable mechanic is among a large number of workmen (thirty-five mechanics) inspiring them by his genius, and as they swing the sledge-hammer at the forge, or push the jointer at the bench, or sweat over the furnace, a looker on can see the strong muscle of hardy workmen. Shaw says before he can be crushed, his enemies must kill the muscle and sinews of men, for they will work for him while muscle lasts. Ah! thou sinews of labor! mightily tough thou art to kill. Mr. Shaw's new manufactory on his own ground, will soon rise, a monument to his perseverance, and we learn that Mr. Shaw, his partner, will soon go east to complete plans to make his establishment more perfect than ever.

INJUNCTION SUIT AGAINST SHAW.—The famous suit against T. Ogg Shaw, for violating the patent of the Manny Reaper and Mower, was laid over to the 9th of May. Mr. Shaw is receiving orders as fast as he can book them. Already his orders fill him up to the middle of June, work day and night. His knives cut keenly.

GROCERIES, DAIRY PRODUCE, ETC.

ELLIOT & BELL, Corner California and Montgomery streets. SAN FRANCISCO; WHOLESALE AND RETAIL DEALERS IN TEA!

COFFEE, BUTTER, SUGARS, MOLASSES, CANDLES, FISH, OIL, LARD, CHEESE, EGGS, HAMS, PICKLES, etc., etc.

CALIFORNIA General Intelligence and Emigration Office, No. 323 Greenwich street, corner of Duane, NEW YORK.

THE SUBSCRIBER is prepared to give information to those wishing to go to California, as to the best route, and what may be necessary for an outfit for single persons or those with families. Much expense might be avoided by those going, if they knew before leaving home just what would be necessary for their comfort. Tickets will also be procured for those wishing them, thus securing passengers against the gross impositions and swindles often practiced upon them, particularly unprotected families going to meet friends and protectors in California. Any assistance to secure a desirable berth, or any advice sought, will be cheerfully given—free of charge, from time of application. The subscriber has spent four years in that State, and made six trips between New York and San Francisco, and passed over both routes. Letters addressed as above, including Three Dollars (\$3.00), will be promptly attended to. When a ticket is procured, an additional sum of Two Dollars (\$2.00) will be required. I am permitted to refer to the following well-known gentlemen, who have long known me: The Rev. Drs. S. J. Prime, and E. D. G. Prime, Editors of New York Observer; Hon. A. Wakeman, 37 Fulton street; Cornelius Mathews, Editor of the New York Times; Danmore & Co., of Danmore's Railroad Coal; Capt. Henry Randall, of the California, New York and European Steamship Company, New York—and Col. Warren, of the California Farmer. Those living in California, sending for friends and families in the East, will find it to their advantage to communicate with the subscriber, as above. JOSHUA BUTTS, 1 323 Greenwich street—(corner Duane), New York.

Advertisements and Subscriptions must be paid for in advance.

[For the California Farmer.]

#### Tap-Root Revived—No. 3.

Is planting shade or ornamental trees a different object is sought after, than in planting fruit trees. It may be for shade alone, or it may be for timber; where the first object is sought the trees require to be grown carefully in a nursery, for the same reasons as the fruit trees; if for nothing else, to facilitate the ease and safety of transplanting them, and when they are grown for timber, small sized trees are preferred. In either case indulge their propensity to send their roots deep into the soil; for what you desire in a shade tree, is a rapid, upright growth—a growth straight and symmetrical, with branches several feet from the ground, and this state of things is the very thing favored most by a tap-root, and the very opposite to what is to be desired in a fruit tree. The study of roots and their functions is one of absorbing interest, and I cannot but feel how inadequate I am to the task of giving information concerning; but the course pursued by the editor of the Cultivist upon this very important subject is, in my opinion, so well calculated to mislead, so contrary to all correct rule, and withal, so completely impracticable, that I could not let the opportunity pass without a "say" upon it. I will notice one more article in the March number of the Cultivist before I conclude. A correspondent asks for information about transplanting evergreens, and which the editor proceeds to answer from "our own experience." At almost every point he is met by just the very obstacles that would be created by following up this "new doctrine," and speaking of the soil, he says:

"It is seldom we find them indigenous to localities in all adapted to garden culture, so that even if removed with the greatest care, it still remains a question as to their ultimate success in maintaining life and vigor."

The inference is very plain. Because the soil of our mountains is of a very different nature from that of the valleys, and because all the conifers in this State grow only on the mountains and in the cañons, and never naturally in our valleys, it is "a question as to their ultimate success," &c., &c. Well, now, this opinion is decidedly refreshing, coming as it does from the editor of a horticultural paper. Why, what will the nurserymen, gardeners and planters of Europe think, should they ever hear of this, that the beautiful Conifers of California, which their enterprising collectors half a century ago gave to the world, and which have since been cultivated throughout Europe; that because the soil of their native habitat is different from the rest of the world, "it still remains a question as to their ultimate success in maintaining life and vigor?" This, too, in face of the fact that wherever they have been introduced, they are flourishing finely; but then, the editor of the Cultivist did not know this, or else he forgot it. But the ill success attending the transplanting of our native evergreens, is attributable wholly to ignorance. I have previously shown that a small pine now in our possession here, and which is only eight inches in height, has a root that is eight feet in length, a portion being still broken off in the ground. This with several thousand others, were grown in this establishment, and the root was the growth of one year, they having been transplanted the previous year from the mountains. Such a growth as this in one year, in the soil of the valley, ought to remove all doubt as to their ultimate success in maintaining life and vigor.

There are now several thousand trees from a few inches to seven feet in height, of those beautiful trees growing in this establishment, and our success in cultivating and transplanting, has been so great, that this past season the demand for them exceeded the supply; I mean for the large ones; and as an evidence of our success in transplanting them, the proprietor, whenever it was required of him, gave a warranty that they were to live, or to replace them, and in no instance, as yet, has he been called upon to replace one. And there is nothing new in our way of growing them; they are grown precisely as all tap-rooted trees are, in all well ordered establishments. It is no secret, but it is the very opposite of the "new doctrine" of the editor of the Cultivist. The trees, when only a few inches high, are brought from the mountains and planted in nursery rows. At the end of the first year they are all transplanted into another position, and the tap-roots which are eight feet in length, are cut short off to about one foot or a little less. At the end of the second year they are again transplanted, and each subsequent year, as they become too large to be easily removed, they are dug around, and the

roots shortened in, and they are dug underneath and particular pains taken to be sure that the tap-root is cut. It is interesting to notice the change in the character of the roots. Instead of the long spindling roots running down to the antipodes, we have a close, compact mass of fibers and spongyoles; but few of these are destroyed when you transplant the tree, and after the tree is transplanted, it soon takes hold in the soil, and as the roots are never interfered with after, they pursue such direction as nature and the soil may predispose them to. Trees cultivated on this plan always retain a more perfect symmetry and the lower limbs are preserved on the trees to a greater age. The editor of the Cultivist says:

"The beautiful conifers, including the pines, cedars, hemlocks, and the Big trees of Calaveras, that for centuries have decked our highlands, \* \* \* are growing where nature planted them," &c. "They prove the new theory of tree planting by seed."

True, they are growing where nature planted them. I have often admired their grandeur, and the immense proportions of these giants of the vegetable kingdom; but show me the man with an eye to beauty, who has not regretted their nakedness, their paucity of limbs for more than half their height from the ground, and which so much mars the contour of the tree. How seldom do we see in our immense forests, a tree of great size, clothed with branches from near the ground up, preserving a graceful outline, and this condition of things is not alone caused by their growing thickly together, for the same thing is to be seen even in the openings, a prolific cause being in the fact that they are growing in the same spot where the seed originally vegetated. The roots struck downward at once, without interruption, with few lateral roots, and the tree grew up in the same manner, and as it attained great size, one after another the lower limbs disappeared, presenting the naked appearance for which they are so remarkable, the big trees of Calaveras even, being no exception to this, and which detracts so much from their beauty, when compared with some of the fine old cedars of Lebanon, to be seen in the parks of England. The editor of the Cultivist cannot prove that trees growing where nature planted them are more beautiful than where they are planted by the amateur or the man of science. We have every reason to be proud of the magnificent conifers of our State, and we hope to see specimens of them more generally distributed throughout the homes in the valleys; but to be successful, do not attempt to transplant large trees from the mountains. That has been the great mistake; hundreds of thousands of trees, too large to be safely transplanted, have been brought down to our cities and sold, only to disappoint those who bought, and finally bring them to the conclusion that the soil of our valleys was unsuited to the mountain trees. Pause a moment and reflect, that whenever a plant less than a foot high, has a perpendicular root more than eight or ten times as long, and when those plants are allowed to get to be four or six feet in height, the root has been making a corresponding growth greater in proportion, deep into the earth. How, then, is it possible to transplant this class of trees without destroying a vital portion of the tree? In nine hundred and ninety-nine cases in a thousand, where such trees have been brought down from the mountains, the roots have not been more than equal in length to a fourth or fifth of the height of the tree. With these facts before us, how can it be expected they can live, and how erroneous to say that because they grow in an entirely different soil, "that even if removed with the greatest care, it still remains a question as to their ultimate success in maintaining life and vigor."

A practice often resorted to in England and the Atlantic States, might be tried to advantage here in removing large size tap-rooted trees, where they happen to grow in favorable localities. It is to dig around and under the tree in the winter season, leaving a large ball of earth to the tree, and leaving undisturbed the roots within this ball of earth, but cutting off all that grow beyond it; the hole is again filled up carefully and the tree permitted to remain there till next year, when if it has survived the operation, and appears to be otherwise in good health, it can be removed. This is resorting at a late day, to our theory, to insure success.

Now, then, after all this talk, what has the editor of the Cultivist accomplished by his "new doctrine?" When he asserts that, "to secure the most perfect fruit, shade, or ornamental trees, it would be better, if equally convenient, to plant out the seeds of trees in the places where they are to remain," he asserts at once a thing impracticable; for who would think in this dry country, of putting seed in allotted places for an orchard, to have to travel over acres of ground to nurse and attend to them, and finally and most assuredly fail, when the same thing could be done successfully; (and in no other way), by growing them together in a nursery by themselves? But to give him the advantage of his "new doctrine," we will suppose they did succeed in growing where the seed was planted, I deny most emphatically that by this means he can produce the "most perfect" fruit trees. I claim that such trees are objection-

able, for I know of instances where peaches and apricots, some apple and pear trees, the former growing where the seed sprouted, the latter growing where the young seedling was planted, and all budded or grafted where they still remain, and the consequence was they made an immense growth, and did not produce as much fruit as trees planted subsequently; they required a good deal of pruning to keep their heads in proportion, and the root being so well and deeply established, the more the head was pruned to give it shape, the more rampant became the growth, and to this day they are not as fine nor handsome trees, nor to be compared in any way, to trees planted subsequently, and which went through the operations of the nursery department.

There are always people to be found who are verdant enough to do a foolish thing if they were told to do it by a man who ought to have more sense; and I have no doubt that some will be found trying the new doctrine of the editor of the Cultivist; and after they have made the effort they will heap anything but blessings on his head.

JAS. B. SAUL.

SMITH'S POMOLOGICAL GARDEN, Sacramento.

#### Great Facts from a Little Journal.

EDITOR FARMER: I have to thank you for a small sheet sent me with the FARMER by last mail, bearing the sounding name of the "Monthly Journal of the California State Agricultural Society," which has two advantages: it is not cumbersome; and like Goldsmith's song,

"If we find it wondrous short,  
It does not hold us long."

In that periodical I find an article in regard to your rival the Cultivist, in which it is highly complimented, and its merits contrasted with the gross mistakes of such foolish journals as adopt a different course. When the Cultivist was first published, I had a copy presented to me by Mr. Wheeler with an intimation that if I would be a contributor, he would continue to send me a copy as an equivalent for my articles. The terms did not suit me, and I politely declined the proposal. I have not seen it since; and therefore can only suppose, from what I hear from some of my friends, that on the whole it is well conducted.

One objection which I had to the first number was, that it proposed to proceed on what I believed to be an erroneous basis: namely, that the art of cultivating the soil has, in our peculiar climate, to be learned anew, experiments to be made afresh, and "the books, reports, and dissertations, founded upon the results of labor in other countries where rains refresh the earth, and invigorate the vegetation, every week in the year," are of a minor importance.

As the experience and deductions of agriculturists had mostly been had and made under such circumstances, I looked upon this as making too clean a sweep, and could only conjecture that the editors calculated upon the credulity of their readers, who might possibly take their word for what they affirmed, to the manifest advantage of those editors. If they could make farmers believe that they themselves were as competent to make experiments as Sprengel, Saussure, Liebig, Bous-singault, Sir John Sinclair and Smith of Deanston, they might next impress upon their easy minds to lay the results of such experiments before their editorial chair, and hear them pronounce oracularly upon the conclusions to be drawn from the facts adduced. Thus we would have two sources of agricultural science, each confined to its separate localities; one emanating from the great republic of science in Europe and the Atlantic States, and one from the sanctum of the California Cultivist, aided by its revolving satellites. Nor would this merely bring name and fame to the propounders of this novel theory, it also pointed the way to wealth, as clear as mud.

One of the editors has since abandoned his high duties of editor, and some people say that the Cultivist, under the sole management of Mr. Wadsworth, has very much improved. On this subject, as I stated, I am not prepared to speak.

But how comes it that the Agricultural Society has taken such a liking to this little periodical? Why, because it is "based upon California experience, without being burdened with a mass of stale theories from foreign essayists, and sickly sentimentalism from domestic inamoratas." Confound those blasted foreigners! They are at the bottom of all the mischief that happens! What a fine country this must have been before a single foreigner set foot in it! The Cultivist, it seems, is conducted upon orthodox know-nothing principles; while those intruders, I presume, maintain the heresy that "a man's a man for a' that," and look as independently as if the whole world were their country. The real *admirable glebe* must have more power—power not only to crush vice, but if it advance their own interest to overawe virtue, science, and talent, also. It is true foreign essayists in pure literature have obtained a wide-spread reputation. The fame of Addison, Steele, Johnson, Goldsmith, Mackenzie, Carlyle, Lamb, Jeffrey, Sydney Smith, Macaulay, and Professor Wilson, extends as far as civilization itself, and their works are translated into the language of every civilized country. Has any one been bold

enough to allude to them, to the injury of California authors? Or is it among the writings of scientific men that somebody has been dabbled, and bringing from their slumbers truths and arguments which some of our instructors do not comprehend, and wish to huddle out of sight under the opprobrious character of "stale theories," lest their own ignorance should become apparent?

Does the Agricultural Society mean to commit suicide, or is it merely in jest? Or are such embryo productions as the State Agricultural Society's Monthly Journal palmed upon it without its knowledge, and against its desire? I am afraid it has been getting too confident of its importance. Diogenes is entitled to his sunshine; and the spirit of justice exists among our people to too great an extent not to abate a nuisance, which seems to assume for itself a right to do as it pleases, without regard to that propriety of conduct which alone can make it respectable.

Let us hope that the Society will expurgate itself.

MILLERSON, April 23d, 1859.

#### Cranberries on Dry Land.

A writer in the Northwestern Farmer says: I see by your paper that it is supposed by some of your readers, cranberries cannot be grown on dry land; but I have proved it to my satisfaction that they can be, and will give you my experience in the business.

Three years ago last spring, about the 20th of May, I procured from Indiana, one hundred and fifty plants, and planted them in my garden, which is high and dry. The soil is a sandy limestone. I prepared the ground by manuring with well-rotted vegetable manure, deep spading and pulverizing. I planted the plants about ten inches apart, kept the weeds and grass out, and the ground mellow, but taking care not to disturb the roots. In the fall I covered the bed slightly with fine hay, and so kept them until the growing season came on the next spring. That season the plants extended so far as to cover the ground between the rows pretty well—some of the runners putting out eighteen inches long. In the fall I applied manure, and covered the ground as before. The following season they grew well, and produced one pint of berries.

In the fall, I covered the bed again, and last spring applied a coating of saw-dust. Some of the runners have grown, the past season, three and a-half feet long. I have gathered from the bed, last fall, two quarts of good berries, and the vines look as thrifty and fine as any I have seen in their marshes. From my experience in the business, I have reason to believe that the cranberry can be grown on dry land to great profit.

[We wish experiments could be made in our State, with the Cranberry on dry land.]

#### How Weeds are Produced.

PROFESSOR BUCKMAN, of England, has recently made some careful investigations as to the amount of seeds of weeds contained in seeds sold as clean, and we will state a few of the results obtained, as they cannot fail, we think, to interest our readers. The professor found "in a pint of clover seed, 7,600 weed seeds; in a pint of cow grass, 12,600; in broad clover, 39,440; and two pints of Dutch clover severally, 25,560 and 70,400 weeds. Supposing these samples to be sown, here were weeds enough to stock the land with seeds for many years. The farmer often goes to the cheapest market and gets weeds for corn, and so pays exceedingly dear for what he considers a cheap bargain." If this be true, in relation to English farming, how much more so must it be to America, when it is well known much less pains is taken in preparing grain for market, as well as in the selection of seed and the general cultivation of the soil! In purchasing seed grain, turnip seed, grasses, etc., farmers often display a want of judgment and ordinary prudence, by selecting such articles as are cheap, or rather low-priced, for that is not really cheap which is not genuine; and we can conceive no greater pest in an agricultural neighborhood, than "a cheap seed store," in the but too common acceptance of the term.

The fecundity of some weeds is truly astonishing. Professor Buckman has counted 8000 seeds in a single plant of black mustard, and in a specimen of charlock, 4000 seeds. The common stinking camomile produces 40,000; and the burdock, 26,000 seeds; and the seeds of a single plant of the common dock produced 1700 little docks.

#### The Locust Tree.

Now is a good time for all who have neglected to plant the seed of this valuable tree, to do so. If the soil is rich and deep, and of a sandy, alluvial nature, they will sprout quick and grow rapidly, and make fair, good trees, by autumn. The seed should be soaked some twenty-four hours, at least, in milk and water; scald the seed first, and remember and do not plant the seed too thick; thin out so as to give each tree eighteen inches in the row, and you will have finer and better grown trees.

#### The King-Phillip Corn.

This is the best Corn for the climate of California, known. From the evidences we have received of its certainty of growing, and ripening and yielding, we have undoubted proofs, and therefore recommend it in the strongest terms.

#### Introductory of Professor Cooper.

DR. E. S. COOPER, Professor of Anatomy and Surgery in the Medical Department of the University of the Pacific, delivered his "Introductory" before the students at the lecture-room, on Mission street, on Monday evening, 2d inst. This lecture was characteristic of the one who delivered it. Without the least circumlocution, he presented the heart of the subject at once; though not delivered in the most pleasing tone of voice and manner, the lecture was one of a most practical character; every line teemed with a common sense idea, terse and pointed; the listener almost forgot all deficiencies of voice and manner; and the students could not but feel that they had indeed placed themselves under the tuition of a teacher who would impart to them the knowledge necessary to cure their patients when they may become practitioners. Should teachers of medicine confine their efforts solely to imparting practical knowledge to students, instead of spending much time, as many do, in discussing speculative points, the world would be blessed with a much more skillful class of practitioners.

If Professor Cooper's "Introductory" is a prelude of what is to follow, the student of the University will have no cause to complain of having to spend time in the study of the speculative parts of medicine. The lecturer began with a brief review of the history of Surgery and of those who have contributed to its advancement, commencing with Hippocrates and Galen; the trials and rewards of great geniuses in the profession were then touched upon; the importance of practicing dissection upon the lower orders of animals was strongly enjoined upon the students; affording, as he said, an opportunity of obtaining knowledge by experience, upon which alone all true medical philosophy and logic is founded, the basis of Aristotle's logic—Aristotle, the first to dissect the bodies of animals, and the greatest logician the world ever produced.

The lecture was full of important points, but space will not permit us to dwell upon them. The following exhibits the opinion of the lecturer as to what an operative surgeon should be. He says: The operative surgeon, who is prepared for all emergencies, must be perfectly familiar with every artery of the human body, capable of bleeding dangerously; he must know them, in fact, like his own vernacular alphabet; so that on no occasion, under whatever excitement of surrounding circumstances, can he forget them. We don't mean by this, that he should know thus well all the names, which different anatomists have given to the different arteries, but he must know their location and anatomical relations as well as he knows the shape of the letters of his alphabet.

In enjoining upon the class the importance of industry in cultivating pathological anatomy, by *post mortem* examinations on all possible occasions, he remarked: You should let no opportunity pass unimproved of witnessing and assisting in making *post mortem* examinations. If you chance to be on terms of intimacy with medical men, who don't belong to this School, or who may even be opposed to it, I would advise you to embrace every opportunity they may through courtesy afford you, of being present at their *post mortem* examinations. There is no reason why you should become unfriendly to those who may be prejudiced, however unjustly, against this School; because, they may be honest but deceived; besides, prejudices among medical men towards each other often change very rapidly, and those who now oppose this School may be its fast friends before you graduate.

The medical gentlemen associated with Dr. Cooper, in the Medical Department of the University, are possessed of talent and energy, and guarantee success for the medical teaching thus commenced on our Coast.

#### Australian Acacia.

This beautiful tree, notwithstanding our severe winter, has stood remarkably well, and all who wish splendid ornamental trees for front yards, or handsome walks, cannot find a superior. The seed of this tree will do well if planted now, in good rich soil, and the trees be large enough for transplanting in the autumn.

KILL THE GOPHERS.—A new way to kill this little traveler on the "underground railroad," whose cunning is proverbial, although he cannot see except straight before his nose, has been furnished by a friend. This little fellow, if his outlet is disturbed, will leave the track he has been traveling on and take to a new one; and thus, the means taken to kill him, at the openings of his former line of travel, often fail. The best way yet found out, as our informant asserts, is to poison by means of *cobalt*, which never loses its poisoning power by remaining in the ground exposed to the air, or if inserted in vegetable matter. The plan adopted by Mr. McDavid (the gentleman from whom we derived the method) is to find out the main tunnel of his road, and there deposit pieces of beet, carrot or ruta-baga, well covered with *cobalt*. Being in the main road, where hundreds pass, every one that comes along says, "Guess I'll take a bite," and thus hundreds are destroyed by one deposit; whereas only a single one is killed by poisoning at the outlets. Many persons, perhaps, may not know, that wherever these outlets appear they have great main roads near by, but such is the case. These roads can always be found by deep spading. Here is the place to do the finishing work for the gopher.

## Stories from Real Life.

THE STORY OF PHEBE:  
A SEQUEL TO BERTHA AND PHEBE, OR,  
THE INFLUENCE OF WEALTH.  
BY MOTHER RUTH.

FRIEND FARMER: Yourself and the readers of the "Story of Bertha," no doubt, if interested in the incidents narrated and the characters delineated (although perhaps faintly portrayed by me in the story), will feel some desire to know something more of Phebe, and also the older sister, Mary, of whom only mention has been made heretofore as one of the family at the cottage home.

When Phebe first made acquaintance with the little daughters of Mrs. Stirling, it was with some reluctance that her mamma gave her permission for such frequent visitings as they seemed to wish; for she somehow felt afraid of some further occurrence of a disagreeable character. But the friendship which had sprung up between Phebe and the little ones, was presided over entirely by Mrs. S., who often sent to request that Phebe might be allowed to come to her. After one of her visits, brought about in this manner, she said:

"Mamma, Mrs. S. asked me a strange question, to-day?"

"Pray," said the mother, "what strange question did she ask you?"

"Well," said Phebe, "she asked me if I knew the names of any families of poor people about here; she would be glad I would tell her. I thought of what had passed, and I told her I believed we were called poor in this neighborhood now."

"Did you tell her," said the mother, "of that poor family in the alley on the next street, that has suffered so much from want and affliction; or the mother of the little boy who was here yesterday, who is so afflicted? Did you tell of them?"

"No, mamma! Did you not tell me to be careful how I ever mentioned anything about other people's circumstances?"

"Yes; but go now and tell this lady of these two families; she may have a desire to help the poor and needy."

Phebe soon accomplished her errand, and returned with her face all radiant with smiling joy.

"Dear mamma! Mrs. S. kissed me and said, 'Thanks, dear Phebe, for coming to tell me this. Now, please ask your mamma to let you go with me to-morrow to look them up; or knowing of them will do but little good.' Now I wonder what she intends to do, mamma. What do you think of her going to such places, as where those people live?"

"I think that God, our heavenly father, sends her there, to do a work of love for her suffering sisters. And now, my daughter, I shall not fear in future to trust you with her; for the influence and example of such, as I believe her to be, will not injure you, but tend to benefit you morally."

"Then you will allow me to go with her, to-morrow, will you, mamma?"

"Yes," said Mrs. T., "you may go; I am certain you will not regret it, for you are so fond of the pretty little boy, that you certainly will be glad to be the means of helping his sick mother."

Accordingly the next morning, about ten o'clock, Phebe was called to accompany Mrs. Stirling, not really understanding entirely the nature of the visit. When they were about getting into the carriage, she requested Phebe to tell the driver which alley on the street; for, he said, there were two alleys; she named the one they wished to go to first. In the carriage were two baskets, well filled, and covered over, so that the contents could only be conjectured. The carriage was stopped for them to get out at the entrance of the alley; they walking to the house, as directed by Phebe, with directions to the man to drive up when beckoned to by his mistress. As they walked on to the house, Mrs. S. said:

"Phebe, you said yesterday, my dear, that you were called poor in the neighborhood. Now, look at the comfortable homes of those who are really poor; and you must be convinced that you are well off; indeed blessed. Never, dear child, think of being poor, while so much of love, beauty and goodness, with comfort, is thrown around you as you have. Your home is a paradise in beauty."

They entered the miserable dwelling of real poverty; many inquiries were made; here was a sick woman and five helpless children; the husband had to depend for support on daily labor; a long and severe fit of sickness had reduced him to almost absolute destitution, with his helpless family; and now the wife was slowly recovering from an attack of fever—all was soon told.

"Now," said Mrs. Stirling, "I wish to help you; in what way can I most effectively benefit your family? with food or clothing, or are you annoyed by small debts? incurred in the matter of house rent, or otherwise, during illness; which I can have liquidated."

All was told that she requested to know, amid tears; she then stepped to the door, and waved her hand to the carriage-driver to come up the alley to her; when he came, the baskets were brought in, and one of them emptied and a part of the other. Mrs. S. then said to the driver:

"Phil, I shall want you to come back here again; notice the house, so that you are sure not to miss it."

After words of comfort to all, and seeing the little children eating heartily of what she had taken from one of the baskets, she said:

"Come now, Phebe, let us find the lady with the little boy."

Bidding all "good-by," with the promise to see them very soon, they left and proceeded to the other place; in a few minutes time they were there. This was up a pair of stairs, running on the outside of the house; a house of better external appearance than the one they at first visited; the little boy, a pale but sweet, intelligent, manly-behaved little fellow came to the door; Mrs. S. was evidently surprised, and said to Phebe:

"Is this the child of the person we came to see?"

She was answered in the affirmative. The boy invited them to walk in; as they advanced across the room, where, sitting upon a little, low bed,

was the pale, emaciated, feeble mother, plying her needle, Mrs. S. said, hastily:

"Excuse a stranger, madam, for intruding upon you so unceremoniously."

But instantly went up, and threw her arms around the feeble creature, saying:

"Maud! dear Maud! How came you here, all alone?"

All was soon explained: she had eloped from the home of her childhood, with a man she loved most ardently, about five years before; they were married, and in about two years she was a widow, with an infant; grief had wrought its desolating influence on Maud Blainley; and, for some time, sickness had been gradually impoverishing her; Mrs. Stirling had never seen her, after the elopement, until this morning; after all was told, she said to her:

"Maud, I shall not leave you here; you must remove from this place."

"O, no!" said Maud, "I cannot go; there is my rent, and also my baker's bill; and I have work sufficient to pay them, as soon as I am able to complete what is now engaged."

"Never mind; let me attend to all your affairs," said Mrs. S., "I cannot leave you here a day; tell me what you will take along of clothes, and I will put them up for you; the rest leave a few days, until I arrange all."

At last she prevailed, and took Maud and her boy with her to her home; as they passed the people below, of whom the room was rented, Mrs. S. made them understand that she would pay all the bills of the lady she was taking away, when her things were sent for; and, all that she had promised was religiously performed in a few days; not only in this instance, but also the affairs of the other family were greatly changed, from distress to a degree of comfort. When Phebe went home that day she said:

"Oh, mamma, I think you were right when you said you thought the good being sent Mrs. Stirling to those poor suffering people we have tried to help. I do believe he did. If you could only have seen all I have seen of her to-day, you would say she was an angel of love in the world. Surely it is a blessing to be able to do as she does for poor creatures who are in distress; and, mamma, the lady and her little boy, she brought home with her in the carriage!"

"Then you see," said the mother, "how fortunate it was I sent you back yesterday to tell her of those persons."

"Well," said Phebe, "I will now tell you, mamma, that she knows the lady with the dear little boy, for she threw her arms around her and called her Maud Blainley, and asked her how she came there; and she told her about being married and her husband dying, and how she loved him; and both of them wept together."

"Doubtless some old friend," said Mrs. T.

On the afternoon of that day, Mrs. S. came over to the cottage to see Mrs. T. for the first time, and explained all to her in relation to the whole affair.

"I have come to thank you," said she, "for by the information given by Phebe, I have been able unexpectedly, to find one I loved years ago, in a state of suffering, and I have been made very happy by the occurrence."

Indeed, all for a time were happy; but the family at the cottage, of course, had their own sorrows, of which Mrs. S. was entirely ignorant. When leaving, she said to Mrs. T.,

"You will please to come over to see my friend; she tells me you have helped her to live. Oh, I thank you for your kindness, from my very heart; heaven will reward you."

And thus they parted. Reader, do you admire this noble-minded rich woman? Go thou and do as she was almost daily doing; making happy hearts, relieving distress, feeding the hungry, and clothing the destitute sick in her neighborhood. Many lessons did Phebe learn from this excellent woman, to whom at last was confided the sorrow of the family in relation to the occurrences already given in previous communications concerning the unfortunate sister whose history was given first.

She regretted she had not known sooner, "For," said she, "I would have sought her acquaintance, and I should have spared no pains to save her from such a destiny, and all of you from such a grief as now dims your happiness."

This was about a year after it happened. Mrs. S. soon made acquaintance with one who has borne but little part in all I have as yet narrated, because she was the mother's companion-daughter, and was almost always at home. She was or always had been looked upon as rather queer and old maidish, from the fact of her taking so much pains about every domestic employment.

She was as good a house-keeper as her mother, and now she was to be married to a very worthy young man, who agreed to remain still at the cottage with the parents. Through Phebe, Mrs. S. learned of the approaching marriage. There was to be no company present save a bridesmaid, a groomsmen, and the minister and wife; and thus were they married. I think they were as well suited in being united in marriage as any two I have ever known. Mrs. S. became deeply interested in Mary R. and was often with her after her private simple marriage. In about another year it was that Mr. T. went after the lost one of his family flock, and returned and sold out his cottage home; and then it was that Mrs. Stirling came forward again as a noble woman, in causing the property to be purchased by her husband, so that if they ever wished they could have it back again. In it she established Maud Blainley as teacher of an infant school in the neighborhood. The reader is already in possession of the fact of the insanity and death of the father of Phebe, who by this generous woman was soon back in the old home, assisting in a well conducted private school.

Phebe's mother made her home with her eldest daughter Mary R. When the little school to be conducted by Maud Blainley assisted by the still young Phebe, was being made up, the work of doing which principally devolved upon Mrs. Stirling, for it was ushered into existence by her benevolent and noble mind, she it was who went to each family to obtain a sufficient number of baby scholars to begin with, none

of them yet eight years of age. In doing this good work she was led to the residence of her rich neighbors by the cottage.

"I came," said she to Mrs. M., "to let you know that we are to have a school at the cottage in the adjoining lot; to ask you, also, if you will send your younger children?"

"I suppose," said Mrs. M., "you are going to make up a school of the little dirty brats around here, and do you think that I shall be simple enough to help you do it?"

"Oh, no," said Mrs. S., "I expect you will engage in no such undertaking. I purpose to do all the labor of getting all the little creatures together, myself; but I would like for you to patronize it so far as to send one or two children."

"No," said Mrs. M., "and I wonder that a woman occupying the position in the world that you do, should engage in any such enterprise. My husband would be ashamed of me if he knew me to engage in anything of the kind."

"I do not quite understand what it is in my course you allude to," said Mrs. Stirling.

"Of course," said Mrs. M., "I allude to your making so much trouble for yourself in always looking up all the poor miserable creatures you can find, and then spending the greater part of your time, and I suppose, a great deal of money also, to make them comfortable, as you call it; and yet you are always engaged and cannot have time to return, or make calls upon, or with, any in like position in point of circumstances with yourself; it is a known fact that you have had no entertainments at your house this season."

"Very well," said Mrs. Stirling, "I quite understand now; but, my dear madam, give yourself no uneasiness about my affairs in that particular. My friends often make social parties at our house; they give us pleasure by doing so; it is true we have no special entertainments, nor shall we in the future; we esteem these forced entertainments amid a display of wealth, as terrible farces, hard to perform; they do not answer our ideas of rational meeting together of friends; besides, they are a dreadful tax upon the mind and time, to get up such entertainments, to say nothing of the spirit of rivalry in the taste displayed on each occasion. We have concluded not to make any at our house nor to attend any entertainments at the houses of our friends in future; but come, say, will you send your children to school? I must now go."

Mrs. M. turned her head and said: "I will not, nor will you succeed in having a school in that place. I shall use my influence to prevent your getting up any such nuisance in the neighborhood, to annoy me; I am too nervous to submit to any such thing."

Mrs. Stirling stepped up close to her and said: "Agatha Primble, you certainly do know me well enough to feel convinced that I shall succeed in making up this school, and I hope you will act more wisely as Mrs. M., than to use any influence you may possess, to prevent it; even now I could weep over you for the evil your influence has wrought even in this place where so little is known of you. I knew not that the person I came to see, called Mrs. M., was Agatha Primble."

"Your observation is a mistake," said Mrs. M., "Agatha is not my name."

"Oh, say, not so again; your countenance is but too well remembered by me," said Mrs. S. "Farewell! you are safe from any exposure by Elith Stirling."

And truly did she succeed in getting up the school. The house underwent some repairs, and in a short time all was in readiness. The school commenced with but eighteen pupils, but in a little time there were quite a number added. Maud and Phebe were very happy in the employment in which they were engaged, and all went on prosperously until Phebe was called to mourn the sad event of the insanity and death of a beloved father. Then it was that Mrs. Stirling besought Phebe to make her house her home, only as she wished to be with her widowed mother and her sister. Maud with her little boy kept house at the cottage where was kept the school. How happy she had made herself, associated with Mrs. S. and Phebe, as friends and companions. Almost every one predicted for Phebe, that she would be an old maid. No such thing; the last time I visited L. after removing from the place, I saw her at her own home, a beautiful residence; her husband, also. They had a fine chubby-cheeked boy, lying asleep in his willow cradle, but I soon had him wide awake in my arms; how glad I was to find Phebe so happy; her husband was a noble specimen of manhood, and I understand from others he was a man who was most highly respected for his known worth—to myself he was a stranger.

The school had then existed five years; Maud was still the presiding teacher, with an assistant, after Phebe's marriage. The mother of Phebe, too, had gone to the spirit land; the older sister was a widow. Mrs. Stirling was still active in doing good; it was said there were no poor around her at that time, for by her aid she had enabled such as were poor at first to do something for themselves until all were in comfortable circumstances. Mr. Stirling always said she had the greatest faculty of making a little money do a great amount of good, helping each one just enough to enable them to help themselves, and if they were able to work, she could always get something for them to do. When asked one day if his wife did not expend a great deal of money for him in her care of the poor? "O no," said he, "not a dollar; we have always had an arrangement since our marriage, that she draws quarterly such an amount to meet the demands of her wardrobe, such as would be considered suitable for my wife, and that is the money used to feed the hungry and clothe those who may need; sometimes it is drawn in advance of the time to meet some pressing demand in sickness among the poor. All bills are deferred till the quarterly allowance, and her books show the expenditure of the greater part of it; she declares that she has an abundance, and you know she always appears genteel. But see!" said he (as she approached her husband with his friend), "how very happy she looks in that plain, neat

attire. Edith," said the husband, "come tell us where now are you going, to find people to help?"

"O, never mind, husband, there are and always will be a plenty to help with words of counsel; if not to overcome want, to overcome human woe of every grade, and where food and clothing are not needed for the body, the mind may after all need aiding or support from a friend. I intend always to find something to do while there is sorrow, mental or physical, to overcome, and I am blessed with health and the means to help overcome human suffering."

The friend of her husband declared, afterwards, "he considered Mrs. Stirling within herself an organized Benevolent Society."

And now, friend Farmer and kind readers, do you know of any Mrs. Stirlings in your midst, who are institutions of benevolence? Do you ever meet with a Bertha, or a young Phebe, in obedience and love to parents, and emulation of good in others, thereby deriving happiness? Do you ever find a Maud Blainley, who left a parent's roof through affliction for one who soon passes away and leaves them in anguish among strangers, far from their childhood home? If you do, remember to do the part of Mrs. S. by them, as far as you are able. Do you find Mrs. M.'s, who are called by names they have no legal right to bear? such characters as Agatha Primble was, for she was living with a man who had deserted a wife and children, and when known bore another name than M.! I have been compelled in these stories, to introduce the characters I have, for there were so many interested. In all the incidents related, there were many more concerned; but I have been as brief as I could; and the fact that the subject, material and characters are sufficient for a considerable volume, is apparent. From observation in California, I am satisfied all these characters live; though my stories had their origin elsewhere, and some of the characters, perhaps, are still living. And now I close with the earnest desire that those who read may be able to trace out the different traits of character portrayed to the mind in the story (for it takes all to make one) and learn to choose the good, and avoid the evil. Many more recollections could be clothed with character, and arranged in order, to interest or beguile a leisure hour, if I knew that others would be benefited by a knowledge of what has come within the range of the experience of the writer, in her different places of residence. Farewell, for the present. MOTHER RUTH.

QUIETUDE, April 23d, 1859.

## FARMERS, BEWARE

CALIFORNIA  
COMBINED REAPER and MOWER,AND  
PECK'S SANTA CLARA  
HEADER and HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNMITIGATED FALSHOODS.

I am not building the "Manny Machine," nor infringing on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a *Practical Mechanic*, and have spent too much money in obtaining *Drawings and Specifications* from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "game," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but MEANLY and COWARDLY, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season of sowing has commenced, they begin to feel as well as see, that my

CALIFORNIA  
Combined Reaper and Mower,

IS A DECIDED SUCCESS;

and unless that they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret emissaries and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "game" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

## California Combined Reaper and Mower,

(and not the "Manny"),

and I have Purchased the Invention called  
"PECK'S SANTA CLARA  
HEADER and HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, ready for the fight whenever the fight opens!"

THOS. OGG SHAW,  
No. 33 Sacramento street.

BOY FOR A FARMER.—A place is wanted with some good Farmer, for an active and intelligent BOY, about 15 years of age. Any person that would like to adopt such a boy, can learn of an opportunity, by applying at the Farmer Office.

## AGRICULTURAL.

## AGRICULTURAL STORE.

J. D. Arthur. W. N. Arthur.

## J. D. ARTHUR &amp; SON,

IMPORTERS AND JOBBERS OF

## AGRICULTURAL IMPLEMENTS

Washington Street, near Davis,

HAVE JUST RECEIVED

by late arrivals from the East,

and will continue to receive

A LARGE AND VARIED ASSORTMENT OF

## AGRICULTURAL GOODS,

Among which are the following, which will be sold at the

## LOWEST MARKET RATES.

## Reapers &amp; Combined Machines,

OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from

6 1/2 to 7 1/2 feet swath.

Burrall's, Manny's, Beloit's, Atkins', and all the

various styles.

## Pitt's Thrashers,

## Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements for a full supply of Agricultural Implements in New York and Boston, they will be

In Constant Receipt of Fresh Goods,

well adapted to this market, by clipper ships arriving during

the season, which we can afford, and

WILL SELL ON AS FAVORABLE TERMS,

As any other similar establishment on the Pacific Coast.

Farmers and dealers will find it to their interest to call

and see the subscribers, at their Agricultural Warerooms.

JOHN D. ARTHUR & SON,

Nos. 3, 4 and 5 Washington street,

between Front and Davis, San Francisco.

## McCormick's Chicago Reapers!

Three Sizes—5, 6 and 7 feet Cut,

WITH EXTRAS FOR ALL THE DIFFERENT PAT-

TERNS, from 1852 to 1859. [Agent for the Manufact-

urers for the Pacific Coast.]

2500 sold in 1855, 4000 sold in 1857,

4000 sold in 1856, 4500 sold in 1858.

15,000 Sold in the last Four Years.

No single establishment in the world can truthfully claim to have manufactured and sold anything like so large a number of Reaping and Mowing Machines during the same time, while my experience dates back to the origin of my machine, in 1834, having been actively and exclusively engaged to their manufacture for the last fifteen years. I am now more largely engaged in the manufacture of these machines than ever before, and, with my improvements for 1859, do not hesitate to warrant my machine as a Reaper, Mower, and Resper and Mower, superior to any other for simplicity, durability and perfect working; and further to say, that farmers who may desire it are at liberty to work my machine through the harvest with any other, and keep and pay for the one preferred. The position of the Raker in my machine (as patented), upon the main frame, where there is great strength, and where the weight adds to the power of the machine, is the only right one. Other makers have to haul their Raker on the platform, where he must submit to having the dust thrown in his eyes by the operation of the reel, and to being jolted over the clods by the little platform-wheel over which he rides, necessarily racking their machine to pieces. This accounts, in part, for the great durability of my Machines as compared with others.

Great Council Medal awarded my machine in London, in 1851. Grand Gold Medal of Honor at Paris, in 1855. Highest Prize at the French Universal Exposition, in 1856. Highest Prize of Royal Agricultural Society of England, in 57. Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the Manny machine, claiming the highest honors, etc., at the French Universal Exposition, in 1855, are known by them to be FALSE. The success of my machine, as indicated by figures above, is its highest praise; while the awards of Premiums, generally, are worthy of no confidence, although Resper-makers make a business of laboring and scheming to secure the little Annual One-horse Premiums of the country. Although it may not be generally understood, it is nevertheless true, that these machines have always been sold at comparatively low prices, and but for the boldness with which I introduced and sold them by thousands, for the ten years past, other smaller manufacturers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and others, of the truthfulness of every statement I have made, and much more. I may further remark, that all of the Reaping Machines of any prominence in the country, are mere modifications of my machine, all other manufacturers having necessarily limited experience in occupation with my machine. A single year's severe service will satisfy the farmer, that in point of durability, my machine is far superior to all others; besides several important advantages, referred to in my regular Annual Circular in pamphlet form, which will be furnished those who desire further information, by addressing me, or any one of my Agents.

P. S.—To correct a misapprehension from recent newspaper reports, I may say, that, while the Commissioner refused to extend my PATENT of 1845, that of October, 1847, will not expire for several years to come, and that it has been my most important Patent; and further, that Resper manufacturers cannot copy more nearly my machine than they have done heretofore. They must still carry their Raker on the back of the platform, and submit to other consequent imperfections.

CYRUS H. MCCORMICK.

## 20 Pitts' Pattern Thrashers and Separators,

Manufactured by Nourse, Mason & Co.; 32 and 38 inch cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1859.—Sirs: J. A. & H. A.

Pitts' Patent, dated June 20, 1857, (covering for Thrashing and Cleaning Grain), was only extended for a term of seven years from June 20, 1857. It has consequently expired. Respect-

fully, yours,

J. HOLT, Commissioner.

SOUTHWORTH & Co., San Francisco, California.

## Pitts' Patent Double-Pinion 8 and 10 Horse-Powers.

To whom it may concern.—This may certify that we have a certificate of authority, of which the following is a true copy:

To whom

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, MAY 6, 1899.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAW, who left here in the steamer of the 5th inst. on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc. We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit. We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HAYCO employed Mr. J. F. LARRABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the Farmer into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

J. B. MORSE is not an Agent of the FARMER, nor authorized to receive subscriptions or money on account of this journal—nor has he been for some time past.

**LETTERS BY OVERLAND MAIL.**—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

## A Beautiful Country House in the City.

VERY few of our citizens are aware of the beautiful retreats of some of our merchants and business men in the hills and slopes around the Bay of San Francisco; and the thousands who remain cooped up in their residences, or counting-rooms, poring over dusty ledgers or reading some silly novel; or, perchance, when leisure hours come, playing tennis or billiards (both excellent games for physical health, if not too often indulged in), should walk or ride along the shores of the beach from Meigs's Wharf down to Fort Point, and they will be richly repaid for all the time spent, by scenes of rural beauty and natural scenery rarely surpassed. It was our pleasure to take a ride thither recently after the glorious rains, and we were very agreeably surprised to notice the immense improvement made within the last year or two.

Our first stopping place was at what is called Black Point (opposite Alcatraz Island), called so by the pilots from its black appearance as seen from the water, the rocks near shore being covered by a species of *kelp* of a dark color, and the ferns and foliage, on the brow of the hill, being of the same dark hue. This Point comprises about one hundred and eighty-five acres, and is the property of L. Haskell, Esq., dealer in wool and hides. This is one of the finest pieces of property for residences around the city, commanding a fine view of that part of the Bay and Islands, and opens up the view of the Golden Gate and Fort Point most pleasingly. This Point was once a site of an old Fort. Cannon-balls are found there now, when digging into the soil; one of these balls we found, and bore away, by permission, as a trophy.

There are several fine cottages on Black Point, now occupied by Mr. Cook, formerly of the firm of Palmer, Cook & Co.; Captain Folger, of Moore & Folger; Captain Moody, and L. Haskell, Esq. All these residences are built in the rural style, and the grounds around are filled with the beautiful native shrubbery, now blooming in great perfection, of which the *Ceanothus* *Cerulea* (or *Heliotrope*, as named by some), the *Lupinus*, *Laurels*, and many small flowers among them. The refuse underbrush has been removed, serpentine walks made, and parterres of the ground (which is a very rich, decomposed vegetable mold) are beautifully laid off, with fruit borders, where strawberries, gooseberries, currants, cherries, pears, plums, and other fruits, are doing excellently well. From these residences, walks are made down to the beach, where bathing-houses give to the families the luxury of sea-baths, in addition to the pleasures enjoyed in such lovely cottage homes.

We would suggest to Mr. Haskell, the owner of this valuable property, to change the name of this place from that it now bears (Black Point), and divide the terrace into three parts, giving to each a separate name: to the first, where the morning sun gleams upon it as it rises, we would give the name of Golden Point; to the nook, or corner, where the bath-houses stand, near the residence of Capt. Folger, that of Shady Nook; and to the extreme point, nearest the open water, Sea-Side Point. These names would be far more appropriate for such a spot of natural beauty, and capable of being made still more beautiful by art, than that which it now bears; for we experienced only bright thoughts and glowing feelings during the short hours we spent there, and the courtesies we received from each and all, made this place a bright point in our day's ramble.

## Floral Fair at Oakland.

We were called upon by Rev. A. H. Myers, President of the Alameda Agricultural Society, who presented for our views the Circular of that Society, containing the announcement of their Floral Fair, to be held at Oakland, in the City Hall, on the 14th June next. This Fair will last five days, and promises to be a *Grand Gala Time* for Flora and Pomona. The Circular of the Society is well designed; the premiums are well arranged, much better than usual. The whole affair is got up on a liberal and well arranged plan; the citizens are all alive to the subject, and have already manifested a degree of liberality and interest sufficient to make contracts for the necessary buildings and all other matters, so as to make the Fair an honor to Oakland. We hope they will bring the children of the Schools into this Fair, to awake the songs of happy children, and thus inspire them with a love of the beautiful in Nature.

**SALE OF MILCH COWS.**—A sale of milch cows, this day, by McRuer & Merrill, on Market street, was very well attended, and the first choice cow and calf brought \$75; thence down to \$14. The number sold was twelve. This is an indication of their value in our market at this date.

## Yosemite Valley.

IN continuation of our remarks relative to this wonderfully beautiful spot, we state that the period for visiting this Valley, has been from May to August; some have gone earlier in the dry season. The present year the snow is so deep on the mountains, and the meadows and creeks so full of water, that the time for visiting this favorite place, will be much later, probably about the first week in June. Of this we shall speak particularly next week, when we shall have full accounts from the Valley, which had not reached us in season for this issue. The scenery in and around the Valley is always grand, even sublime; it is a fitting place to study nature, and to worship the Creator, for it is a very Temple of God.

As the snows melt and the icebergs break from their wintry beds, the lakes and streams above are full, and the falls that burst over their rocky beds are in their greatest power, and most striking beauty and grandeur. Spring, too, comes with her wooing zephyrs and sunny warmth, and the green grass and early flowers come forth like a newly-dressed bride to greet a bridegroom. Earth, air, trees, grass, buds and flowers, all join to welcome the spring, and all meet in this temple in one harmonious anthem of praise to the Creator of all this glory; and the heart that can enter such a scene and not be lifted up in gratitude to God for all it sees, hears and feels, is neither touched with spirit of divinity or blessed with the best attributes of humanity. The Yosemite Valley is not the place to visit for mere sport or pastime, or mere worldly pleasure; it is a place where a mortal can live; where the creature can hold communion with the Creator; where humans can feel they have a divine spark within them, that when they stand before the lofty temples of granite, whose summits are more than three thousand feet high, and as the morning sun glides them with his beams looking like burnished gold, as they gaze upon the mighty cataract that comes dashing and foaming over its rocky bed above, springing, as it seems from the very clouds and thunders down more than two thousand feet at a single leap—as the eyes turn to the green fields and lawn to rest, or look on the giant trees that make the whole scene grand beyond the power of description—then, then will mortals feel most truly, this, this is indeed a place to worship God.

'Tis true, visitors will behold more of real grand beauty in the early season, for the reason of high waters above, but all should go well prepared with flannels and blankets, for the nights are very chilly. Those that form companies, should make a liberal preparation of clothing, and food. We hope, however, to announce by our next, that ample hotel accommodations will be had the present year, so that more real comfort can be had. From June to September, the whole season, there is much to see, admire, and remember. From June the volume of water over the several falls, is gradually diminishing, but always shows more or less their course. In our last number we gave the several routes from our lower cities to Stockton, and thence to Mariposa. Our opinion, from two extended visits to the Valley, once each way, is as follows:—the same route we recommended the last year:

From Stockton to Lagrange, thence to Coulterville. (Thus far, the general stage route is specified in our paper.) From Coulterville (if you have time to visit the rich quartz veins of Gentry's Gulch, and others near by), proceed, in the saddle, to Bear Valley, and examine the great tunnels in the Pine-Tree, Josephine Veins, and other mines on the Fremont mining grounds. These are worthy a special visit, and Bear Valley will be found a pleasant place to tarry for a day. From Bear Valley proceed to Mariposa. Here are good hotels, and stores, where additional outfit can be had, and much that will interest while a little rest is obtained. From Mariposa to the Yosemite it is forty-five miles (called fifty miles), and is usually made a two-day's trip, especially when ladies are in company; although several parties, with ladies, have made it in one day; but as the Great Mariposa Forest is the central attraction of this route, we advise visitors to go to Clark's Ranch, Eden Valley, the first day. This can be done easily, with time enough to observe and examine much that should interest on the way. By all means stop at Chicken Ranch, about half way to Eden Valley, and there our good friends will provide you with as nice broiled chicken and other fixings, as you need. After being refreshed, you pass on, better prepared to observe and enjoy the wild but delightful scenery, and the ride becomes inspiring, by reason of the pure mountain air you begin to inhale.

The trail from Mariposa to the Yosemite Valley is now most excellent, having been much improved by the exertion and labor of the Mann Brothers, who own the trail (the fee for travel over it is \$4, and should be always paid); the toll can be paid to Mr. Clark, at Eden Valley.

When arrived at Eden Valley, visitors should calculate to take the next day to visit the great Mariposa Forest, about three miles from this valley. Go by saddle. Mr. Clark is one of the best guides; his amiable and manly character, added to his intelligence, make him admirably qualified for this duty. A day spent in this forest, among these giant trees, will form a never-forgotten epoch in one's life, and they will always look back to it with pleasure. A ride in the saddle through a fallen tree, one hundred and fifty feet passage, will be but one of many incidents to be ever remembered. Every visitor to Yosemite should make this place one of the important spots to visit. Take time to examine, for there is too much worthy of observation to pass lightly by. The great mistake of many persons who make these tours, is found to be, a flying visit. They peep at this and that, see but a little, comprehend but little, and remember nothing. This forest is worthy remembrance!

In our next, we shall continue the route on and into the Valley; then present some sketches and give the names and incidents connected with this grand scene.

## Sheep-Shearing Festivals.

Now is the beginning of the sheep-shearing season; and we would ask, why should not some of our large sheep-raisers imitate the generous custom of those of New York, Vermont, and other Eastern States, and make such occasions fraught with pleasant gatherings and happy associations? There would be no loss if the observance of the custom did cost a little, the gain in the end would amply repay the outlay. Who will establish this excellent festival here?

**STRAWBERRIES.**—Strawberries are "few and far between like angels' visits"—only \$2.50 a pound! More than three weeks later than last year. Strawberries sold last season, on the 30th of April, at \$1.25 per pound.

## Californians on the Ocean.

STEAMSHIP UNCLE SAM, Tuesday, April 12, 1899,  
70 Miles North of Acapulco.

**EDITOR FARMER:** You saw the good ship Uncle Sam leave Mission street dock at 11 o'clock on Tuesday morning, April 5th, and as you gave your parting glance, as she gracefully glided out into our magnificent Bay, you could not but wish her "God speed!" with her crowd of goodly passengers, on her mission of moderation to monopoly. You could not but rejoice that many, by the timely establishment of a well-organized opposition line, were permitted to visit their friends in the far Atlantic States, and, perhaps, bring them out to California, to enrich the State that they must love, if their residence had been long enough to enable them to appreciate her qualities. And as the steamer's gun rung out its peal and was echoed from the hills opposite, you felt that it was a peal of joy. You well remember the crowded state of the dock, carrying you back to the days of 1852, when the event of a steamer's leaving for Panama, was a signal for friends to gather, to leave that remembrance on the departing ones that should induce them soon to return to the land of warm hearts and generous appreciation.

Never, since the early years of San Francisco's existence as a great commercial emporium, have I seen so dense a crowd as witnessed the departure of the Uncle Sam from Mission street wharf; and the dreariness of departure was enlivened accordingly. Say not that the presence of friends, as you are to leave them for an uncertain interval, is useless and formal. There is a halo surrounding the form of a true friend, though no word may be spoken, as we catch the last glimpse of him and are hurried swiftly away, that is only equaled by the magic smile of welcome as you meet on your return.

We glide down the Bay, holding converse with each familiar point, and as we strike the bosom of the mighty Pacific we are surprised at the calmness with which we are received. Many now commence paying their tribute to Neptune, and pale faces can be seen at every turn. But the ocean was unusually calm, and those only who would be sick in a steamboat on a river were troubled. Our boat was as steady as a fine clipper-ship, and her motion only whet the appetites of the "well ones," so that when the gong sounded, a fine representation of passengers met at the table, and parted mutually satisfied with the fare, the attendants, and each other.

On Wednesday, feeling curious to know why such good order and quiet prevailed on board the ship, I made some inquiries, and found that instead of fifteen hundred passengers, as had been reported, there were only about seven hundred; of these, ninety-four were ladies and from forty to fifty children, although there were many more children [infants?] who had been crowded in by their parents, without purchasing tickets for them.

I felt sorry in looking upon so many ladies and children leaving California, but on being assured by many of them that they intended soon to return, and learning that that was the intention of four out of five of the gentlemen, I felt glad they were going, like so many missionaries, to convert our Atlantic brethren and sisters.

Among the passengers who are going home, with the determination of returning, I find our well-known power-pressman George Amerige, Esq., and wife; Capt. C. L. Taylor, of the firm of Taylor & Swasey, No. 41 California street, with his wife and two children; H. J. Beers, of Beers & Davies, Clay street, and his wife and two children; Archbishop Blanchette and the Very Rev. Mr. Bruletto, who have been laboring for the Catholic Church for several years in Oregon, and are now on a visit to Washington, D. C.; Rev. P. A. Ward, Methodist; Miss Caroline B. Chapman, our well-remembered California favorite; Mrs. Wm. B. Chapman, widow of the lamented "Billy Chapman," with two of her children, one of whom, Master Edwin Chapman, a lad of eleven summers, shows already that he is a "chip of the old block;" Mr. and Mrs. William B. Hamilton, on a visit to the Eastern States; Capt. J. Sewell Reed, an old San Franciscan, on a visit, to return; J. Crookes, an old resident, on a trip to Europe and back to California; Eugene Kelly, Esq.; E. R. Medberry, one of the old stand-bys, to return; Geo. S. Wright, Esq., and family, sons of the well-known steamship captain and owner; W. E. Miles, of Olympia, W. T., on a visit to his home in Washington, D. C.; Enoch and Henry Noyes, two of the few fortunate Fraser River miners, one of whom struck the first spadeful of dirt on Emery's Bar; J. L. Sutton, who intends soon to return, and many other ladies and gentlemen, whom we would fain speak of, did limits allow, and tropical weather permit.

The order and discipline on board the ship is so perfect, that several days elapsed ere any of the officers became known to the passengers. Capt. Huntington is a gentleman, as well as a thorough sailor, and everything goes like clockwork under his excellent supervision. He has as good a ship under him as floats this side; and his officers, Henry J. Johnson, first officer; Sabin P. Lewis, engineer; Wm. Roof, first assistant engineer; J. Rodgers, second assistant; Mr. Harris, second officer, and John Cumming, third officer, seem to partake of his gentlemanly bearing and attention to the business of the ship. No coarse or profane language is ever made use of by the officers or men in the hearing of the passengers; and the example might well be copied by some other steamships we wot of. The surgeon, Dr. B. R. Fitch, is an old "forty-niner," and has been in the steamship service ever since coming to California. The purser, J. G. Foster, came to California in 1850, and after returning home came out as purser of the steamship Sierra Nevada, in her trip round the Horn, where, as in all the situations where he has acted as purser, he has won the best feelings of all those with him. In the difficult and multifarious duties devolving upon a good purser on board a passenger steamship, Purser Foster never loses his equanimity, and his kindness of manner, united with his active attention to the duties of his office, gain the esteem of all. The storekeeper, Mr. George Buckman, the chief steward, Mr. Henry Smith, who has run on the Pacific steamships since 1849; Mr. Ball, the second steward, and "Little Jimmy," are all excellent officers, and all work harmoniously under them. Among the attentive waiters, I see

that one of the Long Island Sound boys, George Thompson, is as much at home here as on board those fine steamboats. I would not speak thus particularly of these officers, did I not feel that such men deserve an appreciative notice, and did I not believe sincerely, from my experience in steamship traveling, that a better set of officers never took charge of a ship.

The Uncle Sam was built in New York, in 1852, by Edward Mills, who also built the beautiful but ill-fated Yankee Blade. The Uncle Sam made four voyages from New York to Aspinwall, and then came round the Horn, to San Francisco, making the quickest trip (by three and a half days) ever made to San Francisco. In the terrific gale which assailed her a short distance out of San Francisco, on her trip to the Colorado, with her enormous load, she fully proved her seaworthiness, and stood up like a first-class clipper ship, which, take away her wheel-houses, she would be.

The weather, until to-day (Tuesday, the 12th), has been perfectly delightful. Being but a short distance from Acapulco, of course, the heat is great, but good awnings covering the entire hurricane deck and a gentle breeze tempering old Sol's power, we think that "things are as they should be." Early this evening we contemplate making the magic little harbor of Acapulco. We shall be detained but a few hours.

After we leave Acapulco, I will try and be more interesting in my Panama letter. As many of your old subscribers are on board, and many more whom I trust will become new ones, you will readily see that things which might appear dull in this epistle will be gladly read by others, especially by the crowd who gathered on Mission street wharf to see us off. The surgeon informs me that the health of the passengers is unusually good, there being only one or two cases of severe sickness: one a consumptive, returning to his Eastern home, which he left in health, to return to die; another, a gentleman just recovering from an attack of typhoid fever, getting along well. The ladies and children are in glorious spirits; and the delightful moonlight evenings are enlivened by the strains of music all over the ship. I am struck with the consideration which the passengers evince for each others comfort and happiness. As Captain Huntington remarked, it is a consequence of their California education. Truly, California has been a blessing to mankind, and her influence is world-wide. The steerage passengers are agreeably surprised at their excellent fare and good accommodations; and, although I have been all over the ship, I hear no word of complaint, except from those who would complain at their accommodations in Heaven, if by some chance they should find themselves there.

I might tell you of the whales, porpoises, flying-fish, etc., and something of the geography of the coast we are gliding along, but the subject has been fully treated by myriads of travelers, and I have already tired you, I fear.

Hoping this will find you and yours well and happy, and all hands in the office the same,  
I am as ever, yours truly,  
E.

ACAPULCO, Wednesday morning, April 13, 1899.

Arrived in the harbor last night, about 1 o'clock. And the warning gun having fired, for the passengers to come on board, I hasten to obey the warning, having passed a few very pleasant hours on shore. There is no political news to impart to you, that has not already been anticipated by the last mail. I was introduced to Col. Sutter, son of the good old General. He is residing in Acapulco. I will write you more particularly of my visit to Acapulco in my letter from Panama.

## Agricultural Pavilion at Sacramento.

Quite a discussion is now going on relative to the location of the Grounds for the Cattle Show and Pavilion for the State Fair: One party goes for I street; another, for M street; and still another, for the line of the Railroad. One party goes for the Pavilion and Cattle Grounds separate, the Pavilion in the city and the Cattle Grounds out; another, to have them together, outside of the city.

We believe the greatest permanent good; i. e. the greatest good to the greatest possible number, will be attained only by securing a good location out of the heart of the city, where all the arrangements of the Fair can be consolidated—Pavilion, Cattle and Trial Grounds; and all in one lot, on the line of the Railroad. By such a location, all articles can be sent from the Levee without injury, and passengers can reach the Fair without dust or fatigue. If the *Public Good* is at all regarded, this plan will be adopted. As for the location on I street, it never could be permanent—the Slough would make it objectionable; and the building now used as a State House, as wisely remarked by the Bee, will not be a permanent institution. We like the independent remarks of the Bee, and hope its influence will be of good service.

## Splendid Stock Horses.

We call the attention of the public to the advertisements of some of the finest and fleetest Stock Horses in the country. Each and all those mentioned in our columns can show pedigrees that will bear inspection, as coming from the best blood horses known. We call attention to the following:

MORGAN BLACK-HAWK COMET stands at *Marshall's Ranch*, Centerville, Alameda county.

PRINCE MORGAN stands at *Moore's Ranch*, San Ramon Valley, Contra Costa county.

BLACK-HAWK GENERAL SCOTT stands at *Shattuck's Stables*, Oakland, Alameda county.

GENERAL TAYLOR stands at *Hunter's Point*, San Francisco county.

ENGLISH RACE-HORSE LAWYER stands at *Twelve Mile Farm*, San Mateo county.

The above horses all rank very high; and, for their pedigrees and other particulars, we refer to their respective advertisements in our columns.

If fruit dealers in this and other cities would furnish us the facts connected with their trade—the amount they receive and sell in and out of the State, it would make their business known and benefit them materially. We have the fact that one house in this city sold the last year \$48,000 worth of Oregon fruit. Fruit dealers would obtain valuable information for themselves as to where fruit can be had at all seasons, by referring to this journal.

## DOMESTIC SUMMARY.

The Contra Costa Agricultural Society was to hold a meeting at the Walnut Creek House, on Monday last, for the election of officers for the coming year.

The heavy rain that fell on Monday last, was very disastrous to the brick makers in Sacramento and elsewhere in the State, says the Bee.

In Solano county the farmers are said to be in good cheer, as they anticipate a good harvest; the wheat and barley, particularly, look fine; the grass, it is said, is equally as good as that of any adjoining counties.

The amount of wheat in the different warehouses of Napa City, says the Reporter, is about 22,000 sacks, and of barley about 9,000 sacks. The current rate for wheat is 2½c. Barley is worth about \$1.10 or \$1.15.

Some excitement prevails in Placerville in regard to the reported discovery of new and rich diggings near the El Dorado Mills, in that county. It is said that these diggings prospect finely.

In Sierra County the water is gradually increasing in the ditches, and the miners in La Porte, and nearly all the adjacent mining towns are at work, says the Messenger. Many of them have cleaned up, and have been well rewarded for their labors.

The mountain streams near Clear Lake are so full of fish (says the Napa Reporter), that they can be scooped out with a fish net by the dozen. In Cache Creek, near the lake, in some places they are in such myriads, and are so easily obtained, that the idea has been suggested of using them as a manure for the poor lands. [?]

At Shasta, says the Republican, on Saturday and Sunday last, we were visited with rains that will be of immense benefit to the agricultural interest of the northern portion of the State. We are informed that the rain is general throughout all of the Sacramento valley. Since the rain, the weather has been cold and somewhat disagreeable.

The Humboldt Times regrets to learn that several head of cattle have already died on the bald hills, from eating what has of late years become famous in that county, as poison weed, though it is nothing more nor less than the common larkspur. It springs early, and is of rank growth, and is only eaten by cattle where grass is scarce or when they are too hungry to discriminate.

Texas are quite a number of companies at work in the banks of the different branches of the Yuba, above Downville, and also in the banks of the river below town; the water being too high for any other kind of mining about the streams. In many instances, the Citizen understands, good pay is obtained. From a superficial view of the streams thereabouts, they have no doubt that there will be very good mining in the banks for years yet.

An election took place for city officers in Stockton on Monday. The Douglas Democrats and Administration Democrats each had a ticket in the field. The result was the Douglasites elected their Mayor, Assessor and five Councilmen. The Administration men elected a Marshal and four Councilmen. The independent candidate for Collector was elected, and there was a tie vote on two of the Councilmen. The total vote for Mayor was 659; of which Holden (Douglas), received 419.

At Sacramento, on Wednesday, the Board of Supervisors rejected by a vote of five to three, the proposition of the Commissioners to locate the Pavilion on the corner of M and Sixth streets, upon the ground that the Pavilion, cattle-grounds, race-track, etc., should be together; and recommended the Commissioners to select some place of four or five acres in the city for such a purpose. A resolution was adopted, desiring the Commissioners to receive new bids for two days, for locating a pavilion.

The Supreme Court on Saturday, in the case of Geo. K. Pattison vs. the Board of Supervisors of Yuba county and the San Francisco and Marysville Railroad Company, decided that a county, by a vote of the people, there being a law authorizing it, may subscribe to objects other than those for which it was incorporated, and that the people had a right to tax the property of that county to the amount of \$200,000 subscription to the above named Railroad Company.

Will Spring ever return? asks the Placerville Observer. In former years the first of May was considered the most delightful period of the seasons. The hills and valleys were covered in the gorgeous habiliments of spring, and all nature betokened that radiant summer was nigh at hand. Now the prospect is quite different. May-day was as cold and uncomfortable as any time during the month of March. The wind went whirling through the trees like the troubled ghost of winter, and on Monday last the hills were whitened with snow. Surely, the comet has wrought a change upon our planet. [Only one of nature's variations, neighbor.]

A Cow Story, singular Phenomena, is given by the Contra Costa Gazette, from Moraga Valley, Contra Costa county. A cow some twelve or fourteen years old, the property of Mr. William Southard, gave birth, on the 10th of this month, to a fine heifer calf of a deep red color; and on the 20th, ten days after, the same cow gave birth to a bull calf, which is spotted with red and white, and a much larger calf than the first. The informant adds: "I saw both calves on the 21st, at the corral of Mr. Southard, and they were alive and doing well. The owner vouches for the cow being the mother of both calves."

A NOVEL bank blast was exploded lately by Moore & Bradshaw, in their claims, says the Hydraulic Press. They first sank a shaft thirty feet deep, sixty feet back from the face of the bank; from the bottom of that ran a small drift for some twelve feet, and at a right angle from this drift another one only eight or ten feet long, placing at the terminus of the latter, three hundred pounds of powder. After laying safety-fuse, which was drawn through lead pipe, from the powder on through the shaft to the surface so as to be water-proof, the drifts were filled with dirt tightly packed; and the shaft was filled with water, which of course is more dense and ponderous than earth would be. The fuse was then fired. When the charge was reached and exploded, it made a noise like the heavy roar of artillery and shook the hill from end to end, a distance of at least half a mile, jarring sensibly all the houses in town. The water in the shaft, accompanied by earth and stones, was thrown into the air in a straight column two hundred feet high, emptying the shaft completely. The earth around the mouth of the shaft cracked just as rock does about a drill hole, and the entire bank, which is very hard, was cracked through and through, so that it will yield readily to the application of water. This is considered the best mode of bank blasting yet hit upon. When drifts are run in from the face of the bank, they cannot be tamped tight enough, and a great deal of the expansive force of the explosion is lost through them.

## Letter from Paris.

## THE WAR QUESTION IN ALL ITS PHASES.

[We take pleasure in laying before our readers a very interesting letter from our esteemed correspondent, a gentleman from this section of our State, well known in the walks of literature and science, from whom we shall be favored by regular letters during his stay abroad. This letter came by last steamer, and was only forty-three days from Paris.]

PARIS (France), March 12, 1859.

All Europe is filled with rumors of war. But where it will manifest itself, whence will come the first blow, and what its results may be, no one can tell.

France and Austria, it is said, are to be the combatants. Italy, poor, beggarly and degraded as she is, the prize. Within the last three months I have traveled over the greater portion of her territory, have seen all of her great capitals and important towns, from the Adriatic to the Mediterranean; and from Venice and Lombardy on the North, to Naples and Sicily in the extreme South; have witnessed the misery of the people, the tyranny under which they groan, and their desire for revolution and liberty.

If unfortunately this war does break out, how far it will spread, how long it will last, what changes it may make in the geography of Europe, what consequences it may entail upon the people, no man can foresee. This imbroglio of Italian affairs, cleared of all extraneous matter, is easily explained.

Italy rose out of the darkness of the middle ages, with the unfortunate inheritance of a great name, and without the ability or power to do so, was expected to emulate the tradition of the past. For the last two thousand years, her records contain the history of the world; now she is divided into petty States and Kingdoms, her territory occupied, and her people ruled by foreign soldiers.

Austria, the most odious, detestable and tyrannical government in Europe, not only holds possession of the Lombardo-Venetian territory, the whole northeastern portion of the country—but by intrigue, and her immense power, dictates policy and law to the entire peninsula, with the single exception of Sardinia. Rome and the Papal States, the temporal possessions of his Holiness the Pope, are garrisoned by the hardy soldiers of France.

Naples and Sicily are only retained in possession of the infamous and ferocious Ferdinand, by the aid of numerous regiments of Germans and Swiss; while Tuscany, Parma and Modena, are mere vassals of the Emperor of Austria.

And of all the Italian republics which formerly existed, San Marino alone remains; the smallest State, both in territory and population, which the world has seen since the days of Ancient Greece. Its territory embraces exactly seventeen square miles; her population numbers about seven thousand, and her miniature army is composed of only fifty men. For more than fifteen hundred years it has maintained its independence, and its integrity, while the balance of the world has been changed by wars, conquest and political convulsions.

The Italians understand well, that if the crushing weight of Austria were lifted from their shoulders, all such matters, as the perjured tyranny of Naples, or the corrupt imbecility at Rome, would be speedily cured.

The expulsion of Austria; then, is the one thing needful, the *sine qua non*; and is the rallying cry of every Italian; from the peasant to the prince, from the Venetian to the Sicilian, and from the Alps to the Gulf of Taranto. If they were relieved from this incubus, and would cluster around constitutional-enlightened Sardinia, all they require would soon be within their grasp. Thus absolute Austria and constitutional Sardinia are pitted against each other for supremacy in Italy, and Europe is called upon to decide whether despotism or freedom shall prevail.

France has decided for Sardinia, and has announced to Victor Emmanuel, that he can count on her, when the time for action arrives.

England, through her orators and statesmen, cries the treaty of Vienna, it must be maintained—forgetting that it has already been violated a dozen times; and that mankind will be the arbiters of their own destinies, in their own generations, despite whatever parchments may be produced to show that their ancestors signed away their inalienable rights.

Russia speaks and says, these treaties are worthless, have been repeatedly broken, and it is time they were revised and remodeled. In the meantime all the States of the German Confederation are arming for the conflict, and will of course sustain Austria.

Thus in the grand struggle in which Europe is about to be involved, there is light and hope for Italy. If they will lay aside their own dissensions and petty jealousies, and unite against their common foe, the whole civilized world will continue to sustain them. But there is only one remedy for Italy: a separate, constitutional government for each of the existing States, with boundaries, distinct and well defined, each independent of the other—but all united in one confederation for common defense, and against all outside interference. This league of States, composed of Sardinia, Lombardy, Modena, Parma, Tuscany, Rome and Naples, would be separated from the rest of Europe by the Alps, and from each other by the Apennines—but held together by a unity of language and religion, by a common history, common glories and common traditions. LE DOCTEUR.

YOTSO MEN'S CHRISTIAN ASSOCIATION.—This most excellent Association hold their Festival Fair on the 24th inst., and will continue four days. This Fair is to be held in Musical Hall. It will be a Fair, indeed, for the fair themselves will be there to make it what it should be—a union of Christian effort for a Christian cause. We are pleased to know that a very general enthusiasm prevails among all the churches, to make this festival one that shall be an honor to Christianity. A host of young ladies will be in attendance as ministering angels, and we trust every florist will contribute to scatter bright flowers in their pathway, and cheer them in their labors.

MAY WEEK.—The past week has been alive with the festivities of May. Many of the Schools of this city, and indeed of all the cities, have had their gala-days; many Societies also enjoyed festive occasions. That highly valuable and interesting portion of our citizens, the Germans, held their grand May Festivities at Russ' and Volk's Gardens and at the Theaters. Parades on our streets, banners flying, and rich strains of music, all tended to keep alive and add to the enjoyment of our May Festivities; and although the clouds gave forth heavy showers, interfering in a great degree with some of the plans of the festival, yet withal, it was the "Merry May-Day" still.

## THRASHING MACHINES. HALL &amp; WOODBURY'S SEPARATORS, With Hall's Improved 10-Horse IRON-POWER.

THESE MACHINES HAVE been enlarged and many valuable improvements added to them the past season. They are now as they always have been, THE BEST Machines imported. Purchasers will do well to call and see these Machines before purchasing, as they will be sold low.

Beware of Counterfeits and Imitations!! None genuine without the TRADE MARK.

THE UNDERSIGNED, SOLE AGENTS of the above celebrated brand of SALERATUS, SUPER CARBONATE SODA, CREAM TARTAR and SOAP POWDER, caution the Public against all SPURIOUS IMITATIONS, as well as an article, in LARGER BOXES, of same manufacture, but of different quality, and TOTALLY UNFIT for this MARKET.

These goods are MANUFACTURED EXPRESSLY for us, of the finest quality, and are always the same strength.

WE GUARANTEE them STRICTLY PURE. To prevent DECEPTION, we call attention to the above FAC SIMILES of the GENUINE.

It is ONLY packed in 12 POUND BOXES, and shipments arriving after 1st June, 1859, will have our name upon every paper.

We have established a TRADE MARK, as above, to counterfeit which will subject the offender to a penalty of not less than Two Hundred Dollars.

We are in constant receipt of the above, and keep a Stock to supply the increasing demand.

We also receive a very superior article of SALERATUS, in 50 Pound Kegs, Manufactured for us, expressly for This Market, under the name of "GOLDEN GATE SALERATUS," also protected by our Trade Mark.

WE GUARANTEE IT STRICTLY PURE. Sole Agents for California and Oregon, JOHN D. WING & Co., 48 California Street, SAN FRANCISCO.

For Sale in Lots to suit Purchasers, by GOODWIN & CO., 53 and 55 Front street, SAN FRANCISCO.

## SPECIAL NOTICES.

THE GENUINE PITT'S MACHINE. T. OGG SHAW'S, is the ONLY PLACE where the Genuine Pitt's MACHINE, made by John A. Pitt, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. [13] T. OGG SHAW.

We are ahead of the world in Ambrotypes. We are ahead of the world in Photography; we are ahead of the world in Daguerotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose lands, I presume, were peculiarly sensitive to the touch of "Vergil."

My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brings so much about, and it will be seen that the committee at the State Fair, reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE, Corner Montgomery and Sacramento streets.

The Oxygenated Bitters.—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Catarrh, loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acidity, Sea Sickness, Scoury, Nausea, Headache, Ennui, and General Debility, or any disease having its origin in imperfect digestion. These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers and others, testify are the only safe, certain and sovereign SPECIFIC for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug; in their nature tonic, not stimulating; retaining their virtues in any climate; they are a "combination and a form indeed of that Medicine which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is made to the written certificates from distinguished individuals known all over the land.

SETH W. FOVLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by: HARRIS MORRILL, HENRY JOHNSON & Co., San Francisco; and by all good dealers in medicine every where. 23

## HOTEL INTERNATIONAL.

San Francisco, California. THE UNDERSIGNED INVITE the attention of the Traveling Public, and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a FIRST-CLASS HOTEL

In every particular. The present Lessees and Managers, JOHN J. HALEY and GEO. R. BARCLAY, with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THOUGHFARES, THE FASHIONABLE PROMENADES, AND STEAMBOAT LANDINGS; thus rendering it at all times the most DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen, during their sojourn in this city. JOHN J. HALEY. GEO. R. BARCLAY.

## MISCELLANEOUS.

## SAFES! SAFES!!

## LILLIE'S IMPROVED WROUGHT AND CHILLED IRON SAFES.

Fire-proof, Powder-proof, Drill-proof, and Burglar-proof.

With Lillie's Unpickable Powder-proof Lock.

The best Safe made for resisting both fire and thieves, as proven in innumerable instances.

As to a recent test by fire, reference is made to the late burning of the Crystal Palace, in New York city, at which all other Safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Cairo. Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl street, N. Y.: Dear Sir: You ask what Lillie's Safe, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned on the 27th of December last, and at that time we had one of those in our office and three in our warehouse. The Safe in our office was filled with our books and papers. The Safe in our warehouse had our books and papers, and everything it contained came out in perfect order. A new coat of paint is all it will want. The Safes in the warehouse have far exceeded our expectations. Although the ornaments were melted off, being exposed to the hottest of the fire several hours, the inside was unharmed. We commend them as being far superior to any other Safe for fire and burglar-proof qualities. There is no warping or twisting, and no necessity for a new Safe, as in the ordinary kind after having been once burned.

Yours, truly, RUEL & MOORE.

Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of today is received. In reply we are happy to say the Safe we bought of you last spring (Lillie's Patent), came out of the fire on Sunday night, all right. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the Safe is unharmed, but nothing in our opinion, to injure it. The fire was a severe one, consuming our store and the adjoining ones on each side, and the Safe was exposed to an intense heat. You will please send for the safe, repair it, and return it to our office, and most obliging yours,

CHAS. WARREN & CO., No. 245 River street. [From the Troy Daily Times, October 6th.]

LILLIE TRIUMPHANT! A GREAT TEST!! The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of Safes than which none more thorough could have been desired. Those who were on the ground at that time, the hottest burning they ever saw, the war of the Safe manufacturers were in an exposed situation. Lewis Lillie of this city, Stearns & Marvin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns & Marvin's Safes were burnt out, others were completely wrecked. Lillie's alone were unharmed, except the trying of the paint upon the inside doors. The Institution could not have arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

[From the New York Times, October 6th.] Go to the ruins of the Crystal Palace, and examine the so-called Fire-Proof Safes, manufactured by Stearns & Marvin, and other Sheet-Iron Safe makers, most of which are a mass of ruins. This unexpected test will open the eyes of the public. Also, examine Lillie's Chilled Iron Safe, which requires only a coat of paint to make it as good as new.

A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 33 Sacramento street.

Lillie's Celebrated Bank Locks, On hand, and for sale. The best Bank and Vault Lock in the world.

Ladies' Department.  
(For the California Farmer.)  
A FRAGMENT.

Like a sweet thrill of mountain bird,  
Through the dim twilight shadows heard,  
Or sound at eve of murmuring stream,  
Whose waves reflect each starry gleam;  
Or like the zephyr's whispering tone,  
As wafted o'er the forest lone;  
Like all that's sweet in earthly sounds,  
Or in the space that Earth surrounds,  
Or in the ambient air above,  
Came floating down her words—"I love!"

I did not ask who was thus blest;  
What need? She lay upon my breast;  
One little hand was placed in mine,  
The other did my neck entwine,  
While rosy lips my kisses met;  
And eyed those eyes of deepest jet,  
Sent such wild rapture to my heart  
As seemed of future joy a part.

They tore her from me! What am I,  
That none will suffer me to die?  
She sleeps alone in the cold bed  
They scooped for her unconscious head;  
And through those shining tresses now  
The worms will creep upon her brow,  
And hold their horrid revels there,  
Defacing what was once so fair!  
Oh, loose my bonds! and let me go  
To rest with her who lies so low!  
Dethrone me not! Her arms I see  
Stretched out imploringly to me,  
And wildly sounds her piercing cry  
That I should soothe her agony!

It is a dream! For cold and white,  
With smile so full of placid light;  
We knew the angel whispered "peace!"  
While struggling for her soul's release!  
A wreath of myrtle round her thrown,  
And in her hands a rose half blown,  
Sweet emblem of her own brief life,  
I see my own dead love—my wife!  
The coffin is her home of rest,  
And so she lies on her breast;  
The grave seems not so dark and cold,  
Nor yet so gloomy seems the mold,  
Since nearly all of what I love  
Is dwelling with the saints above,  
Like cherubim and butterfly  
The shell is here, the soul on high! SALLIE.

March 31, 1859.

The Dignity of Female Labor.

[The following noble response to our estimable correspondent "N. B. H." upon this theme, came to us from a distinguished lady in Alabama. Truth gleams in every line, and it will carry conviction to every mind. The high compliment paid to our correspondent "N. B. H." is just. Labor Derives its Dignity from Woman. There is an eloquence in this letter that will arouse a hundred minds to its truthful appeals. We rejoice to know we shall add this lady to the list of our honorable sisterhood of the "Ladies' Department."]

Editor FARMER: The great prominence which you give to the subject of Female Education is an important feature, and one every way deserving of attention. Your correspondent, "N. B. H.," has some sterling thoughts on the subject; for, what is labor but a certain kind of education? and often the best kind. Yes, "the dignity of female labor" may, yea it does, "sound very unfashionable;" but sounds good, brave, strong, honest. They are words fraught with importance. She has discovered the source whence labor derives its dignity; she has penetrated the secret of the progress which the soul makes towards perfection, when the powers of the mind and body are engaged in their appointed work. Both reason and common sense (to say nothing of religion) cry out against the idea that woman was made but to help to fill the numerical quota of earthly beings—to eat, to drink, to sleep, to awake, to rejoice, to mourn, to die, to be forgotten; or that we were designed to live a life of pleasure-seeking or of useless ease. There is a full-time work for each to do, a separate and distinct work; and there can be nothing like calm, peaceful happiness unless the soul experiences the consciousness that all her faculties and all the faculties of the tenement which she inhabits, the machinery which she controls, are engaged in accomplishing this appointed labor. When, at the close of a useful life, we can exclaim: "I have glorified Thee on the earth; I have finished the work which Thou gavest me to do;" then may we rest, and not till then. And then the soul shall such fullness of joy as nothing else can afford, how many give up all hope of this bliss, for sake of a few short-lived pleasures, and exchange calm content for turbulent excitement, and employment for dissipation, and comfort for novelty! The idea of continued exertion is some; they dread the dreary monotony of a day round of the same duties; and they will not in the habits which would make it easy and natural, nor cultivate the motive (love) which would turn it into a pleasure. Are not these things to be pitied? Has their life any real aim? Is there an inward beauty, a soul-beauty, manifested in the life of a woman, strong to do and to suffer, which is gained only by doing and suffering? A woman, who, after having been reared with utmost tenderness, having been surrounded with efforts and luxuries, finds herself suddenly cast, alone, and weak, and lonely, and friendless, in the world, bereaved of that one whose duty it was to shield her from every ill and only her every want: is it strange if she fall and beneath the weight? But, "Ah! woman, thou art a mystery!" It is possible that she sink beneath the burden, which her former life rendered almost insupportable; yea, I say, it is probable that she will. These are the circumstances that try her; that show her strength, which she thought she possessed; her whole mode of life to be changed; she feels that she is unfitted for the world; yet the iron-hand of duty is laid upon her—comfort is to be changed to wretchedness, luxury for misery, plenty for starvation. She, perhaps, never worked a day in

her life; yet now she is to work to keep body and soul together, and all this is to be endured in loneliness, for summer friends have fled; and, in her deepest affliction, she finds herself deserted. Yet she will rise above it all. The accumulated ills of bereavement, poverty, desertion, and almost despair, may surround and press her down to the lowest depths of suffering, but they cannot overwhelm. Well will it be for her now, if there is left one for her to love and care for; one more weak and helpless than herself, who clings to her alone; for that charge which doubles her burdens, her cares, and her troubles, is to supply her with one great motive power; for now shall woman's love and woman's faith overcome every obstacle, and endowing her with courage sublime, she will do all things, bear all things, despise danger, conquer difficulties, conquer physical weakness; and, triumphing over all the ills of adverse fortune, she will fight her way to victory.

Having thus conquered destiny, may she not challenge the admiration of the world? and shall not the silver trumpet of fame, in clarion tones, tell abroad her struggles and her conquest? No, her contest has, in its very nature, been of a silent, unseen kind, and her inward struggles to overcome old habits, long-established prejudices, weakness, and fear and pride of heart, have been greater and more intense, than those visible efforts to obtain the means of ministering to the wants of the body. These last are apparent to all, but the others were seen by no eye but God's. The world cannot know the depth of sorrow which she crushed back into her heart, and would give it no utterance. The world cannot feel the mighty throes with which she struggles against nature. The world cannot know the pangs which that brave heart bore from wounded sensibility, neglect, and oppression. And therefore the world cannot appreciate her character in the full development which it has gained in its trials by poverty, and labor and pain and sorrow. Quietly she shall pass through life, and instead of the praise of the gaping crowd, the conscious strength, earnest spirit, inward peace and well-earned independence shall be her sufficient reward here, and a fadeless crown hereafter.

Yes, there is dignity in "woman's labor;" it does "aid us in the moral and spiritual part of our being." It is doubtless a great moral agent, and it "helps to develop all the powers of mind and body;" and N. B. H. has nobly vindicated the cause of woman's duty, and may I say it, woman's right to labor. The butterflies of fashion may turn a cold contemptuous glance on such a doctrine, and laugh her to scorn, but there are many who will thank her for boldly advocating the right. The pen that writes on such subjects should not remain idle; let it write, again and again: yea, let such principles be written until the world shall be so thoroughly reformed, that there shall be no more necessity for advocating such principles than for advising people to supply their natural wants for food and drink.

In relation to the education of the young women of our country, there is one very grave error, which, however, would not be so serious were it not almost universal. Women in this country are scarcely ever educated with a view to their being able to labor for a support. The man of wealth expects to give his daughter money enough to live on, and it is an easy matter for her to marry a rich man. The poor man expects his daughter to marry as their only hope, and as the prevailing passion for extravagance renders it a perilous undertaking for a poor man to marry a poor wife, and as the wealthy young men, for the same reason, prefer rich girls for their wives, it is generally a forlorn hope. "Every father feels it to be his duty to qualify his son in some way for making a living; he either gives him an opportunity to learn a profession, or has him taught a trade, or places him behind a counter. And in no one instance does a man feel justifiable in thrusting forth his son into the world without having given him facilities for learning some means of making a living. The daughter must live as well as the son, yet who thinks of giving her the opportunity to qualify herself for making her living? She must trust to marriage. This false principle leads to innumerable evils. Let woman be educated for a life of labor; then, if Providence should place her above necessity, she will not dread a reverse of fortune as the greatest possible calamity which could befall her: or, if she be poor, the means of gaining a living by her own exertions will give her a conscious independence which will rob poverty of half its sting. I could write for hours on this theme, but it is time I were drawing this lengthy epistle to a close.

ALABAMA.

THE LADIES SHOULD READ NEWSPAPERS.—It is a mistake in female education to keep a young lady's time and attention devoted to only the fashionable literature of the day. If you would qualify her conversation, you must give her something to talk about; give her education with this actual world and its transpiring events. Urge her to read newspapers and become familiar with the present character and improvement of our race. History is of some importance; but the past world is dead and we have little, comparatively, to do with it. Our thoughts and our concerns should be with the present world, to know what it is, and improve its condition. Let her have an intelligent opinion, and be able to sustain an intelligent conversation concerning the mental, moral, political and religious improvements of our times. Let the gilded annals and poems on the centre-table be kept a part of the time covered with weekly and daily journals. Let the family—men, women and children—read the newspaper.

FORBEARANCE.—"Every man and woman has his and her infirmities of temper and disposition, which require forgiveness; peculiarities which should be managed; prejudices which should be avoided; innocent habits which should be indulged; fixed opinions which should be treated with respect; particular feelings and delicacies which should be consulted; all this may be done without the slightest violation of truth, or any infringement of religion. Indeed, these are the sacrifices that repay a man in the decline of life, for all he parent delight in his children and repose on them, when his mind and his body are perishing, and he is hastening away to the end of all things."

GROVER & BAKER  
SEWING MACHINES  
REMOVAL.

THE GROVER & BAKER S. M. COMPANY HAVING assumed the business heretofore conducted by MR. S. O. BRIGHAM, For the Sale of our Machines in this City, Take this occasion to announce our REMOVAL from the premises lately occupied by him, to the more

SEE THE FIRST PREMIUM  
SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES took the FIRST PREMIUM at the Mechanics' Fair, Sept. 1858.

Wheeler & Wilson's Sewing Machines Were recommended the HIGHEST PREMIUM at the State Fair, Maryland, August, 1858.

Wheeler & Wilson's Sewing Machines Were recommended as the BEST FOR FAMILY USE, at the San Jose Fair, Sept. 1858.

Wheeler & Wilson's Sewing Machines ARE SIMPLE, not liable to get out of order, make a stitch alike on both sides of the fabric sewed, turn the hem, use the cotton from an original spool, by use of a NEW TENSION, and are capable of sewing the FINEST AND COARSEST fabrics, LEATHER INCLUDED.

Corner of Market and Beale streets.

## Miscellany.

## The Great Stone Face.

Is one of the valleys of New Hampshire, says Hawthorne, there lived in a mean cottage, a young lad, the child of poor parents. From his home and from the whole valley might be seen, in one of the lofty, distant mountains, a large human profile as if hewn out in the rock, and this was known under the name of "The Great Stone Face." There was an old tradition in the valley, that there should some day come a man to the valley whose countenance should resemble that of the great stone face; that he should be the noblest of men, and should introduce a golden age into the valley. The young lad grew up in the full view of that great stone face, which seemed to hold dominion over the dale, and in the constant thought of the expected stranger, who would one day come and make the dale's people happy. For hours he would gaze at the large stone countenance, filling his whole soul with the sublime beauty and nobility of its features. Thus time passed; he went to school, grew up a young man, became a school-master and a clergyman; but he always kept looking at the lofty, pure countenance in the rock, and more and more grew his love of its beauty, and more and more deeply he longed after the man who had been foretold and promised, and whose countenance should resemble this.

All at once a great cry rang through the dale, "he is coming! he is coming!" And everybody went out to meet and welcome the great man, and the young minister among the rest. The great man came in a great carriage drawn by four horses, surrounded by the shouting and scurrying crowd; and everybody exclaimed, as they looked at him, "how like he is to the great stone face!" But the young clergyman saw at the first glance that it was not so, and that he could not be the foretold and promised stranger, and the people also, after he had continued some time in the valley, discovered the same thing. The young man went quietly on his way as before, doing all the good he could, and waiting for the stranger, gazing continually on the large countenance, and fancying that he was living and acting forever in its sight.

Once more the cry went abroad, "he is coming! he is coming!" And again the people streamed forth to meet him, and again he came with all the pomp of the former, and again the people cried out, "how like he is to the great stone face!" The youth looked and saw a sorrowful countenance with really some resemblance to the large features of the face; but for all that it was very unlike. And after a while he began to remark that the resemblance became still more and more unlike, nor was it long before everybody saw that their great man was not a great man at all, and that he had no similarity to the great stone face. After this, he disappeared from the dale. These expectations and these disappointments were repeated yet several times.

At length, although the good clergyman gave up almost entirely his sanguine expectations; he still hoped silently, and continued silently to work in his vocation, but with more and more earnestness, extending yet more and more the sphere of his operations—forever gazing upward to that large stone countenance, and, as it were, impressing yet deeper and deeper its features upon his soul. Thus time went on, and the young man had advanced toward middle life; his hair had begun to grow gray, and his countenance to be pitted by the furrows of advancing years, but the long expected stranger had not appeared. But he yet hoped on. In the meantime the influence of his life and his labors had ennobled the dale's people, and given beauty to the dale itself. Universal peace and universal prosperity prevailed there during a long course of years. And by this time the locks of the clergyman were of a silvery whiteness; his face had become pale and his features rigid, yet was his countenance beaming with human love. About this time the people began to whisper among themselves, "does there not seem to be a remarkable resemblance between him and the great stone face?"

One evening a stranger came to the clergyman's cottage and was hospitably entertained there. He had come to the dale to see the great stone countenance, of which he had heard, and to see the man also, of whom report said he bore the same features, not merely in the outward face, but in the beauty of the spirit.

In the calmness of evening, in the presence of Eternal, in presence of that large stone countenance of the rock, they conversed of the profound and beautiful mysteries of the spiritual life, and while they were so doing, they themselves became bright and beautiful before each other.

"May not this be the long expected, the long desired one?" thought the clergyman, and gazed at the transfigured countenance of his guest. As he thus thought, a deep feeling of peace stole over him. It was that of death.

He bowed his head, closed his eyes, and in those rigid but noble features, in that pure, pale countenance, the stranger recognized with amazement him whom they had sought for—him who bore the features of the great stone face.—*Fredrika Bremer.*

"A correspondent in the London Times calculates the age of the great California tree in the Crystal Palace at Sydenham, at about six thousand four hundred and eighty years. It must have been planted, according to that, when Adam was a very small baby, if not before. This same writer refers to another California tree, which must be at least seven thousand one hundred and twenty-eight years old.

"The method in which the computation was made is this: the writer took two pieces of wood of the tree, one of the heart and another of the sapwood, about an inch square each, and he counted the concentric layers, which are supposed to indicate the annual growth. In the very heart-wood he found forty-five layers to the inch, and in the sapwood twenty-one; and as the tree is fourteen feet in diameter, ten of heart and four of sapwood, the result was easily obtained. The second tree spoken of was thirty-nine feet in diameter."

The substance of the above has been in several papers; and no one seems to have discovered that the astute calculator, instead of finding the number of rings from the radius of the tree, has calculated the ring marks for the whole diameter; and the result is consequently just double the true age of the tree. Ten feet of heart wood will have twenty-seven hundred rings, and four of sapwood (two on each extremity of the diameter), will have five hundred and four rings, indicating an age of thirty-two hundred and four years.

[We clip the above from an Eastern exchange. The English calculation is based upon a tree fourteen feet in diameter. We found one tree in the Mariposa forest forty feet in diameter. What is the age of that tree?]

**CONCRETE FLOORS.**—The lower floors of all the cellars of houses should be composed of a bed of concrete about three inches thick. This would tend to render them dry and more healthy, and at the same time prevent rats from burrowing under the walls from the outside, and coming up under the floors—the method pursued by these vermin where houses are erected on a sandy soil. This concrete should be made of washed gravel and hydraulic cement. Such floors become very hard, and are much cheaper than those of brick or flagstones.

## J. L. POLKEMUS

## DRUGGIST

190

J. St.

## OFFICIAL NOTICE!

POLKEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I have learned my lesson, and have enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Doctor and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists. Legitimate or illegitimate, and of the Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open All Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure. Budd's Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Liniment, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY

10-12

J. L. POLKEMUS

And see what "can be done in California," before sending their millions to some far-off country, never to return.

CALIFORNIA BUTTER AND CALIFORNIA PAIRS are better and cheaper, in the end. Consider it well. 7-1

## MOWING AND REAPING

## MACHINES!

SEVEN DIFFERENT KINDS.

All the best Combined Machines in Use.

Letters of inquiry, and timely orders, will receive our prompt attention.

From the Atlantic Side.

Editor FARMER: The pressure of business prevented me from sending my usual letter to you by last mail. I am happy to feel that no great loss was sustained by you or your readers, in consequence of that failure. Had there been anything comfortable, refreshing or startling to write, you would have had at least a short letter. As the steamers now carry pretty large human freight to your shores, you will be rejoiced to such a degree that you will not miss any one of your Atlantic correspondents, certainly for a few weeks.

I am happy to say to you, that if the present strong opposition continues, there will be a large percentage added to your population the present year. Pike's Peak is growing *Peaker* still, so far as gold is concerned, although it is said that the emigration to that region averages two thousand per day, that pass through one of the frontier towns; that is owing in a great measure to the fact, that all in any way interested in that country, have taken the pains and been to the expense of informing the people of their advantages, and of furnishing facilities for their getting there in a cheap, safe and expeditious manner. They have constructed roads, built bridges; steamboat, stage and railroad lines have been formed, and are now in successful operation. Their Emigration Society's agents, or those of private companies, I am informed, are almost literally swarming over all the land. See the result. Let California learn a lesson by this, and profit by it. A word to the wise, etc.

Our home news is not important in any unusual degree. The members of Congress have gone home to their constituents; the Post-office boiler has collapsed, and come very near frightening somebody, but it didn't, though. The President took it hard, very, and utterly refused to be comforted for nearly two hours; eating nothing during that whole time but two raw onions, and some "salt junk," imported from Cuba. Yet he slept sweetly during the night, except a little dream or two, about the Cass-Yrissari treaty, the filibusters and gallinippers of the Isthmus.

We are now seeing the beginning of the end of the Sickles tragedy. The trial is now in progress at the Federal city, and will hardly be finished before another steamer sails for your shores. There is an extraordinary degree of excitement on the subject all through the country. It will be an exciting trial, without doubt.

The weather is warm and pleasant for the season, vegetation is quite forward, and everything looks very promising, indeed, in the agricultural world, and hopes are entertained of an abundant harvest.

In Europe everything looks warlike, and the probability is that there will be a general, fierce and bloody war, involving all the principal nations of Europe in the conflict. Time will not permit me to say more by this steamer—will give you a long letter next mail. Truly, B.

**RAIN! RAIN!**—Rarely have we had so fine a rain, and one coming more propitiously, than the rain of the first part of this week—commencing steadily, and falling fast, faster, faster; until the earth was well saturated, and drank its fill; and, when the sun came forth on the following morning, the earth, trees, plants and flowers were dressed in diamond drops, glistening like bright jewels. It was a sunrise worth enjoying. This rain was worth millions of dollars to our State, for it came when most needed—vegetation already shows how welcome it was. So heavy a rain-storm in May (this was on the 1st and 2d) is rather unusual; but it was much needed in various sections, and extended generally over the State, as far as we can learn. Over an inch and a half of rain fell here, as well as in Sacramento.

**THE PEOPLE ARE COMING.**—By all the information that can be gathered, from various sources, we have every reason to believe we shall have a great addition to our population before the year ends. A gentleman, who came passenger in the last steamer (the J. L. Stephens), and who complains bitterly of the crowded state of the vessel and the fearful risk of life on that trip, tells us "All Western New York is coming to California!" And we have letters from many States, telling us of the gathering hosts that are now making ready.

**MAY THANKS.**—We tender our thanks to Hon. O. L. Scott, for valuable documents from Washington. Also, to Senators Douglas, Broderick, and Gwin, for valuable favors; to Senator Stevens also, each and all rendering us many favors; for all of which we are very grateful.

**HOTEL INTERNATIONAL.**—"Look out for the paint." Such were the cards hung out over this hotel recently, and now the hotel shines out like a new bride, bright, clear, and showy. The patrons of this hotel find themselves contented and happy, for they are well fed and well cared for.

**UNIVERSITY OF THE PACIFIC—Medical Department.** The opening address of this Institution was delivered in Musical Hall, on Thursday Evening, by Hon. Geo. Barstow. The exercises were commenced by a prayer, by Prof. A. S. Gibbons. The address was an eloquent and an admirable production, often interrupted by the warm applause of the audience. It was replete with brilliant and earnest appeals for the cause it plead, and was listened to by a highly intelligent audience. Addresses were also made by Rev. Dr. Peck and Rev. Mr. Cutler, and altogether this debut is a guaranty of the success of the society.

**Wm. Mansfield. T. M. Wood. MANSFIELD & WOOD,**  
WHOLESALE AND RETAIL  
Cloth and Clothing Warehouse,  
SOLE AGENTS FOR THE SALE OF  
WYMAN & CO'S SUPERFINE CLOTHING.  
A full and complete stock of  
Cloths, Casimires, Vestings and Tailor's Trimmings,  
And every description of  
Gentlemen's Fine Furnishing Goods,

San Francisco Cattle Market.

There has been very little change in the market since our last report. Beef still continues very dull of sale, at a little lower prices. Pork has slightly advanced, with a good demand. We quote slaughterer's prices, as follows:  
BEEF—American, first quality, 12 1/2¢; #2, 12¢; Spanish, first quality, 10¢; #2, 9¢; #3, 8¢; #4, 7¢; #5, 6¢.  
LAMB—At 15¢; #2, 14¢; #3, 13¢; #4, 12¢; #5, 11¢.  
PORK—Dressed, 9¢; #2, 8¢; #3, 7¢; #4, 6¢; #5, 5¢.  
VEAL—At 10¢; #2, 9¢; #3, 8¢; #4, 7¢; #5, 6¢.

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 12, 1859.

NUMBER 15.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### Agricultural Society versus Agricultural Science.

EDITOR FARMER: Apart from the not sufficiently established charge made against the former officials of the Agricultural Society, that they have failed, either from intention or neglect, in the honest discharge of those duties which the public had a right to expect at their hands, we have reason to feel ashamed that men, who consent to occupy positions of trust in that Society, should show themselves so hopelessly ignorant of the business which they undertake to promote, as those who now fill them. Every one will allow that a periodical devoted to the interests of the Society, if widely circulated, would do much good; but such a periodical should be conducted by some one who is well acquainted with the science of Agriculture in its present advanced state. To cover their ignorance, if not from a less excusable motive, our present officials represent Agricultural Science as a "mass of the stale theories of foreign essayists," and recommend to the public a journal which, they believe, rejects the encumbrance, and seems to advocate the novel doctrine, that in our climate facts and experiments are what our cultivators want. "Tell it not in Gath!"

I do not ask which one of the members of the Board is the individual who wrote the notice condemnatory of foreign agricultural writers. If the others allow that individual to pass unrebuked, and use the broad seal of the Society in his future communications and correspondence, they cannot escape from the charge that they approve of his act, and the public has a right to condemn them all.

It may flatter the vanity of some of our citizens to hear foreigners underrated; but the fact remains in full force, notwithstanding that, with the exception of Sir Humphrey Davy, the true constructors of Agricultural Science were born on the Continent of Europe. We have none of equal merit of American birth. But shall we on that account despise it? or refuse to hear truth from the lips and pens of those benefactors of the human race? The Agricultural Society may stultify itself; the American people will not imitate it.

"Facts and experiments," forsooth! The assumption looks well on paper, but what does it amount to? "From all that has been said," writes Professor Henry, for the Patent Office, "it will be evident that the hopes of the future, in regard to agriculture, principally rest upon the advance of abstract science—not upon the mere accumulation of facts, of which the connection and dependence are unknown, but upon a definite conception of the general principles of which these facts are the result." When common farmers make experiments, except under the direction of a scientific man, or Society, they are of very little account. Do they know how far the comparative productiveness of the crops experimented with is owing to the ground being in a proper state as regards heat and moisture? or how far it may not result from the qualities of different soils? There are so many things wanted to produce perfection that the addition of one cannot be a true test. Where farmers are aware of this, and make their experiments accordingly, they are themselves scientific; but their superior knowledge is owing to their having devoted considerable attention to "books, reports, and dissertations," written by no ordinary men, or by those who explain their lessons.

What says Alice of the spiritless attack on the ladies? AGROICOLA.

MILKTON, April 30, 1859.

#### Early Vegetables.

MANY persons, wishing early vegetables, sow the seeds in cracks or boxes, and start their plants quite early; but their early growth is nearly lost in transplanting. Let them try the following method: Take a flat box, and fill in an inch or two of earth; then take flat or English turnips, scrape out the inside of as many as you wish bills of tomatoes, cucumbers, cabbage, or lettuce, place them in your box, fill in and around with rich earth, and sow a few seeds in each; keep in a warm room, and water occasionally. When you plant them, cut off the bottom of the turnip, being careful not to disturb the roots, and your vegetables will be from one to two weeks earlier than those raised in a hot-house and transplanted in the common way. Let three or four cucumber or lettuce plants grow in a hill, and but one tomato or cabbage plant. After they are set and growing well, nip off the poorest of the tomato and cabbage plants, for by pulling them up you disturb the roots of the one you wish to grow.—[G. Coover, Wilkesbarre, Pa.]

#### Summer Fallow.

"A NEW SYSTEM FOR GRAIN.—The Placer Press is informed by a farmer on Coon Creek, that the crops in that locality were never looking better than at present. In that section they have generally adopted a new system in relation to plowing time. They are now breaking up a portion of their ground, and as much as will be put in grain is to lie dormant until just before the next fall rains, when the seed is to be sowed and harrowed in. In this manner the farmer will get his grain in early, and in time to have the benefit of all the rains."

[The above extract from one of our country exchanges, having attracted the notice of our correspondent "Rusticus," he sends us the following; and as we are always willing to give room to all who write upon the science of Agriculture, even though they differ from us, we give "Rusticus" a place, remarking merely that the *bad effect* he finds to result from the system alluded to, was not in the system itself, but only in the poor, hap-hazard way in which that system was attempted; for we assert that it was not at all fairly tried. We will first turn "Rusticus" over to our friend Morley, of Pleasant Ranch, Stanislaus county, and if he don't satisfy him, why, then we "will try."]

EDITOR FARMER: I find it stated in a late paper, that the farmers at Coon Creek, have generally adopted a new system, in relation to ploughing time. "They are now breaking up a portion of their ground, and as much as will be put in grain, is to lie dormant until just before the next fall rains, when the seed is to be sowed and harrowed in." I fully agree with the farmer, that it is of great advantage to have his crop in early, in order to insure "the benefit of all the rains;" but judging from the slovenly ploughing I have seen in this country, and the very inefficient work which the hollow-mouldboard plough can be made to perform, even by the best ploughman, I am inclined to the belief, that this system will be productive more of loss than of advantage to the farmers. It is well known that in order to have the weeds and foul grass fully smothered, they should be excluded from both light and air; and, in order to get a full covering for your seed, your sod should stand at an angle of 45°. Let us assume, that you put in oats on a level field, as a first crop: you take a sod, say, nine inches broad by five deep; if the ploughing be well done, each sod in succession will lie close to, and cover up about two-thirds of, the previously turned sod, against which it is thrown by the plough. By this plan, the weeds and long grass are covered up and rot, being excluded from both light and air, while the exposed one-third of the sods gives a full grip for the teeth of the harrow, and a full covering to the seed that is sown. Now, sir, I have never seen a hollow-shaped-mouldboard plough able to turn a sod so evenly as to give a uniform covering to the seed. It is not long since I examined a field which had been ploughed before winter, and was then being prepared for a spring crop. The sods lay in very irregular positions on the land; some were thrown out of line, smothering the previously turned sod; another portion lay quite flat on the ground, at a long naked interval from its neighbor; the weeds and long grass had thus room to vegetate, and as the earth never lies dormant, as the Coon Creek farmers seem to think, they grew vigorously. In fact, the land was so foul, from this slovenly operation of the hollow mouldboard, though the ploughman was an experienced hand, that it had to be harrowed, and cross-ploughed, and rolled, and harrowed again, before it was fit to receive the seed. Now, sir, I am of opinion that a like expense will have to be incurred by the farmers on Coon Creek, before their land will be fit for grain; and that the proposed benefit from *early ploughing at this season, for next fall early sowing*, will involve an expenditure that will materially reduce the profits of the crop, and that no advantage whatever will be gained by this "new system." Let us suppose the land will not require this process of double working to give a full covering to the seed, still it will be a necessary proceeding, for the purpose of destroying the deposits of insects in the ground, and to prevent their larvae from attaining that growth and strength which will enable them to prey vigorously on the future crop, to the great loss of the farmer. Admitting, then, the necessity for this cross-ploughing, &c, the land must be in a favorable state to work it with good effect; and that state will be as favorable to a *first ploughing in the fall*, as it will to a cross-ploughing, rolling, and harrowing to break the summer-baked sods. I therefore strongly advise the farmers at Coon Creek to weigh well the proposed advantages of this new system, before they adopt it, for I fear the suggestion, however well intended, is the result of a want of that *practical experience* in farming which constitutes the only sure basis on which to build.

RUSTICUS.

#### Importance of Fallow and Deep Plowing.

LAGRANGE, Stanislaus County, April 25, 1859.

EDITOR FARMER: For the last two years I have seen several articles in your paper, in reference to fallow-plowing for wheat and barley, and have myself had some experience in this way of doing, since the spring of 1853, in California; and I am of opinion that it is the best way to do, because as much grain can be grown on fifty acres, tilled

in this way, as on one hundred plowed in the winter and sown immediately, when the ground is cold and wet. Last spring I plowed a piece of fallow, and the ground was broken to a fair depth, not less than ten inches up to fourteen inches in depth; and, I am well assured, the best lands planted in wheat in this county are not equal to my deep, fallow-plowed, poor, sandy-farm land. My land is a sandy loam, out on the plains; and I will challenge any of the best river lands to show better wheat, of the age of mine, in this or Merced county; yet if the weather continues dry [written before the late rains] my crop will fall far short of a full crop. You know the land I refer to, as you have been on it.

Much has been said in reference to deep plowing, and some men argue that ground plowed shallow is the best for a crop. One man on this river has contended for this; he is a man of some considerable notoriety, which may sustain him; facts and figures will not. Whilst in San Francisco last fall, some of the Oakland farmers, or some that lived on that side of the Bay, were advocating the same doctrine. Not long since, the story was set on foot in an adjoining county, that I had spoiled my land; that I had plowed so deep my wheat was a failure. I will lay a wager with any man, that the story was started by a lazy man who does not like to plow deep, if at all. I have the argument for deep plowing, and if any man doubts, let him call and I have the proof at hand.

I. D. MORLEY.

[Providentially, this very week we can present our friend Morley to "Rusticus," although the former sent us this communication without knowing of the statements of the latter.]

#### Letter from a Young Farmer.

We are always happy to hear from those who are engaged in the cultivation of the earth; there is no employment like it, invigorating to the body, and giving information to the mind. Every young man thus engaged in this employment, will find himself better in all that tends to human happiness. We have in the following letter, the evidence, that the fruit was not injured by the frost, or cold weather, as was at first stated. We have never yet supposed there would be any serious injury, and from all sources, now, we have the proof that we were correct. The writer of the following is a young man, from Sacramento county, just becoming interested in scientific and practical agriculture. The success of the Alfalfa is worth noticing; the rapid growth of the orchard and vineyards alluded to, we know, having seen it two years since, in its infancy, and we now rejoice to herald its successful result. We trust our young friend will write us often:

SACRAMENTO VALLEY, May 7th, 1859.

EDITOR FARMER: The last rain has been glorious for the farmers, just what is needed. The waving wheat and barley crops in this section, are looking good. The Alfalfa is coming on finely, which the late showers will help it amazingly; it makes splendid pasture, and when well rooted, it is most impossible to get it out of the ground. I am well satisfied that it will do well here, and should be more cultivated than it is.

Our orchard, that contains nearly eight hundred fruit trees of various kinds, has been plowed and re-plowed across, leaving the ground well worked, so that the young fibers and roots may spread out, giving the trees firmer hold and better growth. Is not this the way to do? All the trees are looking well, and making thrifty shoots. The Peach trees are loaded down with fruit. The Pear, Plum, Cherry and Quince, very full.

The frost, that it was feared injured so much fruit in various sections of the State, did not do us any damage; whether it was our good luck, or being on high land, I know not, but I attribute it to the latter.

Grapes grow very luxuriantly, having some three acres out, but only one-third will bear this year.

Our neighbors are making preparation for watering, getting their wells bored and erecting wind-mills. More anon.

A FARMER'S SON.

#### An Enemy to the Apple Tree.

PLEASANT GROVE RANCH.

San Joaquin Valley, May 10th, 1859.

EDITOR FARMER: In examining some of my Apple trees, I have found a strange kind of bug, of which I send you a sample. They are something new in my orchard, so I thought I would write to you to find out what they are, and a remedy for them (if you know of any). I have found as many as twenty holes in one tree, similar to the one I send you. Respectfully, yours,

WM. W. PRATT.

P. S. We had a very severe frost last night, which has hurt the grape-vines very much.

[We have received the parcel from our correspondent, with the branch of the tree, insects and all, safe. This borer is a species not generally found in branches; it is a winged insect, similar to the Cockchafer (*Melolontha Vulgaris*), which does so much injury to the roots of trees; a species of Beetle, of which we shall present at earliest moment the full history. If Orchardists or Nurserymen have suffered much, or seen this borer, we should like to hear from them and have samples of

the borer. The one sent us is a dark brown, nearly black, winged insect, almost exactly in shape like the Cockchafer. The late hour in which we have received the letter of our correspondent, prevents our giving further comments this issue.]

#### Culture of Madder.

Description of madder—its Cultivation, Manipulation, and preparing for Market.

This plant (Madder in English, *Rubia tinctoria* in Latin, *Garance* in French, *Meekras* in Holland or low Dutch), is a perennial, but has annual stalks three or four feet high, square, knotty and rough; the leaves are verticillated in whorls of six, seven, and eight; the flowers are small at the ends of the shoots, of a green yellowish color, and followed by the seed in valves—each valve containing two globular seeds, of a dark purple or black color at maturity. The great value of madder is in its roots.

Madder grows in all kinds of soils, but it does not produce everywhere abundantly, or roots of a good quality. It does not thrive in dry soils, although they may be good wheat lands. It likes substantial sweet loams, moist underneath, but not too wet, and rich, deep, sandy loams; alluvial bottom lands are very good when well drained. The soils should be free from roots, stones and weeds; those containing the greatest quantity of humus are best; light, dry, gravelly sands and clays are unsuitable. A marly fat sand above a clay subsoil will answer very well, the clay preventing the roots from extending in it. They run along the sandy soil, which retains the moisture, multiply and become large, and are more easily gathered than when the roots run deeply. Suitable lands, containing, beside humus, a great proportion of carbonate of lime or gypsum, are excellent for madder. I think madder will succeed well in Delaware, Pennsylvania and Maryland, on river bottoms and good loams; also, on the Mohawk and Genesee flats of Central New York, those flats containing notable qualities of carbonate of lime.

When it is proposed to establish a madder plantation on suitable land already in cultivation, it is necessary to give it several deep plowings, and to this end I think the new Michigan or double plow to be excellent for the purpose. Give the land all the manure you can, particularly the lighter soils. All weeds, grass, roots and stones, must be eradicated and destroyed. The land should be well stirred (the roots will extend better the deeper the soil has been stirred), and well harrowed, so as to have the land intended for the plantation, ready for planting in April, May or June.

The easiest and least expensive way to propagate madder, is from seed, perfectly ripe, which should be sown in a bed made under a fence, open to the south, and prepared the latter end of February and during March, by digging or plowing a trench one and a-half or two feet deep, well mixed with good fresh horse or mule manure, and cover the bed with four or five inches of good light soil or mold; if ashes are mixed with it, all the better. After the great heat of the dung has evaporated, sow the seed thinly in drills, three inches distant and one inch deep; when dry, water moderately. If frosts come on, cover the bed with boards or mats; keep it very clean of weeds and grass. The plants will come up in eight or ten days, and if well watered, they will be ready to be taken up in April and planted where they are to grow.

When you take up the first set of plants, when eight to twelve inches high, you can make another sowing on the same bed, the management being the same as the last. These plants will be ready to take up and plant out in June or July, when a third sowing can be made in the same bed, to be planted out in August or September.

The plants should be taken up carefully, by lifting them with all the rootlets and fibers unbroken, if possible, and set them all out in rainy, showery weather. It is very useful to dip the roots in a mixture of potash or plaster with earth and water, as this will greatly secure their taking at once, and will start them with vigor.

Before planting, after the land is well harrowed and cleaned, run furrows with a small plow, three or four feet distant, and procure sufficient hands to do the planting, according to the number of acres you calculate to put in madder, so that the planting of all the sets may be done in one or two days; for instance, for twenty acres I would set three plows at work with about twelve or fifteen hands. Let one or two men lift the plants, dip all their roots carefully, and let them be taken immediately to the field. One man with a basket will drop the plants in the furrows, at a distance of eight to twelve or fifteen inches; another to follow after each basket with a hoe, to cover the plants and press them in the ground, leaving at least one whorl or cluster of leaves above ground, clear of the ground. When hands are scarce, the plow could cover them by throwing a furrow over them, but this would not make very clean work, and would still require a hand afterwards to set them straight. There are other ways of planting them, such as forming beds four or five feet wide, with intervals of two to four feet; but this is a very troublesome and expensive way in cleaning them afterwards; the rows four feet or even six feet wide are preferable, as most of the cleaning, weeding, and stirring the soil, can then be done at a much less cost afterwards with the cultivator, particularly the first year. In one or two weeks after planting, go over the plantation to see what plants have missed, and put fresh vigorous plants to replace them.

To plant an acre at four feet rows, one foot per row, will take about 11,000 plants; at fifteen inches, about 9000 plants; at six feet and fifteen inches in the row, about 6000 plants. Thus you can regulate your seed-bed for the number of plants you want.—[F. A. N., in Country Gentleman.]

#### Death of Colonel Jaques.

We feel it to be a duty we owe to the memory of a great and good man, to one who has been a great public benefactor, to give the following brief but just notice of this most excellent man. We remember him well. We shall never forget the earnest zeal he manifested for the first great Agricultural Fair and Cattle Show held in New England, in 1816; for to his zeal and that of General H. A. S. Dearborn, of Roxbury, Mass., much of the interest and success of the cause of agriculture in New England is owing. The Boston Journal says:

Colonel Samuel Jaques, the well known proprietor of the Ten Hills Farm, in Somerville, died March 27th, of pleurisy. The deceased was born at Wilmington, in Middlesex county, September 12, 1776. His paternal ancestor, Henry Jaques, emigrated to this country from England in 1640. At the age of ten or twelve years, the deceased was placed in Charlestown, where, in after years, by his industry and ability, he acquired a fortune, so that in middle life he found himself the father of a large family, high in social position and rich. The failure of a mercantile house in London, however, suddenly made him a poor man, but still possessing the blessings of health, energy, and resolution, and, what were quite as opportune, strong personal friends. A number of the latter, who had often joined Mr. Jaques in the pleasure and excitement of fox-hunting, of which he was passionately fond, and in which he frequently indulged, originated a stock company, by which the splendid estate known as the "Ten Hills Farm" was purchased and placed in his hands, under such favorable terms of payment that he long since retrieved his fallen fortunes.

In early life Col. Jaques was a prominent member of the volunteer militia, and from a private rapidly rose to the rank of Adjutant General. During the war of 1812, he was for a short period in actual service, and at one time had command of a small body of men and a battery of cannon, stationed in Chelsea, for the purpose of checking the advance of a detachment of the British army, which was reported as being about to effect a landing in that quarter. At the laying of the corner stone of the Bunker Hill Monument, by Gen. Lafayette, June 17, 1825, Col. Jaques held the office of chief marshal. For thirty-two years, from 1806 to 1838, he was Inspector General of Hops. He had great fondness for out-door occupations, and took a deep and lively interest in horticultural and agricultural matters. He accomplished very much for the improvement of the breeds of domestic animals in his section of the country.

#### Agricultural Meetings.

The friends of agriculture are awaking to their own interests in every part of our State, and many of our counties will have grand exhibitions the coming autumn. A large and spirited meeting will be held at Santa Rosa, on Saturday, 14th inst. (to-morrow), when a new organization will be held of an Agricultural and Mechanics' Society, and a Practical School for testing these sciences. This is an excellent plan, and we wish it unbounded success. We regret our inability to attend, by reason of lameness, received by the fall of our pet "Kate."

Another meeting will be held at Lafayette, near Oakland, by the earnest friends of the cause, and there they will organize a society, choose officers, and lay out the work for an efficient society. They have a warm and true friend in G. P. Loucks, Esq., who will aid such an institution with a true spirit.

We are glad to make these records, for they tell of the growing interest in our glorious State. We trust the citizens in the respective precincts will be awake and attend these meetings.

#### Short Feed for Stock.

It is very important now that stock-raisers look well to the feed for their stock. Complaints are made that feed is short, and the fall in the price of beef and mutton is an indication that feed is none too good, although we have had generous rains. We have heard that the owners of some stock will be obliged to sell, on account of short feed, and thus a sacrifice will result to them. All this could have been avoided by a timely preparation of a few acres of ground and the planting of the rutabaga, or sugar-beet; and it is not too late now to plant the sugar-beet. This invaluable root will produce the enormous crop of fifty tons per acre; and the cost of plowing, planting and care of two to four acres would not exceed the value of ten sheep; while it would save the lives, probably, of a thousand. Every sheep-raiser should look to this before it is too late. The pure French sugar-beet should be largely raised on every dairy farm and sheep ranch in our State.

#### Pelham Seedling Potatoes.

A Circular we received, announces that these Potatoes have been perfected in ten years, from the seed; after the first year the top end of a single potato was planted, and this course was pursued for ten years, and the result is a large, early, white, mealy, prolific tuber, being a new race. It is not liable to rot, and has escaped unscathed in a field where fifteen varieties rotted around it. The proprietor has obtained three crops in a season, by planting the sprouts, which bear equally with the sets, and the result of the first planting a second time, producing one hundred bushels from a barrel, four weeks in advance of twenty varieties planted with them, some weighing one and a-half pounds. Grown by Robert L. Pell, of Pelham Farm, Ulster county, New York.

## Davy's Agricultural Chemistry.

ON SOILS—THEIR CONSTITUENT PARTS, ANALYSIS, ETC.; ROCKS AND STRATA, REVEALED, IMPROVEMENT, ETC.

No subject is of more importance to the farmer than the nature and improvement of soils; and no parts of the doctrines of agriculture are more capable of being illustrated by chemical inquiries.

Soils are extremely diversified in appearance and quality; yet, as it was stated in the Introductory Lecture, they consist of different proportions of the same elements, which are in various states of chemical combination or mechanical mixture.

The substances which constitute soils have been already mentioned. They are certain compounds of the earths, silica, lime, alumina, magnesia, and of the oxides of iron and manganese, animal and vegetable matters in a decomposing state, and acid, or alkaline combinations.

In all chemical experiments on the composition of soils connected with agriculture, the constituent parts obtained are compounds, and they act as compounds in nature: it is in this state, therefore, that I shall describe their characteristic properties.

1. *Silica*, or the earth of *flints*, in its pure and crystallized form, is the substance known by the name of rock crystal, or Cornish diamond. As it is procured by chemists, it appears in the form of a white, impalpable powder. It is not soluble in the common acids, but dissolves by heat in fixed alkaline lixivia. It is an incombustible substance, for it is saturated with oxygen. I have proved it to be a compound of oxygen and the peculiar combustible body which I have named silicium; and, from the experiments of Berzelius, it is probable that it contains nearly equal weights of these two elements. [According to the later experiments of Berzelius, silica consists of 48.4 inflammable basis and of 51.6 oxygen.—Jons Davy.]

2. The sensible properties of *lime* are well known. It exists in soils united to carbonic acid, which is easily disengaged from it by the attraction of the common acids. It is sometimes found combined with the phosphoric and sulphuric acids. Its chemical properties and agencies in its pure state will be described in the Lecture on Manures obtained from the mineral kingdom. It is soluble in nitric and muriatic acids, and forms a substance with sulphuric acid difficult of solution, called *gypsum*. It is not soluble in alkaline solutions. It consists of one proportion 40 of the peculiar metallic substance, which I have named calcium, and one proportion 15 of oxygen.

3. *Alumina* exists in a pure and crystallized state in the white sapphire, and united to a little oxide of iron and silica in the other oriental gems. In the state in which it is procured by chemists, it appears as a white powder, soluble in acids and fixed alkaline lixivia. From my experiments, it appears that alumina consists of one proportion 33 of aluminum, and one 15 of oxygen.

4. *Magnesia* exists in a pure crystallized state, constituting a mineral like talc found in North America. In its common form it is the *magnesia usta*, or the calcined magnesia of druggists. It generally exists in soils combined with carbonic acid. It is soluble in all the mineral acids, but not in alkaline lixivia. It is distinguished from the other earths found in soils by its ready solubility in solutions of alkaline carbonates, saturated with carbonic acid. It appears to consist of 38 magnesium and 15 oxygen.

5. There are two well known *oxides of iron*, the black and the brown. The black is the substance that lies off when red-hot iron is hammered. The brown oxide may be formed by keeping the black oxide red-hot for a long time in contact with air. The first seems to consist of one proportion of iron 103, and two of oxygen 30; and the second of one proportion of iron 103, and three proportions of oxygen 45. The oxides of iron sometimes exist in soils combined with carbonic acid. They are easily distinguished from other substances by their giving, when dissolved in acids, a black color to solution of galls, and a bright blue precipitate to solution of prussiate of potassa and iron.

6. The *oxide of manganese* is the substance commonly called *manganese*, and used in bleaching. It appears to be composed of one proportion of manganese 113, and three of oxygen 45. It is distinguished from the other substances found in soils, by its property of decomposing muriatic acid, and converting it into chlorine.

7. *Vegetable and animal matters* are known by their sensible qualities, and by their property of being decomposed by heat. Their characters may be learnt from the details in the last Lecture.

8. The *saline compounds* found in soils, are common salt, sulphate of magnesia, sometimes sulphate of iron, nitrates of lime and of magnesia, sulphate of potassa, and carbonates of potassa and soda. [In some soils, especially in Spain and in Bengal, nitre is an ingredient, formed by the intervention of carbonate of lime, by the union of alkali in the soil and of nitric acid, the elements of which are derived from the atmosphere.—J. D.] To describe their characters minutely will be unnecessary—the tests for most of them have been noticed.

The *silica* in soils is usually combined with alumina and oxide of iron, or with alumina, lime, magnesia, and oxide of iron, forming gravel, and sand of different degrees of fineness. The carbonate of lime is usually in an impalpable form, but sometimes in the state of calcareous sand. The magnesia, if not combined in the gravel and sand, is in a fine powder united to carbonic acid. The impalpable part of the soil, which is usually called *clay* or *loam*, consists of silica, alumina, lime, magnesia; and is, in fact, usually of the same composition as the hard sand, but more finely divided. The vegetable or animal matters (and exist in different states of decomposition. They are sometimes fibrous, sometimes entirely broken down and mixed with the soil.

To form a just idea of soils, it is necessary to conceive different rocks decomposed, or ground into fine sand and powder of different degrees of fineness, and that water adhering to the mass, and the whole mixed with larger or smaller quantities of the residue of decay. It will be necessary to describe the properties of the various soils in different stages of decay. I shall be minute in these particulars, will, I trust, feel the propriety of full details on this subject.

The instruments required for the analysis of soils

are few, and but little expensive. They are, a balance capable of containing a quarter of a pound of common soil, and capable of turning when loaded with a grain; a set of weights, from a quarter of a pound to a grain; a wire sieve, sufficiently coarse to admit a mustard seed through its apertures; an Argand lamp and stand; some glass bottles; Hessian crucibles; porcelain, or greenware evaporating basins; a Wedgwood pestle and mortar; some filters, made of half a sheet of blotting paper, folded so as to contain a pint of liquid, and greased at the edges; a bone-knife, and an apparatus for collecting and measuring aeriform fluids.

The chemical substances, or re-agents, required for separating the constituent parts of the soil are, muriatic acid (*spirit of salt*), sulphuric acid, pure volatile alkali dissolved in water, solution of prussiate of potash and iron, succinate of ammonia, soap lye, or solution of potassa, solutions of carbonate of ammonia, of muriate of ammonia, of neutral carbonate of potash, and nitrate of ammonia.

In cases when the general nature of the soil of a field is to be ascertained, specimens of it should be taken from different places, two or three inches below the surface, and examined as to the similarity of their properties. It sometimes happens, that upon plains the whole of the upper stratum of the land is of the same kind, and in this case one analysis will be sufficient; but in valleys, and near the beds of rivers, there are very great differences, and it now and then occurs that one part of a field is calcareous, and another part siliceous; and in this case, and in analogous cases, the portions different from each other should be separately submitted to experiment.

Soils, when collected, if they cannot be immediately examined, should be preserved in vials quite filled with them, closed with ground-glass stoppers.

The quantity of soil most convenient for a perfect analysis, is from two to four hundred grains. It should be collected in dry weather, and exposed to the atmosphere till it becomes dry to the touch. The specific gravity of a soil, or the relation of its weight to that of water, may be ascertained by introducing into a vial, which will contain a known quantity of water, equal volumes of water and of soil; and this may be easily done by pouring in water till it is half full, and then adding the soil till the fluid rises to the month; the difference between the weight of the soil and that of the water will give the result. Thus, if the bottle contains four hundred grains of water, and gains two hundred grains when half filled with water and half with soil, the specific gravity of the soil will be 2; that is, it will be twice as heavy as water; and, if it gained 165 grains, its specific gravity would be 1.65, water being 1000. [It may be more accurately and easily accomplished by weighing it in air and in water in a light vial carefully counterpoised.—J. D.]

It is of importance that the specific gravity of a soil should be known, as it affords an indication of the quantity of animal and vegetable matter it contains; these substances being always most abundant in the lighter soils.

The other physical properties of soils should likewise be examined before the analysis is made, as they denote, to a certain extent, their composition, and serve as guides in directing the experiments. Thus, siliceous soils are generally rough to the touch, and scratch glass when rubbed upon it; ferruginous soils are of a red or yellow color; and calcareous soils are soft. [Clay soils, breathed on, emit a peculiar odor, called the earthy.—J. D.]

1. Soils, though as dry as they can be made by continued exposure to air, in all cases still contain a considerable quantity of water, which adheres with great obstinacy to the earths and animal and vegetable matter, and can only be driven off from them by a considerable degree of heat. The first process of analysis is, to free the given weight of soil from as much of this water as possible, without in other respects affecting its composition; and this may be done by heating it for ten or twelve minutes over an Argand's lamp, in a basin of porcelain, to a temperature equal to 390 Fahrenheit; and if a thermometer is not used, the proper degree may be easily ascertained, by keeping a piece of wood in contact with the bottom of the dish; as long as the color of the wood remains unaltered, the heat is not too high, but when the wood begins to be charred the process must be stopped. A small quantity of water will, perhaps, remain in the soil even after this operation, but it always affords useful comparative results; and if a higher temperature were employed, the vegetable or animal matter would undergo decomposition, and in consequence the experiment be wholly unsatisfactory.

The loss of weight in the process should be carefully noted, and when in 400 grains of soil it reaches as high as 50, the soil may be considered as in the greatest degree absorbent, and retentive of water, and will generally be found to contain much vegetable or animal matter, or a large proportion of aluminous earth. When the loss is only from 20 to 10, the land may be considered as only slightly absorbent and retentive, and siliceous earth probably forms the greatest part of it.

2. None of the loose stones, gravel, or large vegetable fibers, should be divided from the pure soil till after the water is drawn off; for these bodies are themselves often highly absorbent and retentive, and in consequence, influence the fertility of the land. The next process, however, after that of heating, should be their separation, which may be easily accomplished by the sieve, after the soil has been gently bruised in a mortar. The weights of the vegetable fibers or wood, and of the gravel and stones, should be separately noted down, and the nature of the last ascertained; if calcareous, they will effervesce with acids; if siliceous they will be sufficiently hard to scratch glass; and if of the common aluminous class of stones, they will be soft, easily cut with a knife, and incapable of effervescing with acids.

3. The greater number of soils, besides gravel and stones, contain larger or smaller proportions of sand of different degrees of fineness; and it is a necessary operation, the next in the process of analysis, to detach them from the parts in a state of more minute division, such as clay, loam, marl, vegetable and animal matter, and the matter soluble in water. This may be effected in a way sufficiently accurate, by boiling the soil in three or four times its weight of water; and when the texture of the soil is broken down, and the water cool, by agitating the parts together, and then suffering them to rest. In this case, the coarse sand will generally separate in a minute, and the finer in two or three minutes, whilst the highly-divided earthy, animal, or vegetable matter, will remain in a state of mechanical suspension for a much longer time; so that by pouring the water from the bottom of the vessel, after one, two or three minutes, the sand will be principally separated from the other substances, which, with the water containing them, must be poured into a filter, and after the water has passed through, collected, dried, and weighed. The sand must likewise be weighed, and the respective quantities noted down. The water of lixiviation must be preserved, as it will be found to contain the saline and soluble animal or vegetable matters, if any exist in the soil.

(TO BE CONTINUED.)

THE CAMELLIA-FLOWERED PEACH.—I send you, as a curiosity, a fruit of this peach. I have not tasted it, but it smells well.—[R. G.] It would seem that all the double-flowered peaches have had a common origin, judging from the quality of their fruit. That with which Mr. Glendinning has favored us is a colorless fragrant Glendinning, with an agreeable sub-acid, tender flesh, which, however, has the fault of being slightly austere and bitter.—[J. R. S., in the Gardener's Chronicle.]

## Coloring Material for Manufacturers—Progress is the Watchword!

A demand will produce a supply. As we see the beginning of manufacturing, we shall see a demand for all the material to be used, and the various ingredients required, connected therewith. One woolen manufactory will increase the demand for wool; one manufactory of this kind will show what ingredients are necessary to carry on the work, and from whence they are to be obtained. Coloring matter is of some moment to a manufacturer of wools, as well as cottons: Where shall this material come from to supply the first Woolen Manufactory in California? Have the proprietors estimated the amount they will require? Have they named the price they will give? Do they desire to have it imported from abroad, or would they prefer home growth?

If the owners of the first California Woolen Factory desire to be well sustained in home manufactures, let them look about and see how much of the material they use shall be, or can be, of home growth and home labor. Let the building be of California stone, California brick, and California wood; it is true the machinery of the first factory has been brought from abroad, but other can be made here in future. Let the building be pre-erected by California paint, and as far as possible, let materials and labor be truly California. Wool will be the great material to be used, and we hope a just and liberal price will be given. We hope that our State will be able to boast, at the next State Fair, of as handsome blankets and flannels, as any factory in the older States can show.

Coloring matter will be another valuable material required, and that these substances may not all be brought from abroad, we call the attention of all interested to the fact, that the principal coloring materials can all be of California production. We here annex the nature and history of two plants, that enter into the uses of manufacturers:

## RESEDA LUTEOLA;

(By some called *Weld*, or *Dyer's Weed*.)

*Reseda*. From *resedo*, to calm, to appease. The Latins thought it useful as a topical application in external bruises. R. Luteola, a diminutive of *lutea*, yellow, is used by dyers, especially in France. (Chaptal's *Chimie appliquée à l'Agriculture*, etc.) It affords a most beautiful yellow dye for cotton, woolen, mohair, silk and linen. Blue cloths are dipped in a decoction of it, in order to become green. The yellow color of the paint called Dutch Pink, is obtained from this plant. The entire plant, when it is about flowering, is pulled up and employed both fresh and dried. Mr. Swayne observes, that it is one of the first plants which grow on the rubbish thrown out of coal pits. It flowers in June and July. The root and bottom leaves are formed from the fallen seeds before winter; and thus it happens in this, as in many other cases, that the wild plant is biennial, whilst the cultivated plant, growing from seeds sown in the spring, is annual. It is an observation of Linnaeus's, that the nodding spike of flowers follows the course of the sun, even when the sky is covered; pointing towards the east in a morning, to the south at noon, westward in the afternoon, and to the north at night.

ISATIS TINCTORIA.—(or, *Woad*, used by manufacturers for coloring woolsens, silks, etc.)

*Isatis*. From Greek, to render equal. The plant was believed to destroy, by its simple application, all roughness and inequalities of the skin. It was formerly called *glastium*, from the Celtic *glas*, blue, whence *Glastonbury* derived its name. The ancient Britons colored themselves with the blue preparation obtained from this plant, whence they received their appellation, *Britho* being the Celtic word for paint. The Persians were so named by the Romans for the same reason. On account of the brightness of its manufactured colors the Celts called it *gweid* (*gweid*, French, at this day), whence the Anglo-Saxons obtained their name of *woad* or *weald*, and the English the word *wool*. I. tinctoria is in occasional cultivation for its leaves, from which a dye, as a substitute for indigo, is obtained. The seeds are sown on well prepared land in good heart; fresh broken old pasture land is preferred; and the great object is to have large leaves; for which purpose, as Miller observes, the culture given by the best gardeners to spinach should be imitated, that of sowing on a very rich well-pulverized soil, thinning the plants so as they may not touch each other, keeping them perfectly clear of weeds, and frequently stirring the soil between the plants. The culture applied to the turnip in Northumberland would succeed well with woad. The seeds are sown in July, and the plants, when they come up, weeded and thinned; next July, or earlier, the first crop of leaves may be gathered, and two or three others will be obtained during the season. The end of the second year the plants may be plowed down, as the third year they will run to seed, and yield but small leaves. The leaves are pressed, and the juice treated as in making indigo (see *Indigofera*); but such is the cheapness of the latter article, that no British farmer can afford to raise any sort of substitute.

The above valuable aids to the manufacturer are worthy the consideration of those who are now preparing the way of this great enterprise, and we believe these plants will be found growing wild in several portions of our State. As it is said there is no disease incident to human nature, without some plant in nature's field as an antidote, so we conceive there will be no enterprise started in our State of a worthy character, without finding many aids to it promptly offered in Nature's great conservatory. We alluded to Woad, and its culture in our State, many months since, while upon the theme of Home Manufactures.

## The Celebrated Hubbard Squash.

"The richest squash I have ever tasted."—[Hon. Marshall P. Wilder.]

"Nothing could be better. It is a very important acquisition to the vegetable garden."—[Hon. Edward Everett.]

"They equal in flavor and in the fineness of the flesh any squash we have ever tasted."—[N. E. Farmer.]

"We do not hesitate to pronounce the Hubbard Squash the best we have ever eaten."—[Hovey & Co.]

"We have made a careful comparison between you and the kind we are using—the marrow. I truly say yours are far superior."—[J. H. Stibley, Esq., Proprietor of the Winthrop House, Boston.]

"I have never tasted, at any season of the year, so rich and high flavored a squash."—[Parson Stevens, Esq., Proprietor of the Tremont and Regent Houses, Boston.]

We ask especial attention to this excellent Squash. It is, indeed, all that it is represented, as the names of persons who have indulged it will testify. Let it be faithfully tried in California, and let this variety be exhibited the present year at our Fairs.

## Agriculture in the Mines.

We resume our sketches (says the *Hydraulic Press*) with a very pretty, little garden at Sebastopol, which is owned by C. H. Hays, who lives upon it with his family. It is situated on the north side of a hill, or rather at the foot of one, and consists of a few gently sloping acres, light and productive, watered by perennial springs which ripple through it musically. These springs he has taken advantage of to make a dancing fountain, whose waters fall tinkling into an earthen basin. He has only one acre tilled, but on this small spot are upwards of a hundred fruit trees of various kinds, 3000 transplanted strawberry vines, and about 2000 more yet to be set out from a common bed. The ground is mostly planted with melons and vegetables.

## NORTHUP'S RANCH.

This is about one mile from town, on the road to Ray's. A fine, black, loamy bottom, plentifully watered by springs, and resting on a bed of clay, is the portion tilled, and embraces about forty acres. Twelve acres are under actual cultivation, chiefly planted with vegetables which thrive splendidly, and are all sold at this market. Mr. Northup has thirty apple trees, forty grape vines, fifty gooseberry bushes, fifty raspberry bushes, and a quantity of strawberry plants. Next fall he intends setting out 1000 apple trees. He has a considerable amount of good grazing land, well watered and capable of feeding 500 head of stock, all inclosed by a stout rail fence. On this inclosed land is growing a lot of noble pines, which, in a comparatively few years, will be very valuable. Mr. Northup's property is handsomely situated, and will make him, if he retains and improves it, an independent man in a few years.

## CHADWICK'S RANCH.

Every piece of cultivated land in California is called by the imposing Spanish name of a ranch, and we are in a manner compelled to retain a word which has become so common. Mr. Chadwick's new farm, however, better deserves the name than one would suppose when told that this is only the second year it has been cultivated. It is very pleasantly situated at the lower end of town, mostly on the hill-side to the left of the Sebastopol road, and consists of about sixty inclosed acres, embracing cleared land and forest. The richest and prettiest portion of it is a wide ravine of considerable length, through which runs a never-failing streamlet of delicious water, fed by springs from the hill that rises on the southern side, and made prolific by the annual decay of vegetable accumulations. There are fifteen acres only of this farm under actual cultivation, ten of these being sowed to millet, and five planted with a great variety of garden stuff. On one portion of the ground there is a nursery containing 3000 peach trees. Besides these there are 100 grafted peach trees, just bearing, and a few cherry, plum, nectarine and apple trees—all choice varieties; 150 grape vines, and 1000 strawberry plants. The proprietor intends going extensively into the grape culture, and will plant the coming fall at least 10,000 vines. Only a few months have elapsed since he purchased the property for \$1000, and was thought to have paid a heavy price; but he is now so well satisfied with his bargain that he values it at \$4000, is building on it a fine dwelling house, and will soon have his family living on it. These apparently trivial circumstances are mentioned to prove what we have so often asserted in regard to the happy change which is coming over the mining communities. One peculiarity of Mr. Chadwick's place remains to be told: there are several small trees, belonging to the maple family, growing indigenously upon it, which he intends to transplant for shade and ornament.

## EVANS' GARDEN.

Perhaps this is the richest garden-spot in the immediate vicinity of San Juan. It lies in a little flat just below the Grizzly Reservoir, the sillage from which keeps it constantly irrigated; and its natural fertility—the ground being a black loam supporting a stout growth of tuft grass—has been increased by repeated manuring. The cultivated enclosure does not embrace more than two acres. It was first cultivated last year, more as an experiment than with hope of profit, and its productive-ness was astonishing. Sweet potatoes weighing four or five pounds each, and of excellent quality, were produced, besides Bodega potatoes of superior size and flavor, and several varieties of culinary vegetables, all of which thrived equally well. One volunteer squash vine covered the ground for about two hundred feet in circumference, and bore forty-five squashes, weighing not less than twenty pounds each. Encouraged by such unexpected success, Mr. Evans has this season taken great pains in planting his two acres, and will, undoubtedly, realize a very profitable crop. He has not gone into the fruit culture as yet, having only fifty trees and one hundred grape-vines, but intends by another year to make a considerable vineyard on the sloping ground adjoining his garden. He has, however, several thousand strawberry plants, which are full of blossoms and will prosper if set out and attended. Mr. Evans resides with his family upon the property described above, and is engaged in the dairy business.

Q RANCH.—This beautiful Ranch, owned by Messrs. Green & Vogan, is at this time in a prosperous condition. The grain crops and fruit upon it will be superior and abundant this year. Little or no damage has been done the fruit, on this place, by the late heavy frosts. Maj. Thos. T. Barbour, who owns the large orchard, informs us that he will have peaches sufficient to supply the whole county.—[Amador Sentinel.]

We often hear of this fine Ranch, and anticipate much pleasure in a few days from a personal visit to this spot. We suppose the cause of so much success at this place, and in the beautiful Valley of Lone, is because the residents are indeed "Lords of the Manor," and each can say of his broad acres, *I own this valley indeed.*

BOTTLES TO PREVENT POISONING.—A bottle to prevent accidental poisoning has recently been patented in England. Its design is peculiar, and as it is intended solely to contain poison, there is no danger of mistaking the character of its contents. The bottles are provided with an entirely new contrivance, the effect of which is to make it impossible to pour out the contents otherwise than very slowly. The very deliberate and cautious action which is produced will, it is believed, prevent any one from taking over doses of medicine; while it is difficult to imagine a case in which a person could pour out and take the whole contents of one of these bottles in mistaking for something else. So says the Scientific American.

RAILROADS in the United States, in operation and extent, are set down in round numbers, carefully computed by the American Railroad Journal, January 1, 1850, at twenty-seven thousand, eight hundred and fifty-seven miles, and costing upwards of \$961,047,364!

## FARMERS, BEWARE

## CALIFORNIA

## COMBINED REAPER and MOWER,

AND

## PECK'S SANTA OLARA

## HEADER and HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNWARRANTED FALSHOODS.

I am now building the "Manny Machine," nor infringing on the "Manny Patent," nor do I INTEND to do either! on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly UNLIKE the "Manny Machine," except in the use of the knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a *Practical Mechanic*, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "SUFF-GAME," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but WEARILY and COVERTLY, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unpropitious and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

## CALIFORNIA

## Combined Reaper and Mower,

IS A DECIDED SUCCESS; AND

and unless that they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret emissaries and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "SUFF-GAME" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

## California Combined Reaper and Mower,

(and not the "Manny"),

and I have Purchased the Invention called

## "PECK'S SANTA CLARA HEADER and HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written guarantee, or warranty, of two years.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, "ready for the fight whenever the fight opens."

WOULD SAY to those interested in the welfare of California, which is no more than self-interest, to call at

## 112 Battery Street,

SAN FRANCISCO,

And see what "can be done in California," before sending their millions to some far-off country, never to return.

CALIFORNIA BUTTER and CALIFORNIA PAIRS are better and cheaper, in the end. Consider it well. 7-4

## MOWING and REAPING

## MACHINES!

SEVEN DIFFERENT KINDS. All the best Combined Machines in Use.

Letters of inquiry, and timely orders, will receive our prompt attention.

EMLEN &amp; PASSMORE,

633 Market street,

12-2m PHILADELPHIA.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, MAY 12, 1859.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAM, who left here in the steamer of the 5th inst. on a visit to his kindred, to tarry a few months in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us as goodly a list of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HATV employed Mr. J. F. LAMARRE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the Farmer into the family as a friend to all "home industry," it will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

J. B. MORSE is not an Agent of the FARMER, nor authorized to receive subscriptions, or money on account of this journal—nor has he been for some time past.

**LETTERS BY OVERLAND MAIL.**—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

## Gold.

"Gold is the strength, the success of the world; the health, the soul, the beauty most divine; a mask of gold hides all deformities; Gold is Heaven's physic, life's restorative."

The poet spoke truly, as all can testify who have witnessed the gold fever that has raged over the world since the great mania of '48 and '49. Who will write the history of this gold mania. Commerce received new impulses, and merchants made and lost fortunes by it; cities were built, and waste places have been reclaimed; art, science, and genius, in all their forms, have been taxed to their utmost to win this talisman to human happiness; and yet like the fabled ignis fatuus, men pursue the shadow and lose the substance. Can gold bring happiness? Then the possessor of it should be happy. But, is this end and aim of man attained when wealth abounds? The gold of California has changed the destinies of hundreds of thousands of mortals. In its pursuit thousands of human beings have been buried in the ocean's depths; it has laid many a brave heart in a lonely grave on the distant desert; it has given many a parent and child to the tomahawk or scalping knife of the savage, or the less savage beast; it has buried them suddenly in the tunnels and caves of the mountains; many thousands have wasted away in disease and pain, in city or country, mountain or valley, or on the ill-starred isthmus; or, perhaps, when the fatal pursuit became vain, they have left this land in sorrow and despair, and gone back to their native land with broken hearts and constitutions, to linger away a useless life, and die a sad and sorrowful death—and all for gold.

Peruse the journals of the present day, read the records of crime, weep over the details of deserted and ruined homes, and ask has gold done this? Aye, the pursuit of it has done this; the unceasing, untiring pursuit of it has laid waste many a fair home, and rendered desolate the heritage of tens of thousands of hearts that otherwise would have been a paradise of happiness. Ye who handle gold, as the shining bauble rests in your hand a moment, hold it up to your free gaze, and ask the history of that piece of gold! Ask it the story of its travels, and how many think you into whose hands it has fallen would say, that gold brought me happiness? Alas how few.

Would you see gold in its purity, go to the Mint, on Commercial street; look upon it there as it comes from the mountains; see the rejected coin, which, heretofore, had a false value given to it; see it as it passes into the furnace, where the "purifying fire" and the "refiner's furnace" shall separate the pure metal from the dross; watch it as it is cut from the solid bars, rolled, and cut and passed into the hands of those of the gentler sex, whose duty it is to "weigh it in the balance," follow it till the power falls upon it which gives it the impression, name, and value; and as it then is laid on the cases from whence it passes into circulation—and you have the history of the human heart, taken from nature, like gold, which, ere it goes out into the world, must be "weighed in the balance" by woman—the mother; for here we have the figures, the finishing touches, the weight; the world must be adjusted by the mother; and wall will it be for the world when mothers are so educated as to well understand their responsibilities, and send out no human coin that has not been well tested, that when they are weighed in the balance they shall not be found wanting. The Mint of our city is a place well worthy a visit. There the mind will find food for study and will well repay.

**AGRICULTURE'S LETTER.**—We ask attention of our readers to the letter of Agriculture, upon the subject of the State Agricultural Society's publication. This letter from our able and esteemed friend, comes to our columns as all his letters have ever come, with the true freedom and independence that become a scientific mind. He is responsible for all he writes. In reference to the present Executive Board, we know and believe that many of the new members are most honorable men, and are determined to exalt the Society and make it what it ought to be; and every friend of agriculture north is concerned, the first number, as we have said, was got up upon individual responsibility, and we are assured by good men, that if another number is ever issued, it will be as it should be. Heaven knows we desire the prosperity of this Society, but still it is purged of prejudicial influences if never can prosper.

**GRADE AGAINST FOREIGN COIN.**—By the action of the bankers in giving notice that they will receive foreign coin at only its actual value, it has become much depreciated from its former nominal value, and is not very current at any price. It will doubtless rapidly go out of circulation, for which we are thankful.

## Badge of American Freedom.

In a late oration by Z. Collins Lee, Esq., before the Horticultural Society of West Chester, Pa., he regretted that, while the Lily of France, the Rose of Burgundy, the Shamrock of Ireland, the Thistle of Scotland, etc., were emblems of nations; with us, not one of the many beautiful productions of our soil is the badge of American freedom. "Like the song, which animates us in battle," he says, "let us hereafter also point to some flower of our land, which will meet us in the field, cheer us in absence, and delight us amongst strangers, and which to the dying patriot's eye, shall revive the recollections of his home and country." He commends the subject to our fair countrywomen, who will present it as a gift from the beautiful to the brave, with which to return victorious or to return no more. "Botanists," whom we strongly suspect to be the amiable and learned Dr. Darlington, suggests that the Kalmia, our indigenous American Laurel (also called Poison Ivy and Calico bush) be everywhere recognized as the emblem of our great Republic, and worn as the cherished badge of a patriotic people on all public occasions. The suggestion is not a bad one. Others have named the beautiful little early flower, Epigaea; another, the Tulip Tree, or its flower, and the Rhododendron, but to all these may be urged some objection. What say the ladies?—[Horticulturalist.]

The above is found in the Horticulturalist, and has been copied into many papers throughout the United States with various suggestions; but of all the "badges for American freedom" we have found none yet proposed that seems appropriate to so exalted a theme as *American Freedom*!—embracing Human Liberty; Human Progression; Civil, Political, Religious, and Mental Freedom! There is but one Tree under Heaven emblematic of this God-breathed Spirit; and that tree, the Oak! It is a native of the British Isles, from whence the Mayflower sailed. With the early Pilgrims came the Spirit of American Freedom, and upon the bleak shores of New England was it planted. That Spirit of Freedom has spread East, West, North and South. Its watch-fires light up every hill, throughout our blessed land; and over all her hills and mountains the Oak is found; its roots have gone deep into the earth, and its broad and spreading branches offer shelter and shade in storm or sunshine. The Oak then for Freedom! Its bright, glossy leaves will endure the burning sun, or bear the winter's cold, better than any other known. The Oak is the most appropriate emblem of our love of Liberty. From the Oak are made many of the implements of Agriculture and our best machinery—our wagons, carts and carriages roll round upon the Oak, and not a word is *spoke* for Liberty but finds its fellow near the circle, and all will go to the hub in defence of Liberty. Give us then a *Wreath of Oak Leaves*, as the crowning emblem of *AMERICAN LIBERTY*! And when the Patriot and Statesman has done his duty in his country's cause, bind not his brow with the *Poison Ivy*, but grace them with the *Live Oak*! fit emblem of Liberty, which is *Eternal*. Pollock, in his "Course of Time," has most fittingly given this emblem of patriotism its appropriate word, in alluding to that brightest of Patriots, the "Father of his Country."

"Illustrious stood the man Exalted by the people to the Throne Of Government, established on the base Of Justice, Liberty, and Equal Right: Giving example to the meaneast, of the fear Of God, and all integrity of life And manners: in his very heart Detesting all oppression, all intent Of private aggrandizement; and the first In every public duty. Conspicuous, like an Oak of healthful hue, Deep-rooted in his Country's love, he stood And gave his hand to Virtue, helping up The honest man to honor and renown; And with the look which goodness wears on earth, Withering the very blood of knavery, And from his presence driving, far ashamed."

To the Ladies of the Mount Vernon Association, then, let the trust be committed of selecting the appropriate badge, or emblem of American Freedom; and let it emanate from those who have thus nobly saved to our country and the world that Holy Ground—the resting place of George Washington!

## The Sale of the Manny Reapers.

The sale of the Manny & Co. Reapers by De Ro & Eldridge, last Wednesday week, resulted in a sale varying from \$152 50 to \$155. This shows that the importations are so large as to force them on the market, and to bring down the price. This would seem to be a gain to the farmer, but it should also be borne in mind, that goods thus sold will get more or less out of order, and often portions of the working parts lost. To replace them, adds to the cost, and the time required of the farmer to hunt up lost or missing pieces, or the greater loss he suffers when engaged harvesting, to stop his teams and men and go miles to get his machines repaired, often amounts to a loss of \$50—even when the expense of *smoothing* is but \$5. We really wish our farmers would "sit down and count the cost" of time and money they expend in repairs, and then remember, that the "best machines are always the cheapest."

In the present contest between "home manufactures" and imported wares, let full and ample justice be done to all parties, and the State or men that make the *best*, give them the honor which is their due. We yet plead for, and hope for, that honor to rest on this State; for we should have machinery different from all others—for our grain is heavier, our climate is hotter and drier, and therefore our machines should be stronger and better fitted. After much inquiry from hundreds of farmers, we learn, that the expense of repairs upon imported machines is often a heavy bill of expense; while those made here, being made for our climate, the expense is mere nothing. One man informed us that his machine, bought at Shaw's, run the last year at only \$2 50 cost of breakage. Mr. Shaw purchased a large lot of the Manny's, that were sold at auction, and says that he will sell them at the very cheapest rate.

**IMPORTED FLOWERS.**—We spoke in our last number of some rare and beautiful Roses and Plants we received recently from the East in such perfect order, but omitted to say from whence they came; and, therefore, in justice to the parties who always take very extra pains in sending trees, plants, etc., to this country, we state that they were received from the extensive Nursery of A. Frost & Co., Rochester, New York, from whom large importations have been received in California this year; every package in perfect order.

## Progress of Nations and National Intercourse.

**THE NICARAGUA CANAL PROJECT.**—NEW LINES OF STEAMSHIPS.—The Paris Monitor furnishes the following information in regard to a new line of steamers, to connect with the Nicaragua Canal projected by M. Bely:

"A transit contract, by the Isthmus of Nicaragua, has just been signed by M. Thome de Gamond, in the name of the Committee having the concession of the Nicaragua Canal and Sir Rodney Croskey. The object of this transit service is, while waiting for the completion of the Canal, to immediately connect together the lines of steamers which a powerful Anglo-American Company is about to establish on the two oceans, under the name of the Oceanic Packets. Two of these lines will cross the Atlantic: one starting at Halifax, and touching at New York, will run to Greytown; the other leaving Southampton, will unite Europe to Nicaragua. Two other lines will traverse the Pacific: one running from Salinas Bay to the English possessions at Vancouver, touching at San Francisco; and the other from Salinas Bay to Australia, by the Marquesas. These four lines have been adopted, and will employ twelve steamers. A fifth line is in contemplation: from Salinas Bay to Shanghai, by the Sandwich Islands, having for object to introduce Chinese emigrants to the Antilles, by the transit of Nicaragua. The Oceanic Company undertakes to make the passage from Southampton to Nicaragua in sixteen days."

It has already been announced that a party under the leadership of M. Felix Belly had left Southampton for Nicaragua, to commence operations on the proposed Canal. The Paris Press announces that a second party, composed of engineers, had left Paris on the 28th of March, and would embark at Southampton on the 2d of April; and a still larger party would leave on the 17th of April.

The above information we gather from the Boston Journal, received by the last steamer; but the reliance to be placed upon all, or any, of the plans and projects now in operation, or to be put in operation, is not of so much importance as the great fact that calls out these plans and projects, which is, *THE PEOPLE ARE COMING!* And when they make up their minds to come, they will come! Cheap, if they can; but come they will (via Nicaragua, Panama, Tehuantepec, Cape Horn, Overland) from the Atlantic States, Europe, Asia, "Pike's Peak," everywhere! For the word has gone forth: *California is the Garden of the World!* And her valleys and hill-sides are to be covered by the people of every nation and clime. The overpopulated sections of Europe will send their thousands and tens of thousands; the oppressed of all nations, now struggling for liberty and life, will flee to this land as an asylum; the poor, everywhere, will come, to better their condition; those who wish to lengthen out their lives will come, to get a longer lease in our health-restoring climate; and the hundreds and thousands who are now hurrying to Pike's Peak, will never be satisfied until they take a peep at the Golden State.

There is a condition of things everywhere abroad, that seems to set mankind in a kind of fermentation; all over Europe, there are rumors of wars; in our own country, there is a restlessness—an unsatisfied spirit, constantly looking for something new, and all such *will come to our Golden Land*; for already it has won a fame that is world-wide. Contrast our sunny land, where we can gather flowers in the open air the year round, with the cold, bleak, frozen North, where the ice never melts for half the year.

But we need not recount further the advantages of our climate and soil, they are known by the wonderful products and immense harvests; and the genius, power, and wealth of our State, are being known and felt abroad; and these are having their influence. And it is these, that are awakening the people to their true interests. We repeat again: *THE PEOPLE ARE COMING!* And coming as clouds, and as doves to their windows. Let us prepare to receive them all with a joyous welcome.

**THE INDEPENDENT PRESS.**—Certain party organs throughout this State have of late been poking some rare specimens of irony at what they are pleased to term the *Independent Press*. These poor party hacks, living as they do, upon the blood they suck from political factions, cut an extremely ludicrous figure when they attempt to lecture the Independent Press upon its course. They and their kind have done more to demoralize the parties they profess to uphold, than all other causes combined; and having reduced the great political parties of the State and of the nation, to the condition of paltry factions, without aim or principle, they become enraged because the conservative, thinking portion of the people do not join in the miserable system of detraction and personal defamation which they follow. For ourselves, we have no taste for your style, and if you don't like ours, why, the people do, and you can take the less of it; go on with your vile warfare, until your end shall be like that of the Kilkenny cats; the world will be none the loser. The sooner your classic billingsgate is exhausted, the better for society; but do not expect the Independent Press to join you in the delectable work your genius has laid out. Scarcely a day passes but the party press of California give good ground for action in libel against its conductors; and yet these very men are constantly declaiming against the dishonor of their cotemporaries. The whole corps is rapidly reducing itself into a concentrated mass of blackguardism.—[San Andreas Independent.]

Good for the Independent. We like your tone. You dare utter plain and wholesome truths, and we rejoice to see the shackles fall from a portion of the press of our State, and to see them rise to the dignity of a *free press*. There are some journals that we are particularly pleased to receive: we can name the Independent, Placerville Observer, Hydraulic Press, Sierra Citizen, Mountain Messenger, and a few more, that are beginning to shake off the bondage of party and other galling bonds, and study to labor for the elevation of humanity and the spread of that intelligence that will do good. A great portion of our State press is still wedded to that custom which feeds their readers with murders, divorces and tattle, suicides, duels and robberies; we should esteem it an *insult* to the readers of the CALIFORNIA FARMER to offer such matter, and we take pride that our readers do not desire to read such paragraphs.

We have been truly astonished to find several papers in our State, that lay claim to be *respectable*, publishing the particulars of the Washington affair. It is an insult to woman, and a disgrace to honesty, for any journal that ever enters a private family, to put in type the record of crime, and of the poor fallen ones, such as we have in this State and in this very city. We would fain hope a just rebuke would follow such abuse of the press.

## Yosemite Valley.

We left our readers last week in Eden Valley, half way from Mariposa to the Valley; and here, after a night's refreshing sleep beneath a tent, the morning light as it breaks into the Valley will arouse in the heart and mind of every lover of Nature feelings of the most exalted character. The remembrance of the route over which you passed the day previous, from Mariposa, will still linger upon your mind—it has been with you in the dreams of the night. The pleasure the travel afforded the mind, the exercise it gave the body, has prepared you for still greater enjoyment now.

You have crossed the Chowchilla ridge; have been amid scenes of grandeur, witnessed nowhere else in the world, for the scenes are so variable; here and there lofty peaks of mountains, on the right and left, break upon the view; now you are upon some lofty mountain, now down in some deep dell, or gorge, crossing the foaming, sparkling water, whose music echoes through the forest, and around whose streams the brightest flowers drink their cooling waters. It is such memories that play about the mind, sleeping or waking, that give to both body and mind that renewal of life and health always found by visitors to these famed places.

You are now in Eden Valley, at early morn; the sun at its earliest rising should find you gathering the beautiful flowers and ferns, with which these valleys are filled. You have been wise, we hope, and brought along with you a good *haversack*, made light and neat, to swing over your shoulder; and also your *sketch-book* and your *scrap-book*, the one for the use of the pencil and the other for *pressing bright flowers*; and, after a joyous ramble, a bath in the clear, silver Merced, you will have such an appetite for your breakfast as you rarely enjoy down in the lower world.

There is a divine inspiration imparted to every lover of nature, in such a place, which really causes them to feel as though they were in another body or another world. The cold, money-getting, custom-loving habits are thrown off, and one feels a freedom nowhere else found but with nature.

After the repeat of the morning is over, even at the earliest hour, the horses, that have been luxuriating among the rich grass, are brought up, prancing and gay; even the bonny steeds feel the invigorating atmosphere of that place. Now ready for the Great Forest, and friend Clark, in whose valley you have rested, will be your guide, and a better guide could not be found; he is the Daniel Boone of the Forest and Valley. Eden Valley is about one and a half miles long and half a mile wide; situated between lofty mountains, whose sides are covered with lofty trees of majestic growth. This is a valley of living beauty. The Mariposa Forest is about five miles from this valley, and of easy access in the saddle. The whole route is of the most interesting character. You catch some of the most gorgeous scenes in nature in passing from Eden Valley to the grove. We advise travelers to go prepared with a generous repast, and remain the entire day in and around the forest, for there is much to be seen. Too many visitors lose the richest scenes of beauty by their hurried tramp; they seem rather to desire the name of having visited the place, than the enjoyment arising from viewing those sublime works of the Creator.

Now for the time of visiting. The snows are still deep on the mountains, and by letters this week received, we do not advise parties to go till the last of May or first of June—especially ladies, about the 10th of June. We also received information of the new Hotel to be opened in the Valley on the 14th June; of its accommodations, prices, etc., with arrangements for mules, guides, and many items of cost, we give in our next. Visitors will bear in mind the dress needed—especially the ladies. The Bloomer for the saddle and the Valley, and travelers all with the haversack, sketch-book, and scrap-book for flowers; and above all things, do not forget to secure one of Lawrence & Houseworth's best Naval Glasses, to view the scenery; without this more than half the beauty is lost. Our next issue will furnish many particulars.

We would invite the attention of the traveler to the gradual increase of the size of the trees, as you approach the center of the forest; this is one reason why they come upon them so imperceptibly. After about three hours ascent and rambling, you stand in the center of this "wonder of the world," the Mariposa forest. Here, beyond a doubt, is the mightiest forest now known, although we believe greater trees still will be found in this range. It will be recollected that in 1857 we gave our readers the sketch of the place and the measurement of one hundred and fifty-five trees, which we caused to be surveyed and measured, light and diameter, and published the same. We leave our readers here for the present, our space will not permit us to give more this number. Our next shall repeat the measurement of these trees, which are recorded from 20 feet in diameter up to 40 feet, and from 200 in height to over 400 feet.

**THE OVERLAND MAIL** arrived in this city, on Tuesday night at 9 o'clock, making the trip in 22 days and 12½ hours, bringing Boston and New York papers of April 14, and from St. Louis to the 18th. We clip the following, as connected with "The Sickles Trial."

"We are requested on the part of Mr. Sickles, to state, that he deeply regrets for many reasons, particularly for the sake of his child, who must one day read the record of her mother's shame, that the confession of Mrs. Sickles was published. The publication was contrary to his wishes, and if it had been within his power he would have suppressed it."

We would ask in all due deference to the character of such journals as the San Francisco Bulletin, the Times, Sacramento Union, and other journals, if they think it will advance the public good, or promote "social happiness," to publish in our State such reports as the sad confession of that unhappy woman, or to give publicity to this trial. Have we not matters of more moment, and of greater importance to the weal of California, than the reports of all the crime and ruin that befalls other States and cities? We ask, in all sincerity, if these reports, and all the painfully criminal and degrading scenes acted abroad, do not tend to a spread of the same infection here? Are such reports fit to lay before the family, in a morning or evening journal?

**CHAMBER OF COMMERCE OF SAN FRANCISCO.**—At the Annual Meeting, on the 10th inst., the following officers were elected: Albert Dibble, President; J. De Fremery, 1st Vice-President; Geo. H. Kellogg, 2d Vice-President; Wm. R. Wadsworth, Secretary, Treasurer and Librarian. Committee of Appeals for 1859 and 1860: President, Ex-Officio Chairman; Messrs. J. B. Thomas, H. Carlton, Jr., H. M. Hale, Daniel Gibb, R. Fierstein, and J. Friedlander. Committee of Arbitration for 1859 and 1860: J. W. Clarke, Chairman for the year; J. G. Kille, C. J. Dempster, R. G. Sneath, J. H. Cutler. The last four retiring in order monthly, and vacancy presented his annual report, which was ordered printed, with an abstract of the proceedings of the annual meeting, and a list of officers and members, in pamphlet form, for distribution, under supervision of a committee.

## What shall I do with my Trees?

A subscriber writes to us to know what he shall do with some Fruit trees, that have been planted some time and do not seem to do well; they do not seem disposed to grow? Not having the particulars of their condition, we have only to guess, and Yankee-like, we will suppose they are pretty large trees, and the spring being backward, the earth has not received great warmth from the sun; the sap has not begun to move vigorously yet—consequently, the tree is at a stand still. We should advise the *shortening-in* process, this will relieve the sap from having so far to travel when it begins; consequently the tree will push more vigorously. If the bark seems to be hard and dry, or shrunk, shower the limbs and body of each tree with strong soapsuds, and give the tree a *drink*, round the roots, with *liquid manure*; this will start the tree, and when once the *leaves* begin to come, the tree will soon be healthy. Without leaves, the tree would soon dry up and die.

**CHANCE FOR A PRINTER.**—In consequence of the impaired health of the editor and proprietor of the "Sonoma County Journal" (Mr. H. L. Weston), published in the flourishing town of Petaluma, the establishment is offered for sale—either a one-half interest or the whole. The paper is now near the close of its fourth volume; has a large and healthy circulation, while the advertising and job-printing patronage is believed to be unsurpassed by any country office in the State. The printing materials are of the best and in great abundance. For further particulars, apply to the proprietor, or to L. P. Fisher, San Francisco.

**MUSICAL JOURNAL.**—We have received number one of volume fifteen of Dwight's Musical Journal. This work contains reviews of all the principal musical societies, concerts, publications, musical articles, &c. This number contains an important chapter, copied from Harper's, relative to "Behavior in a concert room," which will do well to be understood and practised everywhere. This journal, published weekly by O. Ditson & Co, Boston, at \$2 per annum, contains new music in each number that is worth more than the price of the subscription. We commend this work to musical souls everywhere.

**ONIONS: How to Raise them Properly.**—We have received a very interesting pamphlet, of about thirty pages, containing the statements of seventeen Practical Cultivators of the Onion, residing in different sections of the country, many of them having long been engaged in growing the Onion, their experience will be of very great value to the country. This work was compiled by Orange Judd, Esq., who kindly transmitted us a copy; from which we shall make such extracts as will be of service to this section of the country, at the most fitting time.

**NEW MUSIC.**—We have received by last steamer, a splendid collection of new Music, from the large publishing house of Horace Waters, New York. This house publish all new and rare songs, marches, waltzes, polkas, etc. Many, very rare, have just been issued by them, and can be had by ordering from them direct, or from Kohler, on Washington street, in this city. By referring to their advertisement in another column, all particulars can be known.

**DYSPEPSIA** is known as one of the most distressing complaints which afflict humanity; and until the advent of the Oxygenated Bitters, had been considered incurable when curable, requiring years to accomplish. The Oxygenated Bitters perform in a few days, cures, which other medicines take years to alleviate.

## DOMESTIC SUMMARY.

The stock-raisers of Marin county have no cause of complaint of a want of grass.

The steamer Henrietta made another successful trip between Stockton and Fresno City. The trade on the San Joaquin river is rapidly increasing.

The water in the Sacramento river, Wednesday evening, stood on the city gauge at sixteen feet six inches.

The Grand Jury of San Joaquin have found a true bill against Green C. Palmer, for the murder of John A. Benson.

The citizens of Pine Grove have subscribed seven hundred dollars to defray the expenses of fire-works at the approaching celebration of Independence Day.

On the 6th of May the snow in Damascus, Placer county, was two feet deep, and a mile from there it was four feet. Two miles below, plum trees were in bloom.

The mountaineers think it sounds odd to hear persons, who reside in the valleys down below, talking about the barley crop being nearly ready for harvest, while in their region the peach trees have scarcely cast their blossoms.

At San Andreas, for the week ending the 7th inst., the weather has been dry (observes the Independent) little save rain and disagreeable winds. Water froze during the night of the 2d, and on the 1st and 2d it rained in torrents. Vegetation is three weeks behind.

The Sonoma municipal election resulted thus: A. G. Oakes, Mayor; Chas. Van Gelden, Treasurer; R. Shattuck, Marshal; W. Kamp, Assessor; J. D. Long, City Attorney. Councilmen: L. Adler, Ed. Gillon, D. Gallowsay, P. J. Vasquez, and David Cook.

It is stated that the new ditch in Tuolumne, about which there has been so much excitement among the miners, was sold on the 9th inst., for the amount of the mortgage held by Mr. Davis. There was no violence manifested, as supposed there would be.

The Grand Lodge of Odd Fellows, at San Francisco, elected L. L. Alexander, of Sonoma, M. W. Grand Master; Wm. M. Allen, of Shasta, R. W. Deputy Grand Master; T. R. Kibbe, of Downsville, R. W. Grand Warden; T. E. Johnson, of San Francisco, R. W. Grand Secretary.

The recent Los Angeles election resulted as follows: D. Marchessault, Mayor; H. N. Alexander, Treasurer; P. H. Alexander, Marshal; J. H. Lander, Attorney; W. H. Peterson, Assessor. Common Council: E. Brown, N. A. Potter, A. M. Dodson, James Baldwin, W. Woodworth, D. M. Porter, G. Ybarra. Vote polled, 667.

The number of applications for Patents from California this year has been greater than it had ever been before, and it is stated that the whole number already issued by the Patent Office to California inventors was about forty, exceeding in number those issued to the older States of Arkansas, Iowa, Florida and Texas.

The large building in Sutterville, known as the Hotel, which was built in 1853 by H. A. Breed, at the time that a few enthusiasts supposed Sacramento was bound to "go in," was set on fire and entirely destroyed, on the evening of the 5th inst. It was over one hundred feet long and three stories high, and cost over \$50,000. It was owned by Col. Wm. Meldrum at the time of the fire.

Mr. Brady, the agent of the Pioneer Stage Company, has started a line of coaches to run between Placerville and the New Digging at Brookline. Mr. P. H. Lovell, telegraphic operator, took passage for the same locality, with instruments for telegraphing; and, if there is any truth in the reports of gold up there, we shall know (says the Observer) all about it shortly.

We are inclined to believe, says the Los Angeles Star, from information lately received, that some seventy or eighty miners are doing well on the San Gabriel river, about thirty miles from that city. The gold is found principally in the banks and in the sides of the mountain. Several parties have been up the different forks of the river, and all report that they found gold. Owing to the unusual quantity of snowing on the mountains, miners may expect an unfailing supply of water.

The diggings on the ridge (remarks the Hydraulic Press of 7th inst.), were never so abundantly supplied with water as they are the present season. The long continued rains—protracted even to the present week, as though the heavens would never weary of showering down blessings—have completely saturated the earth, flooded every little stream and filled the largest ditches. All who can wash, therefore, are busily rushing off the auriferous dirt, and others are pushing their preparations with what speed they may.

On Sunday night, the 24th ult., there was a frost at Los Angeles which left its mark on vegetables the following morning. On the 29th, a heavy rain fell during the night, but which did not extend but a few miles in a northeast direction; at San Pascual, only seven or eight miles from the city, little or no rain fell. Again, on the night of the 24th inst., copious rains fell. The Vineyard remarks: It is to be feared that these rains will prove a serious injury to the pasturage, as the grass is dry and must lose its sweetness by the water, while there can be no hopes that any more grass will be produced, this season, by any quantity of rain which may fall.

The little steamer Eureka has returned to Stockton from a trip up the South Fork of the Mokelumne. The Republican says the boat went up to within five miles of Benson's Ferry, when the engine was found so numerous that it was deemed inadvisable to proceed further. Several gentlemen chartered the boat for the purpose of examining the country on the banks of the river. The result of the investigation was not favorable to the prospects of draining the swamp lands in that vicinity, though the soil was found to be of great richness. The Eureka will soon commence running between the vegetable ranches on Georgiana Slough, Sacramento river, and the city of Stockton.

Mr. C. C. Cook, of San Jose, has made an important improvement in the steamer paddle-wheel. By a simple and effective arrangement, the paddles are made to enter, pass through, and emerge from the water, in such a manner as to present their broad surfaces, when acting in propulsion, and their edges, when rising from the water and passing through the upper arc of their revolution, precisely in the manner of a well-feathered oar in the hands of a skillful oarsman. In a letter to the San Jose Tribune, giving the results of a series of experiments, demonstrating the power gained by his Feathering Paddle over wheels of the ordinary pattern, Mr. Cook says: "When running at the depth of nine and a half inches (one-fourth the diameter of the wheel) the driving-power required was equal; at the depth of twelve inches, the driving-power required for the new wheel was 18 per cent less than that required for the other; at thirteen inches, 30 per cent less; at fourteen, 34 per cent less; at fifteen, 34 per cent less; at sixteen, 42 per cent less; at seventeen, 42 per cent less; at eighteen, 60 per cent less. Another feature is, that in the new

wheel the three lower paddles (each wheel containing eight) are in a vertical position, the one in which their propelling power is most directly and effectively applied to the resistant water," which he deems an improvement.

As the haying season is now near at hand, employment will be given, in the grass districts of the State, to a large number of good mowers. The Petaluma Journal says, that "those well versed in the art of swinging the scythe, seeking work, will do well to come this way, as the prospect now is that machines will give place to the old style of haying, this season, in consequence of the lightness of the grass." Working-men, take heed!

It is stated by the Marysville Democrat, that on the 10th inst., Judge Dame sent thirty hands over the river to commence work on the grading of the San Francisco and Marysville Railroad. The number will be increased in about two weeks to four hundred, in order to finish the grading to the Sacramento river at the earliest possible period, so as to be ready for the ties and iron as soon as they shall be on hand.

FEVER and AGUE is being complained of in Marysville. The Democrat says the Mexicans claim that they have a certain cure for it. They take a small bag of salt and place it directly at the pit of the stomach. The salt, after a day or two, turns perfectly yellow, and the patient is cured. Several white persons have tried it, as they assure us, with the same effect. The remedy is certainly simple enough and cheap.

NORTH SAN JUAN, the Press thinks, is becoming rapidly civilized. An Italian organ grinder visited it this week, and during the same period six strapping German nymphs have been tripping it "on the light fantastic toe" at the Star Bakery. The small expenditure of twenty-five cents will enable any person desirous of the honor, to lead one of these fair-haired, blue-eyed Saxon damsels in the mazes of the giddy waltz or fascinating schottische.

This Spring has established the fact, the Placerville Observer thinks, that its place is a more favorable location for peach orchards than Coloma. At the latter place the trees bloom much earlier, and consequently the fruit is more liable to be nipped by late frosts. In proof of this, it is informed by a citizen of Coloma, that the orchards there will not contain more than half a crop this year, while at Placerville the trees will be entirely too full, and large quantities of peaches will have to be thrashed off to keep the trees from being destroyed by the burden.

THE Commissioners, for the location of the Buildings and Grounds for the State Fair, and the Sacramento County Supervisors have at last settled down on a lot for the Pavilion. On the 7th, the Supervisors reconsidered their former action, and agreed to concur in the purchase of the two full lots on the northeast corner of M and Sixth streets. The Bee thinks the location admirable, "if the Pavilion must be apart from the Grounds," and asks, "Where are the Show Grounds to be?" The Commissioners, however, have yet to submit the deed for the lots, which will be presented for approval at the next meeting of the Supervisors, on the 23d inst. Should the deed be rejected, the matter will remain as though no selection had been made.

The Great Four Mile Race, which came off at Sacramento on the 10th of May, over the Centerville Course, between Ashland and Owen Dale, attracted not less than three thousand spectators. The city for a few hours was almost deserted—every man, woman and child, who could get out went; upwards of two hundred ladies were in attendance. The horses were started promptly, Ashland took the lead and kept it, being from one to two lengths ahead each time they passed the judges' stand, winning the first heat in seven minutes and fifty-six seconds, which confirmed the previous confidence of his backers, and three to one was freely offered, but no takers. For the second heat, both horses made a fair start, Owen Dale a little ahead, but Ashland closed on him before reaching the first quarter, and kept the lead throughout, winning the heat in seven minutes forty-nine and a half seconds. Ashland was greeted with cheers at the conclusion; and his backers, it is said, pocketed immense sums of cash. This was by far the most exciting and best conducted race ever run in this section of country, and will long be remembered by those who witnessed it.

RECAPITULATION: Centerville Course, May 10, 1859.—Sweepstake, \$3000; four mile heat; best two in three.  
Nathan Coombs' b. h. Ashland, 5 years old, by imp. Glencoe, dam Mary Bell, by Sea Gull; 6 yrs old. 1  
Wm. M. Williamson's s. h. Owen Dale, 6 years old, by Belmont, out of Maria Downing, by American Eclipse; 118 lbs. 2  
Time: 7:56 7:49.

MOVING THE WEBER BOUNDARY.—For some time there has been information in town, says the San Joaquin Republican, to the effect that the survey formerly made, of the grant of Mr. Weber, had been set aside and a new survey ordered. The orders are, as far as known by Mr. Mandeville, to commence the new survey of the Weber grant, on the north line of the Congressional Township in which Stockton is situated. This line is about one and a half miles from Stockton City Hall, north. It is between one and two north, range six, east. The line will run through Mr. Sarles' property, leaving but seventy-five acres of it within the Weber grant. Major Hammond's property is outside of the line, and that of several hundred others who have purchased of Mr. Weber.

The survey will be commenced on the west side of the north line, at the tule, and will be run three leagues to the east, and three and a half leagues to the south. This will take in a large amount of what was considered as Government land, both upon the east and on the south. Most of this has been sold and preempted as such, and if the orders to survey are not revoked, the titles to land in that category, will become very much confused, and much hardship will be the consequence to the settler and purchaser of the State and United States. The land which will be taken from the Weber grant on the north, will fall into the possession of Andres Pico, whose southern boundary is the Weber, wherever it may be removed.

The new survey, if made, will be sent to the United States Surveyor General's office, at Washington, unless it is first taken into the United States District Court, at San Francisco, and contested, as it is likely will be the case. We have but little doubt, from present information, that the new survey will be made, and the boundary question will be kept in Court for a year or two to come. A letter from Gen. Howard, or the arrival of that gentleman himself, however, may still put the matter in a more favorable light. City property is not affected by the proposed change.

SEVERE FROSTS.—We regret to hear that our neighbors at San José, have suffered very much by hard frosts, the first of the week, which has done great injury to the grape-vines. We learn by a gentleman from San José, that the continuance of such frosts a few nights, would entirely destroy the grape crop the present year.

## Letter from Panama Bay.

STRANSHIP UNCLE SAM, DAY OF PANAMA, Tuesday, April 19, 1859.

EDITOR FARMER: We returned Point Mala at 3 o'clock this morning, and are now (10 1/2 o'clock, A.M.) twenty miles only from our anchorage. Point Mala is well named, for it stretches so far south that we have to run nearly two degrees below Panama to clear it, and get into the Bay. For steamers coming from South American ports, it is not in the way at all. We have had a delightful run from Acapulco. The only sad event occurred last Saturday night, in the death of Mr. John Darling, aged 71 years, a resident of Iowa, who a year since went to Oregon to visit his children that were there residing, and was returning to his home in Iowa. He was accompanied by his youngest son, a lad of 17 years. Every attention was paid to the old gentleman, but death was inexorable, and he now sleeps in the dark blue sea, with naught but the tears of his son and the sympathizing sigh of the stranger, as the last tribute to his memory. He was buried on Sunday morning, at 6 o'clock, with appropriate funeral services, the steamer stopping during the ceremony. The service ended, the bell of the engineer struck, and we were again on our way. Heaven grant that this may be the only death.

Yesterday, about 11 o'clock, A.M., we passed the John L. Stephens, on her upward trip. She was too far off to speak, and we contented ourselves with a look at her. In the afternoon we made the Islands of Quibo and Quicora, just after making the small but singularly beautiful Island of Montuosa. All these Islands are covered with a dense growth of timber and shrubbery, and their appearance is quite picturesque. Quibo is the largest, and is said to be inhabited.

We shall have but a little while longer to gaze on the Bay and the Islands of this last stage of our Pacific trip, and although we cannot but feel lively with the prospect of soon reaching the cooler latitudes of the North, many will take the parting glance at the Pacific with sadness, for it may be the last. Everything has been harmonious and pleasant in the trip from Acapulco.

Last Sunday morning, an hour after the burial, a shower came up, accompanied with very sharp lightning and heavy thunder. It was really refreshing; for you know to Californians, especially to San Franciscans, a thunder shower is a rare occurrence. Music and good feeling has prevailed, and made the heat quite supportable. The nights, in their moonlit beauty and cool breezes, have restored the frames which were nearly melted during the hot days. Plenty of fun and good nature, plenty of ice and good water, and as much comfort as you can possibly take in these latitudes, has been the experience of all but the natural grumblers.

I shall write you from New York immediately on our arrival.

Yours, etc., E.

SAFE PLACE FOR YOUR MONEY AND PAPERS.—Look to the advertisement of the Fire-Proof Safes, now advertised by Thos. Ogg Shaw. The proof is before the public of their excellence, and we refer to the names appended to the statement as a strong evidence of their excellence. If Mr. Shaw continues to receive orders for his new Reaper and Mower and his Header and Harvester for many weeks more, as he has for several weeks past, he will require a number of these safes to keep his own money—in spite of Anjuncts or opposition.

By the Rain Gauge of Mr. Thomas Tennent, of this city, the following comparison for a few years past is made; measurement in inches and hundredths:  
1853-4.....23.48 1856-7.....19.89  
1854-5.....23.67 1857-8.....21.71  
1855-6.....21.65 1858-9 (incl. May 2) 22.12  
As the rainy season this year is not yet over, doubtless it will exceed any previous year above given.

## SPECIAL NOTICES.

MRS. P. E. ROGERS—Family Sewing. We are pleased to learn that Mrs. P. E. Rogers, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

THE GENUINE PITTS' MACHINE. T. OGG SHAW, is the ONLY place where the Genuine Pitts' MACHINE, made by John A. Pitts, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. (13) T. OGG SHAW.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerrotypes. We have documents to prove it, the white-washing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "dag." My Ambrotypes were not exhibited at the last Fair in the city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE, Corner Montgomery and Sacramento streets.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Colds, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it were a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appreciating in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and that their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED!

The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Consumed Consumption, and its power as a safe, certain, speedy, pleasant and efficient remedy cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "J. Wistar" on the wrapper, as well as the printed name of the proprietors.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.  
For sale by—WILLIAM MORRILL, HENRY JOHNSON & Co., and REDINGTON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; South & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

THE AMERICAN TRADES COMPANY.  
WHAT THEY MANUFACTURE:  
The American Smoker.

CONSISTING of a great variety of unique and beautiful patterns of CIGAR TUBES; also, several varieties of PIPE TUBES. The peculiarity about these articles is that each one is arranged so as to receive a damp sponge, through which the smoke of the burning cigar or tobacco has to pass on its way to the mouth. The damp sponge not only cools the smoke, but extracts from it the nicotine oil, the poisonous property of the tobacco, which renders the breath less offensive. Smokers will find in the use of these Tubes a luxury never before attained except by using the Turkish water-pipe. Their use will also greatly promote the health of the habitual smoker and preserve the sweetness of the breath.

The American Carpet Hook.  
Is a little contrivance for putting down carpets without tacks. This is a new article, which has never before been upon the market. But it possesses the merit of enabling a person to put down or take up a carpet of the largest size in general use in fifteen minutes, without any injury to the floor or carpet. It is very cheap, cheaper in the long run than tacks, and the great facility with which even a servant can take up and put down carpets, without the possibility of a mistake, renders it invaluable to the housekeeper.  
15

Co-partnership Notice.  
ON and after the 15th day of April, 1859, GEORGE H. MURDOCK became associated with me in the buying, selling, and importing, of all kinds of AGRICULTURAL IMPLEMENTS; and, also, in the Manufacturing Business. Hereafter the business will be conducted in the name of THOMAS OGG SHAW & CO.

## Greatest Labor-Saving Machines of the Age!

## CALIFORNIA INVENTIONS!

PECK'S  
SANTA CLARA  
HEADER AND HARVESTER!!THE UNDERSIGNED HAVE PURCHASED OF  
Edmund Peck,

All his right title and interest in and to his newly-invented  
PATENT HEADER AND HARVESTER, to which was  
awarded, at the County Fair, held at San Jose, September,  
1858, the FIRST PREMIUM, over the Illinois (or Haines)  
Harvester, and all other Machines in exhibition.  
We shall manufacture for the present harvest 50 Machines of the  
above description, and are ready to receive orders for the  
same. Parties wishing to purchase Clippers or Headers, will  
please give us their orders. We design making the best Ma-  
chine of the kind ever offered to the public. This Machine  
combines many careful improvements, and was pronounced by  
the Committee the greatest invention of the kind. One of the  
above machines cut, last season, OVER ONE THOUSAND  
ACRES OF GRAIN, and the expense of repairs did not exceed  
TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it  
cannot fail to take the place of all other machines of the kind.  
Mr. Peck has displayed great ingenuity and judgment, the ad-  
vantages of which every farmer should be made aware of, and we  
believe the community at large will be much benefited. We  
have already received, through Mr. Peck, from those who saw  
them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in  
THREE DAYS, one machine cut FIFTY-ONE ACRES OF  
Grain, which is more than has ever before been cut in the State  
of California, by one machine, in the same time.

Send in your orders. We mean what we say. Recollect  
the place:

33 Sacramento street.  
THOS. OGG SHAW,  
GEO. H. MURDOCK.

The advantages we claim the Peck Header or Harvester  
possesses over any other MACHINE of the kind in the  
State, are:

- 1st. Its being a California invention, and got up by a practical farmer, and well adapted to the wants of this country.
- 2d. The wheels of this machine being iron, and not liable to shrink or swell.
- 3d. It is the principle of raising or lowering. As the machine is evenly balanced, a child can raise it or lower it with perfect facility in operation, without stirring up dust.
- 4th. It cuts as low as any Reaper in use, and can be raised to a height of three feet, in one minute.
- 5th. In the manner in which the machine is guided, it being so constructed that a boy of ten years can guide it, and we believe the community at large will be much benefited.
- 6th. It has no side draft, as both wheels are of a size, and the weight is equally divided.
- 7th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.
- 8th. It takes less team to propel it.
- 9th. It is more simple and is easily understood.
- 10th. More substantial and less liable to get out of order.
- 11th. We can cut stock with this machine, grain in good condition, for \$2.50 per acre, while in the old manner of cutting, it costs at least \$5.00; leaving you to judge as to the saving this machine has over any others.
- 12th. This machine is so constructed as to save all the grain.
- 13th. You can cut with four horses, from twenty to thirty acres per day.
- 14th. The greatest advantage of all is, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

## Report of the Committee on Reapers, Mowers, and Thrashers.

The Committee appointed to examine and report upon  
Reapers, Thrashers, and Mowers, and Agricultural Imple-  
ments, report that we have examined the California Inven-  
tion, BY MR. E. PECK, of Santa Clara county, called  
"Peck's California Clipper," and saw it operating in grain  
fields. The machine cuts a swath nine feet four inches in  
width, has an apron or elevator the width of the length of the  
sickle, which carries up an axle of about forty-five degrees, the  
grain cut off, and throws it into another apron or elevator  
about two feet wide, and running at right angles to the first  
elevator, and drops the grain into a wagon that runs alongside  
the Clipper to receive it. The Clipper requires four horses to  
propel it, and one man to direct the team, and another to re-  
ceive and haul away the grain, and a driver for each wagon to  
unload it, and to load the grain in the wagon while it  
receives it from the Clipper, requiring only five hands in all. It  
will cut and stack TWENTY-FIVE ACRES A DAY, when  
the grain stands up.

It has a reel, and will gather grain well, even if it inclines to  
an angle of forty-five degrees in an opposite direction from  
which the machine is moving. It will cut within three inches  
of the ground or three feet high, and can be elevated, or low-  
ered, at will, and without stopping the team, and gathers the  
grain so evenly and perfectly that scarcely a head is left on the  
ground. The machine rests on two main wheels, each of  
which has a cog wheel fastened into the spokes about midway  
between the rim and the hub. One wheel drives the elevator  
and reel, and the other the sickle. The machine is so con-  
structed, and so simple in construction, and one examining it will wonder why  
such an invention has not long ago been in use. We do not  
hesitate to say that this machine EXCELS ALL OTHERS  
greatly in simplicity of construction, in being liable to get  
out of order, in durability, in ease of operation, in quan-  
tity of grain it will cut, and the excellent manner in which it  
performs its work.

In plain truth, in the judgment of the Committee, it is the  
best machine for farm use ever invented, and it was  
invented by one of our own citizens, we recommend that it be  
called "E. Peck's Santa Clara County Grain Clipper."

We recommend a first premium to be awarded to Mr. E.  
Peck, for his Santa Clara County Grain Clipper.  
F. H. MURDOCK, Ch. Committee.

## The California

## Combined Reaper and Mower!

## The Best Combined Reaper and Mower now in Use!

## WILL BE MANUFACTURED FOR THE PRESENT

HARVEST, One Hundred of the "California Combined  
Reapers and Mowers," which for beauty, strength and sim-  
plicity, has no equal in this or any other market, as it possesses  
many great advantages over any other Machine, to wit:

- 1st. It is much lighter; the driving-wheel is four feet high, making the draft 30 per cent less than any other machine.
- 2d. The cutting part is in the rear of the machine, and the grain is cut and thrown into a wagon, in ten minutes for mowing.
- 3d. The grain is passed to one side with ease.
- 4th. It will cut grass as low as three inches, and grain as high as twelve.
- 5th. It can be raised or lowered in three minutes.
- 6th. It has less side draft, than any machine in use.
- 7th. It has more motion.
- 8th. You can drive slower and do your work better.
- 9th. It cuts six and a half feet in width, and has a spring-  
cast five feet from the ground, which places the driver in a  
position to be able to manage his team, and see the breakers  
ahead, in time to save the machine.
- 10th. It can be thrown out of and into gear instantly.
- 11th. The cutting part of the machine being in the rear,  
takes all the weight of the horses.
- 12th. The best and last reason of all is, that it is a California  
invented and made Machine; therefore, any purchaser can,  
on short notice, obtain any portion of the machine that may  
break.

I have taken particular pains to select good workmen  
and good materials, and I warrant this MACHINE to reap  
and mow, and to do either or both, better than other Machine  
in this market. Please give me a call.

ALSO, all kinds of REAPERS and MOWERS are in use, can be  
had of me at the Lowest Cash Prices.

## The Queen of Flowers.

In the Northeastern States, June has been called the "Month of Roses," and we often hear of "beds of roses," and "bouquets of roses." We can all have couches and pillows of roses, if we will; and we can press them beneath our feet, and their very fragrance shall rise to refresh us. Those who are blessed with an abundance of this lovely flower, would do well to gather all the fallen leaves and roses when fully open, and dry them a little in a pillow-case or bag made on purpose. This will be found to be a very delightful pillow for a *siesta*; they will dream of roses while they inhale them in their slumbers. A most agreeable plan is to make a neat even fancy bag-mat, for a parlor, and when friends enter, as their feet step upon the mat, a rosy welcome will not be unwelcome.

And now we have a rosy gift for our readers, in a beautiful sketch of the "City of Roses," which we clipped from a Sacramento paper last year. It is from the gifted pen of Bessie, and if it is a year old, and if a Sacramento "Bee" did take its first honeyed sweets from it, there is a plenty left for our readers. Sacramento is indeed the "City of Roses," because the citizens would have it so, and other cities can enjoy roses, if they will only give attention to their culture. Every visitor to that city should stroll down Second and Third streets, and up Seventh and Eighth streets, and enjoy the luxurious breath of the City of Roses.

But we now give the sketch of Bessie, and also the beautiful story of "The Child and the Rose," only wishing some of our composers would set these words to music for our Festivals among flowers:

## "CITY OF ROSES."—By Bessie.

"The Queen of Beauty" is holding court in the "City of the Plains," and never did it look so beautiful as now, in this lovely "Month of Roses." There is scarcely a little cottage, however plain in its pretensions, but has its little patch of flowers at the side, or its rude walls covered with the beautiful climbing rose, while some are so completely surrounded with green foliage as to be scarcely visible, others look as if the "Queen of the Fairies" and her train of mischievous nymphs might court them for a home. A stranger, to walk through our streets, could not but contrast our own with some of her sister cities in point of natural beauties. One would suppose Flora had robbed the whole world of all her garnered treasures, and emptied her lap in Sacramento! Let us look which way we will, our eyes rest upon roses. Over the porch, and the arched gateway, around the door-sill, and the garden promenade; in the highways and byways, clustered in elegant and tasteful profusion, blooms this flower of love and poetry, the very perfection of floral realities. Not yet to mortal ken has the "Angel of the Flowers" revealed a rival to the rose. The graceful Multiflora peeps out laughingly from the vine-trellised arbor, with a tinge upon her cheek delicate as a maiden's blush, as if too modest to occupy the same proud eminence with her royal neighbor, the stately queen "La Reine." The monster "Giant dees batailles," with flaming jacket dyed in Venus' blood, is holding court among the floral eyes, his prime minister in "Cloth of Gold," coquetting with the chaste "Modeste." The matchless "Prairie Queen," regardless of the pattern she should set, is nestling side by side with the "Duke of York," her virgin sister "Princess Adelaide," droops her head and blushes soft behind a veil of "Moss," "Prince Albert" and the fair "Kentucky Bride" are flirting to their hearts content within an emerald bower, while "George the Fourth" nods affably to his plebeian neighbor the "Belle of Baltimore," the sweet "Castilian," and old "Madam Hardy" (white) makes us think of home, for with our infant breath we inhaled its fragrance, and could wish our dying would leave the same blissful memories. Who can talk of roses, and live among them, and not have some aspirations for the pure, the beautiful, and the poetical. "Poetry is lavish of roses," and why should not roses and those that love them be inspired with poetry? Our own city bids fair to out rival Persia and the gardens of the Nile. I might say a great deal more in its praise, but I fear I am interrupting little Miss Yellow Breast there, who is breakfasting on a dew-drop, and talking to her lover "under the rose." SACRAMENTO, May, 1885.

## THE CHILD AND THE ROSE.

BY E. OAKES SMITH.

When stirring sad and sorrowful bird  
Brought gladness to the earth,  
And spring-time voices first were heard  
In low sweet sounds of mirth;

A little child, with pleasant eyes,  
Reclined in tranquil thought,  
And, half communing with the skies,  
His pretty fancies wrought.

He turned where, cased in robe of green,  
A rose-bud met his eye,  
And one faint streak the leaves between,  
Rich in its crimson dye.

The warm light gathereth in the sky,  
The bland air stirrith round,  
And yet the child is lingering by,  
Half-kneeling on the ground:

For broader grew that crimson streak,  
Back folds the leaf of green,  
And he in wonder, still and meek,  
Watched all its opening show.

"'Tis done, 'tis done!" at length he cried,  
With glad amazement wild;  
The Rose, in new-created pride,  
Had opened for the child.

O, had he heart like thine, sweet boy,  
To watch creative power,  
We too, should thrill with kindred joy  
At every opening flower.

For the California Farmer.  
Sweet Childhood.

There is music in our house to-day; music that falls upon my heart as sweetly as the evening dew falls on the thirsting earth. The patter of tiny feet sounds lightly over the floor, a fairy form advances, and rosy, laughing lips are pressed to mine; a little, clinging hand pulls on my robes, and, gushing like a mountain rill from out its hidden source, a wild, sweet laugh comes trilling forth, and finds its echoes in my soul. O! sweet and winsome childhood, how full of blessedness thou art; how closely allied to the purity of angels. What a treasure to the earth, which, but for thee, must sometimes weary of her children. Thy feet press lightly on her greenward; thy hands caress, with loving tenderness, her humblest flowers, and gently on her breast thy head is pillowed. What wonder that she oft-times draws thee down, and wraps her garments close about thee; so closely that our eyes can look on thee no more. She yields thee to our blessed Father; transfers thee to those angels who

now behold his face, "For I say unto you, their angels do always behold the face of my Father in Heaven."

Parents whose heart-thrones now are wreathed with these sweet blossoms, consider well your trust. A day shall dawn when He who gave them, pure and bright, into thy keeping, will ask his own again, and woe to thee if thou pronounce them lost. Twine carefully the flexible vine, whose tendrils cling so lovingly to thee; remove superfluous stems, and graft with buds of purity and wisdom; so shall the fruit be fair, and thy reward be glorious.

SALLIE.

## The Elevation and Freedom of Woman.

[We ask the serious and attentive perusal of the following letter from a. n. u., by every mother, wife, and adult daughter in our land. We would appeal to them, by all their hopes and desires for human happiness, to read this letter with serious candor, and reflect well upon it. We know well the truth it conveys; we know well its momentous importance. Fathers, too, may not pass it by; their highest interest—the interest of their children—is most intimately blended with these truths. No intelligent mind can peruse this letter without feeling, as they review the wreck of homes over our land, and the vast amount of human misery, and the disgraceful record of our courts, that parents have a high duty to perform; and this duty is pointed out by a. n. u. We know our duty as a journalist, and, thank Heaven, we dare do it. While we fearlessly advocate the cause of woman's elevation, woman's education, and the happiness of homes, we fear no slanderers and secret plotters—never, as long as the promise stands, that "one can chase a thousand, and two put ten thousand to flight." Bad men may rail against "sickly sentimentality," it will not avail them. The Farmer will be the herald for the cause of happy homes, and the building up and beautifying of homes all over this fair land; and we know we shall have the warm and earnest aid of woman in behalf of this journal. We sincerely offer our gratitude to a. n. u. for her cheering words. We have many letters that tell us of sympathy and zeal, and every mail brings us subscribers and advertisers. Like the old patriot who said to his men during the revolution, when enemies were lying in wait, "Trust in God and keep your powder dry," we say we will "trust in God" and keep our pen going; and as our kind friend a. n. u. says she never works with gloves on, so we mean to work all the time with "gloves off," and shout to our friends saying, O. C. W. (here) our enemies lie.]

OAK-SHADE FARM, May 6, 1885.

COL. WARREN: Yours of the 16th April, by some unaccountable mischance, failed to reach me until yesterday; still determined to reply, as I perceive, from the tenor of your letter, you really need all the sympathy that a pen, ink, and paper medium can convey to you. How often, since I have been a correspondent of your paper, have I sat thinking of all you would be called to pass through, on account of pleading the cause of woman, and her emancipation from the thralldom of ignorance, and a blind, bigoted submission to hoary errors that have enshrouded her capabilities until rust and canker have encased and hidden her true nature from all, save a few who are deep in her eternal welfare; these look for, and endeavor to remove, the mass of falsity that surrounds her pathway; to award to her the true attributes of her nature, and bring to light the hidden treasures of woman's mind, in the form of beautiful thoughts which are of a refining power. Long ere the nineteenth century had dawned should we have been set free from many mistaken prejudices in relation to the true mission of woman to our earth, had she been free to speak forth her own nature in acts, unfettered by the influence of her brother man. Pardon me, my friend, if I should speak to you very plain at this time, for this is a theme on which I intend to be so. Woman was God's last, best gift to man on earth; her nature should be the purity and brightness, or, in other words, the glory of man; she should be the brightness of a glory rendered the Divine Author of our existence by man.

Colonel: woman has, from a necessity, borne the curse of child-bearing, of conceptions, and also misconceptions, in the reproduction of our race. Whether she was blessed with a good husband or a bad one; whether he lived by the sweat of his brow, or was a drunkard, liar, or thief, mortal life has been, through her, by man, multiplied on our earth. Need we wonder at all the evil or infamy that fills the world, when the most refining part of human life has been always more or less compelled to a negative or passive course by the grosser part; that we fail to perceive a harmony in our humanitarian system. Woman was made susceptible of all the more refined emotions of human nature; capable of all the most pure and holy perceptions and conceptions of the human mind; with imaginative power of soul to reach out after the all of infinity, through the principle of love; but she has been most cruelly dealt with by the positive male principle—save now and then, by a brother in the human fraternity, who was honorable enough to battle with mankind to achieve the great object of female enlightenment and God-given freedom to development and progress, even if she should prove to be a star of the first magnitude in the world of mind. O, my God, I tremble when I reflect upon the enormity of guilt resting upon mature manhood, in struggling to keep my sex as ignorant as children, relative to the laws of her own constitutional formation, and the inherent laws governing the reproduction of human beings. And why, dear sir? That she may be negative or else become passive to man to mould her to his will; that she may be compelled, through ignorance of Heaven's eternal laws, enshrined in her organization of mind, to give no heed to their mandates in relation to the uses or abuses of her nature. I long for the meridian of the day which will be as a thousand years, wherein the ignorance that now broods darkly over the human mind as a pall, will be taken away, and all-conquering truth be among earth's children as a mighty covert from error.

Believe me, friend of human progress, if I tell

you I find the majority of my sex hard to rouse to the importance of the work of knowing human nature; even afraid of being found inquiring into any of the enigmas of life's problem not yet solved by them. And yet with all their ignorance of the constitution of man, moral, mental, or physical, they are ashering into existence beings who are to be as they, only so far as others may be able to train them to walk in a different life from that of their parents; lives enveloped in ignorance and supineness on the most important subjects that pertain to human beings being begotten and born in accordance with nature's divine laws; or in other words, God's laws stamped in the very soul, to guide the outer being. If we are in ignorance of the laws of life, how can we produce our race blessed with a disposition to inquire them out? If we have no such knowledge of the universal relationship of things as they exist, reaching to all, and through all existences, how can our children be expected to come forth of us a part in mind as well as body. Behold, our world is crowded with human life, more or less made unhappy by misdirection of the forces of the human mind, all striving to exhibit and exert an influence on the stage of human action. Behold our criminals; what makes them such? Often, too often, alas, begotten and brought into our world ignorant, and kept so, of the laws of right; or else influenced by those who have preceded them, of such development. Now pause and ask thyself why is this? Hear, O my brother, if you wish sons and daughters born in the world, who are not cursed with excesses, learn to know and govern yourselves ere you become fathers and mothers. Lay the ax at the root, trifle no more with the branches. Go to work, O man, thou who wast made to be the glory of thy Maker, and make woman what she was intended—thy glory; place within her reach all the keys of knowledge which are in your possession; aid her to attain as far as man in knowledge in relation to man and herself; teach her the all that is known of the subtle power by which man has too often made her his abject slave; by acting upon her magnetically, rendering her passive to his will, whether for weal or woe. Let man buckle on his armor, for God is about to exalt to her own position ere long, woman, whom, if an honest man only plead her cause, or open up facilities for her to plead her own cause, he is mocked at by many as promulgating "sickly sentimentalism." But this cannot always be, for woman must, herself, eventually frown down this evil by her own onward course, so that no man will dare impugn her productions, for they will be of a character and tone that will rebuke the mocker of her purifying influence, when the social sphere is become, by her influence, purged of some of its wide-spread evils, which can never be removed save by woman. Man is impatient to do this work for our world, but it will be done, and man will look and wonder, for it will be marvelous in his eyes.

Now then, my friend, faint not by the way. May your mind be raised far above such punyism as O. C. W. to injure you or your paper, the best advocate of right I know in the land. I know you will perceive the spirit that animates my feeble efforts in our world, that of bringing about a day of better things, when man's animal nature shall be chained and held in obedience to the higher powers of the soul, all animated by that love that is purifying. My best wishes for your happiness, and success in fulfilling your mission on our earth; and when your work is done, may it be said to you, "Well done, good and faithful servant, enter upon thy reward; thou has been faithful over that which thou didst find to do, thou shalt now be crowned and made ruler over those who mocked at thy work." Farewell S. U. U.

MUSICAL NOTATION.—Mr. Cornelius Mahoney, the teacher of Music in the Institute for the Blind, in New York, has invented, says a cotemporary, the Scientific American, an entirely new system of notation. He has the name of the note cut in the note itself, showing white in the black notes and black in the white ones, so that at a glance the name of the note can be seen. This is more practical and far less expensive than the other system. We do not suppose, however, that either will come into general use. Mr. Mahoney is also the inventor of embossed music for the blind, by which any blind person can read the music by touch, and will not require a second person to read them, as was formerly the case, "thus placing this charming solace and divine consolation, sweet melody, within the reach of that class who need it most—the blind." It is much to have done anything toward facilitating the acquisition of art; how much more when this is done for the sake of those to whom the enjoyment of more than one art is almost out of the question.—[Phil. By. Bulletin.]

THE HOME OF BEAUTY.  
"Creative Genius! from thy hand  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"  
What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—to live to our vision, live before us models of themselves.  
Here is our castle,  
And here our gods;  
But they are mortal.  
Around these lofty halls  
This good, the great, the living and the dead;  
And yet they speak—speak all:  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us.  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living band  
That we may raise a glorious song  
To all who set the noble part,  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wood thrush thousands come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For it is not a freeman's duty,  
To worship at the shrine of Beauty?  
Behold these flowers that gem the land,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand, they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned.  
Behold, cries Genius, quickly glancest  
Enough! the artist, A. H. YANCEY!  
Daguerrian Gallery,

GROVER & BAKER  
SEWING MACHINES.  
REMOVAL.

THE GROVER & BAKER S. M. COMPANY HAVING assumed the business heretofore conducted by MR. S. O. BRIGHAM, For the Sale of our Machines in this City, Take this occasion to announce our REMOVAL from the premises lately occupied by him, to the more

COMMODIOUS AND CENTRAL STORE,  
No. 118 Montgomery Street,  
AND WOULD INVITE THE SPECIAL ATTENTION OF

Ladies,  
And all who have an interest in DOMESTIC ECONOMY,  
And the Emancipation of the FEMALE SEX from the wearisome and overburdening Slave-work of the NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES,  
The superior Excellence and unobtainable Advantages of which over those of all other Manufacturers, cannot fail to be apparent to the most casual inquirer. We have lately perfected, and introduced into this market, several

NEW AND IMPROVED STYLES,  
Which, while embracing all the essential and exclusive qualities secured by the Original

GROVER & BAKER PATENT,  
Have in addition many New and Valuable Improvements, and are more simple in construction; make less noise, run faster, and perform

A Greater Variety of Sewing,  
than any other Sewing Machine extant. The capabilities of our Machine are not limited to any particular description of Cloth Sewing, but execute with the most wonderful rapidity and nicety, Every description of Fine or Coarse Sewing, UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT  
Can be procured of us, for either Old or New Styles of Family Machines.

That our Machines may dispense their benefits throughout the State, in the shortest possible time, we HAVE MADE A LARGE REDUCTION from our former Rates, and with pleasure announce our Prices—from

\$75 to \$160;  
Varying, according to size and finish.

For Bag-making,  
And all Manufacturing where Sewing is required, our MANUFACTURING MACHINES stand pre-eminent, and their qualities are too well known to require comment.

Samples of Work and Descriptive Cuts of Machines, Prices, etc., sent per mail. All Machines warranted. All orders for NEEDLES, DUPLICATES, PARTS, COTTON, Etc., must be accompanied by Cash. GROVER & BAKER S. M. COMPANY, No. 118 Montgomery street. R. G. BROWN, Agent. 11-3m

## Science—The Utility of Zoological Studies.

POSITIVELY may ridicule "bugs" and "reptiles," just as the "two young bears in wanton mood" underrated the importance of the bees whose hives they overset. But although in this case the personal consequences may not be so mortifying and painful as in that, yet the community may suffer heavily from the misjudgment of those who ought to know better. It is a fact (says the Boston Journal), that our crops are every year injured to the extent of many thousands of dollars by the depredation of insects, whose habits we do not now understand. In this way the Hessian fly, the canker-worm, the carcelio, the cotton-worm, the tobacco-worm, and other insects unknown, make way with capital and labor to an enormous extent. Possibly the potato disease springs from the same source; and we know that the different varieties of our most valued forest trees are often subjected to these mysterious destroyers over a wide section of country. Now could any official remedy for these injuries be ascertained, the amount which the State proposes to give in aid of the Museum of Comparative Zoology would prove a most profitable investment to us and an incalculable benefit to the whole country.

Such benefits have followed zoological studies in other countries. Five large volumes now to be seen in our State Library show the zeal with which this science has been pursued in Germany, in order to discover an antidote to the operation of forest insects; and a similar volume is devoted to a single insect which has proved exceedingly destructive to the vines of France. The researches and their publication, both in Germany and France, have been followed with the happiest results; so much so in the latter country, that similar investigations have been put on foot with reference to injuries to the silk crop, which promise to be equally beneficial. All these inquiries are conducted mainly by the government, in answer to the urgent and long continued demands of the people.

We get, therefore, some idea of the learning, time and expense necessary for carrying forward zoological studies, even in a very limited field of inquiry. And yet all that has been done in Europe in this time, goes for nothing—except as to the best methods of research—because our insects are entirely different. Prof. Agassiz says that we have some 200,000 known species; of which the habits of only about 200—one in a thousand—have been investigated. How much, then, remains to be done, can only be faintly conjectured. But we have the mass of all others best fitted to prosecute this important branch of study, and we have hundreds ready and anxious to aid him with their money and influence, and to share in his labors. Every season, especially in the older parts of the country, enforces the necessity of more knowledge as a measure of protection against heavy losses. Is it not, therefore, the duty of the State to co-operate with zealous private citizens in acquiring and disseminating this knowledge?

NEWSPAPER CIVILITIES.—There is no reason why newspapers as well as individuals should not observe the rules of good breeding in professional intercourse. Two well bred persons, although rivals or enemies, try to do one another in civilities, until one having overstepped the bounds of propriety, intercourse and recognition cease altogether. Gentlemen meeting in society do not openly criticize each other's faults and weaknesses; although delicate personal compliment is always allowable, even when not entirely merited. So, we maintain, it should be with editors; they should never say of each other in print, what they would hesitate to say in person. This is the course we have pursued and mean to pursue; we will not recognize professionally, a man of bad principle or despicable character, more than we would associate with him in private life; nor will we write of a contemporary otherwise than we would speak in his presence.—[Trinity Journal.]

When all newspaper men learn to appropriate, and as their rule of action espouse such sentiments, then may we hope to see the press of California what it was some years ago—the most fair, manly, and influential press in the world.—[Marysville Express.]

Let us live in hope when each editor for himself shall adopt the honorable course of the Trinity Journal, the cause of truth and right will soon prevail. Amen, to the sentiments of the Trinity Journal.

A FRENCH INVENTION.—Some Frenchman has invented what is called a barotrope, a sort of human locomotive, by which a man sits on wheels and walks himself along. It is evident that each step will carry a man several yards on an instrument of this kind, and a speed of 240 might be attained without any exertion. Two men made five miles with it in thirty-five minutes, on the Boulevard Mazarin, at noon, when the street was most crowded. At another time the same two men made 13 miles in 36 minutes, the exercise being so easy that they offered to keep it up alternate hours day after day, and thought they could without difficulty average 50 or 60 miles a day. A singular thing about it is, that it beats the best trotting on steep grades if they present a compact or paved surface.

A REMARKABLE ARTESIAN WELL.—In Louisville, Kentucky, there is an Artesian well which has reached the depth of 2086 feet. This is not so deep as the well of the Messrs. Belcher, at St. Louis, Missouri, but the result has been far more successful. The Louisville well ejects a stream of water to the height of 170 feet, and has a flow of 13,750 gallons per hour. The water is ascertained to possess the most valuable mineral properties, and may be used as a remedial agent in chronic diseases of the stomach, liver, kidneys and skin, and in scrofulous affections.

CURE FOR WARTS.—My hands being literally covered with warts, I tried some dozen recommended cures, with a good effect, until I procured some muriatic acid. A few applications with a knitting-needle to the top of the warts entirely removed the whole of them in a few days, without causing any sore or pain.—[T. H., in Ohio Farmer.]

VEGETABLE SEASONERS.—Parsley, celery, thyme, sage, onions, garlic, and other seasoners, should not be put into soup stew, until the soup is nearly done; chop fine, and put it in an hour before the soup is taken from the fire.

A DOWN-EAST POET thus immortalizes the beautiful river Connecticut: "Roll on, loved Connecticut! long hast thou ran, giving shade to South Hadley and freedom to man!"

HOLLOWAY'S PILLS.—Where are their vouchers? The reply is, Where are they not? The living language cannot be named in which they have not appeared. All races, in all climates, are subject to liver disease, indigestion, dysentery, diarrhea, asthma, and general debility, and wherever these exist the pills have proved infallible.

Sold at the manufactory, No. 80 Maiden Lane, New York, and by all druggists, at 25c., 50c., and \$1 per box or pot.

## SAFES! SAFES!! ELLIOT &amp; BELL,

LILLIE'S IMPROVED  
WROUGHT AND CHILLED IRON SAFES.  
Fire-proof, Powder-proof, Drill-proof, and Burglar-proof.  
With Lillie's Unpickable Powder-proof Lock.

The best Safe made for resisting both fire and thieves, as proven in innumerable instances.

As to a recent test by fire, reference is made to the late burning of the Crystal Palace, in New York city, at which all other Safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Cairo.

Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl street, N. Y.: Dear Sir: You ask about Lillie's Safe, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned on the 21st of December last, and at that time we had one of those in our office and three in our warehouse. The Safe in our office was filled with our books and papers. The Safe is unharmed, and everything it contained came out in perfect order. A new coat of paint is all it will want. The Safes in the warehouse have far exceeded our expectations. Although the ornaments were melted off, being exposed to the hottest of the fire several hours, the inside was unharmed. We cheerfully recommend them as being far superior to any other Safe for fire and burglar-proof qualities. There is no warping or twisting, and no necessity for a new Safe, as in the ordinary kinds after having been once burned.

Yours, truly,  
BUCK & MOORE.

Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of today is received. In reply we are happy to say the Safe we bought of you last spring (Lillie's), came out of the fire on Sunday night, all right. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the Safe shows no cracks, but nothing in our opinion, to injure it. The fire was a severe one, consuming our store and the adjoining one on each side, and the Safe was exposed to an intense heat. You will please send for the safe, repair it, and return it to our office, and much obliged, yours,  
CHAS. WARREN & CO., No. 245 River street.

[From the Troy Daily Times, October 6th.]

LILLIE'S PATENT! A GREAT TEST!!  
The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of Safes than which none more thorough could have been devised. Those who were on the ground say that it was the hottest burning they ever saw, the fire was in the trying of the fire in an exposed situation. Lillie's Safe, manufactured by Lillie's, alone was unharmed, except the top of the paint upon the inside doors. The Institute could not have arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

Go to the ruins of the Crystal Palace, and examine the so-called Fire-Proof Safes, manufactured by Stearns & Marrio, and other Sheet-Iron Safe makers, most of which are a mass of ruins. This unexpected test will open the eyes of the public, and convince Lillie's Chilled Iron Safe, which requires only a coat of paint to make it as good as new.

A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 33 Sacramento street.

Lillie's Celebrated Bank Locks,  
On hand, and for sale. The best Bank and Vault Lock in the world.

J. L. POLKEMUS

DRUGGIST

190

J. St.

OFFICIAL NOTICE!

POLKEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since

the ever glorious FORTY-NINE, have suffered with

you in three fires and three floods, and intend to live

among you with my family during the term of my natural

life, if not longer. I return to you my most sincere thanks

for your unfaltering patronage and support, which has

enabled me to pay One Hundred cents on the Dollar

through all my adverse fortune. I would also give you

a few reasons for your continued patronage, and inducements

to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate

Druggist in this City.

Persons in this connection will please observe that there

is as much difference between a DOCTOR and a DRUG-

GIST as there is between a Druggist and a Doctor, and

rather more so between those who have picked up the

Drug Business and those who have devoted their whole

lives to it. To this latter class I have the honor to belong,

having learned my business in the Atlantic States, and

been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people

wish to know where they can get their prescriptions filled

with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE

BEST place where they can get their prescriptions filled

with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

FOURTHLY.

We will furnish those in indigent circumstances with

MEDICINES AT COST! the same being attested by two

or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS

ONLY. The amounts we have lost heretofore by credit-

ing we intend to distribute equally among our patrons, in

the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable

articles:

Dr. Carl Warburg's Tincture. This article is par-

ticularly recommended for Ague and Fever, when every other

article fails to cure. Budde's Nerve and Bone Liniment,

Flower of the West, for Fever and Ague.

Delight's Spanish Liniment, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numer-

ous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know

how to import them, and how to sell them to satisfy the

public as to price and quality. At all events, give us a

call, and WE WILL TRY.

10 3m J. L. POLKEMUS

## HOTELS.

CITY HOTEL,  
OAKLAND.

THIS HOTEL IS NOW OPEN TO THE citizens of Oakland and the Traveling Public, and will be conducted in the AMERICAN STYLE. The Manager, from his long experience in Hotel-keeping in this State, flatters himself that he will be able to render entire satisfaction. He pledges himself to devote his whole time to the comfort of his patrons. The HOTEL is the same as NEW, having been handsomely Plastered, Painted, and NEWLY FURNISHED.

The BAR will be always kept stocked with the finest Wines, Liquors and Cigars.

CHARGES MODERATE.

Breakfast will be served in time for persons leaving on the first boat.

Particular attention paid to the ACCOMMODATION OF FAMILIES.

11-3m R. J. MURRAY, Manager.

ST. GEORGE  
HOTEL!

Corner of Fourth and J Streets,

SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY

RENOVATED,

RE-FITTED AND RE-FURNISHED,

IS NOW OPEN

FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON,

Proprietor.

8-3m

EAGLE HOTEL,  
OAKLAND.

(ALL LANGUAGES SPOKEN.)

THE PROPRIETOR OF THIS HOTEL

has again taken this Old and well-known

House,

and has restored the same, and the Rooms hard-finished.

They are in the best and most convenient style, having

reference to the comfort of Guests.

LARGE PARLORES, convenient Sleeping ROOMS,

a fine RESTAURANT—all kept in the best order.

Every Language is spoken here, so that Guests of all

Nations can be well cared for.

The Undersigned again invites his old friends and the

public to visit him, assuring them nothing will be left

undone to suit them.

JOSEPH DAVIS.

Oakland, April 14, 1859. 11-3m

Beware of Counterfeits and Imitations!!  
None genuine without the  
TRADE MARK.

The UNDERSIGNED, SOLE AGENTS of the above

celebrated brand of SALERATUS, SUPER

CARBONATE SODA, CREAM TARTAR

and SOAP POWDER, caution the Public

against all SPURIOUS IMITATIONS, as well as

an article, in LARGER BOXES, of same manufac-

ture, but of different quality, and TOTALLY

UNEFT FOR THIS MARKET.

These goods are MANUFACTURED EXPRESSLY

FOR us, of the finest quality, and are always

the same strength.

We GUARANTEE them STRICTLY

PURE. To prevent DECEPTION, we call

attention to the above FAC SIMILES of the

GENUINE.

It is ONLY packed in 12 POUND BOXES,

and shipments arriving after 1st June, 1859,

will have our name upon every paper.

We have established a TRADE MARK, as

above, to counterfeit which will subject

the offender to a penalty of not less than

Two Hundred Dollars.

We are in constant receipt of the above,

and keep a Stock to supply the increasing

demand.

We also receive a very superior article of

SALERATUS, in 50 Pound Kegs, Manufac-

tured for us, expressly for This Market, under

the name of "GOLDEN GATE SALE-

## May-Day Festival at Mountain View.

[We are most happy to lay before our readers the doings of good and happy hearts at Mountain View. The sketch sent to us by our valued correspondent N. B. H., is another proof of her devotion to the cause of Education—not only in adult woman, but in girl-woman also, and in children. All this is the evidence of her truthful devotion to the cause of Human Progress, and thousands of hearts will long bless her for it.]

OAKSHADE FARM, May 21, 1859.

EDITOR FARMER: As you are so much interested in all that concerns our educational department, I deem it not amiss to give a sketch of our May-day Festival in this neighborhood. The School just below Mountain View met to-day, at 10 o'clock, and although the weather was a little unfavorable (as far as thin dresses were to be had in consideration), there were a much greater number of persons than your correspondent expected to see assembled upon the occasion. All appeared to be very happy. The spot selected for the place of meeting together for the purpose of the ceremonies of the day, was near a very comfortable church (not yet completed inside, as there were no seats); just in the rear of which edifice there was an Arbor, which was used last year for Camp-meeting of the congregation who have erected the new Church. This was newly arranged for the present occasion, with plenty of good seats; very many persons assembled in the Church—mostly children and young-girl women. After a brief space of time all were seated under the spacious Arbor, save those of the School and individuals who were to bear a part in the ceremonies and procession, which were properly arranged in the Church, and marched out in beautiful order to the Arbor. In front were two gentlemen and a lady, who conducted the singing; the Teacher was in the procession, but just where I did not see; next came the May-Queen, a cheerful, pretty-looking young girl-woman, with a promising specimen of intelligent young manhood, who was to crown the chosen Queen. Next the Maids of Honor, all blooming young girls, just entering or near young womanhood. After these came the remaining pupils, composing the School, the girls two and two; the boys in like order. Just as they reached the entrance, under the Arbor, singing commenced by the procession, "Rory, Rory Wreath." There was a carpeted platform or altar, where ranged the chosen Queen, her Maids of Honor, the Young Man who performed the ceremony of crowning her, the Orator, and another who was to take part in the ceremony.

After the singing ceased, the Queen was crowned, and a very appropriate address was made to her by the young man, who placed the rosy crown upon her young brow; after which, came a very appropriate response from the crowned Queen. They acquitted themselves well in their performance. Then there was a little song, appropriate to the ceremony of the crowning; after which the Queen was seated with him who adjusted the crown. The balance of the School, as also the Maids of Honor, remained standing while addressed by a Reverend gentleman, whose name I do not remember. The speaker seemed to partake largely of the spirit of the occasion; he dwelt with a degree of felicity upon the peculiar beauty of such festive scenes, eulogized the dawning brightness of the happy throng of the rising generation, expatiated upon the liberty of American sons and daughters, and the freedom of our institutions, our progress from rude, barbarian life, to present civilization, etc.

Mr. Kincaid was then called upon to speak, who from the audience came forward, ascended the platform, and delivered a very appropriate but condensed Address, relative to the origin of May-Day celebrations.

Next Mr. Bailly, then Mr. Troy. These last two appeared to be in possession of considerable humorous fun, and permeated now and then with correct and witty remarks; occasionally the whole audience were excited to laughter of that degree that betokens pleasure, but not of a disorderly-harmonious product.

The last song succeeded the Orator's Address, first delivered, and was rather an invocation. All passed off well. The ceremonies through, two long tables were well covered with refreshments, provided for the large company and the school; there was a very generous display and plenty for all. The most perfect freedom, considerable cordiality, and good will prevailed throughout. Surely it is well for us to engage in such meetings together, as this; I was comparatively among strangers, and yet I felt among friends. I think all enjoyed the occasion, although it was sprinkling rain almost all the time. This School is now in the hands of a Teacher who is well qualified to train the young mind; one who has succeeded, in a few months, in getting it pretty well organized; and there are some few persons who seem to take a great interest in promoting the welfare of the School. Mrs. Morton, I believe, very generally is much esteemed as a Teacher.

And now I wish to say to the young, who may read what I write, surely they will not forget all the pains taken for many days in preparation for May-Day for their happiness; surely every little boy and girl will strive to merit their Teacher's approbation, and also remember obedience, affection to parents, and respect to all who help provide enjoyment for them on the occasion, and recurrence of May-Days.

N. B. H.

RECORDS IN REMOVING SMUT.—We had the pleasure of a brief interview with George P. Loucks, Esq., near Martinez, where he has a fine Ranch, and a warehouse to receive grain. Mr. Loucks has been very successful in his experiments to conquer the smut, and we hope to lay before our readers the results of his labors. Such efforts are of great value to the whole State.

FREEMAN & CO.'S EXPRESS.—This Company dispatch a special messenger by the J. L. Stephens, on the 20th inst. Freight, packages and letters received up to the latest moment. This house are increasing their business rapidly, and winning favor of the public.

LEWIS GIBSON, Esq.—We take pleasure in calling attention to the card of this gentleman, in our columns. Mr. Gibson is one of our old citizens, who has long been known as a pioneer merchant, and esteemed of all men. The goods offered by him will always be found of the best quality. Dealers in country produce should call on him.

TO THE PANORAMA OF EUROPE (a most splendid exhibition) everybody should go. Parents should go with their children; it is an excellent school. Take an Opera Glass; it adds greatly to the perfection of the view.

THANKS to the First Baptist Church for invitation cards to Concert of the 12th; also, for the polite invitation of M. E. Hughes, Esq., for the "Phalanx Victory."

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

(Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 20, 1859.

NUMBER 18.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### Sonoma and Napa Horticultural Association.

We are most happy to hear from the friends of Horticulture in Sonoma and Napa, and to know of the successful results of the "Plan" of Colonel Haraszthy for the formation of a Society (the design of which was presented in our journal in April), which will tend to develop the vast resources of those rich counties. The plan is to establish a Garden, similar to those of Europe, for introducing new products from every clime, and practically testing their adaptability to our climate.

We now give wings to the doings of the meeting held at Santa Rosa last week, agreeably to notice, and hope the action of this Association will induce other counties to follow their excellent example. We have no doubt, through the influence of Col. Haraszthy and the other able friends of the enterprise in both counties, the Grounds will be selected, a handsome Library collected, and ere another year we shall look for good results from these efforts.

There is one feature named in the "Plan" (which we published in April) which it is important to keep in mind; namely, MEET ALONG WITH THE PRIZE! Every observer of such institutions cannot but have seen with deep regret, that there has always been some men, who, either by reason of their political alliances, sectional feeling, national prejudices, or some sinister design, have crept in and have marred the whole glory of the best laid plans.

#### Sonoma and Napa Horticultural Society.

At a meeting of the citizens of Sonoma County, convened pursuant to notice, Dr. J. H. Hill was appointed Chairman, and Wm. M. Boggs, Secretary. The Chairman explained the object of the meeting to be the formation of a Horticultural Society, upon the plan suggested by Col. Haraszthy, as published in the CALIFORNIA FARMER, of the 27th April. The meeting was then addressed by Col. Haraszthy, and Mr. Osborn, of Napa county, showing, in a very able manner, the advantages arising from such institutions; after which, the following resolutions were adopted:

Resolved, That the Society shall be called the "Sonoma and Napa Horticultural Society."

Resolved, That the Stock of the Company be limited to five hundred Shares, of ten dollars each, and that no person shall subscribe for more than twenty-five Shares.

Resolved, That each Stockholder shall be entitled to one vote for each and every Share that he may hold, not exceeding twenty-five.

Resolved, That a Committee, consisting of seven, be appointed by the Chairman of this meeting, to open books and receive subscriptions for Shares in the "Sonoma and Napa Horticultural Society," to be based upon the "Plan," and organized for the purposes, proposed by Col. A. Haraszthy, and published in the CALIFORNIA FARMER, of the date of April 27th, 1859; that the Chairman of said Committee be and he is hereby empowered and requested, whenever a majority of the Shares have been taken, to call a meeting of the Stockholders of said Association, to be held at some convenient place in the County in which the most Stock has been subscribed; at which meeting a Constitution and By-Laws shall be adopted; permanent officers elected, and such other business transacted as may be necessary; and that said Committee be instructed to invite propositions from towns and individuals, in either and both said counties, for its permanent location, to be presented and submitted at said meeting.

The Chairman appointed Wm. M. Boggs, Judge Bright, M. Ryan, and F. Rohrer, of Sonoma county, and William Baldrige, W. H. James, and G. N. Cornwall, of Napa county, said Committee.

Resolved, That a copy of the proceedings of this meeting be forwarded to the papers of Napa and Sonoma counties, the CALIFORNIA FARMER, and Cultivator, for publication.

J. H. Hill, Chairman.  
W. M. Boggs, Secretary.

#### Letter from a Workman.

SANTA CLARA COUNTY, May 13, 1859.

EDITOR FARMER: I wish you would send me a specimen number of your paper. I want to know the terms, as I wish to subscribe for it, and perhaps get another subscriber or two. I may want to advertise some through your paper. I am growing something of a crop of Nepal or beardless barley, which gives good promise of being worth raising. I am sowing three and a half pounds of Hungarian grass seed, the product of less than one drachm of seed planted last spring, under rather unfavorable circumstances. I am no book farmer, but have been, with very little exception, a constant subscriber to some agricultural publication, for the last thirty years. I find in them much that is useless, a little that is worse, but enough that is useful to pay the subscription four-fold. Jack-frost does not get up to where we are at this season, so our fruit has escaped his bite, but our peaches are threatened by the disease which shows itself in the swelling and curling of

THE RESIDENCE OF JOHN GRIFFEN, ESQ., RYE, WESTCHESTER COUNTY, N. Y.

#### The Beautiful Engraving.

We feel a true pleasure in being able to present to our readers one of the finest designs for a Rural Home that can be found in the Union. It is somewhat after the style of the Italian villa. The location of the mansion and grounds is in such a commanding position that every feature of them strikes the beholder most pleasantly. This truly beautiful mansion and grounds, with all the useful and ornamental buildings and pleasurable accompaniments, is the residence of John Griffen, Esq., father-in-law of S. H. Meeker, Esq., of this city, well known as a pioneer, and one of our largest importers and most esteemed merchants. This estate is a large and valuable one; it is situated on a gentle rise of ground in the town of Rye, Westchester county, twenty-four miles from New York city, on the old Boston mail road, and immediately adjacent to the village of Mamaroneck, a name derived from the Chief of the warrior tribe of braves. The mansion is 45 feet square, the wings 22 by 18 feet. Boat and bathing houses will be seen on the right; stables, coach-house, poultry-house, and dove-cot, with ice-house, on the left hand.

The grounds slope beautifully down to the Mamaroneck river, which empties into Long Island Sound, half a mile distant. Steamboats make daily trips from New York to Mamaroneck, and the New York and New Haven railroad cars pass within half a mile. These grounds were designed in 1851, and were finished, including the buildings, during 1852, and now occupied by Mr. Griffen, a very highly esteemed citizen, and the owner of one of the most chastely designed and elegant estates in New York.

We have spared no pains or expense to present this engraving, expressly for the purpose of offering a design worthy of imitation in our highly favored climate; and we hope to see such styles of architecture and ornamental grounds prevail extensively in our State.

THE GROUNDS SLOPE BEAUTIFULLY DOWN TO THE MAMARONECK RIVER, WHICH EMPTIES INTO LONG ISLAND SOUND, HALF A MILE DISTANT. STEAMBOATS MAKE DAILY TRIPS FROM NEW YORK TO MAMARONECK, AND THE NEW YORK AND NEW HAVEN RAILROAD CARS PASS WITHIN HALF A MILE. THESE GROUNDS WERE DESIGNED IN 1851, AND WERE FINISHED, INCLUDING THE BUILDINGS, DURING 1852, AND NOW OCCUPIED BY MR. GRIFFEN, A VERY HIGHLY ESTEEMED CITIZEN, AND THE OWNER OF ONE OF THE MOST CHASTEY DESIGNED AND ELEGANT ESTATES IN NEW YORK.

WE HAVE SPARED NO PAINS OR EXPENSE TO PRESENT THIS ENGRAVING, EXPRESSLY FOR THE PURPOSE OF OFFERING A DESIGN WORTHY OF IMITATION IN OUR HIGHLY FAVORED CLIMATE; AND WE HOPE TO SEE SUCH STYLES OF ARCHITECTURE AND ORNAMENTAL GROUNDS PREVAIL EXTENSIVELY IN OUR STATE.

#### The Oyster Plant.

A SUBSTITUTE FOR THE SHELL OYSTER—ITS CULTIVATION, AND HOW USED.

EDITOR FARMER: Not having seen any writer in your valuable paper on the cultivation of the Oyster Plant, I have taken this occasion to write you our experience in raising the same.

Last year we received a small package from the Patent Office, at Washington; and it being something new, we took some pains in its cultivation. After selecting a place for our Kitchen Garden, we ran the surface plow deep, followed by the sub-soil plow, loosening the ground to the depth of eighteen inches; then harrowing it, ready to receive the seed; drawing a line and marking the rows, two feet apart, so as to admit the one-horse hoe between them, keeping the ground mellow. It grows similar to a carrot, the color white, and runs to the depth of nine inches. It makes fine soup; and when well cooked (which a farmer's wife can do), any one will hardly tell the difference between it and oysters; for it has all the taste and flavor of a shell oyster. Take the plant, wash and scrape it clean; cut in small slices, and cook as you would shell oysters; or boil, slice up fine, and fry them in cakes.

A FARMER'S SON.

SACRAMENTO VALLEY, May 16, 1859.

P. S. During the last week we had a heavy gale, blowing from the northwest, which has kept up day and night, drying everything up quicker than the heat of the sun. It was the hardest wind we have experienced during the three years past in this section, breaking off branches from the peach trees and shoots from the grape vines.

I notice some have commenced cutting wild oats for hay, and are cutting barley also.

[We are pleased very much to receive another

letter from our "Young Farmer;" and we hope his example will be followed by hundreds more; so that we may have all such valuable esculents as the Oyster Plant brought into practical use. We venture the assertion, that any housekeeper who has never yet tried this valuable and delicious root, if they will follow the directions of our friend, "Young Farmer," and, after cooking in the way here proposed, they do not think the plant delicious, and equal almost to the real oyster, then we will "pay the oysters"—that's all.]

#### Hot-Air Engine.

ONE OF THE MOST INTERESTING INVENTIONS OF THE AGE IS THE "ERICSSON CALORIC ENGINE." A small one is in operation at the sales room of Messrs. S. P. Dewey & Son, 112 Montgomery street. It is the second one which Mr. Samuel Brannan has received from the manufacturers in New York. It is a small engine, not more than a six-inch cylinder, and intended more to illustrate the principle of its operation, than for specially important use of power. When we consider that the inventor, Capt. Ericsson, has been for many years engaged in study and experiment upon this new agent of motive power, and that his own fortune, and also that of his wife and several of his friends, have been expended in pursuit of his theory; and that until quite recently his efforts had been regarded as a failure, we may well hail his triumph with joyful acclaim. Henceforth the calorific engine will be one of the glowing facts in propulsive power, and the keen appreciation of the world. It is said that the manufacturers are turning off an average of one a day, and that the demand for them is increasing rapidly. The advantages claimed for this engine are:

1st. It occupies not more than one-half the space required for a steam-engine of equal power.

2nd. It requires only about one-fourth the quantity of fuel necessary to run a steam-engine of equal power.

3d. It will not explode; nor is it more dangerous than a common box-stove.

4th. It requires no engineer; any boy who can throw coal in a stove can attend it.

5th. It is simple and unlikely to get out of order.

6th. It requires no water, and therefore can be used where that element cannot be obtained.

7th. The cost is less than for a steam-engine.

Such, in brief, are the advantages of the calorific engine over the steam.

Mr. Brannan informs us that he has one of these engines at work on his ranch, and that all the advantages claimed for it by the inventor have been and are now illustrated in the use of it, where, for several years, he has been running a steam engine. For pumping, raising rock, quartz-mills, flour and saw-mills, and the propulsion of every class of machinery, this engine must, ere long come into general use. All honor to Ericsson; may he triumph.

#### Look to your Flowers.

WE NOTICE IN MANY COLLECTIONS OF POT PLANTS in the windows and upon the platforms of our citizens, the pots have become encrusted with a collection of moss, alkali, and slime. This is very injurious to the plant, as well as injurious to the atmosphere of the room in which they stand. The surface of the pot is porous, and through its sides, when clean, the fresh air is admitted, and the base air or impure gases are emitted; it is therefore important for the plants' sake, that they should be clean, to say nothing of the appearance of such pots in a dwelling. We would also urge the importance of immediate attention to garden plants also; the dust upon the leaves is the same as injurious collections upon the pots of plants. Every leaf of plants should be clean. Remember they are the lungs through which the plant draws its breath of life.

#### Letter from Illinois.

The Weather—Prospects of Fruit—Sudden Disappointment—Lessons from Nature—Deadening influence of Gold, etc.

MILAN, April 18.

MR. EDITOR: Since my last we have had almost every imaginable change of weather, and some that was almost inconceivable. All the latter part of March was exceedingly pleasant, and fruit and vegetables were progressing nicely; peaches were full blown; grass seemed to invite the poor, friendless, feedless cow to a feast much needed; all nature seemed to rejoice in sunshine and green pastures; but old boreas was looking on with jealous eye, and said to himself, "this is too much happiness for you of this changeable clime, I will assert my sway while yet I may, and delight me once more in a nail of disappointment." This he effectually carried out on the fourth and fifth days of April, when it was so cold that the ground was frozen to the depth of about an inch, and snow fell as fast as at any time during the winter. I thought, "good-by peaches; I had fondly hoped to revel in thy rich fragrance and delicious pulp, but one cold blast has swept all these fancies from my brain." Though I feel resigned at all times to the changes of weather, yet I felt sad, and I have no doubt my countenance betrayed it. This time the old fellow did not have it all his own way; the peaches are not all killed. Some varieties of the apple are in bloom, also, pears, cherries, and plums; a good indication that we shall have plenty of fruit, but the weather does seem to indicate something else; for, at this writing (April 16th) it is cold, with now and then a stray snow-flake losing itself mid spring-blossoms. The poplar and maple are making the forest seem gay and joyous; the red-bud and dogwood, too, come in for their share of admiration. The wheat crop looks quite promising, better I think than it did two years ago, when we had an extra crop. The old crop is nearly exhausted; not more than enough remaining to meet consumption till the new crop comes in. Corn is very scarce, and worth \$1 per bushel. On the whole, I never saw as hard times as at present. Nearly all the farmers are buyers instead of sellers; consequently, there is no money in circulation.

Since writing the above, we have had a real snow storm. I have often looked out with a great deal of pleasure upon the falling snow, and rejoiced to see the earth and trees whitened; but at this time the sensation it produced inspired anything but pleasure. Near my window stand two flowering almonds, which are decked in all the gayety of genial spring. How sad to see them exposed to the pitiless peltings of a nor-wester. O you delicate little blossoms, may I not chide you for your imprudence, in having been tempted by a few smiles to come forth to waste your charms in this cold atmosphere. When the sun shines warm again, and the birds sing sweetly, I shall look for thee; but alas! thou wilt have faded and passed away.

I look again, and see other flowers, fairer and sweeter than my flowering almonds, which have been tenderly cared for, for a time; but they, too, have been overtaken by the cold snows of adversity; and when the bright sun of prosperity again shines, and the sweet music of the soul enkindles holy affection, then it is we look around for those dear objects; but oh, how often it is they have been frozen to death. Is this true? Reader, cast one glance around you, and answer it to your own satisfaction.

As a man's god is, so will be the affections of his heart. This I will give you as a text; and when you are sitting quietly at home, you may preach from it; when you are in the field, you may preach from it; nor does it make any difference where you are, you may preach from it. Ponder it well in your mind; make it a kind of touch-stone, by which to try, not only others, but yourselves.

See that hard-fisted old miser, as he nightly counts his "white and yellow earth," more devoted in his idol-worship than many who make pretense to the worship of the true God. Does this man see beauty in anything but his god—gold? No, not one tender affection has he to bestow—least of all, upon the beautiful. His heart is ice, and the law of assimilation is in full force here too.

Let us take a closer view of the matter: Mr. Flint has four sons; all fine, robust boys, full of life and animation. Flint is a hard-working and very loving man. The dollar is his mark; he is perfectly blind to all else. He teaches his sons the lesson of utility, and that only. No books, no newspapers are provided for their instruction; they are sent to school to learn to "cast accounts," when their education is completed. The oldest one marries a very respectable, intelligent, young lady; the only daughter of parents who have spared no pains to make her a true lady. The husband worships at the same shrine as his father; is zealous; the snow falls upon the gentle flower. The other sons become disgusted with this unnatural worship, and become profligate. Why not? They have had none of the good restraints thrown around them; their intellects are as gardens overrun with foul weeds; the whole man is a desolation. One becomes a drunkard, another is convicted of grand larceny, and the other is a street loafer. Let, then, the gentle flower have a sunny corner in our hearts, shedding its gentle influence to lead us to the better worship.

J. C. A.

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALBERT S. TAYLOR.

The Condor of this country has long been a matter of dispute with scientific naturalists, as to the exact family of the Vulturidae with which it is to be classed. It certainly has not the bill and beak of the Bearded Vulture or the Egyptian Vulture of Cuvier's Regne Animal, nor of the common Zopilote or Turkey-Buzzard of this State; which last is about the same in size and features as those of the South Atlantic States. But the Condor of California has the precise type of head and bill, and the curved, dentated beak of the Condor of the Andes, exactly as is engraved on the plate at page 164 of Carpenter's London edition of Cuvier's Regne Animal of 1849.

In many works written on Natural History, such as above in Cuvier, Whitlaw's Goldsmith 1840, Milne-Edwards 1834, Carpenter's Zoology 1844, and a variety of English and American publications of the like character, we have been able to meet none but the most meager and wretched outlines of description of the Condor or Sarcophagus Gryphus of the Andes. The most extended description of this bird, and one which has not before appeared in English, is to be found in the celebrated Spanish historico-geographical work of Col. Antonio de Alcedo, on America, published at Madrid, in 1789, in five volumes. The description of the Condor is at page sixty-seven of appendix to volume five; is the most minute one we have met with, as to physique, and appears to have been written by Alcedo, from careful personal observation, as he was, for several years, acting in Peru as a *Militaire*. The translation we give is a free one:

"The wings, when stretched, measure sixteen feet across; the body is much larger than that of the Royal Eagle; the plumage is black, with the exception of those of the back (meaning the under feathers of the wing), which are entirely white; the head feathers or down are very short and fine; the eyes are black, with the iris of a reddish gray; the bill is four inches long, very thick and curved, black at the base, and the remainder of it to the point is white. The outer wing feathers are two feet nine inches long, and four lines in diameter; the thighs are ten inches and eight lines long; but the lower limbs alone (*emillas*) are six inches long; and in each foot there are four thick toes, the hind one is two inches long, with only one articulation, the claw of which is eleven lines long; the middle toe is five inches and ten lines long, without the claw, which is curved, and of a whitish color, and is twenty-two lines long. Although the other two toes are rather shorter, yet they are armed with claws, nothing less stronger. The tail of the bird is entire, but small in proportion to the grand figure of the animal. The female is smaller than the male, and of a grayish color; it has not the collar of the male, which we have described, but has a tuft of feathers (*penacho o pequeño copete*) which it raises at pleasure. (He appears to be describing a male specimen.)

"These Condors make their nests on the bare rocks of the highest sierras of the Cordillera, where they lay two white eggs, much larger than those of a peacock. [An old Spaniard, who lived many years in Peru, informs us that he has seen these eggs rimmed with gold, and used by the rich for chocolate cups.—A. S. T.] The birds live on all kinds of flesh of animals, living and dead. They will sometimes join with the wolves in chasing down sheep and goats, and will often kill young calves separated from their dams. Two or three of the Condors will at times join and chase down a calf, and with their sharp beaks, claws, and spread wings, beat and pick the animal until it dies, first destroying the eyes, when they devour it completely in a few moments. They will sometimes entirely smother with their strong, immense wings, a lamb or kid, and pick it to death in a few moments while so inclosed. Vaqueros are always on the lookout for these pirates of the air. They sometimes entrap the Condors, by killing a bullock, and after taking out its entrails, and opening the hide over the belly, a man gets inside, armed with gloves made of some tough substance, and seizes them by the feet with great caution and quickness, when his companions immediately approach and secure the bird, by throwing a strong lasso around its neck, the bird being then very dangerous to approach. Other hunters, not so bold, make a small corral of uprights, and put inside of it a dead animal. The Condor having a quick scent and wonderful vision, immediately as it alights its game, descends and devours the prey with great voracity, when, its craw becoming filled, the bird in its gorged state is not able to rise on its wings from the ground with facility, the sides of the corral in this instance preventing the use of its wings, on seeing which the laborers run up with clubs and dispatch the creature. But if the Condor can get on an eminence after eating, it can readily fall with its wings outspread and easily support itself in the air, and so escape; in a short time appearing in the upper atmosphere to be no larger than a thrush."

In the History of the Earth and Animated Nature, by Oliver Goldsmith, published in 1774 (we use the edition with notes and emendations by Alexander Whitlaw of Glasgow, June 1840), that delightful writer quotes the following authorities in a short description of the Peruvian Condor, vol. 2, page 38:

"Acosta, Garcilasso, and Desmarchais, assert, that the Condor is eighteen feet across the wings extended. The beak is so strong as to pierce the body of a cow; and two of them are able to devour the entire beast. The Indians assert that they will carry off a deer or a young calf in their talons, as eagles would a hare or a rabbit; that their sight is piercing and their air terrible; that they seldom frequent the forests, as they require a large space for the display of their wings; but that they are found on the sea shore and the banks of rivers, whither they descend from the heights of the mountains. By later accounts we learn that they come down to the sea shore only at certain seasons, when their prey happens to fall upon

land, and feed upon dead fish and other sea-animal refuse. Condamine observed them near Quito, and he states that shepherds dread them as enemies of their young sheep. Labat was informed that the body of the bird is as large as that of a sheep, and that the flesh is tough, and is as disagreeable as that of carrion. It was also stated to have even carried off children, but this is contradicted by more recent accounts.

"Mr. Strong, the master of a ship, sailing on the coast of Chili, in latitude 33° south, had a Condor shot from a cliff near the sea, which measured thirteen feet from tip to tip of wings. One of the quills was two feet four inches long; the barrel or hollow part six and three-quarter inches long, and an inch and a half in circumference."

To continue from Goldsmith: "Padre Feuille, speaking of a Condor killed in the valley of the Ilo, in Peru, says, 'The wings of this bird, which I measured very exactly, were twelve feet three inches (English) from tip to tip; the great feathers, which are of a shining black, are two feet four inches long; the length of the beak (bill) was four inches, thick, and with the point curved down and white at its extremity; the other part of it was of a jet black. A short down of a brown color covered the head; the eyes were black and surrounded with a circle (the iris) of reddish brown. The feathers on the breast, neck, and wings, were of a light brown; those on the back were rather darker. Its thighs were covered with brown feathers to the knee. The thigh bone was ten inches long; the leg five inches; the toes, three before and one behind, the latter one and a half inches long, with a claw, black, and three-quarters of an inch in length.' [This description must be for a female bird, as the white neck-ruff is not mentioned.—A. S. T.] The birds inhabit the Cordilleras and the valleys of the interior; but, in the rainy season only, come down to the sea shore to feed on marine carcasses. They come down to the coast in the daytime, towards evening, but fly away to their mountain haunts at night."

Mculloch's Geog. Dict'y art. Peru, quoting from Stevenson and Smith's travels in that country, states that there are four varieties of the Condor found in that republic; and that they are also found in Chili, together with several other species of the vulture tribe. They also abound with other species of their analogies in the eastern flanks of the Andes and the pampas in the provinces of La Plata. It will thus be seen that the Sarcophagus family are still but imperfectly known and described by naturalists or travelers, though they have the extensive geographical distribution as from Cape Horn to Behring's Straits—in fact, all those portions of the western hemisphere which are peculiarly volcanic, arid and California in their features, with immense open grass pampas or prairies, or mountain elevations sparsely covered with wood. This feature of the bird's habits is one which distinguishes it from the Cathartes, which are found in greater numbers in dense wooded districts, tropical and immediately extra tropical, and build and fly nearer the earth.

Humboldt also observed the Condor when in Ecuador, Peru and New Grenada, in 1800, and described its habits, as it was a common bird seen in his mountain journeys. "He shot many specimens, and is satisfied that their average size does not exceed that of the largest European vultures. It attacks and destroys deer, vicuñas, and other small animals, and is said often to attack and severely wound the cattle of the Indians in the Andes; the old stories of their attacking men are now exploded [though it is hard to say what a very hungry Condor would do with solitary wayfarer on an unsheltered plain.—A. S. T.] When Humboldt and Bonpland were gathering plants on the Andes near the snow line, they were daily in company with several condors who would allow themselves to be closely approached without exhibiting signs of alarm, though they showed no disposition to act offensively. The Indians they saw, never accused these birds of carrying off their children, though every day opportunities occurred. It is said not to make a nest, but to lay its eggs on the naked rocks. When hatched, the female is said to remain with the young for a whole year to provide them with food and to teach them to supply themselves. The habits of the Condor partake of the bold ferocity of the eagle, and of the disgusting stinkiness of the vulture. Though it feeds on animal offal, it frequently makes war on living prey, but the gripe of its talons is not sufficiently firm to enable it to carry off its victim through the air (?). Two of them acting in concert will frequently attack a puma, a lama, a calf, or even a full grown cow. They will pursue the poor animal with unwearied pertinacity, lacerating it incessantly with their beaks and talons until it falls exhausted with fatigue and loss of blood. Then having first seized upon its tongue, they proceed to tear out its eyes, after which they devour the intestines, which is usually continued until gorged so fully as to render them incapable of using their wings in flight." The Indians, who are well acquainted with this habit of the bird, often turn it to account for rude amusement, by exposing a dead horse or cow, which is soon sighted by the condors. As soon as the birds have glutted themselves, the vaqueros attack them with lassos and capture them with great facility. This sport is a peculiar favorite of those countries, being held in estimation second only to bull-fighting. Sir Francis Head, in his Journey Across the Pampas, mentions seeing fifty Condors around a dead carcass. One of his party, a Cornish miner, with great difficulty beat off one of the birds which he had in foolish-bravado seized by its neck." Vide Whitlaw's Goldsmith, Chapter on Condors.

In the work on Zoology by Dr. Wm. B. Carpenter, London, 1844, on vol. I, p. 416, he states of the Condor that its length is somewhat more than four feet, and the expanse of its wings about nine feet. It will be seen that there is very great discrepancy in all these accounts, which can be imputed to nothing else but negligence and want of knowledge from books and observation, or from describing male and female condors of different ages or species. In Von Tschudi's Travels in Peru, etc.,

in 1838-42, speaking of the Condor he says: "In the market of Valparaiso, live condors are frequently sold. These birds are caught in traps. A very fine one may be bought for a dollar and a half. I saw eight of these gigantic birds secured in a yard, in a very singular manner. A long, narrow strap of leather was passed through the nostrils of the bird, and firmly knotted at one end, whilst the other end was fastened to a wooden or iron peg fixed in the ground. By this means the motion of the bird was not impeded; it could walk within the range of a tolerably wide circle, but on attempting to fly it fell to the ground head foremost. It is no trifling matter to provide food for eight Condors, for they are among the most voracious of birds, as they can eat eighteen pounds and more of meat a day, without inconvenience. I measured a very large male Condor, and the width from tip to tip of wings was fourteen English feet and two inches; an expanse of wing not equaled by any other bird except the white albatross." p. 24, Ross' Eng. trans.

Von Tschudi, speaking of the immense table lands of the Puna in Peru, elevated ten and twelve thousand feet above the sea, "where the forked lightning darts its zigzag flashes on the mountain tops of the surrounding Cordillera, or running along the level ground, imprints deep furrows in its course, whilst the atmosphere quivers amidst uninterrupted peals of thunder a thousand fold repeated by the mountain echoes, where nature withholds her fostering influence alike from vegetable and animal life, the Condor alone finds itself in its native element. On the inaccessible summits of the Cordillera, it builds its nest and hatches its young in the months of April and May. It measures, when full grown, from the point of the beak to the end of the tail, five feet, and from the tip of one wing to the other, twelve or thirteen feet. It feeds chiefly on carrion, but when impelled by hunger, will attack young and defenseless sheep, vicuñas, and llamas. He cannot raise great weights with his feet, which, however, he uses to aid the power of his beak. The principal strength of the Condor lies in his neck and in his feet, yet he cannot when flying, carry a weight exceeding eight or ten pounds. All accounts of sheep or calves being carried off by them are mere exaggerations. The bird passes a great part of the day in sleep, and hovers in quest of prey chiefly in the morning and evening. It possesses the senses of sight and smell in a singularly powerful degree, for while soaring at a height beyond human vision, the Condor discovers its prey on the level heights beneath, and darts down upon it with the swiftness of lightning, accompanied in a short time by hundreds of its companions. It has a singular tenacity of life, unless wounded in some vital part. It is very seldom shot by fire-arms, but the Indians of the Puna often capture it with the lasso or the sling bolas; in the province of Abancay they capture it by decoying them to a stretched hide with fresh meat left on it, and a large hole cut in the hide; as the condor is glutting himself the Indian catches hold of one of his feet through the hole and secures it with a rope. I had a condor in Lima, which when he first came into my possession was very young. To prevent his escape, as soon as he was able to fly, he was fastened by the leg to a chain to which was attached a piece of iron of about six pounds weight, which he dragged after him in a large yard with great facility. When he was a year and a half old he flew away with the chain and iron attached to his leg, and perched on the spire of the church of Santa Tomas, whence he was scared away by the carrion hawks. On alighting in the street a negro attempted to catch him for the purpose of bringing him home, upon which he seized the poor creature by the ear and tore it completely off. He then attacked a child in the street (a negro boy of three years old), threw him on the ground, and knocked him on the head so severely with his beak, that the child died in consequence of the injuries. This bird afterwards died off Montevideo, after being two months at sea, on our homeward voyage to Europe." p. 211.

The same author at p. 175 also mentions the Peruvian Condor as collecting in great numbers by the ocean coasts, on the stranded whale, which it feeds upon, as does its congener of California, with great avidity and voracity. It is very strange that in all the foregoing quotations, not one of the writers makes an accurate and detailed description of the entire features of this bird. Not one of them mentions its weight, its viscera, or its tongue, though such prominent features of the creature, and so necessary to its understandable delineation: and particularly as to the female bird. Any unscientific person with three hours' labor, with a dead specimen before him, could sit down, and only observing precision, and taking mother nature for his guide, write a better word-picture than the persons foregoing, whose names are celebrated in history and literature. Alexander Wilson, the Pennsylvania peddler, seems to have surpassed all prior word-painters of birds and their habits, and is equal to any of his successors in this peculiar gift of ornithological delineations.

(TO BE CONTINUED.)

## Buckwheat as Food.

A LATE issue of Hunt's Merchant's Magazine, in an article on buckwheat thus speaks of it concerning its properties as an edible: "Considering the good qualities of buckwheat, it is probably less appreciated than any other bread grain. Writers on agricultural products seem to eschew it as food for man, and regard it only as a miscellaneous adulteration of wheat flour, or as a product of poor soil for cattle. It is of a totally different family of plants from the cereals, and will flourish on sandy hill-sides which are barren for other grain. It is probably the most easily cultivated and the cheapest bread grain in the world. It is extensively cultivated in Belgium and some parts of inhabitants. Though its properties are very different from wheat, it is, nevertheless, quite as rich in all important compounds, and in extremely cold weather it is more substantial than wheat. It is, however, less digestible, and apt to disagree with the stomach, or persons unaccustomed to it. By analysis, buckwheat is second to wheat in gluten, but deficient in starch. By the addition of one-fourth quantity of oat or Indian meal to buckwheat flour, the bread is very much improved.

## Davy's Agricultural Chemistry.

OF SOILS—THEIR CONSTITUENT PARTS, ANALYSIS, ETC.; ROCKS AND STRATA BENEATH, IMPROVEMENT, ETC. [CONCLUDED.]

4. By the process of washing and filtration the soil is separated into two portions, the most important of which is generally the finely-divided matter. A minute analysis of the sand is seldom or never necessary, and its nature may be detected in the same manner as that of the stones or gravel. It is always either siliceous sand, or calcareous sand, or a mixture of both. If it consist wholly of carbonate of lime, it will be rapidly soluble in muriatic acid, with effervescence; but, if it consist partly of this substance and partly of siliceous matter, the respective quantities may be ascertained by weighing the residuum after the action of the acid, which must be applied till the mixture has acquired a sour taste and has ceased to effervesce. This residuum is the siliceous part; it must be washed, dried, and heated strongly in a crucible; the difference between the weight of it and the weight of the whole, indicates the proportion of calcareous sand.

5. The finely-divided matter of the soil is usually very compound in its nature; it sometimes contains all the four primitive earths of soils, as well as animal and vegetable matter; and to ascertain the proportions of these with tolerable accuracy, is the most difficult part of the subject.

The first process to be performed in this part of the analysis, is the exposure of the fine matter of the soil to the action of muriatic acid. This substance should be poured upon the earthy matter in an evaporating basin, in a quantity equal to twice the weight of the earthy matter, but diluted with double its volume of water. The mixture should be often stirred, and suffered to remain for an hour, or an hour and a half, before it is examined.

If any carbonate of lime or of magnesia exist in the soil, they will have been dissolved in this time by the acid, which sometimes takes up likewise a little oxide of iron; but very seldom any alumina.

The fluid should be passed through a filter; the solid matter collected, washed with rain water, dried at a moderate heat, and weighed. Its loss will denote the quantity of solid matter taken up. The washings must be added to the solution, which, if not sour to the taste, must be made so by the addition of fresh acid, when a little solution of prussiate of potassa and iron must be mixed with the whole. If a blue precipitate occurs, it denotes the presence of oxide of iron, and the solution of the prussiate must be dropped in till no further effect is produced. To ascertain its quantity, it must be collected in the same manner as other solid precipitates, and heated red; the result is oxide of iron, which may be mixed with a little oxide of manganese. Into the fluid, freed from oxide of iron, a solution of neutralized carbonate of potash must be poured, till all effervescence ceases in it, and till its taste and smell indicate a considerable excess of alkaline salt. The precipitate that falls down is carbonate of lime; it must be collected on the filter, and dried at a heat below that of redness.

The remaining fluid must be boiled for a quarter of an hour, when the magnesia, if any exist, will be precipitated from it, combined with carbonic acid, and its quantity is to be ascertained in the same manner as that of the carbonate of lime.

If any minute proportion of alumina should, from peculiar circumstances, be dissolved by the acid, it will be found in the precipitate with the carbonate of lime, and it may be separated from it by boiling it for a few minutes with soap lye, sufficient to cover the solid matter; this substance dissolves alumina, without acting upon carbonate of lime.

Should the finely-divided soil be sufficiently calcareous to effervesce very strongly with acids, a very simple method may be adopted for ascertaining the quantity of carbonate of lime, and one sufficiently accurate in all common cases.

Carbonate of lime, in all its states, contains a determinate proportion of carbonic acid, i. e. nearly 43 per cent, so that when the quantity of this elastic fluid given out by any soil during the solution of its calcareous matter in an acid is known, either in weight or measure, the quantity of carbonate of lime may be easily discovered.

When the process by diminution of weight is employed, two parts of the acid and one part of the matter of the soil must be weighed in two separate bottles, and very slowly mixed together till the effervescence ceases: the difference between their weight, before and after the experiment, denotes the quantity of carbonic acid lost; for every four grains and a quarter of which, ten grains of carbonate of lime must be estimated. [The process by diminution of weight is the most accurate: precipitating by carbonated alkali, it is difficult to procure the whole of the lime.—J. D.]

The best method of collecting the carbonic acid, so as to discover its volume, is by a peculiar pneumatic apparatus, in which its bulk may be measured by the quantity of water it displaces.

6. After the calcareous parts of the soil have been acted upon by muriatic acid, the next process is to ascertain the quantity of finely-divided insoluble animal and vegetable matter that it contains. This may be done, with sufficient precision, by strongly igniting it in a crucible over a common fire till no blackness remains in the mass. It should be often stirred with a metallic rod, so as to expose new surfaces continually to the air: the loss of weight that it undergoes denotes the quantity of the substance that it contains destructible by fire and air. [When the soil is aluminous, part of the loss in the above process will be owing to water driven off. Pure hydrate of alumina contains about 53 per cent water; the whole of which can be expelled only by a white heat. On this account, the ascertaining with any accuracy the proportion of animal and vegetable matter in a soil is difficult, and requires much chemical skill.—J. D.]

It is not possible, without very refined and difficult experiments, to ascertain whether this substance is wholly animal or vegetable matter, or a mixture of both. When the smell emitted during the incineration is similar to that of burnt feathers, it is a certain indication of some substance either animal or analogous to animal matter; and a copious blue flame, at the time of ignition, almost always denotes a considerable proportion of vegetable matter. In cases when it is necessary that the destruction of the decomposable substances may be assisted by the agency of nitrate of ammonia, which at the time of ignition may be thrown gradually upon the heated mass, in the quantity of twenty grains for every hundred of residual soil. It accelerates the dissipation of the animal and vegetable matter, which it causes to be converted into elastic fluids, and it is itself at the same time decomposed and lost.

7. The substances remaining after the destruction of the vegetable and animal matter are generally minute particles of earthy matter, containing usually alumina and silica, with combined oxide of iron, or of manganese. To separate these from each other, the solid matter should be boiled for two or three hours with sulphuric acid, diluted with four times its weight of water; the quantity of the acid should be regulated by the quantity of solid residuum to be acted on, allowing for every 100 grains 2 drachms, or 120 grains of acid.

The substance remaining after the action of the acid may be considered as siliceous; and it must be separated, and its weight ascertained, after washing and drying in the usual manner.

The alumina and the oxide of iron and manganese, if any exist, are all dissolved by the sulphuric acid: they may be separated by succinate of ammonia, added to excess, which throws down the oxide of iron; and by soap lye, which will dissolve the alumina, but not the oxide of manganese; the weights of the oxides ascertained, after they have been heated to redness, will denote their quantities. Should any magnesia and lime have escaped solution in the muriatic acid, they will be found in the sulphuric acid; this, however, is rarely the case; but the process for detecting them, and ascertaining their quantities, is the same in both instances.

The method of analysis by sulphuric acid is sufficiently precise for all usual experiments; but, if very great accuracy be an object, dry carbonate of potassa must be employed as the agent, and the residuum of the incineration (6) must be heated red for half an hour, with four times its weight of this substance, in a crucible of silver, or of well-baked porcelain. The mass obtained must be dissolved in muriatic acid, and the solution evaporated till it is nearly solid; distilled water must then be added, by which the oxide of iron and all the earths, except silica, will be dissolved in combination as muriates. The silica, after the usual process of lixiviation, must be heated red; the other substances may be separated in the same manner as from the muriatic and sulphuric solutions.

This process is the one usually employed by chemical philosophers for the analysis of stones.

8. If any saline matter, or soluble vegetable or animal matter, is suspected in the soil, it will be found in the water of lixiviation used for separating the sand. This paper must be evaporated to dryness in a proper dish, at a heat below its boiling point. If the solid matter obtained is of a brown color and inflammable, it may be considered as partly vegetable extract. If its smell, when exposed to heat, be like that of burnt feathers, it contains animal or aluminous matter; if it be white, crystalline, and not destructible by heat, it may be considered as principally saline matter.

9. Should sulphate or phosphate of lime be suspected in the entire soil, the detection of them requires a particular process upon it. A given weight of it (for instance, 400 grains) must be heated red for half an hour in a crucible, mixed with one-third of powdered charcoal. The mixture must be boiled for a quarter of an hour, in a half pint of water, and the fluid collected through the filter, and exposed for some days to the atmosphere in an open vessel. If any notable quantity of sulphate of lime (*gypsum*) existed in the soil, a white precipitate will gradually form in the fluid, and the weight of it will indicate the proportion.

Phosphate of lime, if any exist, may be separated from the soil after the process for gypsum. Muriatic acid must be digested upon the soil, in quantity more than sufficient to saturate the soluble earths; the solution must be evaporated, and water poured upon the solid matter. This fluid will dissolve the compounds of earths with the muriatic acid, and leave the phosphate of lime untouched. It would not fall within the limits assigned to this lecture, to detail any processes for the detection of substances which may be accidentally mixed with the matters of soils. Other earths and metallic oxides are now and then found in them, but in quantities too minute to bear any relation to fertility or barrenness, and the search for them would make the analysis much more complicated, without rendering it more useful.

10. When the examination of a soil is completed, the products should be numerically arranged, and their quantities added together; and if they nearly equal the original quantity of soil, the analysis may be considered as accurate. It must, however, be noticed, that when phosphate or sulphate of lime are discovered by the independent process just described (9), a correction must be made for the general process, by subtracting a sum equal to their weight from the quantity of carbonate of lime obtained by precipitation from the muriatic acid.

In arranging the products, the form should be in the order of the experiments by which they were procured. Thus:

I obtained from 400 grains of a good siliceous sandy soil from a hop-garden near Tunbridge, Kent:	
GRAINS.	
Of water of absorption.....	19
Of loose stones and gravel, principally siliceous	53
Of undecomposed vegetable fibers.....	14
Of fine siliceous sand.....	212
Of minutely-divided matter separated by agitation and filtration, and consisting of:	
Carbonate of lime.....	19
Carbonate of magnesia.....	3
Matter destructible by heat, principally:	
Vegetable.....	15
Silica.....	21
Alumina.....	13
Oxide of iron.....	5
Soluble matter, principally common salt and vegetable extract.....	3
Gypsum.....	2-81

Amount of all the products..... 379

Loss..... 21

The loss in this analysis is not more than usually occurs, and it depends upon the impossibility of collecting the whole quantities of the different precipitates, and upon the presence of more moisture than is accounted for in the water of absorption, and which is lost in the different processes.

When the experimenter is become acquainted with the use of the different instruments, the properties of the re-agents, and the relations between the external and chemical qualities of soils, he will seldom find it necessary to perform, in any one case, all the processes that have been described. When his soil, for instance, contains no notable proportion of calcareous matter, the action of the muriatic acid (7) may be omitted. In examining peat soils, he will principally have to attend to the operation by fire and air (8); in the analysis of chalks and loams, he will often be able to omit the experiment by sulphuric acid (9); and, when a soil is extremely dense and heavy, and after being heated to redness, strongly attracted by the magnet, he must particularly attend to the quantity of iron it contains; and, in this case, the muriatic acid will be the principal agent.

In the first trials that are made by persons unacquainted with chemistry, they must not expect much precision of result. Many difficulties will be met with; but in overcoming them, the most useful kind of practical knowledge will be obtained; and nothing is so instructive in experimental science as the detection of mistakes. The correct analyst ought to be well grounded in general chemical information; but, perhaps, there is no better mode of gaining it, than that of attempting original investigations. In pursuing his experiments, he will be continually obliged to learn the properties of the substances he is employing or acting upon; and his theoretical ideas will be more valuable in being connected with practical operations, and acquired for the purpose of discovery.

## Miscellany.

## Public Behavior.

HARPER'S *Lowly* has been in Boston, was present at the Tremble Concert—that is, his alter ego was—and thus writes to himself about it:

My dear Mr. Lounger: I observe that you have a word to say now and then about the conduct of grown-up people in various situations, and I make bold, therefore, to tell you of the difference which I lately remarked between the behavior of an audience in New York and one in Boston. Nobody need fly into a passion in advance, and say that he doesn't wish to hear what a stuck-up Athenian has to say, because I am not an Athenian; I am a plain Knickerbocker, thank Heaven! and eat my pipe upon the stoop, and scoff at the Boston State House, and have my own opinion of the Frog Pond.

But that is neither here nor there (I mean my opinion, not the Frog Pond; which, as you know, and all men know, is very much there indeed); the point is the conduct of the public of the two cities. On a certain Friday morning, not a hundred years ago, I went to the Exhibition of Declaration by the students of Columbia College. The exercises were held in Niblo's Saloon, which was crowded by a throng of ladies and gentlemen (at least they seemed to be such). But when the speaking began on the platform it began throughout the house. I, who had come to listen (not that any of my children took part, but as a friend of education and of youth, was appalled at the loud murmur around me.

My young friend, Mr. Emerson, was indeed listened to, as he deserved to be. But he had the good luck to come first on the programme; and so my other young friends, Mr. Laurence, Mr. Post, Mr. Greenwood, and Mr. Pell were vociferously applauded—but not much heard. In fact, it was Babel; and I was glad to hear President King censure the indecency of the incessant talking among the audience.

But it did not end. They talked on louder than ever. When they applauded, it was done with such stamping and shouting that there is not a circus in the world that would not have been disgraced by it; and the President, with just severity, cried indignantly, "I call upon the students of the college to separate themselves from those who come here to make a ruffian noise!"

The whole thing was a noisy row. The applause indicated no intelligence and no appreciation, but simply a foolish determination to make as much confusion as possible. It was an immense audience of apparently respectable people; and if the offenders were only a few among them, they should have been removed by the police.

The next morning business (W. I. goods) took me to Boston. I arrived at evening, because I had arranged to see a dealer at Hartford and one at Worcester; and so had to give the day to travel. Looking around to see how I should amuse myself, I observed a notice of a concert at the Music Hall, and thither I went.

'Tis a noble hall, and at least three thousand people were packed into it. The music was entirely German, of which I was glad enough, for I have long wanted to have the taste of Trottatore taken out of my mouth. [Note to the indignant reader: You are a great lover of Trottatore, and think me a barbarian. Well, think so. A man who would be sensitive about the Trottatore would have just wit enough to abuse me for liking an entirely German concert. I prefer a flowing beaker of Burgundy to your thin, sweet wine-whew, and gooseberry wine at that. No—thank you! I take Clos de Vougeot; wish you much pleasure with your sweet slops. Day! day!] The thing is that the audience was magnificent in numbers and in conduct. The performance was admirable. There was an arrangement for eight hands of Weber's Invitation to the Waltz. It was by Otto Dressel—a pianist whom New York lost; and, losing, lost the most passionate and poetic player in the country. Dressel played with three friends, Mr. J. C. D. Parker among them. The first time it went splendidly. The next, obeying a determined encore, it fell out of time a little. But, on the whole it was an exquisite concert. There was no piece too long, nor were there too many pieces; and when the three thousand applauded, they did not bang their heels and sticks and umbrellas against the floor—they did not yelp and shout "Hi! hi!"—they did not whistle and roar—but a solid clapping of hands, uninterrupted by a single heel, not only made the best applause, but showed that it was the applause of people worth the pleasing.

I take the liberty to prefer that kind of audience gathered to hear music, to the one I encountered in my native city which came to hear oratory. The Athenians behaved with dignity and self-respect, and a profoundly intelligent and appreciative enjoyment. The Knickerbockers behaved like circus riders, rowdies, and children. I know what Boston has to struggle with. I have actually seen that yellow State House—yellow enough to give all Massachusetts the jaundice. I am fully aware of the Frog Pond, and the other difficulties. I reflect with pardonable pride upon our nine millions tax, and smile with sympathy upon a little city so handy that a man needs less than an hour to reach his home from his office.

But I must acknowledge that little Boston bears up bravely under its airy and shady common, its clean streets, and its conveniences. I grant that it has grown somewhat sober in the effort to sit upon three hills at once; and I see that stretching, with the mere fatigue of growth it has already laid its head in Roxbury, and its finger tips on Cambridge and Charlestown. But I am not yet prepared to believe what I lately saw in the Springfield Republican, that the Atlantic Ocean rises in Boston harbor and flows eastward.

These are things that naturally make a wise man—[Note to the indignant reader: Meaning me!—] ponder. But, settle them how he will, he cannot deny that the behavior of a Boston audience is superior to that of Hi-biting Yorkers.

Yours respectfully, Mr. Lounger,  
HANS VAN TUOMP.

## True Hearts and False.

Our country is but one grand theatre of unreal dreams and imaginings, and the true characters of the masses are hidden from each other.

Thus it is that so many unhappy marriages are contracted, and life rendered miserable. How many launch forth upon the squally sea of matrimony, without taking a thought with regard to the moral responsibility that they have voluntarily attached to themselves; and consequently ere long, but not before it is too late, they discover that they have been aiming to exhibit a polished exterior in order to hide their real characters. And hence, the truth forces itself upon their minds that they have been acting the part of the hypocrite with each other, which makes life a path of thorns instead of one strewn with flowers. How widely different their lot, however, from that husband and wife, who, before marriage, read as in a book, the characters of one another, and who realized and experienced the bliss of

Two hearts that beat as one,  
Two souls with but a single thought.

Joy serene encircled their lives, and happiness filled the cup of human enjoyment, for they gave the dove of truth a place in their hearts, whose influence made their journey through life, a path of flowers which led the way to

Where the rivers of pleasure flow o'er the bright plains  
And the noontide of glory eternally reigns.

Is it not true, then, that the flirtations, for I can

think of no other appropriate term, carried on between Young America and their equally juvenile sisters, are false and wicked? because deceit is a sin in the sight of high Heaven of awful magnitude, and one which has done more to bring unhappiness and misery upon the human family than any evil that ever cursed mankind. But, it may be asked what is the main cause of so much falsehood and deceit being practiced in our large cities. We answer that gold is the paramount cause—that it is gold that prompts so many to sacrifice principle upon the altar of interest, and to barter the purest and noblest affections of the human heart for wealth and grandeur. They are dazzled by the glare of a false meteor, which buries the pure and lovely gem of truth for a time in the shadow of its blaze. But "the truth is mighty and will prevail."

crushed to earth shall rise again—  
The eternal years of God are here;  
But error, wounded, writhes in pain,  
And dies among her worshippers.

Truth is as beautiful as glittering diamonds or burning rubies; as lovely as the sun when he sinks to rest in his western home; and as pure as pearls in a lake of crystal. 'Tis as peaceful as a summer's midnight when nature for a season sleeps in calm repose; as artless as an angel of mercy when ministering to virtuous innocence; and as sincere as justice upon her throne. 'Tis as uniform as the moon in her starry rounds.

## FARMERS, BEWARE

## CALIFORNIA

## COMBINED REAPER and MOWER,

AND

## PECK'S SANTA CLARA

## HEADER AND HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNWARRANTED FALSHOODS.

I am not building the "Manny Machine," nor infringing on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly unlike the "Manny Machine" except in the use of the Knife, on which there is not now, nor has there ever been a PATENT.

I think I know what I am about. I have had too much experience as a Practical Mechanic, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who buy of me will be prosecuted. This is the old "ALF-OF-GAME," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but MEANLY and COWARDLY, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

## CALIFORNIA

## Combined Reaper and Mower,

IS A DECIDED SUCCESS; and

and unless they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with STORIES KNOWN TO BE FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "ALF-OF-GAME" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower, (and not the "Manny").

and I have Purchased the Invention called

"PECK'S SANTA CLARA HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, 'ready for the fight whenever the fight opens.'

THOS. OGGS SHAW,

No. 33 Sacramento street.

## New-York Seed Warehouse.

## ALFALFA,

New Crop;

## HUNGARIAN GRASS;

Garden, Flower, Field and Tree Seeds.

THE extensive Variety of SEEDS we offer, are grown by experienced Cultivators in the Atlantic States and Europe, and we have taken the greatest pains to secure only the Purest and best Stocks, and have no doubt they will give the utmost satisfaction.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, MAY 20, 1859.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAM, who left here in the steamer of the 8th inst. on a visit to his kindred, to carry a few months in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our Journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HAYES employed Mr. J. F. LAMARRE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the Farmer into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

J. B. MORSE is not an Agent of the Farmer, nor authorized to receive subscriptions or money on account of this Journal—nor has he been for some time past.

**LETTERS BY OVERLAND MAIL.**—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

**Happy Homes.**  
"I've wandered on through many a clime,  
Where flowers of beauty grew;  
Where all was blissful to the heart,  
And lovely to the view—  
I've seen them in their twilight pride,  
And in their dress of morn,  
But none appeared so sweet to me,  
As the spot where I was born."

WHERE, upon all the face of this fair earth, could man desire to have his lot cast, and expect to find a land blessed with a better climate or a richer soil; or where, within his own reach, have been placed all the natural means required for perfecting human happiness, than in our own favored California? If in a clime like this—if in a land literally "dawning with milk and honey," where the earth is teeming with such natural, wonderful beauty; such abundance and luxuriance—men cannot find happy homes, then the fault lies within his own nature. Every man makes or mars his own destiny.

We ask a careful examination of the beautiful engraving upon our Journal's front this week. This we present to our readers and friends, as the picture of a truly beautiful home, where the happy possessor well understood the great secret of establishing and making a beautiful happy home. We present this engraving as worthy of imitation. In a country like ours, where thousands of locations are full of natural beauty, and where, by the aid of art and the appliances of wealth (that cannot be in any other way so well appropriated), beautiful and happy homes can be reared, where all that heart, body, and mind can desire are brought within reach by means of the cultivation of the earth, the education of the mind, and the devotion of the heart in making that home beautiful and happy; and when the citizens of California shall well and wisely strive to this end, the tenants of our present homes will not desire to travel across the ocean in search of happiness, for it will be found here; and the gold now required to sustain this unnecessary expenditure, will do much in erecting and sustaining the very homes that the now unsatisfied ones are in search of.

"Who, that in distant lands has chanced to roam,  
Never thrilled with pleasure at the name of home."  
When the high privileges which the God of nature has given us in this State shall be truly appreciated, the great song of every true heart will always be:

"Mid pleasures and palaces though we may roam,  
Be it ever so humble, there's no place like home."  
And California will then be honored abroad and her citizens will love it and cling to it, and not desire to wander abroad for pleasure or happiness.

**A CHRISTIAN FAIR.**—We have received from the managers of the Young Men's Christian Association, complimentary tickets to their Floral Festival Fair, which commences on Tuesday next, at Musical Hall. We have received also a circular containing the list of the executive and general committees of ladies; and we confess, by looking over the programme of names, nobody can possibly be otherwise than pleased, for certainly the list presents the fairest names, and they will be the fairest committees that have ever been appointed, and beyond a doubt it will prove the fairest Fair ever yet planned in our city. Over sixty ladies from ten churches in this city, have kindly volunteered to attend and aid the young men in their christian work. Surely, this is charitable. Be-hold members of all the different denominations laying aside little differences and uniting for the great object of christian benevolence; thus fulfilling the very purposes of christianity. "And they all met together in one place, with one heart, and one mind, and the Spirit of the Lord was upon them." And such we hope will be the result of this, the best and fairest work of God's creatures on earth. Heaven will bless such efforts.

**Our Artist.**—When our readers have looked upon the splendid engraving which graces our Journal this week, we think they will say it is an artist's work. It is the work of our young artist, D. Van Vleck. It needs no praise at our hands. Our pen need only refer to it and name the artist. We have been placed under obligations to the same artist for the enjoyment of several beautiful views, and also received from him an engraving of the horse Gray Eagle, one of the finest engravings of a horse that has yet been executed in this State. One can almost fancy he sees the animal move.

**VALUABLE BOOKS.**—We have been most kindly favored with a valuable collection of books at the hands of Hon. D. C. Broderick, consisting of Smithsonian and other Congressional volumes, from which we shall make such extracts as will be of service to our State. Many thanks for the gift.

## The Wools of the World.

We are enabled by the courtesy of our Boston Correspondent, to lay before our readers and all who are interested in growing wool, a valuable table giving the value of all the different wools now offered to the manufacturers at Boston, and also the imports into Boston of the various kinds of wool for the first quarter of each year, for the last six years. Growers of wool will observe the difference between the value of foreign wool of the fine grades, and those of America. They will also observe the stocks on hand the first quarters of 1853 and 1859. These tables will be of great service to the wool growers of California, and should be preserved by them. Why should California wool range from 14 to 18 cents, and from 24 to 42 cents, while Australia wool ranges from 24 and 26 to 35 and 40 cents, and from 50 to 85 cents? Cannot California boast as fine a climate as Australia? Have we not men of capital and energy equal to Australia? And are not our acres as broad, our hills as green, and our valleys as rich? California wool growers should look to these things! They will also notice a falling off in the stock on hand from 1853 as compared with 1859, of near three and a quarter millions of pounds of foreign wool at Boston alone, even while the imports are three times as great as in 1859 or 1858, and greater than any of the preceding years. It is gratifying to notice the steady advancing rates of California wool in the scale of prices, and to notice also the rapid increase of quantity. With a climate like ours why should not California wool growers produce wool of as excellent quality as any in the world? Why should they continue to raise wool at 14, 20, 25, 30 and 40 cents, when by a better breed of stock, they can not only produce higher priced wool, but produce three times the quantity of wool to each animal? Those who desire to improve their flocks should look to our advertising columns. A way is there pointed out that is sure to make them successful in this respect, and make them wealthy too. We ask attention to the appended remarks touching the condition of the market, and the feeling of the manufacturers who are the purchasers. We hope this valuable table will be appreciated by our wool growers, and we advise those who export wool from California to consult Messrs. G. W. Bond & Co. Their house is of long standing, and they are a good house to consign wools to. We have known them long and well, and can assure our friends that their interests will be strictly and most carefully attended to by Messrs. Bond & Co.

**Prices Current of Wool at Boston, April 1, 1859.**

The year opened with a brisk trade, and with a time realized upon the prices quoted in our last public sale in February. Since then there has been a lull in the market, partly occasioned by

considerable arrivals of foreign wools both here and in New York, which has had a flattening tendency. Our quotations indicate a slight decline. The annexed tables show that while the importations of the first quarter of this year have been beyond an average, the excess is not more than sufficient to make up for the difference in stock at the commencement of this year and last; indeed the supply for the quarter has been somewhat less than last year, while the sales have been much greater.

The chief increase in import has been of fine wools from Buenos Ayres and the Cape, which were imperatively needed to keep our machinery in operation, and of which there remains unsold less than the importation of the last fortnight, while of Valparaiso wool the stock has been entirely sold, and of other descriptions it is really light. Manufacturers however, of all classes, are generally well supplied for present wants.

## Yosemite via Mariposa.

We left our travelers last week preparing and on the way to the "Great Mariposa Forest." Visitors should not feel they are now on a tour of mere sport and frolic, but give heart and mind to the scenes around them. Every foot of ground over which they pass contains views of beauty, glory, and interest beyond description. If you see nothing immediately around you, let your eyes look upward and outward to the high mountain above you, or the gorgeous valley beneath you. Every opening among the trees discloses new scenes. More than half the real interest of the views are lost for a want of reflection upon their points. Every traveler should have a glass in hand to catch these scenes as they break upon the view. The sketch book, memorandum book, and book for flowers will all be needed. Take time to enjoy all these scenes now; it may be the only time on this earth you can ever enjoy as much; and you, by care and attention, may be the discoverer of some new and valuable source of beauty for posterity.

Eden Valley, from whence the visitor started, is the residence of the "Boon" of this forest, who will be a valuable and agreeable guide for travelers—reward him well. Like Daniel Boone, he knows every rod of his hunting ground.

Although we have before published the sketch of the Mariposa forest, we feel called upon to publish a few extracts, to show its grandeur, and to secure that attention to it from travelers which it deserves. The following we extract from former notes, when, with a party of four friends, we gave time to the measurement of these giants of the forest:

After about three hours of up hill work we reached the slope where we found Rambler's tree, near a bubbling spring of water. We halted at the spring to refresh ourselves with a cup of its cooling waters.

After refreshing ourselves at the spring we commenced, as we had designed when starting on this enterprise, the survey and measurement of what we believed from report must be a group or forest of trees greater than those of the Calaveras, and we had come prepared with measuring lines for that purpose.

The first tree we measured was "Rambler," and measuring it three and a half feet from the ground, found it eighty feet in circumference; close at the ground 102 feet; and, carefully surveyed, 250 feet high. Tree No. 2, nearly fifty feet in circumference. No. 3, at the spring, ninety feet, three and a half feet from the ground, and 102 at the ground, and 300 feet high. Nos. 4 and 5 we call The Sisters, measuring eighty-two and eighty-seven feet in circumference and 225 feet high. Many of the trees had lost portions of their tops by the storms that had swept over them. After measuring the first five trees we divided our company, two taking the south-east direction, and two with myself the northerly, and keeping record of each tree measured, which resulted as follows:

The whole number measured was 155, and these comprise but about half the group, which we estimate cover about two to three hundred acres, and lie in a triangular form. Some of the trees first met your view in the vale of the mountain, thence rise south-easterly and north-westerly till you find yourself gazing upon the neighboring points, some ten miles from you, whose tops are still covered with their winter snows. It is estimated to be some six or ten miles from the dividing line, and the eye can gaze upon a world upon either side of the ridge. The following are the number and measurement of the trees. Our party measured none less than forty feet, and Rambler measured as ourselves only those of beauty of symmetry less than forty feet, and a few only. Those measured by his party are as follows:

Number of trees.	Circumference in feet.	Number of trees.	Circumference in feet.
1 tree.....	102	1 tree.....	53
1 tree.....	97	1 tree.....	51
1 tree.....	92	4 trees each.....	50
3 trees each.....	79	6 trees each.....	49
1 tree.....	72	5 trees each.....	48
3 trees each.....	70	2 trees each.....	47
1 tree.....	68	3 trees each.....	46
1 tree.....	66	2 trees each.....	45
1 tree.....	63	1 tree.....	44
3 trees each.....	62	2 trees each.....	43
2 trees each.....	60	2 trees each.....	42
1 tree.....	59	1 tree.....	40
1 tree.....	58	1 tree.....	38
3 trees each.....	57	2 trees each.....	36
1 tree.....	56	2 trees each.....	32
3 trees each.....	55	1 tree.....	32
2 trees each.....	54		

The aim was to see if we could not find one hundred trees over fifty feet in circumference, which was more than both parties accomplished, as will be seen. Our party measured as follows:

No. of trees.	Circum.	No. of trees.	Circum.
2 trees, each.....	100	3 trees, each.....	59
1 tree.....	82	5 trees, each.....	58
1 tree.....	80	do down to.....	52
2 trees, each.....	77	2 trees, each.....	51
1 tree.....	76	6 trees, each.....	50
3 trees, each.....	75	1 tree.....	49
1 tree.....	72	1 tree.....	47
2 trees, each.....	69	1 tree.....	46
3 trees, each.....	67	2 trees, each.....	45
1 tree.....	64	1 tree.....	44
4 trees, each.....	65	7 trees, each.....	44
2 trees, each.....	63	4 trees, each.....	42
1 tree.....	61	3 trees, each.....	41
10 trees, each.....	60	8 trees, each.....	40

Some of these were in groups of three, four, and even five, seeming to spring from the seeds of one cone. We measured none less than forty feet. Several of these glorious trees we have, in association with our friend, named. The one near the source of the refreshment. Two trees, measured ninety and ninety-seven feet in circumference, were named The Two Friends.

No description we can give could convey to our readers the wonder and awe with which one is feeling creeps upon you of inexpressible reverence and awe, but rather be silent and think. Man here feels his own insignificance; and his soul, unbidden, breathes that hymn: "Be thou, O God! exalted

high," and praise rises from the heart to the lips spontaneously. No one, it seems to us, can enter this grove and not acknowledge the Deity and do him reverence. Would we had time and space to speak more of this wonderful forest. We do not wish to take away from our Calaveras friends, but if they will go and see this, they will cheerfully yield the palm, both in size and numbers.

We shall continue this subject in every issue of our journal, and hope the present year to secure additional facts and make new discoveries; adding much to the general stock of information on this interesting subject. A large party will start from this city about the 10th of June, to be present at the opening of the Valley Festivities.

## Letter from Aspinwall.

ASPINWALL, Thursday, April 21st, 1859.

**EDITOR FARMER:** We left Panama yesterday morning about ten o'clock, and in three hours and twenty minutes we arrived in Aspinwall. Just before we left Panama several of us took a fine bath in the Pacific, just outside the walls of the city, and on our arrival at Aspinwall we cooled ourselves in the Atlantic. The railroad is in splendid condition, and the excellent appointments throughout, the strong and massive bridge across the Chagres river at Barbacoas, and the general comfort of the cars, gave us much satisfaction. Aspinwall has much improved and is now really a beautiful town. The depot of the railroad company is of stone and would do credit to any road in the Union. The buildings connected with the station are of the most substantial and complete description. The Frigate Roanoke and the sloop-of-war Jamestown are still in port. The Roanoke leaves this evening on a cruise. The British mail steamer Medway is here. I should have told you that the frigate Merrimac, the Vandalia, the U. S. steamer Saratoga, and the St. Marys were at Panama when we left. As we passed the Merrimac on our way up the Bay of Panama, her band gave us "Hail Columbia" in fine style, which we responded to in cheers. The jack-lars manned the yards in good shape, to the great delight of all the passengers on board our steamer. I found my friend, Col. John D. Bowles still at the American Hotel, and during our stay at Panama was his guest. He looks as young as he did seven years ago.

The Northern Light came in this morning about eight o'clock. She left New York on the 11th at two o'clock p. m., and would have made much better time had Captain Tinklepaugh been sure the steamer on the other side would have made so good time. The New York passengers have all gone to Panama, the last train having been gone half an hour (eleven o'clock a. m.). They will not be detained at all at Panama, the Uncle Sam being entirely ready to receive them, having been free of her California passengers since Tuesday at two o'clock p. m. Aspinwall is much preferable to Panama, in its present improved condition, although one can pass a day in Panama very comfortably. The cool breezes of the Atlantic were very grateful to those of us who enjoyed the walk on the Beach Road, which is the finest feature of Aspinwall. The scenery along the railroad is at times very beautiful, and as we often struck the Chagres in its serpentine course, we could not but gaze in triumph upon its spiteful waters, where for days we had been at the mercy of the swift currents and the native boatmen in former times. In addition to the fine bridge that spans the river at Barbacoas, there are many smaller bridges but equally strong, where the road would cross the river. The track abounds in short curves, and as our long train glided onward, those in the middle cars could often see both ends of the train. The engineers must be good and careful, or frequent accidents might result.

There are several nice hotels in Aspinwall. The two best are the Howard House and the Aspinwall, at which latter hotel I am now writing. P. A. Dubord is the proprietor. It will soon be under the guidance of P. A. Dubord & Co., and an old Panama friend of mine, Mr. C. H. Scott, will be one of the firm. He has resided on the Isthmus since 1851, and had I time I would gather much interesting information from him in regard to things on the Isthmus. The health of our passengers has been excellent during their detention on the Isthmus, and as we shall go on board the Northern Light this afternoon at five or six o'clock, I think our bill of health will be a good one. Ever since we arrived in Aspinwall we have been treated to a fine sea-breeze. The passengers by the Orizaba arrived in New York one day before those who left on the mail steamer of the 5th of March. The Golden Age, on her last trip from San Francisco, came down in ten days and twenty-two hours, and the Moses Taylor took her passengers up on this side. The trip will doubtless be the shortest ever made to New York. Notwithstanding our detention, we shall make a good trip yet, for the Northern Light is a glorious boat, and if we don't mistake we will make the trip in seven days, perhaps less. Her Atlantic passengers were in admirable health and spirits, and went out of Aspinwall in fine style. The population of Aspinwall has much increased, and the stores, hotels, and fine residences, and pleasant promenades, make it vastly different from the vile swamp we remember it was in 1851. Truly, the locomotive, the steamship, and our own bright California, work wonders, even in South America.

Adieu for a few days, when I will write you from New York.

Yours, E.

**BIG-TREE GROVE.**—We call especial attention to the card of Messrs. Sperry & Perry, of their Hotel at Murphy's. This is the hotel on the route to the Big Trees of Calaveras, and those who desire to visit both great forests, as all should, are now reminded that they can take the stage (Dillon & Co.'s line) at Stockton and reach Murphy's in one day. This has often been done; even through to the Big Trees, which is fifteen miles beyond Murphy's. In another column more particulars will be given. From this Big-Tree Grove, visitors can go on via Columbia and Sonora to Yosemite. This is one route, and one of intense interest; and those who feel an interest in one Big-Tree Grove should see both; and on this route, going one way and returning the other, this is accomplished. The Hotel of Messrs. Sperry & Perry has been always found to be comfortable and happy; and after a ride by stage or private conveyance, this Hotel and a visit in the vicinity will give pleasure seekers enough for a week's enjoyment.

Some of these were in groups of three, four, and even five, seeming to spring from the seeds of one cone. We measured none less than forty feet. Several of these glorious trees we have, in association with our friend, named. The one near the source of the refreshment. Two trees, measured ninety and ninety-seven feet in circumference, were named The Two Friends.

No description we can give could convey to our readers the wonder and awe with which one is feeling creeps upon you of inexpressible reverence and awe, but rather be silent and think. Man here feels his own insignificance; and his soul, unbidden, breathes that hymn: "Be thou, O God! exalted

## The Industrial School.

This excellent institution has now been organized and its commencement was duly celebrated by our authorities and the friends of the school on Tuesday last. The ceremonies took place at the school buildings, which are situated at the junction of the San José and Ocean House roads. We regret we could not witness the ceremonies, for we hope much from an institution which will have the power of doing good to the young, checking the progress of crime, and leading them into paths of improvement by industrial habits. The day was so tempting a large and respectable audience was present. The newly appointed Superintendent, Captain Hennell, led the company over the grounds and through the building, showing and explaining the plans and prospects. The Managers of the school, President Burr, and the Board of Supervisors, were present, with many other city officers and several teachers of our public schools. Wm. Blanding, Esq., in behalf of the Board of Managers, invited the Rev. Dr. Anderson to open the meeting with religious exercises, which commenced by reading portions of scripture particularly applicable to the occasion as tending to the inculcation of virtuous principles and good habits, all resulting in the reformation of men. Thomas H. Selby, Esq., the President of the institution, addressed the Board and made his report, after which J. B. Crockett, Esq., delivered an interesting and valuable address; just such an address as would be expected from a gentleman always ready to aid in a good cause. We hope to be able to print the address entire. These interesting services were closed by an excellent collation spread in the hall. Several ladies graced the scene by their presence, and added to the importance of the event.

## "Grizzly" Sheared—Forty-two Pound Fleec.

Messrs. Flint, Bixby & Co., San Justo Ranch, Monterey county, have lately sheared their great merino buck "Grizzly," and as was predicted, he goes ahead of everything in weight of fleece, not excepting even the coarse-wooled sheep. Indeed Mr. Flint is satisfied his merinos surpass any other variety, not only in quantity of wool (saying nothing of its fineness and greater value), but also in carcass, for mutton. "Grizzly" he does not place so high for symmetry of form; but he goes enough on fleece to make up for everything. Think of a merino fleece weighing forty-two pounds! Here is the certificate of the fact:

SAN JUAN, May 13, 1859.  
The undersigned were present when was shorn a French merino buck, imported by Flint, Bixby & Co., aged three years past. The fleece, we were told, was the growth of fourteen months and ten days. It was in very handsome condition, and unusually free from accumulations of dirt before being washed, and immediately after being shorn (in our presence) it was found to reach the extraordinary weight of forty-two pounds.

J. W. LEIGH,  
N. C. PETERS,  
F. MYERS,  
W. H. KOOSER.

**YOSEMITE VIA MURPHY'S.**—Desirous of giving all the information we can to the lovers of the beautiful, we have taken pains to ascertain all the various routes to the Yosemite, and to give each and all; and as there are parties who by kindred ties have friends in various locations who are there visiting, we may enable them to accomplish by a view of nature a double good.

By a letter received from Murphy's we learn that Dillon & Co.'s line of stages now run regularly, and can go from Stockton through to Murphy's in a day, a distance of sixty miles, a fine carriage road all the way; and from Murphy's is the only perfectly good road to the Big Trees. We knew of several parties who went through the last year even to the Trees in a day. There will be an extra effort made the present year to meet the wishes of the traveler, and

## DOMESTIC SUMMARY.

The weather at La Porte, Sierra county, was cold and windy during the latter part of last week, unlike the usual pleasant May weather of that place.

In the rear of Dr. Brown's office, above Stony Point, Placerville, is a well defined vein of talc, or what is familiarly known as French Chalk. There is also a vein of beautiful white marble in the same quarry.

The San Jose Tribune tells of a "little incident" that occurred on a recent trip of the mail stage from Oakland to that place, winding up the account with the assertion that there was one more passenger aboard, on its arrival, than the way-bill called for. Fast!

In the garden of Mr. F. Joseph, Placerville, is a pear tree, only two years old and six feet in height, which now contains one hundred and seventy-five pears. Mr. Newbauer (states the Observer) has also some young apricot trees, which are so heavily burdened with fruit, that they have already been propped to support the limbs.

On Monday last, the Rev. Mr. Shuck, of Sacramento, was severely injured by being dragged seven or eight hundred feet by a mare he was leading—his leg being caught in a coil of the rope. He is terribly lacerated and bruised, but without injury to head or spine, or having any bones broken or dislocated. He is recovering.

Ripe cherries have been banded the editor of the Stockton Republican by Mr. Inglis, as early as the 16th, of the "red heart" variety, and were grown in his garden in that city. The cultivation of this fruit has previously not been very successful in that vicinity, owing to the multitude of birds which devour it. A much larger quantity, however, will be raised the present season.

The Tehama Gazette is informed that Mr. A. H. Owen, while fishing for sturgeon in the Sacramento, a few nights since, hooked a monstrous fish of that description, which measured seven feet nine inches in length, and weighed two hundred and twenty-six pounds. When opened, three large stones were found in the stomach, the largest weighed one and a half pounds and the others a pound each.

On Saturday, the 7th inst., the final action was taken by the Board of Directors upon the contract for erecting their Fair Building in Oakland, which is to be completed on or before the 10th of July. Great interest is being manifested in the coming Floral Fair; and, judging from present appearances (remarks the Alameda Gazette), it will be a magnificent exhibition. Besides the Floral Exhibition, the premium list includes the Fine Arts.

Persons just in from Lake Valley (says the Placerville Observer) state that freight wagons are now constantly crossing the Summit of the Sierra Nevada without difficulty, so that we shall probably have no other hindrance to trade in that direction until next winter; and by that time, it is to be hoped, the necessary arrangements will be made to keep the route open. This can be done with little trouble, if attended to in time.

At Johnson McLain's diggings, on the South Fork of Feather river, four miles beyond Grass Valley, a snow slide occurred on the 10th inst., breaking a dam of Mr. McLain's and also destroying a large stone belonging to him. The latter is at the present time (says the La Porte Messenger) covered with an immense pile of snow, fifty feet deep. It will be impossible to make any repairs before August, as the snow, in all probability, will not disappear till that time.

The Brookings stampede has quieted down at Placerville. In the excitement, hundreds rushed to the new Dorado, and it is needless to add, most of them have been disappointed. All agree, however, that a valuable gold field has been discovered, which will some day prove rich; but, at present, it is unavailable, on account of the almost total absence of water for mining purposes. The Observer remarks: We are thoroughly satisfied that the discovery is no humbug; and, from the fact that the new diggings are in a range with the rich placers of Indian Diggings and Grizzly Flat, we shall expect the new mines to be quite extensive, when thoroughly explored.

At San Jose recently, a meeting was held to consult upon the propriety and feasibility of constructing a Railroad from San Jose to San Francisco, and raising the sum of two hundred thousand dollars by hypothecating the credit of the county to aid in the construction; and a committee appointed to prepare an address to the people of Santa Clara county on the subject. The committee have performed the duty assigned them, and give the estimate for the first division of the Road (from San Jose to San Francisco creek, eighteen miles), at \$397,536—including cost of construction, depots, stations and rolling stock complete.

We are informed that a fatal disease has broken out among the cattle, in the vicinity of Major Bradley's, upon the Calaveras, says the San Joaquin Republican. Several valuable cows have been lost, and more are dying daily. The nature of the disease is not known. A farmer informs the Republican that his cow was taken with the disease, and, after catching her with some difficulty, he inserted a knife into the animal at the usual place where they are bled, but nothing but air pushed out. Some of the dead animals have been opened, and it is said that the appearance of the flesh under the skin resembles that which had been beaten to a jelly. [This sentence is significant, and reminds us of a case we published recently in our journal.]

HOOPE VALLEY.—The Northern Californian (Humboldt county) remarks: We are informed that this fertile valley presents a finer appearance than ever before, so early in the season. The crops are all in the ground, and looking well. Over twelve hundred acres of wheat have been sown, and other crops in proportion. There will be this year quite a large quantity of several varieties of fruit—peaches, grapes, etc. The United States troops, under Capt. Underwood, have put in a crop, and are making improvements in the way of roads; and only awaiting orders to commence the erection of the necessary buildings for a garrison. The farmers are now (May 4th) commencing the first hoeing of their corn, making roads, fences, etc.

DISTRESSING—Two Women and Five Children Burnt. We learn from the Red Bluff Beacon, of May 12th, that the house of Col. E. A. Stevenson, about three miles from that town, on the opposite side of the river, was burned to the ground the previous night, consuming his wife and three children, and Mrs. Kronk with her two children. Mr. Kronk (Col. Stevenson's overseer) was in the house, but managed to escape, though so badly burned that it is doubtful about his recovery. Col. Stevenson was formerly Indian Agent at the Nomes Lakes, and was absent at Tehama at the time of the fire. It is generally supposed that the fire was the work of Indians. Another Fire.—On Friday night, the 13th, the citizens of Red Bluff were alarmed by seeing a fire on the opposite side of the river. It proved to be Mr. Seth Hooker's house, situated about three miles from Col. Stevenson's, and five miles from that town. When parties from town arrived, the building was entirely destroyed. It is believed to be the work of Indians, as

Mr. Marshall, who was sleeping in the house and who is an old mountaineer, says positively that he heard Indians immediately before the house was fired.

The trail from Downsville, via City of Six, to Forest City, was traveled by mules on Monday, the 9th inst., for the first time this Spring.

Houses are more in demand at present in Sacramento than at any period within the past two years, it being actually difficult to get a good tenement at moderate rent.

A lot of one hundred and seventy-five acres of land, situated upon the Weber Grant, outside of the northern township line, was sold recently at twenty dollars per acre. The improvements were of little value.

COOK CREEK is the garden of Placer county, says the Press. Messrs. Ewing, Fairchild, and Chamberlain Brothers, have over three hundred acres of fine wheat, which is heading out, and expected to yield twenty-five bushels the acre. The grass in Placer county is very fine.

LIEUT. Beale reached this city, a few days since, from the crossing of the Colorado, which he left on the 6th inst. Lieut. Beale brings to California two of the Barcelona Jacks, imported from Spain, especially for California. They measure fifteen hands high, and came in fine order.

Mr. Watkins, of Siskiyou, is reported to have said: That though many of the members of the Legislature complain of their per diem not being sufficient to pay their expenses, yet he succeeded in sinking (in his vest pocket) about four hundred by the operation.

STOCK.—The Sacramento Bee gives the following figures as the ruling auction rates at the Cattle Market. Sales have improved of late, and there is a fair demand for cattle of every description, at the following rates: Good American buggy horses, \$300 to \$400; Good American work horses, \$200 to \$250; Good Spanish saddle horses, \$80 to \$100; Second-rate Spanish saddle horses, \$40 to \$60; Spanish mares, \$30; Good pack mules, \$75; American work cattle, \$125 to \$150; Milch cows, \$60 to \$65. No Spanish cattle in market.

The farmers in Tehama county are making preparations to commence hay harvest. The Beacon says the crop will be a short one; and that the wild oats are being entirely eaten and killed out: land which has produced two tons of good oat hay to the acre, now produces nothing but weeds. It will be but a few years before grasses will have to be sown to fill the desideratum; indeed, a great portion of the hay this year will be made of volunteer wheat and barley. Without some unexpected hindrance, the wheat and barley crop of Tehama county will be an abundant one.

The Northern Californian says, we hear cheering news from the mines of the Klamath and Salmon. The miners generally are at work, and making money. A miner writes from the North Salmon: "I do not know a claim that does not pay good wages—from six to ten dollars a day to the man. The claims on the river generally pay well, and will not be worked out for ten years. There are a great many Chinese coming on to the river; plenty of room, though we would rather have white men. The warm weather is rapidly taking the snow off the mountains. We hope to see it off soon, so that cattle may be driven over, as we are getting tired of salt beef."

The Ranchmen in the vicinity of Double Springs, Calaveras county, recently held a meeting, at which they passed resolutions "ruling out" the large valley stock-breeders, who have hitherto been in the habit of grazing their flocks in the hilly regions of that county. The ground taken by the ranchmen is (says the San Andreas Independent), that these valley folks have no interest here, pay no taxes into our treasury on the value of their stock—the taxes are collected in other counties. The Independent says the Lowlanders "got up and dusted," driving their cattle from the land of crag and fall to where the serpentine Joaquin drags her muddy current through muskrat roosts and gopher villages.

New and unusually rich diggings have been found at Gold Cañon, twenty-five miles from Genoa, Carson Valley. The mines at that locality have been worked for several years past, but never proven very remunerative until quite recently. The "dust" is fine scale gold, and probably worth sixteen dollars an ounce. The Placerville Observer, in describing the new diggings, says they are at the base of a high mountain, and the gold is found in the debris of a rich quartz lode, which crops out at the surface, and has already been traced a distance of six miles along the foot of the mountain. There are at present about forty miners at work, with rockers, who average ten dollars a day to the hand. The great difficulty in the way of successful operation is the scarcity of water. The only supply the miners now have, is obtained from a spring, situated one-fourth of a mile distant, and conveyed to the diggings through a small flume. An abundance of water can be obtained at either Clear Creek or Mill Creek, in Carson Valley, and the soil and grade favorable; distance, about twenty miles.

"BLOOD WILL TELL."—On Saturday and Sunday last, our city (says the Placerville Observer) was favored by the presence of a large body of Piute Indians, who have been spending the Winter somewhere in the southern portion of California, and are now returning to their old home, east of the Sierra Nevada. The Piutes are fine-looking savages, and are, both mentally and physically, vastly superior to our spindle-shanked, grasshopper-fed neighbors. They are conscious of their superiority, and it is amusing to notice the air of contempt which they assume in presence of the Root-Diggers. Last Saturday, a Hangtown Indian came rushing into a store and informed the merchant that one of the Piutes had robbed him of his hat. The merchant stepped to the door, and sure enough there stood Mr. Piute with the appropriated sombrero under his arm. "Did you take that hat from this Indian?" inquired the merchant. "Yes!" was the laconic reply. "Well, what did you take it for? It is not yours, and you have no right to rob this Indian," continued the gentleman. The Piute brought the discussion to a close by indignantly exclaiming: "Hangtown Injin nothing but d—d Root-Digger, anyhow!" On Sunday, quite a number of the Piutes attended church, and behaved admirably during the services. As a further proof of their superiority as a race, when they passed through Main street on Saturday, several of the squaws were comfortably seated on horseback, under the shade of umbrellas, while the males footed it and carried the papposes.

A NEW STEAMER.—A new steamer is being built at Steamboat Point, in this city, for the California Steam Navigation Company, and is designed to run between this city and Sacramento. The following is her dimensions: Length on deck, 250 feet; length over all, 260 feet; breadth of moulded beam, 40 feet; breadth across guards, 64 feet; depth of hold, 10 feet; draught, 3 feet 8 inches; light; tonnage, 950 tons. She will have a low pressure beam engine, cylinder 60 inches in diameter and 12 feet stroke. Her entire hull is to be built of timber grown on the Pacific coast. She will be the largest river boat in the State, and in style and finish she will excel any boat on the Pacific coast.

## Yosemite via Coulterville.

We present the following letter from the old pioneer at Coulterville, mine host of Coulter's Hotel. It will be perceived that the time we named, say from the first to the second week in June will be the time. We are pleased to announce the fact of the opening of a good hotel and boarding house. We have been favored by the proprietor of another house, Mr. G. H. Hite, with complimentary tickets for the opening ball at Yosemite, on the 14th of June of which we shall speak hereafter.

COULTERVILLE, May 16th, 1859.

EDITOR FARMER: I received your letter this day and hasten to reply. We now have about ten men on the Yosemite road repairing it, and by the last day of this week it will be ready for traveling. At Crane Flat there has been considerable snow, and will be some for two weeks to come; but it is not more than from three to five miles. I have no doubt you recollect the place; it is about one and a half miles this side of Crane Flat, and three miles beyond, until you begin to descend to the first creek. You recollect two beautiful streams before you come to the cascade. At one there was a bad mud hole; those as well as the cascade are now bridged, and I expect our road is the only accessible way to the valley for the next month. We now have two fine livery stables with as good a stud of horses as can be found in the southern mines. The price for animals this season I believe is to be about \$2, at least for large parties requiring pack animals. We are determined to make this the route to Yosemite. Mr. and Mrs. Holton, formerly of Sacramento, go up next week to open a house where ladies will be certain to find care and accommodation to as full an extent as could be expected in opening so new a place, and under the circumstances. This will be the season to visit the valley; such an opportunity may not occur for many years. There is a party of ladies and gentlemen to leave here on next Monday for the valley. The stages run through from Stockton now in one day, leaving Stockton on the even days of May, odd days of June and July, even days of August, and on the odd days of September and October, arriving at Coulterville the same evening. Any information that you or parties wishing to visit Yosemite may desire, I will give, and attend to and make arrangements so that parties can leave the following day if they desire.

I have not got fixed up yet in as good style as I would wish to be, but what my house lacks in appearance, I will make up in the way of something to eat and attentions. Yours truly, G. W. COULTER.

SIX-BOWED WHEAT.—We have been shown a specimen of wheat which was planted in February, 1858, by Mr. Kaller, on the Hogan road. It does not exactly resemble either the Mormon or the Egyptian wheat, having no beard. There are six rows of kernels upon each head, containing ten in each row, making sixty in a head. We have consulted sundry gentlemen of agricultural genius, who cannot enlighten us as to its nativity. Mr. Kaller planted two heads at first, and in a few weeks will have four bushels, which will plant four acres.—[S. J. Republican.]

## SPECIAL NOTICES.

THE Ladies' Electro-Chemical Bath.—Exactly so—a suite of Baths, with a well furnished reception room, has been assigned exclusively to the ladies who patronize his institution, by Dr. BOWEN, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A skillful, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as a cure for neuralgia, rheumatism, and the other "ails that flesh is heir to," as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than "sugar-coated pills," and how much better, those can most truly tell who have "thrown physic to the dogs," and cleave to these health-giving baths.

MRS. P. E. ROGERS—Family Sewing.—We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs has been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

THE GENUINE PITTS' MACHINE.—T. OGG SHAW'S, is the ONLY PLACE where the Genuine Pitts' MACHINE, made by John A. Pitts, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. (12) T. OGG SHAW.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it: the white-washing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "rays." My Ambrotypes were not exhibited at the last Fair in the city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest artist.

1. Corner Montgomery and Sacramento streets.

The Oxygenated Bitters.—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Cough, Loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acidity, Stomach Sourness, Nausea, Headache, Neuralgia, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Farmers, and others, testify, are the only safe, certain and powerful specific for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race. These Bitters were discovered by Dr. George B. Green, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drugs in their nature, tonic, not stimulating; retaining their virtues in any climate; they are a "combination and a force" of medicinal ingredients, which know no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character the disease may be, no matter that it has baffled the skill of the physician, and restored the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is here to the written certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by—JAMES M. MORRIS, HENRY JOHNSON & Co., and RICHARDSON & Co., San Francisco; CHAS. MORRIS, and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

To CORRESPONDENTS.—We have letters from our esteemed Parisian correspondent "Le Docteur," dated April 7th; they will appear soon. Several new correspondents have favored us by the late Atlantic mails, all of which shall have early attention.

"Leaves from my Journal," will appear next week.

Rusticus is on file.

"Roaming Thoughts" will soon appear.

Several valuable communications came to hand at a late hour, which shall have due honor.

## MAMMOTH GROVE HOTEL.

THE undersigned respectfully announces to the public that they have recently purchased the above premises, and have renovated and refurnished the hotel in such a style as to merit the patronage of

A FIRST CLASS HOUSE.

By reason of experience and strict attention to business, they hope to be able to please all who may favor them with a call.

The proprietors intend to render the Mammoth Grove what nature designed it should be of the

Most Desirable and Pleasant Places

of resort for spring, summer and autumn pleasure seekers in the State. We need hardly add that the Big-Tree Grove is among the grandest wonders of the world.

GOOD FISHING AND SPORTING

within five miles of the hotel. Distance from Murphy's fifteen miles; from Cave City, twelve miles; from San Andreas, via Murphy's, thirty-five miles; via Cave City on horseback, twenty-seven miles. By Murphy's, good roads for carriages.

## Greatest Labor-Saving Machines of the Age!

## CALIFORNIA INVENTIONS!

## PECK'S SANTA CLARA HEADER AND HARVESTER!!

THE UNDERSIGNED HAVE PURCHASED OF Edmund Peck,

All his right, title and interest in and to his newly-invented PATENT HEADER AND HARVESTER, to which was awarded, at the County Fair, held at San Jose, September, 1858, the FIRST PREMIUM, over the Illinois (or Indiana) Harvester, and all other Machines on exhibition.

We shall manufacture for the present harvest 50 Machines of the above description, and are ready to receive orders for the same. Parties wishing to purchase Clippers or Harvesters, will please give us their orders. We design making the best Machine of the kind ever offered to the public. This Machine combines many useful improvements, and was pronounced by the Committee the greatest invention of the kind. One of the above machines cut, last season, OVER ONE THOUSAND ACRES of GRAIN, and the expense of repairs did not exceed TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it cannot fail to take the place of all other machines of the kind. Mr. Peck has displayed great ingenuity and judgment, the advantages of which every farmer should avail himself, and we believe the community at large will be much benefited. We have already received, through Mr. Peck, from those who saw them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in THREE DAYS, one machine cut EIGHTY-ONE ACRES of Grain, which is more than has ever been cut, in the State of California, by one machine, in the same time.

Send in your orders. We mean what we say. Recollect the place:

33 Sacramento street.

THOS. OGG SHAW, GEO. H. MONROE.

The advantages we claim the Peck Header or Harvester possesses over any other MACHINE of the kind in the State, are:

1st. Its being a California Invention, and got up by a practical farmer, and well adapted to the wants of that country. The wheels of this machine being iron, and not liable to shrink or swell.

2d. Its principle of raising or lowering. As the machine evenly leveled, a child can raise and lower it with perfect ease while in operation, requiring no delay.

3d. It cuts as low as any Reaper in use, and can be raised to a height of three feet, in one minute.

4th. Its manner in which the machine is guided, it being so constructed that a boy of ten years can guide it.

5th. It has no side draft, as both wheels are of a size, and the weight is equally divided.

6th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.

7th. It takes less team to propel it.

8th. It is more simple and is easily understood.

9th. More substantial and less liable to get out of order.

10th. We can cut and stack with this machine, grain in good condition, for \$2 50 per acre, while in the old manner of cutting, it costs at least \$5 00; leaving you to judge as to the saving this machine has over any other.

11th. This machine is so constructed as to save all the grain.

12th. You can cut with four horses, from twenty to thirty acres per day.

13th. The greatest advantage of all is, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

Report of the Committee on Reapers, Mowers, and Thrashers.

## Ladies' Department.

## WOMAN'S DEVOTION.

BY C. L. S.

I have waited for his coming,  
With a weary, fainting heart—  
I have watched the stars fade—  
And have seen them all depart.

Oh! the solemn hush of midnight,  
And the long, long hours are past;  
And upon my weary vigils,  
Bath the morning dawned at last.

And the shadows o'er the hill-tops  
Slowly vanish one by one;  
For their dusky gloom may never  
Mar the glory of the sun.

Oh! the purple clouds and golden  
Form a glorious array,  
As they herald now the coming  
Of the mighty God of Day!

It hath burst upon my vision;  
But it may not bid depart,  
All the dark and gloomy shadows,  
That enshroud my shivering heart.

And the fragrance of the blossoms,  
As it floats upon the breeze;  
And the birds' wild, thrilling music,  
And the waving of the trees,

Can charm my soul no longer—  
For, oh! to me more dear  
Is that light and well-known footstep,  
I list in vain to hear!

O cease my heart's wild throbbing,  
For the weary watch is past—  
Far down the winding pathway  
Is the loved one's step at last.

Forget my lips their chiding—  
I'll meet him at the door;  
And joyfully I'll welcome  
The transient hour once more.

[N. Y. Mercury.]

[For the California Farmer.]  
LINES TO MY BROTHER.

BY BERTHA BAY.

Phoebus as the summer showers;  
As the dew upon the flowers,  
Or the treasure in the sea,  
Are thy whispers unto me.

Gentle as the evening light;  
Holy as the stars of night;  
Cheering as an infant's gleam,  
Are thy whispers unto me.

Though before my longing eyes,  
Oceans roll and mountains rise,  
And thou art so far from me,  
Very near thou seem'st to be.

Though no more thy songs of mirth,  
Win away my heart from earth;  
Nor thy tender, love-like eyes,  
Chase the shadow from my skies;

Though forever, save in heart,  
We must wander far apart,  
Thou art now, and e'er will be,  
Fond and faithful unto me.

Let the mullen ocean roll,  
Though we dwell as pole from pole,  
Only can the gleam of space,  
Draw a veil across the face.

[For the California Farmer.]

## The Glories of Spring.

"Beautiful thoughts can never die."

Editor FARMER: Spring comes tripping lightly  
over the greenward, scattering here and there  
handful of bright blossoms, bearing upon her  
fragrant breath the spell of some fairy queen,  
bidding the leaves unfold and tender grasses to cover  
the earth. She kisses the maiden's brow, and  
brightens the rose on her rounded cheek; flings  
gladness and sunshine around all hearts, and de-  
ludes even age with a dream of youth. Men go  
cheerily forth to toil, thankful for the soft light of  
early dawn, which ushers in the splendor of each  
"new created day," and birds join in merry anthems  
for the warmth, the glory, and loveliness of this  
glad season. Homes grow in beauty, while fair  
hands wipe off the stains of winter, an dreariness  
each little room for comfort and convenience; or  
train outside the clambering vine, and plant the  
flowering shrub.

Oh! this is a glorious season for free country  
denizens; the season for rambling and healthful  
enjoyment; a season for active labor. This is the  
seed time, wherein to plant, and water with faith,  
awaiting the harvest. And while we brush away  
the dust from our hearts, it is well also to destroy  
the cobwebs that are accumulated about our  
hearts; to brighten up the beautiful pictures  
which hang on the walls of memory; to make the  
windows of our souls so bright that loveliness alone  
may enter, and charity take up her constant abode.  
Each human life is a springtime, wherein birds of  
hope sing gladly, and flowers of affection success-  
fully bloom; where shadows gather and afflictions  
fall like refreshing showers, causing the heart to  
droop for a moment, that it may shine the more  
brightly in the radiance of its Father's love.  
When shall the harvest be? God only can ap-  
point it; but He has promised that it shall not fail.  
In the morning sow thy seed, now while thy day  
continues; while the spring falls gently upon thee,  
and the dew of heaven shall moisten and nourish,  
and the warm sun shine on thy labors.

May-day is almost at hand, but our climate is too  
cold for its just celebration. It brings us a sweet  
dream of songs we have heard in childhood, or  
tales we have read; but as an actual gala-day it  
is all unknown. But if ever our feet press the  
soil of your beautiful State, and our eyes delight  
in its loveliness, we hope to unite with the children  
in weaving a fair, bright garland, and crowning a  
"Queen of May." May the skies be fair, and breezes  
fan gently the brows of those loyal ones, who  
gather with song and dance to offer a floral tribute  
to the last sweet daughter of spring; and with  
this wish I bid you a "gentle good-by." SALLIE.  
April 19, 1889.

If thou art master, be sometimes blind; if a  
servant, be sometimes deaf.

Woman's Wrongs and Sufferings—Woman's  
Struggles and Triumphs.

Can you feel darkness? Can you feel light?

The chilling influence of the one, and the pleasure  
inspired by the other, is best appreciated when we  
pass from the darkness of a dungeon to the warm  
beams of Heaven's sun and light again. The painter  
may create upon the canvas the dark and angry  
thunder-cloud; he may paint the forked lightning,  
passing to and fro from cloud to cloud; he may  
also gild that canvas with the glories of the rising  
sun, or the golden clouds of evening; but neither  
painter, sculptor, poet, orator, or writer, can depict  
to the full extent the wrongs and sufferings of  
Woman, even in the Nineteenth Century. Viewed,  
as she is by the masses of mankind, as inferior to  
man, as merely a helper, drudge, hireling—servant,  
plaything, slave! for the moment woman is placed  
below her station of equality with man, she be-  
comes his slave; for man dares not insult or degrade  
his equal! Woman must be raised by public senti-  
ment to her appropriate place—equality with man,  
in all those relations that tend to elevate humanity;  
beyond this sphere woman should not go. But,  
in all those walks of life that affect the physical,  
intellectual, moral and social nature of the child,  
woman should be equally educated with man.  
When this is done, the darkest cloud that ever  
rested on human hopes and human happiness will  
pass away. How little do the "lords of creation"  
think of the wrongs and sufferings of woman!  
How few men have ever been where the "shot  
strikes!" How few have ever given an hour to  
look into the history of suffering woman! How  
few have ever gone to the home of the widow and  
the fatherless! How few have comforted the help-  
less orphan!

Thank God! there are some Howards, some noble  
philanthropists, even in this land of the "golden  
calf," though the mass worship Mammon, until  
insanity, or heart-disease, ends their strife. Could  
the veil be lifted from the hearts of thousands of  
suffering women in our land; ay, even here in our  
own State; nay, in our very city, what a picture  
would be revealed! A Guido, a Raphael, or a Reu-  
bens, would lay down their pencils, ere they would  
attempt the sketch. There is an amount of heart-  
agony little dreamed of; and rarely does the sterner  
sex trouble themselves with this suffering, or strive  
to offer relief. This is *Woman's Mission*, for woman  
has been where the "shot strikes."

But it is not our purpose further to portray these  
scenes of suffering, but only to awaken attention  
to this all-important theme; and hope, that if the  
sterner sex will not feel these wrongs and aid in  
their removal, woman herself will awake to the  
duty she owes to herself, and begin the work of  
her own redemption; for man will never rise a  
redeemed creature, until the author of his being  
stands wholly free from that ignorance which en-  
velops the physical, intellectual and moral nature  
of the child-man, and fully understands the law  
that creates, guides and controls the affections,  
which govern the life of the soul. How many  
women, of splendid intellect naturally, have been  
kept crushed down through life, and gone to the  
grave unheard of and unwept, by reason of this  
tyranny which restrained the freedom of woman.  
How many are now praying for the day, when every  
shackle shall be broken, when woman shall stand  
forth as the true helpmate of man—to aid him in all  
that pertains to his happiness. Where is the man  
that does not honor the really educated woman?  
Where is the man that does not wish such a woman  
for his own wife? And no woman is educated, that  
does not thoroughly understand all the duties of  
the household, in its domestic character.

But to our purpose: We are often applied to by  
those of the softer sex for information relative to  
the opportunities offered in the various departments  
of education, including the accomplishments of  
music, languages, embroidery, etc.; and often in  
regard to the opportunities offered to women for  
literary efforts. And, in these inquiries, we some-  
times find that suffering woman stands revealed—  
in her efforts in these departments to obtain a  
livelihood for herself, and for those whom sudden  
death or change of fortune compels her to come  
before the public in support of; and often, in these  
cases, while all may seem bright and beautiful  
without, the heart of that woman feels a weight of  
sorrow that would crush a man; and we often find  
a noble heroism displayed by woman, where man  
himself would shrink, falter, and despair.

A case recently came to our notice of a lady,  
who, by the sudden death of one on whom she had  
leaned, finding herself surrounded by unlooked for  
poverty, seeks employment in the walks of litera-  
ture, or as a teacher in the cause of education.  
From a private letter, we now present a few pas-  
sages that speak the woman and the mother. If  
this is not nobility of soul; if this is not heroism,  
we know not what is. And shall not such hearts  
bear words of cheer? Here is one case for the  
reader to reflect upon. Here is one case of woman's  
suffering; but there are thousands darker. Here is  
only pecuniary or physical suffering; there are  
darker shades in woman's history; of which here-  
after. But, to the extracts:

"The necessities of my case deprive me of the  
merit of modestly holding back until I am called  
for. Poverty, like a hungry wolf, dogs my steps;  
to turn back, or stop, or falter, is to fall into his  
terrible jaws. I must even struggle on through  
life, as I have done for the last five years. I must  
'paddle my own canoe' against wind and tide;  
and that, too, without any strong arm to help me.  
I must think for myself, act for myself; and try all  
means, possible and impossible, which afford even  
the remotest prospect of enabling me to make a liv-  
ing. Thus I again obtrude my affairs on your notice.

"Most truly, and most emphatically, 'by the  
sweat of my brow' do I gain my living; and, not  
mine alone, but also that of dear ones who depend  
on me. I have, literally, no fragments of time  
which I may spend in writing for amusement.  
I often find it a weary task to accomplish all that I  
have to do; and before I get through with my mul-  
titudinous and multifarious engagements, I droop  
with utter weariness; the spirit indeed is willing,  
but the flesh is weak. Teaching, studying, reading,  
writing, sewing, cooking, and attending to children,  
are none of them onerous duties, taken separately

and singly, but viewed as the labor of one individ-  
ual, they become a herculean task. As this is a  
mild description of my own case, you will readily  
conceive that I could not have been induced to  
take this burden upon my shoulders by anything  
but stern necessity: poverty, of course, is the cause  
of it, and not any natural taste on my part for  
hard work. And this same poverty induces me to  
try if it be possible to increase my limited means,  
by making an arrangement to contribute to your  
paper. Perhaps I am very bold in offering my  
services. I know not what you may think on the  
subject; but this I know, poverty will make any  
one bold; the wants of my children make me bold;  
the knowledge that there is no human being on  
earth to whom I can look for succor, makes me  
bold; the thought that when I falter we must  
starve, makes me bold. So I brace myself against  
refusals, repulses, shocks, and all that is disagree-  
able; I determine that it is better to try, and fail,  
than never to try at all; I shut my eyes as to what  
any one will think, and, conscious that I am trying  
to do for the best, I go on."

Noble woman! Who would not readily do all in  
their power to aid and encourage one thus gifted  
with such readiness to meet adverse fate. It is such  
women that make homes what homes should be.

"And if a trouble dimmed their golden joy,  
'Twas outward dross and not infused alloy;  
Then Home knew but affection's look and speech,  
A little Heaven above disension's reach."

[For the California Farmer.]

## The Agents of Omnipotence.

I HAD been reading the wonderful story of crea-  
tion, as related in the first chapter of Genesis,  
when I fell into a train of thought as to whether  
the mighty effects did follow almost instantane-  
ously the fiat of the Creator, as the time of even-  
ing and morning seems to indicate; or whether the  
eternal days of God were not thus spoken of in  
order that it should have greater effect upon the  
undeveloped minds of the primitive inhabitants of  
earth. For, God reveals himself to mankind  
accordingly as they are able to understand His  
nature and attributes. First, by His almighty  
power, teaching them to fear Him; and man's  
obedience was through fear until in Christ was re-  
vealed God's love to man. While thus musing, I  
seemed to hear, as it were, the voice of an angel,  
saying, "sink down ye mountains, and ye valleys  
rise." Filled with wonder and fearful suspense, I  
looked out upon the hills expecting every moment  
to see the mighty convulsions of earth to produce  
this great result, when waiting long and perceiv-  
ing no change or commotion, I ventured out, and  
seating myself by the side of a large rock which  
sheltered me from the winds and drifting sands,  
my attention was soon attracted by some beauti-  
ful mosses that grew upon the side of the rock.  
While considering the delicate structure and almost  
invisible beauties of these tiny parasites, clothing  
the rugged rocks with artistic loveliness, I began  
to ask myself if this was all the use and duty they  
had to perform in the economy of nature. On  
removing a piece of moss from the rock, I saw  
that beneath, the hard granite crumbled to my  
touch, and as the wind swept by, it carried away  
the loose particles and dropped them in the valley  
below. Then I knew these were the agents of  
Omnipotence, that would "bring the lofty hills low  
and make the rough places smooth." Then, said I,  
let not woman be discouraged, though her labor  
and influence be like that of the clinging moss,  
since "God often chooses the weak things of this  
world to confound the wisdom of the wise." "Nei-  
ther will his word return unto him void, but  
will accomplish that whereunto it is sent;" nor  
can the puny arm of man stay for a moment his  
eternal decrees. Woman has something more to  
do than to be the mere ornament of man, or play-  
thing of his idle hours; but she must labor by  
gentleness and love to soften and spiritualize his  
earthy nature; and to this end God has given her  
the power of moulding the germ of both the body  
and mind; but if she proves recreant to this trust,  
and lets the golden moments pass, she may strive  
in vain for that influence, which can never be re-  
gained, for "as ye sow, so shall ye also reap."

EDITH MONTAGNON.

SIERRA COUNTY, April 23d, 1889.

SOCIABILITY.—The ladies of Elyria are having a  
series of social visits without formality, without  
full dress, and without elaborate refreshments.  
Gentlemen come in after business, and they have  
a good time without any parade.—[Exchange.]

Let the ladies of Elyria be invited to send a  
delegation to California, if we cannot establish  
this excellent plan without. The foolish and false  
notions in regard to social life, have prevented  
many young men from entering into the married  
state. Young men say emphatically, the girls are  
not educated to be wives, but fashionable ladies,  
and they cannot afford to support such.

BEAUTIFUL PARLOR ORNAMENT.—Take *Pine burs*  
of various sizes, that are partly opened, and sprin-  
kle grass seeds within the leaves, or minute flower  
seeds (such as musk, sensitive plant, mignonette,  
nymphs, etc.), and place the cones in water.  
They will close up again to their original form,  
becoming solid cones. In a short time the seeds  
will vegetate, and spring in delicate leaves from  
amongst the laminae; and these will present to the  
eye a vase of peculiar beauty.

At twenty-four an unmarried woman is in the  
May-time of her existence. At that age her chance  
of marrying well is better than it was at any pre-  
vious period—because her judgment is better, and  
is more able to exercise a beneficial control over  
her imagination.

HOLLOWAY'S PILLS AND OINTMENT.—Sallow cheeks,  
dull eyes, a languid step, blotches and pimples on  
the face and forehead—all these proclaim the victim of dys-  
pepsia, and all these can be rapidly and durably cured  
by the use of these gentle, but thorough and irresistible,  
remedies.

Sold at the manufactory, No. 80 Maiden Lane, New  
York, and by all druggists, at 25c., 50c., and \$1 per  
box or pot.

CAUTION.—In our changeable climate, coughs, colds,  
and lung diseases, will always prevail. Consumption  
will claim its victims. These diseases, if taken in time,  
can be arrested and cured. The remedy is Dr. Wistar's  
Balm of Wild Cherry.  
Buy none unless it has the written signature of "I.  
Butler" on the wrapper.

GROVER & BAKER  
SEWING MACHINES.  
REMOVAL.

THE GROVER & BAKER S. M. COMPANY HAVING  
assumed the business heretofore conducted by  
MR. S. O. BRIGHAM,

For the Sale of our Machines in this City,

Take this occasion to announce our REMOVAL from the  
premises lately occupied by him, to the more

COMMODIOUS and CENTRAL STORE,

No. 118 Montgomery Street,

AND WOULD INVITE THE SPECIAL ATTENTION OF

Ladies,

And all who have an interest in

DOMESTIC ECONOMY,

And the Emancipation of the FEMALE SEX from the  
wearisome and overburdening Slave-work of the  
NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES,

The superior Excellence and unmistakable Advantages  
of which over those of all other Manufacturers, cannot  
fail to be apparent to the most casual inquirer.  
We have lately perfected, and introduced into this  
market, several

NEW AND IMPROVED STYLES,

Which, while embracing all the essential and exclusive  
qualities secured by the Original

GROVER & BAKER PATENT,

Have in addition many New and Valuable Improve-  
ments, and are simple in construction;  
make less noise, run faster, and perform

A Greater Variety of Sewing,

than any other Sewing Machine extant.  
The capabilities of our Machine are not limited to any  
particular description of Cloth Sewing, but ex-  
ecute with the most wonderful rapidity and nicety,  
Every description of Fine or Coarse Sewing,  
UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT

Can be procured of us, for either Old or New Styles of

Family Machines.

That our Machines may dispense their benefits through-  
out the State, in the shortest possible time, we

HAVE MADE A LARGE REDUCTION

from our former Rates, and with pleasure announce  
our Prices—from

\$75 to \$160;

Varying, according to size and finish.

For Bag-making,

And all Manufacturing where Sewing is required, our

MANUFACTURING MACHINES

stand pre-eminent, and their qualities are too well  
known to require comment.

Samples of Work and Descriptive Catalogs of  
Machines, Prices, etc., sent per mail. All Machines  
warranted. All orders for NEEDLES, DUPLICATE  
PARTS, COTTON, Etc., must be accompanied by Cash.  
GROVER & BAKER S. M. COMPANY,  
No. 118 Montgomery street.  
R. G. BROWN, Agent. 11-3m

THE "NE PLUS ULTRA"

or

SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE

(Under Howe's License).

MANUFACTURED BY THE GLOBE MANUFAC-  
TURING COMPANY,

339 Broadway, New York.

MAY BE TRULY REGARDED as the "Ne Plus  
Ultra" of Sewing Machines, and all who are wish-  
ing to find a Machine which is capable of doing any  
kind of Sewing for Tailors and Housewives, with a sat-  
isfaction heretofore unknown—should lose no time in  
ordering one of the PATENT LEVER MACHINES,  
which are to occupy a similar position towards other  
Sewing Machines, that a PATENT LEVER WATCH  
(and every one knows its value) occupies towards a  
Lepine or other second-rate watch.

This Machine makes the "Lock Stitch" which looks  
the same on both sides of the fabric, and which cannot  
be ripped.

PRICE \$50.

To all respects equal to Machines heretofore sold at a  
hundred dollars and upwards.

Specimens of Sewing done by the PATENT LEVER  
MACHINE, will be forwarded to any part of the country,  
upon the receipt of a postage stamp.

N. B.—An energetic and reliable Agent is wanted in  
every town and village of the United States and Cana-  
da, to sell the above named Machine. An advantageous  
arrangement will be made with the right kind of Mer-  
chant who is willing to have the exclusive agency.

Address—

GLOBE MANUFACTURING COMPANY,

12-3m 339 Broadway, New York.

JOSEPH GENELLA!

..AT THE..

PIONEER CROCKERY STORE,

180 and 182 Montgomery street.

Near Jackson street. SAN FRANCISCO.

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 27, 1859.

NUMBER 17.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$5 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### The Naturalization of Plants.

[We would invite the especial attention of all the friends of agriculture, everywhere upon the Pacific coast, to the following valuable essay upon the "Naturalization of Plants," from our excellent scientific correspondent "Agricola." It needs no further commendation at our hands, than simply to say that, from our own observations in California, the change pointed out by "Agricola," as resulting from the change of plants from one climate to another, has been observed by us, and often presented to our reader in years past; but not in so elaborate a manner as now presented by our able correspondent; and we hope this essay from his pen will be carefully studied, so that the good which such an essay may effect shall be fully realized by the agriculturists of our State.]

It is of considerable consequence to people settling in a new country like California, so unlike in many respects to those which the majority of us have left, to know how far they may succeed in acclimating the plants of their native soils, to the use of which they have been long accustomed, and are become partial; and likewise, whether they may not be able to introduce from more southern latitudes a number of new plants, which they have hitherto been disposed to view in the light of rarities or luxuries.

The subject of acclimating plants is one on which vegetable physiologists are by no means agreed—one portion of them affirming that the natures of plants become gradually changed, and another, that the supposed change proceeds from attentive cultivation, by means of which a local atmosphere is created for the roots of the plant, at least, to which its being qualified to live and thrive under new circumstances is owing. I think it will be found on examination that both parties are right.

The prime requisites for the vegetation of a healthy seed, under any circumstances, are heat and moisture; both of which exist in different proportions in all latitudes. If the seed of a plant from a southern climate is taken to the north, and planted in a watery soil, it would undoubtedly rot, even though the seed of a water-loving plant, because the water of the north is too cold to dissolve the gum by which it is cemented together. But if placed in a considerably drier soil than it was formerly accustomed to, it would most probably vegetate and grow, for the reason that such soil might contain enough of moisture to supply its wants, and would necessarily be warmer than a wet soil. Again, if the seeds of a plant which had been accustomed to grow in a dry soil were taken from the north to the south, it might be needless to expect them to produce perfect plants in a similarly situated soil, where the sun is much warmer; but if planted in a moist and cool situation, they might grow more luxuriantly than in their native place. We thus possess the means of assimilating the temperatures of the north and south, by creating local atmospheres for the plants of either.

To a certain extent such atmospheres are not confined to the roots of plants. The temperatures of plants participate to a considerable degree of the heat of the moisture with which their roots are supplied; and the greater the heat of the sun, the greater the quantity of cold water required from below for their relief, and the more quickly they evaporate it. Consequently, there passes through them a much greater quantity of moisture, and the heat of the plant remains nearly equal under very different degrees of solar heat.

If this were all, there might be nothing to prevent the transportation of plants from one climate to another, however different in their temperatures, provided we used ordinary caution in accommodating them to their altered condition. But the forces of Nature are not exerted for merely keeping plants alive, but to make them increase and grow. For this purpose they are furnished with peculiar structures, which, though bearing much resemblance through all their varieties, are not so exactly similar as to admit, in many cases, of those which live and thrive in one latitude being taken precipitately, if at all, to another of a different character.

Plants are principally composed of carbon, which is separated for them from the atmosphere by the solar rays; and the stronger the heat of the sun, the larger the quantity which is thereby separated from its former connections. If therefore we take a plant from the south to a northern latitude, it would, generally speaking, lose its color, from the want of sufficient carbon. If, on the other hand, we take a plant from the north to the south, the

spongioses of its roots may be unable to drink up enough of sap from the soil, to enable it to resist the solar heat, or assimilate carbon so fast as Nature provides it. It would thus be exposed to the consuming pressure of atmospheric oxygen without its natural defence, and would necessarily perish. The questions therefore occur: Do we, or do we not, possess the power of acclimating plants, so as to be able to modify and change their structures, that they may be qualified to endure the temperatures of other latitudes?

The power of plants to change their natures, to suit new conditions, may be best exemplified by a reference to those which grow in the same latitude under considerably different circumstances. Davis mentions two small watered meadows in Wiltshire (England), which from their unusual produce were denominated "the long grass meads." The grasses which produced so much hay were a puzzle to the neighboring farmers; but on investigation the crop was found to consist principally of one of the most noxious weeds of their cultivated fields, so altered in its character, from the different circumstances in which it was placed, as to have become a valuable forage plant. Many of the natural grasses are so tenacious of life as to be troublesome weeds; and this is owing, in several cases, to the facility with which they can accommodate themselves to various conditions. Of these grasses, some have knotted or bulbous roots when growing on dry land, which they change for fibrous roots when growing in boggy soils. On a dry soil, those bulbs form so many water bottles, in which to lay up moisture against seasons of scarcity. Where they are not wanted they drop them, and assume fibrous roots; and the moisture the soil, these roots keep the nearer the surface. These facts have frequently come within my own observation. But it is only a few plants, and those of an unusually hardy character, which are capable of thus transforming their shape, apparently at will. It may take others a series of generations to effect far less changes. But, as I said, the structures of all plants bear much resemblance, and afford modified exemplifications of the law by which their healthy vitality is maintained.

Let us see whether we cannot trace the cause of this change from knotted and bulbous to fibrous roots, and vice versa.

When such plants grow in a dry soil—being but sparingly supplied with sap, after coursing its way to the leaves, and assimilating carbon from the atmosphere, it gets so much thicker before it reaches the roots, in consequence of the evaporation which is constantly going on, as not to be able to leave them, except to a limited extent. It therefore of necessity accumulates in the roots. Where the plant is liberally supplied with moisture, no such stoppage occurs, from the circulating medium being more abundant, and in a more fluid state. We might be disposed to look on this stoppage, and the concretions thereby produced, as a disease, did we not find that in this way Nature often forms the most valuable portion of plants—for instance, in regard to turnips, beets, carrots, &c. Whether they form such concretions or not, no apparent disease occurs in the case of the coarse grasses referred to. Under either circumstance the plant thrives vigorously, and ripens its seed in abundance.

What takes place so perceptibly in regard to such plants, Nature has a tendency to do in regard to others. When plants, whose natural situation is a moist soil, are taken to one much drier, if she does not make the same provisions for their preservation during seasons of drought, she qualifies the roots to find supplies over a wider pasture, by extending them. The superabundant juices of the plant, thickened in consequence of a deficiency of their usual supply of moisture, are more adhesive in their character than formerly, and instead of dropping entirely out of the plant, attach themselves to the extremities of the roots, which consequently are increased in length, and thus are rendered more capable of collecting a larger quantity of moisture for the growing plant.

Amid these variations, it could not be supposed that the chemical composition of the sap of the plant would continue identically the same. In its endeavors to get approximately its usual quantity of moisture the plant is less choice in its selections. The thirsty mouths of its roots catch at everything liquid, which it bears along as unavoidable substitutes. To a difference in its sap the plant certainly manages to accommodate itself, within certain limits. Analyses of the same plants grown under different circumstances, or merely in different fields, never exactly agree, although no difference in their luxuriance may be perceptible. Nor is the difference in the proportions of their constituents confined to their stems and leaves; it extends also to the fruit. Thus the composition of the entire plant is so far capable of change.

When the seed of such a plant is placed in a soil similar to that from which it has just been taken, it is better qualified when a plant, to endure such inconveniences than its predecessor, taken from a soil in which its natural cravings were fully satisfied. So far as its components have become changed, they have been so under circumstances which conduced to qualify it for withstanding such contingencies. Even when a seed, it was not with-

out improved qualifications. As the heat of the sun dried up the decreasing moisture of the soil, the sap of the plant became in consequence of a more saline nature. It required this, however, to enable it to resist the solar heat. Except such had been the case, it could not have assimilated the large quantity of carbon which the increasing heat was providing for its relief. As things are, the diminution of the quantity of its sap prevents it from doing so to its accustomed extent; and the plant is consequently more saline in its composition than it would otherwise have been, the seed included. The consequence of the seed of the plant being so far changed in its nature is, that as it germinates and gets above ground, it proceeds to accumulate carbon from the atmosphere with more rapidity than it would otherwise have done, from the quantity of salts in the decomposing remains of the seed enabling it to do so. From this cause, the growth of the plant proceeds more quickly, and the more open pores of its different vessels enable it to assimilate the various matters necessary for its growth more easily. It gets acclimated, and becomes more vigorous; and in a short time its various components get so suitably balanced, that it may grow even more thrivingly than in the climate to which it was indigenous.

But this acclimation has to a certain extent changed the qualities of the plant. They may be better, but they are more likely to be worse; and equally so, whether it has been taken from a northern climate to a southern, or from a southern to a northern. It is prudent, therefore, in making such changes, to accommodate plants, by adapting the soil as much as possible to their previous tastes as regards temperature (by means of irrigation, draining, deep-working &c.), so as to make them retain as much as may be their former qualities.

In the North of Scotland, where my experience in farming has been chiefly had, the grain plants have to be renewed occasionally, to prevent their deterioration. When fresh seed has been introduced from the south, it is invariably of better quality, but the plants are more tender. By and by they get harder; but as they do so, the quality of the grain gets inferior. Hence the advantage of good cultivation has not escaped the attention of the most slovenly farmers, there; as by such means the grain retains its original quality, while the plant, though probably not quite so hardy as if grown in a worse-cultivated soil, is equally adapted for the improved soil in which it has been sown.

MILLINGTON, May 20, 1859.

#### The Tap-Root Question Moralized.

[Our Miner friend has put the finishing touch upon the "Tap-Root Question"; and we think the advocates of that foolish and absurd theory, may now be left to "moralize" upon the glory of their exploits and the honors they have won.]

EDITOR FARMER: I see, Colonel, that you intend running this question pretty deep into the ground, so I thought I would say a word or two upon the subject. As man is said to have his prototypes in nature, both physically and mentally, I think it is plain to be seen, that the tap-root of trees represents the selfishness of the human heart; for, whenever we see a person that has lived nearly all his life in one place, or those wholly engrossed with their own ideas and sentiments, and refuse to mingle or to exchange opinions with others, he is very much like that specimen of a tree spoken of, from Smith's Garden, with as many "feet" in the ground as "inches" above it; or, in other words, he goes in for self twelve times as much as for anybody else—taking root downward, but bearing very little fruit upward. Now, we all know, that the best thing that can be done for such people, and to deprive them of their narrow views and prejudices, is to remove them to some other place; and they will be found always to leave more or less of the tap-root of selfishness behind them, and the tender fibers of their hearts will strike out nearer the surface, where they can feel the genial warmth and influence of the sunny rays of human kindness; and will grow to be ornaments and blessings to their race. According to this theory, what shall be said of those who advocate the tap-root doctrine? A MINER.

GRIFFIN CANON, May 13, 1859.

EGGENTRIC DINNER.—A paragraph is quoted in Notes and Queries from the Inventor's Advocate, dated nine years ago, describing a dinner given at the baths of Lucca by a certain Lord B. The meat, fish, and vegetables, were at least two years old, having been preserved in a way that is now common; the carafes were supplied with water which originally belonged to the sea, but which had been changed into fresh water by a process then recently discovered; the wine had been fished up by means of the diving bell from the bottom of the Thames, where it had lain in a sunken ship more than a century; and the bread was made from wheat found by Lord B. himself in one of the pyramids, and sown in England. To a repast of this kind, we may say, we could now add a dry powder, liquefied even at the table into cream, the produce of the cow, and fruit of bygone seasons apparently freshly gathered. If such details had been given not a great many years ago in a fairy legend, they would have been criticised as impossibilities unnecessarily wild and extravagant.

#### Summer Fallow.

EDITOR FARMER: Your paper, of May 12th, contains two articles on Summer Fallow, which is becoming a topic of considerable note among the farmers, both here and in other sections of our State. It is a subject of no small importance, and should call the attention of all "tillers of the soil." Within the past two years, considerable discussion has been going on between the farmers, whether they would be benefited by so doing, and would it pay for the trouble.

Neighbor A. had a portion of his land broken up, and left dormant through the Summer; the next Fall he plowed an adjoining piece, and sowed the seed over the whole. When harvest came, his summer-fallow grain was a great deal higher, thicker, and better, than the piece that was sowed the same year; and, besides this, the crop yielded him a third more. His neighbors took note of it, and were fully satisfied of the importance and the benefit derived by so doing. They all say it is the best system to work by; and many have broke up their land the past Winter, so as to sow early and receive the benefit of the first rains.

Ground that is plowed and left loose, receives a benefit from the atmospheric air, the dews of the evening, and the rays of the sun. By plowing you exterminate the weeds, turning them in, and there lay, decomposing, enriching the soil. Some have an idea that shallow plowing will answer the same as deep. I hold to the latter, whether for grain, vegetables, trees, or shrubbery; for it leaves the mold loose for the roots to penetrate below the surface. There is a right and wrong way to plow. In laying out a land, say twenty feet, I have seen some plowmen, after going the first round, start back three feet from whence they came down, leaving a space in each land not touched. This is a poor way to get along; and the one that follows it up will be the loser in the end. When you plow, go deep; loosen up the soil, and it will repay you for the trouble. Take time; for one acre well done, is far better than three skipped over. DIX.

SACRAMENTO COUNTY, May 21, 1859.

#### Improved Field Fence.

We ask attention from the farmers of our State to the advertisement of Col. Winchester, of Iowa Hill, who offers, through our advertising columns, the Improved Field Fence, which can be built at a low rate and quickly. It is of the utmost moment that farmers should have their grounds well guarded by a good, strong fence. Thousands of dollars can be saved by timely care and due attention to this all-important subject. Orchards, gardens, and vineyards, have been frequently destroyed by neglecting to build a protecting fence. A delay of a month has lost many a green field. Many a farmer has told us that it costs too much to dig the post-holes. Now, this fence can be built without post-holes, and at a cost of half the usual rates. In the advertisement the price of lumber is estimated for New York. Californians can estimate for their different localities. The cut to represent the Fence will be inserted in our journal next week. We can cordially recommend this Fence to all our friends. Letters of inquiry relative to this Fence; its cost; a county or town right to build, can be addressed to Col. Winchester, Iowa Hill, or to the Editor of this journal.

#### The Hubbard Squash.

This famous Squash, of which we have spoken several times, must not be forgotten by the cultivators of Market Gardens, or by those who raise home luxuries. One of the valuable traits of excellence of this Squash, is its keeping quality. It can be preserved long after all other kinds are gone; and its peculiar richness of flavor wins for it a high mark of excellence. In the notice we gave of it some time since, and the report of the chairman (D. T. Curtis) of the Massachusetts Horticultural Society, at Boston, in our haste we made a mistake relative to the origin of this Squash. We gave credit to G. G. Hubbard, Esq., when we should have given the credit to a lady of Marblehead, who had cultivated it for several years before it was brought into notice. All honor then to the lady who has produced the finest Squash now known; aye, the sweetest, the soundest, and the best keeping Squash. And when our pies are making for Thanksgiving and for Merry Christmas, let us not forget the favorite Hubbard Squash, or the lady who originated it. We are much obliged to D. T. Curtis, Esq., Chairman of the Committee, for facts kindly sent us from Boston, via Overland.

#### Grapes on High Ground.

We are pleased to learn from Judge Ralston, of Sacramento, of his success in raising Grapes on high ground. His plan is to plow and sub-soil very deep. His experiment was with three acres, and he has been very successful. During the season he plows and cultivates constantly. This season, while his grapes have been cut down with the frost in low grounds, those in the vineyard on high ground have been uninjured. His peach trees, planted last season in dormant bud, have a good crop of fruit upon them; while others, on low ground, have suffered much from frost and cold. We are gratified at these results, and hope to hear of others, who have thus tried the hill-side system of grape growing.

#### New and Beautiful Roses.

SOMETHING new! Something new! Newer, better, and more beautiful! Progress! Progress! One would suppose that, when the different Roses now known and cultivated numbers more than ten thousand varieties, there was little chance for improvement; and when one can look upon the gorgeous Soffrano, with its soft, velvet tint of saffron and gold, or pluck a bud of the aristocratic Yellow Chromatella, and link these with the chaste, beautiful, and pure white General Lamarque, and the deep, kingly crimson Giant of Battles, it would be almost beyond the power of nature to produce a richer or more beautiful quartette; but every year Flora sends out new roses. It is the fashion for florists, and they must lead as well as the ladies with their fashions. During the last week we paid a visit to Sonntag's garden, at the Mission, to examine some new roses that we had heard from, and confess that Sonntag is truly a florist, ever seeking for the beautiful. Among several new monthly roses, we saw the Glory de Moss, Oscar le Clerc, and Maria Bougonne; also, Souvenir de Henry Clay. This last is said to be a very superb rose—color brilliant. Mr. Sonntag has a new rose, Lord Raglan, very superb, darker than the Giant of Battles; also, two others, Pauline Lancieuz and Triumph of Horticulture; these are magnificent roses. Several were in bloom, and promise magnificent results. We noticed, also, several new perpetuals more: Madam Damache, General Castlereagh, Duchesse de Cambaceres, and Sol d'Austerlitz. Several of these we examined in bud and opening, and they are truly splendid. Several will prove larger and better than La Reine, which is so gorgeous as a show flower; but the florist's flower would be chosen from a smaller size and more compact beauty. Yet these roses are indeed a great acquisition, and we hope our citizens will secure each of these new roses for their own private gardens, as soon as Mr. Sonntag can propagate them. Mr. S. has a splendid hedge of the Bridal Rose, alone worth a ride to his garden. There is also Ponia, Humili, Whittleji, and many fine plants that will please; and a visit to this garden and many others in that vicinity, will always repay. Parents should go often and take their children; there is much to see and much to learn, and time and money thus employed are well invested.

#### Sales of Stock.

A SALE of "Twenty choice American Cows," as advertised, took place on Market street, at 12 o'clock to-day. The attendance was not large, and the prices obtained did not seem to meet the expectations. The Cows were a fair lot, ranging in age from two-year-olds to seven or eight years, and mostly with calves by their sides. The following are the prices realized: Four lots, Cows, \$60, \$50, \$40, and \$45, respectively; Eleven lots, Cows with calves, \$35, \$40, \$42 50, \$42 50, \$62 50, \$40, \$30, \$37 50, \$50, \$52 50, and \$45, respectively; Two lots, two-year-old Heifers with calves, \$35, and \$40; One lot, two-year-old Heifer, \$37 50.

SALE OF FARM STOCK IN SACRAMENTO COUNTY.—On the 24th of May, there was sold at auction, at Benson's Ferry, on the Mokelumne, by order of the administrators of the estate of John A. Benson, deceased, the entire lot of stock that had heretofore been ranging on the well known Sacramento County Ranch. The attendance of farmers, stock operators, and others was large. The terms of sale were cash on delivery, and the prices, which ranged considerably higher than the appraised value, are given by the Sacramento Standard, as follows: Three yoke of work oxen brought \$165, per yoke; three untamed Spanish mares, with colts by their sides, \$30 each; ten two-year-old Spanish colts and fillies, from \$20 to \$43 each; six do., yearlings, \$10 to \$15; one four-year old American stallion (mean enough to spoil twenty generations of progeny), \$145; one hundred half-bred yearling heifers, were then put up in lots of ten, with the privilege of all—the first ten fetched \$37 per head; the next ten brought \$21 50, and the purchaser exercised his privilege and took all; seventy of their brothers (yearling steers) were then put up on the same terms, and realized—ten at \$20; ten at \$17 25; ten at \$16; and forty at \$12 75; eight geldings, broken either to saddle or harness, fetched respectively, \$102, \$100, \$85, \$66, \$62, \$61, \$59, and \$47; four broken mares brought \$60, \$50, \$50, and \$45; eight of the same, with colts by their sides, realized \$70, \$53 50, \$52 50, \$52 50, \$45, \$42, \$41, and \$40; one male, \$70; five Spanish milch cows, with calves, brought from \$33 to \$26; ten American do. do. (by no means a choice lot), from \$75 to \$41—(a gentleman who paid \$75 for the selection, chose one that was evidently spavined); a five-year old American bull, brought \$25, and a two-year old, \$35 (these went greatly below their value); about a dozen American steers brought \$20, and two or three two-year olds, \$35 each; from seventy-five to a hundred two-year old and upwards, Spanish steers and dry cows, were bought by a butcher for \$27 each (this lot was in very good merchantable condition); the last lot consisted of about two hundred and fifty Spanish cows, calves by their sides, realized \$27 50 each. A lot of thirty-three California mares and colts was sold at Santa Rosa, Sonoma county, on the 20th and 21st of May, at prices varying from \$13 to \$30 per head. Among the lot were several yearlings, which brought from \$12 to \$18. None of the lot had ever been broke to harness or saddle.

Mr. EVERETT has completed thirteen of his fifty-two papers for the Ledger.

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

(CONTINUED.)

The Condor of the Southern Pampas of Argentina and the coast of Chili, is thus described by Charles Darwin, in his *Voyage of a Naturalist*, vol. 1, pp. 235. He is here speaking more particularly of the countries of the Patagonian frontier:

"April 27th, 1834. A Condor just killed measured from tip to tip of wings, eight and a half feet, and from beak to tail, four feet. It is found from the Strait of Magellan and along the Cordillera of South America as far as 8° north of the Equator. The steep cliff near the mouth of the Rio Negro (South Atlantic coast), is its southern limit; they have consequently wandered about four hundred miles from the great central line of their habitation in the Andes. It is not uncommon near Port Desire, on the bold precipices of that vicinity; yet only a few stragglers occasionally visit the sea coast. A line of cliff near the mouth of the Santa Cruz, is frequented by these birds, and about eighty miles up the river, where the sides of the valley are formed by steep basaltic precipices, the Condor reappears. From these facts it seems that the Condors require perpendicular cliffs. In Chili they are mostly found on the coasts; but in the early part of the summer, they retire to breed in the most inaccessible parts of the inner Cordillera, where, I am informed by the country people, in November and December they lay two large white eggs on the bare rocks—their only nest. It is said that the young Condors cannot fly for an entire year; and long after they are able, they continue to roost by night and hunt by day with their parents. The old birds generally live in pairs; but among the inland cliffs of Santa Cruz, I found a spot where scores must usually haunt. On coming suddenly to the brow of the precipice, it was a grand spectacle to see some twenty and thirty of these birds start heavily from their resting place and wheel away in majestic circles. From appearances this must have been a long frequented haunt for roosting and breeding, as the birds here resort to digest their food. From these facts, the Condor, like the Gallinazo, must, to a certain degree, be considered a gregarious bird. They feed on guanacos and other animal carcasses; but, from what I saw in Patagonia, I do not believe that, on ordinary occasions, their daily excursions extend to great distances from their regular sleeping places.

"The Condors may often be seen at a great height, soaring over a certain spot in the most graceful circles. On some occasions I am sure that they do this only for pleasure; but on others, the Chileno countryman tells you, that they are watching a dying animal, or the puma devouring its prey. If the Condors glide down and then suddenly all rise together, they know that it is the puma, which, watching the carcass, has sprung out to drive away the robbers. Besides feeding on carrion, the Condors frequently attack young goats and lambs. The shepherd dogs are trained whenever they pass over to run out and, looking upward, to bark violently. The Chileno destroy and catch numbers. Two methods are used: one by snaring with fresh meat in a coral of sticks; the other is to mark the trees where they roost, frequently to the number of five and six, and at night climb up and noose them; being heavy sleepers, as I have myself witnessed, this is not a difficult task. At Valparaiso, live Condors sell from two to two and a half dollars a piece; but I have seen them sold for only one. In a garden near Valparaiso I have seen between twenty and thirty of them alive. Though fed only once a week, they appeared in good health. The Chileno country people assert that they will retain their vigor for five or six weeks without eating; but this I cannot verify."

When an animal is killed in the campos, the Condors congregate in a short time in an inextinguishable manner: it must not be overlooked that the birds have discovered their prey, and picked the skeleton clean before the flesh is in the least degree tainted. Alluding to the experiments of Audubon on the turkey-buzzard of the south, Darwin says:

"I tied some Condors by a rope in a long row, each one separate, along the side of a wall. Having folded up a piece of meat in white paper, I walked backward and forward, carrying it in my hand, at three yards distance, but they took no notice whatever of it. I threw it on the ground within one yard of an old male bird, but it failed to attract from him any particular notice. With a stick I pushed it closer and closer, until it touched his beak; the paper was then instantly torn off with fury, and at the same moment every bird in the long row began struggling and flapping its wings. Consequently, it appears to me that the evidence for and against the acute smelling powers of carrion vultures is singularly balanced."

Darwin here quotes the experiments of that distinguished naturalist, the Rev. John Bachman, of Charleston, S. C., on the visual and olfactory powers of the common turkey-buzzard of the Southern States, as compared with that of the Condor.

"When an animal is killed," he continues, "in a lonely valley, may not the sportsman be all the time closely watched from above by the sharp-sighted bird? And will not the manner of its descent proclaim throughout the district, to the whole family of carrion feeders, that their prey is at hand?"

Continuing on, he remarks: "When the Condors are wheeling in a flock round and round any spot, their flight is beautiful. Except when rising from the ground, I do not remember to have seen one of these birds flap its wings. Near Lima I watched several for nearly half an hour, without taking off my eyes. They moved in large curves, sweeping in circles, descending and ascending without giving a single flap. As they glided close over my head, I intently watched from an oblique position, the outlines of these separate and great terminal feathers of each wing; and the separate feathers, if there had been the least vibratory movement,

would have appeared as if blended together, but they were seen distinct against the blue sky. The head and neck were moved frequently, and apparently with force. The extended wings seemed to form the fulcrum on which the movements of the neck, body, and tail acted. If the bird wished to descend, the wings were for a moment collapsed; when expanded with an altered inclination, the momentum gained by the rapid descent seemed to urge the bird upwards with the even and steady movement of a paper kite. In the case of any bird soaring, its motion must be sufficiently rapid, so that the action of the inclined surface of its body on the atmosphere may counterbalance its gravity. The force to keep up the momentum moving in a horizontal plane in the air, in which there is so little friction, cannot be great, and this force is all that is wanted. The movement of the neck and body of the Condor we must suppose is sufficient for this. However this may be, it is truly wonderful and beautiful to see so great a bird, hour after hour, without any apparent exertion, wheeling and gliding over mountain and river." [This word painting of Darwin's, on the flight of the Condor and its motions in space, answers precisely to those of the California bird, as I have repeatedly observed.—A. S. T.]

Mr. Darwin accompanied the surveying expedition of the English ship Beagle, Capt. Fitzroy, as an independent scientific observer, in the years from 1831 to 1836, and visited the east and west coasts of South America, the Gallapagos Islands, Australia, etc. The book before quoted is one of great celebrity, and is written in a modest but most comprehensive, catholic spirit. It is almost entirely made up of personally observed facts, relating to the physical and zoological features of the countries visited. The Condors of South America and the Land Turtles of the Gallapagos group, appear to have been more closely observed by him than any others of the animal kingdom—the Condors with much attention. But what a disappointment to think, with all this writer's powers of careful observation, when in all which appears in his book (though he saw "in a garden at Valparaiso, twenty or thirty of them alive," there is no formal distinct description of either the male or the female Condor. The female Condor of South America, we believe, no naturalist or traveler has ever properly described—that is, to our knowledge—though many of them casually say, that it is different in several features from the male bird. Nor does there seem to have been even made any proper paintings from life and study of life of the male and female Condor.

The female of the California Condor appears to be almost a distinct bird from its male companion; and we have no doubt, that the same law holds good with the different *Sarcophagus* of North and South America, of which we would take the liberty, as an amateur scribbler, to suggest, that there are on the American Continent, probably, not less than eight or ten different species, distinct from the Cathartes tribe. Fine and close observation will show.

Note of March, 1859.—Lieut. Gillis, in the first volume of the United States Astronomical Expedition to Chili, in 1849-52 (published by Congress in 1855), on page 357 makes some interesting notes on the Chilean Condor:

"The herds of cattle are watched over by a special class, the *vagueros*, who, together with certain of the *inquinos*, traverse the hills from day to day, looking for the sick and wounded, protecting very young calves from attacks of Condors, and driving stragglers within the boundaries of the hacienda again. As Condors are almost the only enemies to be feared, and their mode of attack is so sudden as to leave little hope of rescue, it is important to be always on the alert for them. They never make an attempt singly, nor when the cow is near; but watching for the first moment when she leaves her newly-born calf at a little distance, two or three will pounce upon it from a mid-heaven flight. One claws out its eyes at a stroke, and, as its mouth is opened in the agony, a second seizes its tongue; and thus its cries are stifled before a single sound could have reached the mother. The sharp eyes of the *vaguero* may have caught a glimpse of the rapid swoop, perhaps a mile or more away; yet, what can he do? Long before he could approach sufficiently near, life will be utterly extinct; and the animal being too young for the *patrón's* table, it is scarcely worth his effort to attempt interruption of the dainty banquet. On some estates, and generally during or about the calving season, there is an annual wholesale slaughter of these pests, the Condors.

"Though not an ornithologist, I was desirous to inspect closely a bird so famed, not less than to obtain specimens for the National Gallery at home, where the student of the feathered tribe could examine them at leisure. On expressing a wish to possess a pair of the largest dimensions, my friend quietly replied: 'Very well; I will kill a mare, and you shall have a dozen, if you wish. They are customers we like to be rid of, and would gladly resign all the *Buitres* to the personal inspection of the ornithologists.' In order to destroy them, a coral, or pen, is formed of high stakes set in the ground, within which one or more carcasses are placed, to entice the birds. Not long afterwards, they may be seen flocking from far and near, and they are soon busily engaged pulling the flesh in pieces. Knowing that they habitually cram themselves until unable to move without disgorging a part of the food, and that their great weight will prevent their rising without a long preparatory run, which the coral does not allow them for, the *haciendado* quietly bides his time. When he thinks this has arrived, *peons*, armed with clubs and lassos, enter the coral and beat the birds to death. Some times this is not accomplished without fierce struggling, and occasional bad wounds to the assailants, but it is rare that a Condor escapes; for, if one manages to clear the ground, he will suddenly find a lasso about his neck or leg, and he comes toppling back again. Five of them (monstrous birds of both sexes) were brought to me late on the evening before my return to Santiago, two of the males measuring each eleven feet ten inches, from tip to tip of the wings; but they could not be conveyed in the *barlocho* with us; and though every

effort was made to preserve the skins next day, the heat was so great they could not be saved. Subsequently, however, a pair of equal dimensions was obtained, and form part of the collection brought home by the Expedition.

"Having the sleepy, sluggish, ungraceful attitude of the vulture tribe, the bird is far from handsome. Except about the wings, back and neck, the plumage of the male bird is of a bright black color, with occasional grayish tinges; the ends of the wings are of a mottled brown, and the head and neck, as far as the commencement of the breast-bone, wholly bare—the dirty red or brownish skin, which covers the latter, lying in folds, or corrugations. A ruff, or circle, of milk-white and downy feathers, about an inch in diameter, surrounded the neck of a pair of those brought to me. Those which were without it were smaller birds, most probably of a different species; for, not only was their plumage generally of a lighter color, but brown feathers were also perceptible on every part of the body. The circle of white is a distinguishing mark of the true Condor. Even the very young birds possess it, though the color is then a light blue-black, differing little from that of the rest of the plumage. Its color, and that of the wing and back feathers, changes with age. Two years elapse before the young leave the nest in search of food for themselves; a pair in Santiago, over a year old, still retaining their downy feathers. Males are distinguished by a thick caruncle, which extends over the head as far as the insertion of the bill. Though strong and thick, the bill is small in proportion to the size of the animal. It is nearly straight on top, with a rather downward curve of the upper mandible, where it enters the cranium, the lower extremity being arched in a form indicative of power. The talons are as short and flat almost as those of a barn-door fowl. With an eye lacking fire, or even animation, half-drooping wings, often trailing on the ground when it walks, and a crouching head, one would not fear to attack half-a-dozen of them; unless at a time when hunger had roused the dormant fend within. And so, after looking at it carefully, I cannot but think that all the stories about children and sheep being carried away by Condors, or men and grown cattle being attacked by them, are wholly fabulous. A bald eagle would 'comb' one of them in 'no time,' and is altogether a much more desperate bird to encounter. One of these days fortune may permit me to learn something of their habits from the *vagueros*, who are often in the vicinity of their nests; but the present visit was too brief to undertake climbing the mountain crags, even to wait upon the Condor at his home."

Lieut. A. McRae, the assistant of Gillis (an accomplished scientific officer, well known to our citizens, and whose unfortunate death in San Francisco, in 1856, caused such deep regret), notes in his trip over the Andes, from Santiago to Mendoza, in Gillis' second volume, of the immense numbers of the Condor seen by him at the most elevated heights of the range.

Mr. Cassin, in his account of the ornithological collection of the aforesaid Expedition (second volume, page 173), states, that of six specimens in the collection, examined by him, all those labeled as females bear a close resemblance to the males, but are invariably smaller. The colors are the same, though of somewhat duller shades, but not brown, as stated by Padre Molina; though the present specimens corroborate his statement respecting the relative sizes of the sexes of this species. In Lieut. Gillis' notes, he says: "Males differ from females by a prominent caruncle, almost as marked as in the domestic cock. When young the plumage is downy and bluish-black, and the circle around the neck at that time is very little different in color from the adult. Between the ages of one and two years, the down nearly all disappears, but the birds remain near the nest, I was informed, until quite two years old. I saw two in Santiago that had been there more than a year, and were still unable to fly. As the birds grow older, the wing and back feathers gradually become of brown or ashy-gray, and the age may be known by the extent and brightness of the lighter-colored plumage."

In the foregoing quoted works on Chili, the writer could not fail to observe a curious fact, viz: the great similitude, or equality, of the physical anatomy of Chili and California; i. e., the Alta California of history, prior to 1800. They are almost precisely alike in climate, soil, minerals, meteorology, physical geography, natural history, and vegetable productions. All our birds, animals, etc., with several exceptions, seem to be varieties of each other; though in Chili, it seems, bears are not found, nor any of the true pines, or other conifers, that is in the settled parts; and California has no representative of the lama family. Doubtless, the plants and animals which would do well in one country would do well in the other. This curious subject would bear ample investigation.

The following notes of Nov. 1854, have been revised and corrected to the date of March, 1859:

## The Great Condor of Northwest America.

Note of 1 Nov. 1854. A fine specimen of this bird was killed on the beach at Monterey, a few days ago. As it has never been described before (to our knowledge), with accuracy, and as the scientific books of natural history are as unsatisfactory and incomplete as the tales of peripatetic hunters, we shall take mother nature as she shows herself in this huge feathery embodiment of creation, as our guide and pattern.

An imperfect description was given by us of this bird in the S. F. Herald, of Dec. 12th, 1852. The present specimen being killed near our house, we are enabled, with a more extended knowledge of its habits, to give a careful and detailed history of the creature.

The bird before us is a male, and weighed when killed, twenty pounds avoirdupois. The following are its dimensions and proportions: From beak to end of tail feathers, 4 feet 6 inches; from tip to tip of wing, stretched out, 8 feet 4 inches; one wing, 3 feet 3 inches; tail feathers twelve in number and 16 inches long; from ruffle on the neck to vent, 2 feet 9 inches. It has thirty-two brachial feathers on each wing; the five long outer wing-feathers measure 2 feet 5 inches each; its

breadth across the breast bone is 8 inches; under the wings it has a long triangular layer of white feathers, and the outside of the lower part of the mid-wing feathers is also tipped white.

The head, down to the commencement of the beak, is covered with a beautiful lemon-colored loose skin. The beak, which is a horny white, is 1 6-8 inch long, and curved over the lower bill, with a point as hard as iron, having a waved edge, toothed like the condor of Peru, sharp as a knife; the under mandible is a perfect half cylinder, into which fits with the nicest accuracy a hollow tongue of the same shape. This tongue is a curious feature, being 1 7-8 inch long by 4 an inch broad, and is serrated with a hardened edging inclining down the gullet, which the bird uses with great force and power in reducing its food for digestion previous to swallowing.

The head is 7 inches long, and is barred over with a triangular-shaped band of black featherlets like small short camel's hair pencils, on a naked white skin. Across the crown, it measures 3 inches, and is 3 inches from edge of skull to edge of lower jaw bone. The neck is bare of feathers, is of a pale, dirty, flesh color, and is 7 inches from base of the skull to the ruffle at the root of the neck. This ruffle is composed of stiff broad feathers, having elongated points, into which its neck is buried when at rest.

Its legs are of a dirty white color and scaly, and measure 10 inches from the knee joint to the end of the claw of the main toe. The feet consist of four toes, which are armed with strong, black, blunt claws; its middle toe is 5 1/2 inches long, which includes a claw 1 1/2 inch in length; the hind toe with claw is only 1 1/2 inch long. The breadth of the foot across the palm is 2 1/2 inches. The length of the legs from the hip joint to the end of the middle toe is 15 inches.

The egg of the bird, as I am informed by a fifteen-years resident of California, is 3 inches broad by 5 inches long; about one-fifth larger than a goose egg. Its color is a pale blue, spotted brown, and is nearly as thick as an ostrich egg. The same person informs me that the female lays only one egg during a season (others inform me it lays two), and makes its nest on the ground in the ravines of the mountains, and generally near the roots of the redwood and pine trees. It is three months before the bird can fly. The eye of the bird is 1 inch long by 1 inch broad, and weighs half an ounce; the iris is a beautiful light pink. The brain is shaped like a heart flattened, and weighs one ounce; it measures 1 1/2 inch in breadth and length. The heart, lungs, and liver are nearly the dimensions of a year old pig; its gut is short and white; the gall bladder is 6-8 of an inch long.

The bird when erect stands over 4 feet from the ground, and from its huge wings, when spread out or even closely folded, looks a mountain of dark feathers. The feathers are of a uniform dusky brown black color, with the exceptions mentioned. The body is covered closely with a long, lead-colored feathery down, with a thick skin (or hide rather), which is underlaid over the whole body, and particularly its under part, with a compact layer of bright yellow fat of a strong musky smell. The meat is of a bright arterial red, and with large flakes of air cells under the wings and breast sides, copiously fills out the contour of the animal. The muscular and bony development of the wings, neck, head and legs, is intense, which gives it immense strength and power in flight, and in attacking its prey or devouring its food.

Such is the description from nature of the "Sarcophagus Californicus," or Condor of the Rocky Mountains and the Northwest.

(TO BE CONTINUED.)

## Coal Ashes as a Manure.

But few experiments have been made by American farmers, says a writer, to test the fertilizing properties of coal ashes. While we are importing guano and other manures from foreign lands in enormous quantities, and at great expense, it may be well to employ some substances nearer home, which are now neglected and cast aside as worthless. Thousands of tons of ashes might be obtained in cities, where coal is extensively employed for fuel, which, when applied to the soil, would doubtless greatly augment its productive powers. It is stated in "Faulkner's Farmers' Manual," an English publication on manures, that coal ashes contain sulphate of lime, with some potash and soda, all of which are known, when separately applied, to produce a good effect on clover crops, and to constitute an important part of the food of all grasses.

The following experiment by an English farmer, may shed some light on the subject: The ground selected contained three perches of clover; the first had no manure, and produced thirty-eight pounds when cut in full head; the second, where four quarts of sifted coal ashes, which had not been exposed to the weather, were applied, the produce was fifty pounds; on the third perch, one quart of plaster was sown, and the crop weighed fifty-four pounds. It will be seen that the ashes increased the clover nearly one-quarter, above that on which no manure was applied, which goes to prove that this substance is a valuable fertilizer. Coal is said to be of vegetable origin; therefore, we can see no reason why its ashes should not contain the food of plants. Experiments on various soils and crops might be made by any farmer at a small expense, as coal is employed as fuel in nearly every town.

FORCING MELONS, ETC.—One of the best methods to raise early plants of the melon and cucumber under glass, is to take suds from three to five inches thick, soak them some twelve hours or more in liquid manure, and then plunge them, grass down, into the bed, then insert three or four seeds in each sod, where they can afterwards be transplanted with the sod, without disturbing the roots.

ARTICHOKES.—A writer in an Eastern paper says that 2000 bushels of artichokes can be raised on one acre. Another writer says he has no doubt of this, for from a single rather small tuber, he dug in the fall nearly or quite one peck. This root threw up three stalks, yielding as above.

BUILDING ONE'S HOUSE.—Our ordinary dwelling houses should be built to last, and built to be lovely; as rich and full of pleasantness as may be, within and without, and with such differences as might suit and express each man's character and occupation, and partly his history.

## The late Col. Jaques.

We lately published a short article containing the announcement of the death of this early friend of agriculture. A writer in the Country Gentleman furnishes the following sketch:

Col. Samuel Jaques of "Ten Hills Farm," in Somerville, near Boston, about and concerning whom your readers have been informed from time to time, departed this life on the 27th March, in the 83d year of his pilgrimage. The Colonel was in many respects a remarkable man—one whose knowledge, if judged by the books he had read, might be regarded as limited, but if tested by his knowledge of things as they really are—as they exist in nature, would be regarded far otherwise. He improved what every farmer enjoys, his opportunities for observation and experience, thus furnishing and storing his mind with useful and valuable knowledge. He resorted to the original sources, not being willing to take instruction second hand or from books, but interrogating nature herself, and carefully noting and treasuring up her oracular responses. In this way the Colonel had acquired a large amount of information not contained in books, but found in the recesses of nature, who yields her treasures to none but earnest seekers, and such she never turns empty away. In this respect the life of Col. Jaques is a model for every young man who desires to become useful, successful and happy.

The breeding of domesticated animals seemed to interest the Colonel more than any other department of rural life. In this he has done more to develop the laws of propagation than any other man in this country. He has not only originated a breed of cattle, but has in various ways, tested and confirmed by demonstration, that breeding in-and-in is not only the best, but about the only way of improving stock with certainty. He owned for several years, that remarkable English horse known as Bellfounder, or Norfolk Trotter. He had in his possession for some time, the Sherman Morgan, the sire of the Vermont Black Hawk.

The Creamtop breed of cattle, as heretofore stated, was made chiefly of the blood of Coileles, a short-horn bull, grandson of Comet, and two extraordinary native cows. He has bred in-and-in for nearly forty generations, with constant improvement in symmetry, and no deterioration in constitution, as anybody can see who will look at the specimens still kept at his late residence. He was for many years a successful breeder of Merino sheep, as the premiums he received from the Society for the Promotion of Agriculture, abundantly prove.

The Colonel was remarkable, also, for his love of fox hunting. Some still live who well remember the interest he formerly took in this kind of sporting. His horn, his hounds, and his horse, were his equipments for this kind of enjoyment and recreation. He was always cheerful and full of life—active, vigorous and healthful, loved home and domestic scenes better than public life—though public men were frequent visitors and most welcome guests at his spacious mansion. He frequently had the pleasure of entertaining the most distinguished gentlemen of our country. He enjoyed the rare and most un-American quality of not being an office-seeker, though he had forced upon him the office of Inspector General of Hops, which he held from 1806 to 1838.

Notwithstanding the ups and downs of fortune which the Colonel shared, his life in this respect was a success, as he left his family a large and valuable estate. But had he left no property, the inheritance of his good name and virtues would be an invaluable legacy. While the surviving children mourn the loss of such a father, they may well rejoice in the reflection that to them the lines have fallen in pleasant places, and that they have a goodly heritage.

## Salt as a Manure.

The following questions were addressed to the editor of the N. E. Farmer: How salt is to be applied to the soil, whether it should be mixed with barn-manure or sown broadcast? If mixed with manure, in what proportion? If sown, how much to an acre, at what season, and what kind of soil is most benefited by it? Would it be advantageous to use it when barley is to be grown? How would it affect pasture land? And further, would solicit the opinion of some experienced on the profit likely to accrue from purchasing salt at twenty cents a bushel for agricultural purposes?

Would you consider it profitable to buy air-slaked lime, at eight cents a bushel, to put on the land?

To these questions the editor replies: We have often used salt as a fertilizer, but have not pursued the experiments with sufficient accuracy to make them worthy of note. So we refer to others, and find plenty of evidence that salt may be used as a fertilizer where it can be obtained at low rates, where it is dirty or in a damaged state so as to make it unfit for common purposes.

Salt renders dry loams more susceptible of absorbing moisture from the air, and this is of great importance, because those soils which absorb the greatest proportion of water from the atmosphere, are always the most valuable to the cultivator. On heavy undrained lands it would not act beneficially.

When sprinkled slightly over manure heaps it checks the escape of the carbonate of the ammonia, and tends to prevent undue fermentation. It not only acts on vegetation as a stimulant, but serves as a direct constituent or food of some kinds of plants.

Applied to grain crops, on light soils, at the rate of 500 pounds to the acre, salt increases the produce of seed, and very much improves its weight to the bushel, and quality. On grass land and clover, salt has a good effect, rendering the herbage more palatable to stock.

Mangold wurtzel, manured with salt mixed with farm-yard dung, at the rate of ten or twelve bushels, or even more, an acre, grows luxuriantly. It would undoubtedly be useful on a barley crop, because the soil adapted to that plant, is the kind of soil most benefited by salt.

We do not doubt but that salt at twenty cents, and air-slaked lime at eight cents a bushel, would be profitable on land where they are actually needed.

## Flowering of Potatoes.

Mr. Manby of England, in his Prize Essay on the Cultivation of Early Potatoes, says that "a flower to an early potato is considered a sign of deterioration, the first symptom of growing out, it being contended that all the strength of the plant should be thrown into perfecting the tuber and not into the opposite extreme." He would therefore eradicate them as soon as they appear, and save seed from plants which have shown no indication of flowering. Experiments have shown that potato plants beginning to show a tendency to flower, perfect their tubers less early and perfectly than before that tendency was developed.

The oldest man in Pennsylvania, a Mr. Sweet, over whom has passed 122 winters, died in Butler county, in that State, recently.

## Miscellany.

## BOTH SIDES.

A man in his carriage was riding along  
A gaily dressed wife by his side;  
In satin and laces she looked like the queen,  
And he like a king in his pride.

A wood-sawyer stood on the street as they passed;  
The carriage and couple he eyed;  
And said, as he worked with his saw on the log,  
"I wish I was rich and could ride."

The man in the carriage remarked to his wife,  
"One thing I would give if I could—  
I'd give my wealth for the strength and the health  
Of the man who saved the wood."

A pretty young maid, with a bundle of work,  
Whose face, as the morning was fair,  
Went tripping along with a smile of delight,  
While humming a love-breathing air.

She looked on the carriage; the lady she saw,  
Arrayed in apparel so fine,  
And said in a whisper, "I wish from my heart  
Those satins and laces were mine."

The lady looked out on the maid with her work,  
So fair in her calico dress,  
And said, "I'd relinquish position and wealth,  
Her beauty and health to possess."

Thus it is in the world, whatever our lot,  
Our minds and our time we employ  
In longing and sighing for what we have not,  
Ungrateful for what we enjoy.

We welcome the pleasure for which we have sighed,  
The heart has a void in it still,  
Growing deeper and wider the longer we live,  
That nothing but Heaven can fill.

(For the California Farmer.)

## LEAVES FROM MY JOURNAL

BY M. A. SABLES.....NO. IV.

What a glorious day it is! See how grandly  
Diablo looms up; and, far off in the horizon, see  
how clear are the mountains beyond San Pablo  
Bay. The sky is as blue as we imagine we should  
see even in Italy. "Will you join us on an excu-  
sion to Diablo?" said H. to me. "With great  
pleasure," I responded; and, hurrying down to the  
Carquinez ferry-boat was soon at the prettiest  
village in California—Martinez. "Have you got a  
safe horse (or better, a mule), which I can depend  
on, for a jaunt to the mountains?" I inquired of  
the livery stable-keeper. "Yes; a horse that you  
will like." He went kick, will he? "No." "No  
stomble?" "No." "Well, I'll take him." Exit  
stable-keeper. Scene 3: Enter stable-keeper  
with a lean, lank, broken-down nag. "There you  
are, sir. He's one of the finest pieces of horse-flesh  
in these parts." "We are late," said H.; "all the  
other horses are taken, and you'll have to make  
him answer." With a look of supreme contempt,  
I mounted, and off we rode. The old horse, to do  
him justice, went on briskly enough; and we were  
soon with a jolly company of about twenty. One  
of the party had recently arrived from the East,  
and kept us in a roar of laughter by his mirth-  
provoking antics. Imagine a sailor on horseback,  
and you will get an idea of the figure he made;  
add to the sailor enough whisky to make him  
merry, but good-natured, and you can complete  
the resemblance.

The ride to the foot of the mountain was thor-  
oughly enjoyed; the air was clear and bracing,  
and it was a luxury indeed to watch the play of  
sunlight on the green sward and with the graceful  
branches of noble trees that completely shaded our  
path. It was sunset when we reached the large  
ranch of Mr. Walker, one of the most hospitable  
men I have met in California. It would have been  
interesting, at another time, to have noted the pro-  
cess of manufacturing cheese for the San Francisco  
market. I must say, however, that I was struck  
by the scrupulous cleanliness of every department.  
At another time, too, it would have been entertain-  
ing to have related the bear stories and gold pros-  
pecting adventures with which he whiled away the  
long hours of the night. Mr. Walker has traveled  
much, and has observed clearly men and things.  
We did not expect to receive so much kindness  
from a comparative stranger; and I, for one, was  
much rejoiced at finding a good house, an excellent  
supper, and a good bed, in place of camping out  
and shivering over cold meat and bread, as was  
expected. Romance charms me in my comfortable  
room, with dressing gown on and slippers on my  
feet; but the reality always takes away my appre-  
ciation. Some people camp-out, and say, "How  
comfortable!" with chattering teeth and shivering  
limbs. I really envy them, with all my heart—the  
spirit is willing, but the flesh is weak. My  
companions called me lazy, because I slept until  
six, instead of getting up at four o'clock, to see the  
sun rise and do—nothing. I told them it was a  
matter of taste; that they probably recollected the  
story of the old woman and the cow.

At seven o'clock we were all mounted, and, with  
Mr. Walker for a guide, commenced our "winding  
way." For nearly two miles we followed a wagon  
road, built by some miners, I believe in 1852, to a  
quartz vein, then thought to be extremely valuable,  
but which was found too expensive to pay. They  
say a Scotchman has discovered a vein which is  
very rich, but it is to be kept a secret until he ac-  
cumulates enough money to put up a steam-mill.  
Common report says, he is a practical miner, and  
is to be depended upon. The wagon road is even  
at present almost easy enough to drive up a buggy.  
It could be repaired with very little expense. Our  
first halt was at a rock, nearly half way up, from  
which springs a delicious stream of water. It was  
the spot for a lunch, or camping party; but we  
were all too anxious to reach the top. Mounting  
up from this point, is a work of some difficulty and  
requires patience and perseverance, but is not at  
all dangerous. The children in our party were not  
obliged to dismount once. Towards the top, it was  
difficult to force our way through the chaparral;  
but the flag-staff gained, and all fatigue vanished  
at the view of the sublime and beautiful landscape  
surrounding us on every side. I am an enthusiast,  
but I was awed by the solemn silence and the vast  
extent of country upon which we looked, and my  
lips refused to utter a sound. I never before felt  
the magnitude of our Savior's temptation; and

looking down from old Diablo, if the mind is op-  
pressed by such a scene, is it a wonder that the  
intellect refuses to comprehend the meaning of  
Eternity? What a startling and Aladdin-like page  
in the world's history has this old mountain been  
a silent witness to! It was the first prominent  
object upon which my eye rested in California.  
I have lived in almost its shadow for six years;  
and, when in other climes, I know I shall often  
look back to the glorious and sunny land upon  
which old Diablo looks; a land which, in spite of  
"La Belle France" and "Splendid Italy," in future  
years will be called the "Garden of the World."

The eye first turns its expectant gaze towards  
the blue waves of the great ocean, and there it is;  
and over the greenest of valleys, brilliant with  
myriads of wild flowers; over San Francisco Bay,  
and the metropolis of this western empire; and  
over the portals of the Golden Gate, once eyes  
drink in the sight of the Pacific, as far as the  
Farallones de las Grayles, twenty miles beyond  
where its waves thunder upon this rocky coast.  
I can appreciate now the feelings which made Bal-  
boa speechless, when, from the pinnacle up which  
he had climbed, he first looked upon this grand  
old ocean. To the south one looks down upon  
McGreer's Canon, Morgan's Territory, Passahara,  
Green, and San Ramon Valleys, Livermore's and  
Dougherty's ranches, and at the little lake, spark-  
ling like a diamond surrounded by an emerald  
setting, at our feet. To the north one glances over  
Diablo Valley, Martinez, the Straits of Carquinez,  
Benicia, Vallejo, Mare Island, to the horizon, along  
which extends, as far as the eye can reach, the  
snow-white peaks of the Sierra Nevadas. This  
fascinates the eye as much as the west view, of the  
Pacific. To the east, one overlooks the smaller of  
the two peaks of Diablo to the San Joaquin  
plains and Stockton. The mountain is, according  
to the stake of the United States survey, 3856 feet  
high—a comparatively insignificant height; but the  
author of "Do Re" (a most attractive book of  
travels, by an old Californian) says Monte Diablo  
commands as fine a view as any one of the cele-  
brated peaks which he has visited on the Continent  
of Europe.

After a lunch, thoroughly enjoyed, we took a  
parting look from the flag-staff, and commenced  
the descent. The atmosphere was so rarefied that  
we could see the streets of San Francisco, and  
some could distinguish the white sails of vessels  
coming in the Golden Gate. The real danger and  
difficulty of the excursion now commenced, and  
the comic pencil of Crinkshank could have had  
abundant "studies from nature." Mr. Walker  
halted at the Monument Rock, where three charm-  
ing little school girls, from Sacramento, entertained  
us by singing some Spanish songs. The courage  
and cheerfulness of these children, in even danger-  
ous places, commanded the admiration of the  
whole party. My contemptible looking animal  
proved how false are appearances, and trudged  
on with patient industry; but I must say that  
although I forgave him for his looks, I would not  
"hanker" after him under more favorable circum-  
stances. Our polle guide led us down through  
Walker or Rocky Canon; and although very tired,  
we enjoyed this part of our excursion very much.  
The rocks are piled together in the most picturesque  
confusion; and at every turn, new and beautiful  
pictures would challenge admiration. The grass  
was of the richest emerald green; the wild flowers  
gorgeous in hue; the trees, some of them, of giant  
size, with the richest foliage; while all along, the  
clear brook dashed along with a musical gurgle  
that enchanted the ear. We often halted to rest,  
and with the turf for a couch and the flowers for  
a pillow, I would dreamily watch the vultures as  
in graceful circles they would wheel around the  
battlement-like rocks. Sometimes C. despite his  
evident fatigue, would imitate Billy Burch, and  
cause our laughter to be echoed through the canon.

While we were all enchanted by the impressive  
nature of the scene, on the top of the mountain,  
C. climbed up to the flag-staff, and after drawing  
a long breath, ejaculated with great unction and  
ridiculous gravity, "Well, this is a devil of a place!"

We reached Mr. Walker's ranch completely tired  
out, but each one declaring fatigue a cheap price  
to pay for such a pleasure. By the kindness of  
my Martinez friends I was enabled to ride in a  
wagon the remainder of the distance.

The proper way for pleasure-seekers to ascend  
Monte Diablo, is to ride to the foot of the moun-  
tain in a carriage or wagon, then take horses to  
the top. They should start from Martinez in the  
morning, and calculate to camp out on the moun-  
tain top, where there are plenty of sheltered places,  
and witness the sun rise and set from the top.  
Such an experience would be an epoch in any one's  
life; and like the author of "Do Re," in the midst  
of other scenes, the mind would recall with vivid  
distinctness the remembrance of an ascent of  
Monte Diablo.

## FARMERS, BEWARE

CALIFORNIA

COMBINED REAPER AND MOWER,

AND

PECK'S SANTA CLARA

HEADER AND HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES,  
that Treadwell & Co., of this city, are endeavoring to  
produce the impression in the Farming community that  
I am manufacturing the "Manny Machine," I am once  
more in the field, to assert, that all such representations  
are UNMITIGATED FALSHOODS.

I am not building the "Manny Machine," nor in-  
fringing on the "Manny Patent," nor do I intend to do  
either; on the other hand, I am building a MACHINE  
OF MY OWN INVENTION, called the

California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the  
use of the knife, on which there is not now, nor has  
there ever been, a PATENT.

I think I know what I am about. I have had too  
much experience as a Practical Mechanic, and have  
spent too much money in obtaining Drawings and Spec-  
ifications from the Patent Office, of the various kinds of  
Reapers which I now have in my possession, not to know  
precisely the line occupied by Patents heretofore ob-  
tained and now in force.

I also learn that I am threatened with prosecutions,  
and that the Farmers who will buy of me will be prose-  
cuted. This is the old "saw-gee," and has been  
pretty well "played out." For two years the combined  
force have been playing upon me, not openly, but  
MEANLY and COWARDLY, behind masked batteries, with  
a view to the breaking up of "Home Manufacture," that  
they might the more securely and successfully continue  
to monopolize the

AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But  
thus far, their assaults have been entirely without success,  
and will continue harmless if I am sustained by the  
farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordi-  
nary warfare upon me at this particular time, is, that  
as the season for selling has commenced, they begin to  
feel as well as see, that my

CALIFORNIA

Combined Reaper and Mower,

IS A DECIDED SUCCESS!

and unless they can intimidate the farmer, and  
force him to buy from them at a greater cost, Machines  
much inferior to mine, they will be obliged to hold a  
large stock over for next year—an unpleasant job, truly,  
but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much  
better employed in actually prosecuting and establishing  
the truth of their assertions, than by sending their hire-  
lings and secret circulars and letters throughout the  
country, to poison the public mind with atrocious  
charges to be FALSE.

Why don't they prosecute me, and let the farmers  
alone? They know full well that they can maintain no  
action. As I said above, they find the "saw-gee" more  
successful with the farmer than with me, and conse-  
quently the scene of their operations this year  
has been transferred from this city to the farmer in  
the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower,

(and not the "Manny"),

and I have purchased the Invention called

"PECK'S SANTA CLARA

HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall con-  
tinue to MANUFACTURE both, in numbers equal  
to the demand. And I now say, that persons who may  
buy either of the above Machines of me, will, if required,  
receive a written GUARANTEE OF INDEMNITY.

Forward your orders, and they shall be filled.  
With this I am done. I am now, and ever have been,  
"ready for the fight whenever the fight opens."

THOS. OGG SHAW,

No. 33 Sacramento street.

## POLAR OIL.

30,000 GALLONS

REFINED POLAR OIL,

In Barrels and Cases,

FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our

## AGRICULTURAL.

125

McCormick's Chicago Reapers!

Three Sizes—5, 6 and 7 feet Cut,

WITH EXTRAS FOR ALL THE DIFFERENT PAT-

TERNS, from 1852 to 1859. [Agent for the Manu-

facturers for the Pacific Coast.]

2500 sold in 1855, 4000 sold in 1856,

3000 sold in 1856, 4500 sold in 1855.

15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim  
to have manufactured and sold anything like so large a number  
of Reaping and Mowing Machines during the same  
time, while my experience dates back to the origin of my ma-  
chine, in 1834, having been actively and exclusively engaged in  
their manufacture for the last fifteen years. I am now more  
largely engaged in the manufacture of these machines than  
ever before, and, with my improvements for 1859, do not  
hesitate to warrant my machine as a Reaper, Mower, and  
Reaper and Mower, superior to any other for simplicity, dura-  
bility and perfect working; and further to say, that farmers  
who may desire it are at liberty to work my machine through-  
out the harvest with any other, and keep and pay for the one pre-  
ferred. The position of the Raker in my machine (as paten-  
ted), upon the main frame, where there is great strength, and  
where the weight adds to the power of the machine, is the  
only right one. Other makers have to haul their Raker on the  
platform, where he must submit to having the dust thrown in  
his eyes by the operation of the reel, and to being jolted over  
the clods by the little platform-wheel over which he rides,  
necessarily racking their machine to pieces. This accounts  
in part, for the great durability of my Machines  
as compared with others.

Great Council Medal awarded my machine in London, in 1851.

Grand Gold Medal of Honor at Paris, in 1855.

Highest Prize at the French Universal Exhibition, in 1856.

Highest Prize of Royal Agricultural Society of England, in '57.

Highest Prize of the U. S. Agricultural Society, in 1857.

As the best Reaper.

Publications made by the manufacturers of the Manny  
machine, claiming the highest honors, etc., at the French Uni-  
versal Exposition, in 1855, are known by them to be FALSE.  
The success of my machine, as indicated by figures above, is  
its highest praise; while the awards of Premiums, generally,  
are worthy of no confidence, although Reapers-makers make a  
business of laboring and scheming to secure the little Annual  
One-horse Premiums of the country. Although it may not be  
generally understood, it is nevertheless true, that these ma-  
chines have always been sold at comparatively low prices, and  
but for the boldness with which I introduced and sold them by  
thousands, for the ten years past, other smaller manu-  
facturers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and  
others, of the truthfulness of every statement I have made, and  
much more. I may further remark, that all of the Reaping  
Machines of my prominence in the country, are mere modifi-  
cations of my machine; all other manufacturers having neces-  
sarily limited experience in comparison with my own.

A single year's severe service will satisfy the farmer,  
that in point of durability, my machine is far superior to  
all others; besides several important advantages, referred to in  
my regular Annual Circular in pamphlet form, which will be  
furnished those who desire further information, by addressing  
me, or any one of my Agents.

P. S.—To correct a misapprehension from recent newspa-  
per reports, I may say, that, while the Commissioner refused  
to extend my PATENT of 1845, that of October, 1847, will  
not expire for several years to come, and that this has been my  
most important Patent; and further, that Reapers-makers  
before cannot copy more nearly my machine than they have  
done heretofore. They must still carry their Raker on the  
back of the platform, and submit to other consequent im-  
perfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,

Manufactured by Nourse, Mason &amp; Co.; 32 and 36 inch

cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1859.—Sirs: J. A. &amp; H. A.

Pitts' Patent, dated June 20, 1857 (machine for Thrashing and

Cleaning Grain), was only extended for a term of seven years

from June 20, 1857. It has consequently expired. Respec-  
tfully yours,

J. HOLT, Commissioner.

Southworth &amp; Co., San Francisco, California.

Pitts' Patent Double-Pinion 8 and 10 Horse-Powers.

To whom it may concern.—This may certify that we have

a certificate of authority, of which the following is a true copy.

A. GORDON &amp; CO.

To whom it may concern.—This may certify that A. Gordon &amp;

Co. are fully authorized by me to sell the "Pitts' Improved

Patent Double-Pinion Horse-Power," in any of the States or

Territories secured to me by letters patent, (Signed)

Boston, October 20, 1858. JOHN A. PITTS.

We are this month shipping Horse-Powers of the above

patent to A. B. Southworth, of San Francisco, Cal., which he

is hereby authorized to sell. A. GORDON &amp; CO.

Rochester, N. Y., October 28, 1859.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, MAY 27, 1890.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAW, who left here in the steamer of the 5th inst., on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HARRIS employed Mr. J. F. LARSEN as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

J. B. MORSE is not an Agent of the FARMER, nor authorized to receive subscriptions or money on account of this journal—nor has he been for some time past.

**Old Times—Old Habits.**  
Strick to our business, and you will be sure to be successful. How many of the old residents of California can look back and see the errors they have made, by continually changing their business and entering upon new and untried adventures? Whereas, if they had remained constantly devoted to one pursuit, they would now have been wealthy. We often, however, meet with merchants, miners, mechanics, farmers, and traders, who are now at their first testing-ground; perhaps a city or village has grown up around them, and instead of a few canvas tents here and there, are now surrounded by large brick warehouses, and they are occupiers of similar buildings; and near to them are found others equally prosperous. Show me an industrious man, and I will show you a prosperous one—perseverance, permanence, and a steady pursuit, have secured to them prosperity.

In one of our rambles in the outskirts of Sacramento City, we met, while at Hubbard's Garden, with an old Pioneer Teamster, of the 1850-school; one who had been "teaming goods" from Sacramento City since that date, steadily, up to Michigan Bluffs. Mr. M. Englander, an old Pioneer and one of the earliest settlers there, informed us he now sends his teams from Sacramento City with two loads of assorted goods, about six tons weekly, to his store at Michigan Bluffs, and has done so ever since 1850. He is now the oldest teamster on that route; and, by his steady attention to his business, has made himself rich—having a large store and extensive business at Michigan Bluffs. We noticed his good wagons and fine teams of horses, in excellent condition—a sure sign of a good business man.

**The Sacramento Pavilion.**  
The question is settled! The Commissioners have bought, the Supervisors have sanctioned the purchase, and the authorities have paid \$5,000 for the lots upon which the Pavilion will stand—when built. From what we learned at the Levee City the last week, we hesitate not to say we believe a great mistake has been committed, for there does not appear to be any person hardly pleased or at all satisfied. We conversed with many persons who declare that they will not pay the taxes assessed for this purpose, because they are not satisfied with the action of those who had the management of the affair. Nearly all that we have conversed with, declare that they supported and voted for the work under the impression that some place would be selected for pavilion and grounds together, and that the buildings were to be used exclusively for such purposes; and they want it out of the city, along the line of the railroad, where it would be convenient for all the county. We know there is much feeling on this subject, and if we should guess, we do not think much success will attend the present efforts. In fact, we do not think there is either such a unanimity as is needed for so great a work, nor is there time and means enough to complete the work before autumn. Should this prove true, it will be a source of much regret; but when selfish policy reigns, and bad counsels prevail, no good results can be expected.

**Clean Your Grain.**  
We have often presented this subject to our grain growers, and urged a better attention to it, for their own pecuniary good. We can name many of our best millers, with whom we have conversed, who have shown us where the raisers of grain have lost from four to ten per cent by their careless way of cleaning their grain. They do not reflect sufficiently upon the importance of having their wheat thoroughly clean. A man raising two or three thousand bags of wheat, if perfectly cleaned from straw and broken or loose heads, would require from 100 to 200 less bags for his grain; then, the time of his men in filling, loading, hauling, storing, and freight; and if the cleaning is not well done, this amount is deducted at the mill when the wheat is sold, for dirty wheat never brings as much as clean wheat; and again, the very waste at the mill is often purchased back again by the grower, for hog or chicken feed; thus, first losing the value, then paying for it. If our grain-growers will make some inquiry of the millers, they will find their loss from this neglect far greater than we have stated it. May we not hope a better attention this year to this subject?

**Young Men's Christian Association.**—We rejoice to know of the success which has attended the efforts of this excellent association, and this result we anticipated when we learned of the interest manifested by the ladies of different religious societies to lend a helping hand to the work. By a union of effort, great good has been accomplished, and where ready hands join in such labors, it often results as we think it may, in the union of hands and the union of hearts.

## Hubbard's Gardens, Sacramento.

This most excellent garden-spot is situated on the American River, one mile from the Public Square; and omnibuses run to the Gardens every half hour, from the city, at the low price of a *bit*. The whole ground comprises about eighty acres, and is laid out in orchards, fruit gardens, and vegetable grounds. One *Apple Orchard*, of one thousand trees, of extra growth and quality; the *Peach Orchard* comprises about four thousand trees (two thousand in full bearing), with some forty kinds of fruit; a *Vineyard* of ten thousand grape-vines, in excellent condition; a second *Apple Orchard*, of eight hundred trees of younger growth; a large collection of other fruit trees, consisting of about one thousand pear trees, one thousand plum trees, three hundred cherry trees, and two hundred each of apricots and nectarines; also, a bed of strawberries of some four to five acres, principally British Queen, Longworth's Profligate, etc. These Orchards and Gardens are in excellent order, affording fruit the whole season. Nothing serious has occurred, by reason of cold or frost, at these Gardens; although some frost has nipped the grapes and peach shoots on the low land. The late rise of waters has brought it up to within about eight inches of the surface. It can be seen percolating through the earth about the plants. The water has covered some low places.

Dr. Hubbard has a large building for the reception of those who desire to get fruits, such as strawberries, peaches, etc. He receives visitors, and furnishes ice-creams, strawberries and cream, etc. A large hall for "dinner parties," or "pleasure parties," with a fine room for parties and balls, completes his plans. The grounds, with the scenery round, make it very attractive—presenting a near view of the American River, with its swelling tide. We can recommend persons who love a pleasant ride, to make this one of the places of their visits, when at the Levee City.

## Hog-Raising and Pork-Packing.

Is investigating the value of this kind of business, and its value to our State, we have been led to make inquiries, which have resulted as follows: Mr. Geo. Cooper, of Sacramento, who is a large dealer in cured provisions, assures us that those who are now dealing in Pork, i.e., those who raise Hogs, are asking too high a price for their own interest. The ruling rate now is about \$11 per hundred, dressed. He could raise more, as easily as he raises his present stock, and do a better business, by selling Hogs at \$7 per hundred. Holding too high, prevents success in this branch of trade; thus decreasing home production, and enabling importers of Pork to control our market. The raisers of Swine should bear in mind, that the increase of this kind of stock is beyond all precedent. They should also bear in mind, that five pounds of barley will make one pound of Pork, once more, if rightly fed; and it is far better to fatten Hogs on barley, and realize two cents per pound for the grain, than to sell at one to one-and-a-fourth cents. Mr. Cooper assures us that he has made money by feeding ground barley to his Hogs, which cost him two cents per pound. We are confident that our farmers can raise and fatten Hogs upon barley and root-crops, so as to realize handsome profits, and sell at \$7, or even \$8, per hundred. Mr. Cooper has a large slaughtering establishment on the Yolo side, and extensive packing-houses in Sacramento, with smoke-houses, and every convenience; and he can and will succeed in this enterprise; and he should have the encouragement of all who wish well to our State. Sacramento retail prices, at his market, are as follows: Hams, 30 cents; Sides, 25 cents; Lard, 25 cents; Tongues, \$1; Smoked Salmon, 10 cents; Butter, 40 to 50 cents; Eggs, 62 cents; Cheese, 30 cents. Visitors to Sacramento should see his market. His advertisement will be found in our columns.

## Worms on the Grape.

We felt much pleased to receive a visit from Samuel Norris, Esq., of Norris' Ranch, the gentleman who was so cruelly beaten some time since in Sacramento. We are truly glad to find Mr. Norris so far recovered as to visit his friends, but was deeply pained to learn that our friend was deprived of his hearing by reason of the outrage he received. Can our laws give no redress for such wrongs? We received from our friend the information that he had suffered also from another worm, and that his vineyard of some thousands of grape-vines, had been destroyed by a species of worm that he shall denominate the *cabbage worm*. The worms brought us by Mr. Norris were not in a state for a just examination. We are promised more, and Mr. Norris assured us he would watch the operations of these worms and note their changes. These worms were from one-fourth of an inch to two inches long—a species known to gardeners as the "cabbage worm." They had completely eaten up all the leaves and green branches, the growth of the present year. We hope if others have suffered by this worm, they will advise us of the fact, and send us samples of the worm, and a report of all its operations. We shall anticipate a valuable letter from Mr. Norris, explaining further the changes of this destructive worm, and its effect upon his vines.

## Floral Fair at Oakland.

Let everybody prepare for the coming Fair at Oakland, for it will be a glorious affair, and everybody will be there. Such strawberries and other early fruits as will be seen, will make the mouth water. The ladies, too, are now busy with the needle, the pencil, and the brush, to give the artistic work, and they add to the scene of beauty and genius. The farmer, the orchardist, the mechanic, and the artist, will all vie with each other to make it an interesting and a happy scene.

**Wilson's Burglar Detecting Gun.**—One of these curious guards against thieves we saw yesterday, and we would assuredly say, they are not only *detectors* but *killers* of thieves; for no thief could possibly enter by the door or window alive, without detection.

## Solomon's Temple.

"Time, place, and action, may with pains be wrought, But genius must be born, it never can be taught."  
We are to be called on to explain the reason why we place this couplet of the poet Dryden at the head of this article, we should simply declare that it was because we believed it most truly and emphatically belonged to California, in her present position before the world. Her history, her character, the energy of her citizens, the peculiar circumstances which have surrounded her advent, and the many and sore trials that have befallen her citizens, all tend to show, that by her position upon the map of the world, holding the key of the "Golden Gate," the time of her advent, the place she occupies, and the trials to which her citizens have been exposed, has indeed called into being that action in the minds of men that has given birth to such a genius as the world never saw before. A single reflection upon the minds of intelligent men and they will see it at a glance.

We believe in our heart that California will prove the birth-place of a genius of a newer and a higher order, such as will stamp it as peculiarly of California origin. We could recount many inventions of a very high order; many enterprises of a very extraordinary character, that spring into being on our golden shores; but our purpose is simply to show the truth of our assertion by the fact that the grand design of building "Solomon's Temple" originated here in California—the place above all others for such an enterprise; one for which our State is peculiarly adapted and qualified, by reason of the materials necessary for its builders, and of which no other State in our Union can produce. The history of the building of the Temple, as minutely described in first Kings, sixth to eighth chapter, should be carefully read by all who visit this great work; for this Temple is a *fac simile*, in every particular. The form of the Temple is perfect; the "Porch before the Temple;" the "Chambers;" the "windows of narrow lights;" the "walls of cedar;" the "carved knobs and open flowers;" the "Oracle," overlaid with pure gold; the "Ark of the Covenant," of finest gold; the "doors of olive tree;" the "palm trees, within and without;" the Altar, Pitchers, Cups, and the six hundred Images; the "Table for Shew-bread;" the "Tables of the Money-changers;" these are all perfect. The "Ark of the Covenant," with the Censers for incense, the Bowls, Spoons, Basins, and Golden Candlesticks and Snuffers, all of pure gold; "Cherubims;" the "Golden Sea," with all and everything described in Sacred History, will be found faithfully and artistically perfected in this great work; the marble-work particularly will command the admiration of every artist. (This was executed by Joseph Whittle.) The surrounding scenes in the Pavilion, of which there are twenty (prepared by Mr. O. Rogers), represent Jerusalem, Mount of Olives, Mount Hermon, the Dead Sea, Bethlehem, Mount Carmel, Coast of Sidon, Caesarea, Mount Sinai, Mount Aararat, Mount Lebanon, Beyroot, etc.; the Plains of Jordan, Isle of Patmos, the Isle of Crete, Smyrna, and the Harbor of Rhodes. These scenes are of deep interest to all who value Sacred History—the student, the teacher, and the Christian.

Parents by all means should take their children; and we trust this exhibition will prove a valuable school for all. In order that these scenes may be enjoyed in the highest degree, and the beautiful perspective of the views realized, opera-glasses should be taken by visitors. This great work has been begun and carried forward under the care of A. Sluhow, master builder, with about forty mechanics and artisans of skill and ability; and when we reflect that this immense undertaking has been conceived, carried forward, and completed by woman, it is another evidence of the influence she can exert on mankind for good; for we believe this work will lead to an increased study of the Bible, and the interesting scenes connected with the Holy Land. It is expected that the Rev. Dr. Scott, and Rev. Dr. Peck will deliver addresses at the opening of this grand work, and thus add greatly to the interest of the occasion. To the Masonic fraternity this will afford a rich season for their cause, and it cannot be doubted they will improve it to the utmost.

**HUNTER'S POINT.**—This most admirable sporting ground, some six miles from this city, should be better known. Every person who desires a fine ride over a most excellent road and along the opening view to the ocean, should seize the present beautiful morning, and enjoy this pleasant trip. Those who use the gun, can find abundance of game, and fishing tackle can be brought into use also. But the ride over the San Bruno Turnpike is truly delightful. The farther you go, the better you will like it. The sea-breezes will invigorate, and the flush of health will tell where you have been. But "Hunter's Point;" here is a little "beauty spot" hidden in a little cozy nook, where roses and lilies send forth their fragrance, and here an early pioneer has built his "home." Friend Hunter has been holding this charming spot nearly ten years, and it is a gem sparkling with the drops of the sea's silvery spray and the morning's early sunbeam. Mr. and Mrs. Hunter have a beautiful and happy home. Our only regret was that friend Hunter did not long since plant himself an orchard and vineyard. He has the best of soil and location. Don't lose another year, friend Hunter. Put your vineyard on the side hill, and your orchard in front of it. We will come and show you how. We will only ask our bread and butter and a snuff of the fresh breezes from the ocean. Oh, how much beauty there is in scenes like these.

**MARBLE WORK.**—We examined some very splendid marble mantles, now being made by the Devine Brothers, of Sacramento, to order, for a gentleman of that city, from pure Carrara marble, valued at from \$300 to \$500. The style of work is entirely new, being the diamond pattern. We are glad to see such work of our own artists go to embellish our "California Homes." We saw a marble mantle at Devine Brothers, the same as the one made and exhibited at the Fair, valued at \$1,000. We hope some wealthy citizen will come forward and purchase this for a beautiful home.

## Thanks to the "Times."

A VERY handsome complimentary notice of our Journal appeared in the Times a few weeks since, and though we have not yet spoken, we have nevertheless not forgotten. The peculiarity of the notice awakened a train of reflection, and while we gratefully return our thanks, we especially thank them for the happy allusion to our most particular friends (?), which they said we had not a few.

One of the most important results of our reflections, after a careful perusal of the complimentary notice, is the following; we write what we feel, and feel what we say:

Who are our friends? "Prosperity makes friends; adversity tries them." This is an old proverb and a true one. There is another saying: "God save me from my friends! I can take care of my enemies," is equally true, with the brave of heart. We have had occasion during a life-time of some years, to learn a thing or two. As danger calls out man's energy and endurance, so trials call out a man's faith, and poverty shows him who are his friends. All these trials to which human life is incident, will teach a man wisdom if he will learn. The flattering notice of our journal by our cotemporary of the Daily Times, some little time since, will not be lost. We thank them. Our experience of the world has shown us that the man without enemies, is the man without friends. A good fellow never accomplishes much. His fire tries the metal, and purifies it from the dross which surrounds it; so a fierce contest among men separates the good and true from those that cannot stand fire. The man who relies more on his friends than himself, builds on a poor foundation. His friends may leave him—may prove untrue; but if he prove true to himself, he will stand, for he has the promise that "one can chase a thousand, and two put ten thousand to flight," and "thrice is he armed that hath a quarrel just." The man that pursues the even tenor of his way, turning neither to the right nor the left, but labors for the cause of right and the good of his country and his fellow men, it is written, "the fire shall not consume him, nor shall the floods drown him, neither shall the gates of hell prevail against him." We are firm in this faith.

## "Come to our Home."

The following most cordial and kindly invitation we found appended to a valuable letter inviting us to come and visit some happy friends in the mountains. It is so welcome an invitation that we cannot resist it. We accept it, dear friends, and have ventured to publish the four stanzas which closed your welcome letter. There is a sincerity that marks them truthfully tendered. "Come, dear friend, come to the mountains of snow, When the broad valleys are parched up below; Leave the hot city, its cares and its strife; Come and enjoy our wild mountain life. There's wealth in these mountains that invite you away; I speak not of gold or its gorgeous display, For the wealth of the soul is dearer by far, Out shining bright rubies or the night-beaming star. Our rude little cot just under the hill, Is surrounded by flowers that drop o'er the sill, And fashion, the goddess, has never been seen To cross the low threshold with her giddings and spleen. So let us treat you; come away from the town, With its trials and misery, and its gilded renown. Here a trio of friends most anxiously wait To welcome you in through our white cottage gate."

Who would not accept such a welcome—such an invitation? Our response to our mountain friends will be, we come! we come!

We'll hie to the mountains  
To sing in their praise,  
And drink from cool fountains  
In summer's warm days  
We'll leave our bright valley  
For the mountains of snow,  
For their cool breath shall rally  
When we faint here below.  
The wealth of these "hill tops"  
Like a miser we'll grasp;  
'Tis not gold—but the fruit crops,  
Flowers, and friends that we'll clasp;  
True friends are the soul's life—  
They will ever outlast;  
They gleam o'er our whole life  
Like Gilead's rich manna.

In that neat little cottage "just under the hill,"  
We'll meet our three friends with a hearty good will,  
And there from the cares of the city we'll fly  
To meet them and greet them in early July.

**BIRD CAGE MODEL.**—We went up J street, Sacramento, in the early part of the week, to examine a "model," which was said to be the model of the New Pavilion for the Agricultural Fair. Just as we entered, a person stopped on the side-walk, saying: "Look here! See this big Bird Cage!" We could but smile; for, really, it struck us the same way, when we came to examine it. This model is presented for the New Pavilion, by Wm. Patten. It is represented to be for a building one hundred feet by one hundred and forty feet; made to a scale of five feet to the inch. By this scale, the building is to be only forty feet high. This, we think, not a good proportion, but far from it—it looks *ugly*. The design is not of that style that would do credit to Sacramento. The basement entrance being nearly hid by a poorly constructed stair-way, wholly darkening the entrance. The whole plan is too *mediocre* for a building of this character. We hope, if they succeed in erecting a building, it will be a good one—worthy the County of Sacramento and the State of California.

**CALIFORNIA BIRD CAGES.**—California can boast of bird cages of home make that will surpass any that have ever been imported into the State. We were invited into the store of J. R. Ray, Esq., on J street, Sacramento, to examine the new style bird cages made by Mr. Chas. C. Allen, an artist of most excellent taste, now at work for him, manufacturing them in a style of beauty that will assuredly meet with public favor, and have a just appreciation; and what is very important, they can be sold at prices equally low with the imported ones, while the beauty of style and finish far surpass them. We advise all who desire beautiful cages to call and see those now being made at Mr. Ray's.

## BUSINESS DIRECTORY.

**EASTERN.**

**RISE OF WATERS AT SACRAMENTO.**—We spent a few days at the Levee City, in the early part of the week, and rode a little way into the country to see the coming waters from the mountains. The waters are very high, and considerable portions of the low ground round and back of the city is submerged. Below Washington, on the Yolo side, the waters spread over a large space, and we noticed several gardens and orchards under water; and, if the present warm weather continues, there must be considerable injury done. Chinadom, from I street to the American river was a perfect sea. It is to be hoped that the authorities will not delay an examination of the Levee too long; for, "an ounce of prevention is worth a pound of cure." And it should be apparent to every reflecting mind, that the snows are melting very fast, and the quantity in the mountains being unusually great, the rush of waters will consequently be quite sudden and very great, and come down from every quarter upon the Levee City. A defect in the Levee might cause the loss of millions and the ruin of many. Under any circumstances, injury will accrue to overflowed land under cultivation, with the more certainty from the heat of the season—making the water hot as it recedes, and burning the vegetables inundated. Cultivators should look to this, and a showering of cold water will benefit trees or plants that have become nearly white from immersion. We hope, however, that our hard-working and truly deserving farmers and gardeners may be spared much loss and inconvenience. A few days covering of water would not be serious; but a week, ten days, or two weeks, would be fatal. Attention and care now is all important.

**TO OUR CORRESPONDENTS.**—We thank those who kindly have sent us words of commendation and their solid evidences of appreciation. We shall not forget such acts. There are many names recorded in red ink, who, we feel, have given us evidences of friendship, that will stimulate us to still greater effort to merit their favors. "Leaves from the Pine Forest," by Alice, will appear next week. This will please the friends of Alice, as it is one of her happiest efforts. "Obedience," by Edith Montessor, a valuable essay on education, we are happy to announce for next week. Several valuable letters from new friends also, for our Ladies' Department, will promptly appear. A communication from Dix, on country life and the weather, will appear next week.

**OUR EXCHANGES.**—We are constantly applied to from all sections of the country to exchange; we shall be most happy to do so, whenever we can consistently, as we are desirous of receiving any information in return to benefit this State; but as our exchange list is already very large, we must hereafter restrict ourselves to those journals of science and art, and of a nature to interest us in those departments to which we are allied. Works on education, either literary, scientific, or social, will always be welcome; others that desire to exchange will be required to pay the difference in the price of our journal.

**THE WEATHER.**—On Sunday morning we had a smart shower of rain, and through the day and Monday, the indications were for a regular south-east storm, but gave us only light showers, and about the same occurred in various places in the interior. Since then the weather has been more of a summer kind, culminating yesterday in a "melting" warm day. This warm weather has started the snows in the mountains, causing a rise in the rivers, which have overflowed in some places, damaging the crops; we hope the loss will not be extensive.

## DOMESTIC SUMMARY.

CALIFORNIA figs, of this year's crop, are now on sale at the fruit stores in Sacramento.

A submarine telegraph cable has been successfully laid recently from Valparaiso to Mare Island, to connect with the Alta Telegraph line.

The Vineyards of Los Angeles, says the Southern Vineyard of the 20th inst., present a promising appearance for an abundant vintage. The injury by the cutworm has not been serious.

The Pacific Mail Steamship Company have now on their wharf, at Benicia, about ten thousand tons of coal, most of which is anthracite. It is said they have enough now, here and at Panama, to supply their vessels for the next two years.

The Sonoma County Agricultural and Mechanical Society, at a meeting held on Saturday last, decided that the first annual exhibition of the Society shall be held at Healdsburg, on Wednesday, Thursday, Friday, and Saturday, September 14th, 15th, 16th, and 17th.

The Supervisors on Monday, by a vote of 6 to 2, accepted the deed of the lot corner of M and Sixth streets, notwithstanding that the Board of the State Agricultural Society presented a protest against it and in favor of the I street lot; consequently there is nothing left now but to go on with the building, says the Sacramento Bee.

The Board of Trustees of the Agricultural, Horticultural and Mechanical Society, of the Northern District of California, at their meeting in Marysville, on Saturday night, completed the Premium List for the first Annual Fair of the Society, to be held at Marysville, Aug. 30th, 31st, September 1st, 2d, and 3d, 1889, and ordered the same to be published.

A GENTLEMAN now in Humboldt intends to go into the business of grinding and preparing redwood bark for mattresses. The editor of the Times, at that place, has some specimens of his preparation, and sees no reason why it should not be as good as palm or hair. The gentleman thinks, also, that the inside of the bark will make good gunny bags.

The San Gabriel river mines continue to be of interest. The Vineyard says there has been received by three or four merchants in Los Angeles, about two thousand dollars worth of gold within the past ten days. Men are continually leaving the city for the mines, and but few return. A miner took out in one day seventy dollars worth of gold. One piece of this day's proceeds was worth fifty dollars.

An uncommon storm is reported by the Stockton Republican. About three o'clock on Sunday morning, a heavy gale commenced blowing from the northwest, and the rain poured down in torrents for some time. The storm was accompanied with quite heavy thunder and sharp lightning. The skies were clouded during the forenoon of Sunday, and there was occasionally a light shower. In the afternoon there was a heavy rain for some hours, and during most of Monday the skies were clouded, though no rain fell. This is a strange event for the 22d of May.

A SILVER mine of large extent, the Shasta Republican says, has been discovered recently by Capt. William Weatherlow, Geo. Lathrop, and Joseph Kitts, between Honey Lake and Mud Lake. It is situated south of the latter place, and runs in a direct north and south line. In some places the lead is from ten to fifteen feet wide. Where the ore does not crop out its presence is readily determined by the color of the ground. Some of the quartz containing the silver has been assayed, and yielded at the rate of 164 ounces to the ton. The metal is represented to be of the finest quality. The ore resembles that found in the celebrated Arizona mines. The mine is situated about fifty-five miles northeast from Honey Lake, and is accessible by a good wagon road. Work in the mines will commence during the summer or fall.

HEAVY freshets and destruction of property are reported in San Joaquin county. The Stockton Republican of Tuesday learns that within the last twenty-four hours, the rivers in that portion of the State have overflowed their banks at many points, and the consequences have in some instances been disastrous. At Clark & Cahill's Ferry, on the Stanislaus, the entire country in the vicinity was overflowed. The most serious damage, however, has been done on the Mokelumne river, in the vicinity of Wood's and of Staples' Ferries. In addition to the loss of other property to a large amount, a field of two hundred acres of wheat belonging to Mr. Staples, is under water. The water was up even with the causeway which connects Wood's Bridge with the land near his hotel. The lands on the banks of this river, upon which are rich crops, are submerged for many miles, and the loss of property has been immense. There had not been a very heavy rise in the Calaveras, when the stage passed, yesterday, though the other rivers are greatly swollen.

SAN RAMON Valley is set out by a correspondent in the Contra Costa Gazette, under date of Alamo, May 18, as follows: Our beloved county is so beautiful during these spring months, that it well compensates for her seared and dreary look during a portion of the year. Let any one who has a spark of love for the beautiful in his nature, but wander over our hills and valleys "in the spring time of the year," and he cannot help exclaiming, "How lovely I how beautiful!" Here in our beautiful little valley of San Ramon, the very hills seem to dance with joy. In the words of Campbell, it would seem as if

"The Queen of the Spring, as she passed down the vale,  
Left her robe on the trees and her breath in the gale."

Our fields now give promise of a rich and abundant harvest; and it seems indeed as if the "Queen of Spring" had passed through our vale, and left innumerable manifestations of her visit. Things are moving slowly on to the important time of year to our farmers—the harvest. Some have commenced cutting hay, but it is generally very light. I think our people have missed it by not saving more grass land—or rather hay land—in this county. As I heard a man say the other day, "hay will be hay next fall;" so stockmen look out for breakers ahead.

THE "DASHWAYS."—A glorious work is in progress in behalf of the cause of temperance. We believe it will restore many men to society again, who have been heretofore wholly or partially excluded from good society by their intemperate conduct and evil associations. God speed the noble work. Homes will be again made happy. Children will bless this work. Wives will thank God for it, and California will rise and shake herself from a portion of the evil that has cursed her. The introduction of pure water will change men's habits also, and peace will come where sorrow dwelt before.

## Yosemite, via Mariposa.

By the letters we have received from our friends on the Great Valley route, we are enabled to present our readers with the following facts, to aid them in their calculations for this delightful trip. Our friend Holmes, editor of the Mariposa Gazette, whose enthusiasm for these grand scenes equals, if not exceeds our own, has kindly communicated with us, giving valuable facts, from which we gather the following:

No one has yet attempted the route from Mariposa, although many are preparing to go the first week in June, when the road can be traveled with comfort and facility. The vast quantity of snow has filled the streams and well watered the meadows, which will give a richer verdure the present year than usual. This section of the State presents so many features of interest and grandeur, that all should either go or come this route, especially to view the "Mariposa Forest."

About the first of June, and from thence forward for two to four weeks, by reason of the immense volume of water, the Falls will be in their greatest glory and grandeur, presenting an appearance unparalleled in the world.

Undoubtedly the festivities, which will take place in the Valley on the 14th of May, will be of a character unequalled for enjoyment. The strains of rich music from the band, echoing over the valley and the mountains; the scenes which are reflected by bonfires; and the loud tones thundered forth from wooden cannon—These accessories, with the roar of the water-falls and the shadows from mighty pillars of granite; while the merry dance, and happy voices, make still richer music, will afford such enjoyment as can seldom be found down in the world below.

From Coulterville, we learn of the successful trip of a party from Bear Valley. Mr. Fremont's family, with several friends, passed safely on, and are now in the Valley; and numerous parties are preparing for a visit to the Valley between the 1st and the 10th of June.

From all advices received, we would advise parties to be preparing so as to be in the Valley the first week of June, or by the 10th of the month, and enjoy the festivities of the 14th, which will be most interesting. Visitors should, if possible, try to give themselves two weeks' time in the Valley; for there is so much to see, so much to enjoy. A hasty trip prevents the opportunity of examining those scenes as they should be, or of realizing a tithe of their beauty.

We would urge the attention of all to a suitable preparation; carrying such materials for enjoyment and use, as books for reading, scrap-books to press flowers, a good glass for observation (one of Lawrence & Houseworth's marine glasses) will open new worlds to view, and a haversack to gather curiosities and carry food for a long stroll.

THE ELEPHANTS.—We received a courteous invitation to visit these "new comers" to the Pacific last evening, under the new and spacious pavilion erected on the lot next to the Hotel International. To say we were interested, would be to speak lightly—we were surprised and instructed. We have seen "the elephant" many times; have seen, we believe, every noted one in every collection of animals that has been shown over the United States for years. We have also seen many European collections, and watched their fantastic as well as their gigantic movements and herculean efforts; but have never witnessed elephants so thoroughly trained. These wonderful animals were imported by Mr. Quick, "round the Horn" safely, although the voyage was over one hundred and fifty days. They were bought by John Wilson, Esq., of the "Lyceum," for the sum of \$22,000; and will be exhibited over our State, that all "old comers" and "new comers" may "see the elephant." We witnessed these curious and well-trained animals. We saw them under subjection to man, as was originally declared at the Creation: "I give thee dominion over every beast of the field;" and here we see it exemplified literally. These elephants are called "Prince Albert" and "Victoria"; their tutor and manager is Dr. Charles Bassett. They will, doubtless, instruct and please many thousands of our citizens, who will be well repaid for the visit; for these great, unwieldy and bulky animals, as they are to all appearances, can dance with bells on their feet—as Prince Albert does while Queen Victoria turns the organ; they stand upon three feet, four feet; mount upon a barrel, placing their four feet within the circle of the head (two feet in diameter); stand upon their fore feet while upon the barrel, and perform many curious pranks. Mr. Wilson has done well to make this effort to please the public, and we hope he will be well rewarded. Parents should take their children to see these animals; the only ones, so well trained, ever exhibited in the United States or Europe. In truth, everybody should go.

LET YOUR LIGHT SHINE.—Those who toil by the midnight lamp should always secure for their use a clear, yet soft and pure light; and to secure this invaluable aid and comfort to the student, bookkeeper, or writer, whose duties require night work, pure oil is the essential thing; candles, alcohol, and camphene, with their crusted wicks may do for a season, but the genuine, pure sperm oil far surpasses all other lights for the ease and comfort of the eyes. We speak from the experience of several years' hard study at night, and having tried all kinds, we have found the oil the best; and for some time we have been using the pure oil from the oil-works of Stanford Brothers, and have never found so excellent a light before. We know there is none superior, and rarely any equal to it. The best way to prove this is to try it—this we recommend all to do.

GRAND FLORAL BALL AT OAKLAND.—We cheerfully call attention to the preparations now making for the Alameda County Agricultural Society Floral Fair Ball, which will take place on the 20th June, at their new Pavilion in Oakland. By referring to the card of the managers and committees, it will be seen that the programme embraces the names of substantial citizens, and there is no doubt that the occasion, the place, and the associations, and the guests, will form a bright galaxy of beauty, wit, fashion, and happy spirits sufficient to make the occasion long remembered as one of the best and happiest of the year. We can confidently assure all that it will be a "recherche" affair.

## Great Excitement at 33 Sacramento Street.

What a celebrated place is 33 Sacramento street. T. Ogg Shaw's new California-built Clippers will leave daily next week, for San José and Santa Clara Valleys, and so on through the season, from pier 33; Secretary, J. Crosby, Esq. These Clippers will be heavily freighted with extras, suitable for repairs for the harvesters of these famed valleys. First clipper sails on Monday, loaded with wheels, gearing, etc., and rigged with the new belting from Fulton's Factory—a California production, being tanned with our own oak bark. Another line will run up the Sacramento Valley, and a third up to Napa, Sonoma, and the interior. Tickets procured at T. Ogg Shaw's—the only office of this kind in the world. Remember 33 Sacramento street. Stout hearts! strong will! and real working muscle wins!

BAD MILK.—We often hear of that "blue milk" that the woman once liked so much better than the other kind, that had the thick cream on, and we are fearful that some dairymen put blue in the water the cows drink. The fact is, the weather is getting warm, the cows are getting thirsty and drink a great deal of water, and if blue is put in the water the milk will look blue. Now there is a way to know if the cows drink pure water or blue water. We really hope those that receive blue milk will ascertain this matter, for it is important to science to have it known. There is a certain glass tube to test milk, and every family can procure one at small expense, and they will then learn whether the cows drink blue water or not.

On the 19th inst., there died in this city, in the most indigent circumstances, a Sonoran by the name of Eugenio Lopez. Mr. Lopez came to California a few years since, in advance of vast herds of cattle and sheep, into which he had put all his large capital. On his way down to meet his stock he was robbed, below Monterey, of a large sum of money, which he was taking with him to defray the expenses of his drovers through the State. He was so severely injured in his encounter with the robbers, that he lingered at an obscure ranch for many months, insensible and unable to give any account of himself. On regaining strength enough to pursue his journey, which he was enabled to do through the generosity of his humble host (who had found him bleeding and helpless, and whose unceasing kindness had saved his life), he went on to Los Angeles, where he got tidings that his stock had passed many weeks before; and, when he got back to this city, he learned that his agents, unable to resist the temptation presented by his absence, and undoubtedly deeming him to be dead, had converted all his property into money and decamped with the proceeds. Thus Mr. Lopez, from a position of great wealth, was suddenly reduced to abject poverty; with this terrible loss, aggravated by the ill consequence upon his bodily injuries, he has struggled for several years, until death has finally put a period to his sufferings.

PERSONAL ITEMS.—The London papers say that the collection of old pictures Mr. James J. Jarvis of Boston has gathered at Florence cannot be surpassed for its perfection and richness. The collector has refused the most tempting offers to part with some of the treasures he has brought together, but he has altogether declined to sell, preferring to bring them to America.

THE LADIES' Electro-Chemical Baths.—Exactly so—as a suite of Baths, with a well furnished reception room, has been assigned exclusively to the ladies who patronize his institution, by Dr. BOWEN, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A skillful, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as aids to cure scurvy, rheumatism, and the other "aids that flesh is heir to," as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than "sugar-coated pills," and how much better, those who most truly tell who have "brought physic to the dogs," and cleave to these health-giving baths.

MRS. P. E. ROGERS—Family Sewing. We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest premiums, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Field and Ornamental FAMILY SEWING will be executed in the best style of the art.

THE GENUINE PITTS' MACHINE. T. OGG SHAW'S, is the ONLY PLACE where the Genuine Pitts' MACHINE, made by John A. Pitts, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. [13] T. OGG SHAW.

WE are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, the witnessing of an unapproached committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "Venus."

My Ambrotypes were not exhibited at the last Fair in this city. Please call and see the celebrated Premium Ambrotypes that my neighbor brings so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Cold, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it were a work of supererogation to speak of its merits.

Consumption CAN BE CURED! The whole theory of this Medicine fully confirms the opinion of that eminent man—Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Consumptive Consumption, and its power as a safe, certain, speedy, pleasant and efficient remedy cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "J. H. WISTAR" on the wrapper, as well as the printed name of the proprietors.

SETH W. FOWLE & Co., Proprietors, 12 Tremont street (Museum Building), Boston, Mass.

For sale by—HARLES MORRILL, HENRY JOHNSON & Co., and REDINGTON & Co., San Francisco; CHAS. MORRILL and R. H. DONALD & Co., Sacramento; SMITH & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

SALUBRIOUS RHUBARB.—We were shown two stalks of Rhubarb (pie-plant), said to be of the Victoria variety, by Rev. Mr. Briggs, which he had received from Mr. Hill, of Grass Valley, which weighed about four pounds, and measured twenty-two inches long; stout and strong stalks. The Victoria is a good kind, and was the best until the Cannon was introduced. We learn Mr. Hill produced last year from one-eighth of an acre, a crop of rhubarb that realized in value \$2,000. This is paying pretty well.

## SOLOMON'S TEMPLE.

This Magnificent Work of Art,

NOW COMPLETED

According to the most perfect style of architecture, as described in Sacred History, will be opened for the approval of the public, on

MONDAY EVENING, MAY 30th, AT 8 O'CLOCK.

The proprietors believe they can claim from the public their deserved approval and support.

When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement resolved that it should be completed whatever the amount of labor it should require, or the cost it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

EXHIBITED IN THE PAVILION

Recently occupied by the

MECHANIC'S INSTITUTE, The whole interior of the Pavilion has been handsomely fitted up with

SKETCHES OF THE HOLY LAND

which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate hand-bills describing minutely this temple. Suffice it to say that all and

EVERYTHING RECORDED IN THE BIBLE

will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. Stothow, as master builder, competent artists for carved work, A. Moise glider and finisher, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows: Season Tickets admitting a gentleman and lady... \$5 00 Single Tickets... 50 Children under 12 years, half price.

The Pavilion will be open from 10 o'clock a. m. till 10 o'clock p. m.

12-3—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Byrne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions.

17-3m MRS. C. SHADE, Proprietress.

## CHENEY'S

IMPROVED FIELD FENCE.

PATENTED JANUARY 25, 1859.

PERMANENT OR PORTABLE.

It is made of boards or rails in the following manner: Take two sticks or poles of timber 2 1/2 inches square, and about 6 1/2 feet long, either sawed or split—their length may be varied according to the height intended for the fence. Lay them across each other in such a manner that the ends which rest on the ground, will be about 5/8 of a foot apart, leaving about 18 or 20 inches of each pole above the point of intersection to receive the top-rail, board, or pole. They may be fastened at the point of intersection by halting and nailing; or if the poles are split by bolt and screw. A miter box may be used to saw and have the poles. Next take two cleats about 1 inch thick and 3 inches wide; nail the short cleat across from one post to the other, so as to leave a triangular space large enough to receive the rail or board. Then nail the long cleat to the post parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them.

For board fence use a stick 2 1/2 inches square and 2 1/2 feet long; nail it to the cleats, about one of the posts about one inch from the point of intersection; this is to stand perpendicular, and the boards are to be nailed to it. For rails, two perpendicular strips of board about 2 inches wide should be nailed to the cleats to keep the rails in place; or a loop of wire attached to the posts or hung on the second rail in which the lower rail may be suspended, can be used if preferred.

Now to set up the fence, set up two posts and put in the rails or boards, nail the boards on; place the top rail in the crossing of the post. Lock-rails may be used by placing one end in the crossing of the post, the other end on the ground. These serve to keep the top rails in place, and brace the posts; thus enabling the fence to withstand the effects of wind, and preventing it from being thrown down by animals, and making it stronger. Where fencing timber is scarce, the bottom rails may be dispensed with by substituting a low mound of sod or turf, or stone wall.

Expenses per 12 feet: lumber \$10 per 1,000; rails, \$3 per 100; posts, including lumber (8 feet) nails and making, 14 cents each; five rails at 3 cents each, 15 cents. Cost per 12 feet, 32 cents; or if two boards, six inches wide, and three rails are used, the cost will be about 35 cents per twelve feet. Cost per rod, from 20 to 30 cents.

The superior method of hanging a gate to one of these posts is worthy of special notice. A gate for California. A few remarks may here be proper in respect to the general principles of its improvements. A careful inspection of the model or drawing of the fence itself, will show that the particular form and construction of the posts and panels has been adopted with reference to their simplicity, economy, strength and durability. The posts stand on the ground, not in it; hence, no digging of post-holes or rotting off of posts, or sagging over; it is not affected by frosts or winds. This fence is believed to be the best—all things considered—ever offered to the public.

Town, County, or State Rights, for sale on the most desirable terms. Address BETH CHENEY, Klanton, Chaut. Co., N. Y., Patentee, H. WINCHESTER, Iowa Hill, Agent for California.

Letters addressed to Editor Farmer, will receive immediate attention. 17-3m

## THRASHING MACHINES.

HALL & WOODBURY'S SEPARATORS, With Hall's Improved 10-Horse IRON-POWER.

THESE MACHINES HAVE been enlarged and many valuable improvements added to them the past season. They are now as they always have been, THE BEST Machines in the world.

Purchasers will do well to call and see these Machines before purchasing, as they will be sold low.

EXTRA CASTINGS, of all Descriptions, for repairs, For prices and particulars, apply to or address

## Greatest Labor-Saving Machines of the Age

CALIFORNIA INVENTIONS!

## PECK'S SANTA CLARA HEADER AND HARVESTER!!

THE UNDERSIGNED HAVE PURCHASED OF Edmund Peck,

All the right title and interest in and to his newly-invented PATENT HEADER AND HARVESTER, to which was awarded, at the County Fair, held at San José, September, 1888, the FIRST PREMIUM, over the Illinois (or Haines) Harvester, and all other Machines on exhibition. We shall manufacture for the present harvest 1500 Machines of the above description, and are ready to receive orders for the same. Parties wishing to purchase Clippers or Headers, will please give us their orders. We design making the best Machine of the kind ever offered to the public. This Machine combines many useful improvements, and was pronounced by the Committee the greatest invention of the kind. One of the above machines cut, last season, OVER ONE THOUSAND ACRES OF GRAIN, and the expense of repairs did not exceed TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it cannot fail to take the place of all other machines of the kind. Mr. Peck has displayed great ingenuity and judgment, the advantages of which every farmer should avail himself, and we believe the community at large will be much benefited. We have already received, through Mr. Peck, from those who saw them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in THREE DAYS, one machine cut EIGHTY-ONE ACRES OF Grain, which is more than has ever before been cut, in the State of California, by one machine, in the same time.

Send in your orders. We mean what we say. Recollect the place:

33 Sacramento street. THOS. OGG SHAW, GEO. H. MONROE.

The advantages we claim the Peck Header or Harvester possesses over any other MACHINE of the kind in the State, are:

- 1st. Yielding a California invention, and got up by a practical farmer, and well adapted to the wants of this country. The wheels of this machine being iron, and not liable to shrink or swell.
- 2d. It is the principle of raising or lowering. As the machine is evenly balanced, a child can raise or lower it with perfect ease while in operation, requiring no delay.
- 3d. It cuts as low as any Reaper in use, and can be raised to a height of three feet, in one minute.
- 4th. It is the manner in which the machine is guided, it being so constructed that a boy of ten years can guide it.
- 5th. It has no side draft, as both wheels are of a size, and the weight is equally divided.
- 6th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.
- 7th. It takes less team to propel it.
- 8th. It is more simple and is easily understood.
- 9th. More substantial and less liable to get out of order.
- 10th. We can cut and stack with this machine, grain in good condition, for \$2 50 per acre, while in the old manner of cutting, it costs at least \$3 00; leaving you to judge as to the saving this machine has over any other.
- 11th. This machine is so constructed as to save all the grain. It will cut and stack TWENTY-FIVE ACRES A DAY, when the grain stands up.
- 12th. The greatest advantage of all is, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

## Report of the Committee on Reapers, Mowers, and Thrashers.

The Committee appointed to examine and report upon Reapers, Thrashers, and Mowers, and Agricultural Implements, report that we have examined the GRASS CLIPPER, INVENTED BY MR. E. PECK, of Santa Clara county, called "Peck's California Clipper," and saw it operating in grain fields. The machine cuts a swath nine feet four inches in width, has an apron or elevator the width of the length of the grain, and carries up an angle of about forty-five degrees the grain cut off, and throws it into another apron or elevator about two feet wide, and running at right angles to the first elevator, and drops the grain into a wagon that runs alongside the clipper to receive it. The clipper requires four horses to propel it, and one man to direct it, and three men to receive and haul away the grain, and a driver for each wagon to unload it, and a hand to load the grain in the wagon while it receives it from the clipper, requiring only five hands in all. It will cut and stack TWENTY-FIVE ACRES A DAY, when the grain stands up.

It has a reel, and will gather grain well, even if it inclines to an angle of forty-five degrees in an opposite direction from which the machine is moving. It will cut within three inches of the ground, or three feet high, and can be elevated or lowered instantly and without stopping the team, and gathers the grain so cleanly and perfectly that scarcely a head is left on the ground. The machine rests on two main wheels, each of which has a cog wheel fastened into the spokes about midway of the ground or three feet high, and can be elevated or lowered, and the other the sickle. The machine is of the most simple construction, and one examining it will wonder why such an invention has not long ago been in use. We do not hesitate to say that this machine is the best of the kind in the State of California, in being less liable to get out of order, in durability, in ease in operation, in the quantity of grain it will cut, and the excellent manner in which it performs its work.

In plain truth, in the judgment of the Committee, it is the best machine for farm use ever invented, and as it was invented by one of our own citizens, we recommend that it be called "E. Peck's Santa Clara County Grass Clipper."

We recommend a first premium to be awarded to Mr. E. Peck, for his Santa Clara County Grass Clipper.

P. B. MURDOCK, Ch. Committee.

## The California

## Combined Reaper and Mower!

The Best Combined Reaper and Mower now in Use!

WILL BE MANUFACTURED FOR THE PRESENT HARVEST, One Hundred of the "California Combined Reapers and Mowers," which for beauty, strength and simplicity, has no equal in this or any other market, as it possesses many great advantages over any other Machine, to wit:

- 1st. It is much lighter; the driving wheels are four feet high, making the draft 30 per cent less than other machines.
- 2d. The cutting part is in the rear of the machine, and the apron so constructed that it can be taken off in ten minutes for mowing.
- 3d. The grain is passed to one side with ease.
- 4th. It will cut grass as low as three inches, and grain as high as twelve.
- 5th. It can be raised or lowered in three minutes.
- 6th. It has less side draft than any machine in use.
- 7th. It has more motion.
- 8th. You can drive slower and do your work better.
- 9th. It cuts six and a half feet in width, and has a spring-steve five feet from the ground, which places the driver in a position to be able to manage his team, and see the breakers.
- 10th. It is in time to save the machine.
- 11th. It can be thrown out of and into gear instantly.
- 12th. The cutting part of the machine being in the rear, takes all the weight off the horses.

All the best and last reasons of all, is that it is a California-made Machine; and therefore, any purchaser can, on short notice, obtain any portion of the machine that may break.

I have taken particular pains to select good workmen and good materials, and I warrant this MACHINE to reap and mow, and to do any kind of work, better than any other machine in this market. Please give me a call.

ALSO, all kinds of REAPERS that are in use, can be had of me at the LOWEST CASH PRICES.

THOS. OGG SHAW, No. 33 Sacramento street.

Ladies' Department.

THE LITTLE GIRL THAT DIED.

Written by a ship-master who carried to sea as a memento, the sun-bonnet of his "little girl that died" at the age of about six years.

I have a little history,  
Locked in my trunk, beside  
The likeness of a little girl—  
The little girl that died.  
Tie the little bonnet, that  
Our little Lottie wore—  
A memento of the Little One—  
You're often seen her with it on.  
Playing round the door.

With tearful eyes I've studied it—  
"Tis soiled and somewhat worn;  
One little string is almost off,  
Its little cap is torn.  
A history of her busy hours—  
Her title once was few—  
No kind of work was carried on  
But what she knew how it was done,  
And helped me do it too.

It's not a fancy bonnet, or  
A fashionable one;  
It covered all her little head,  
And kept out all the sun.  
A history of her ramblings  
About the fields at play—  
The flowers she picked to fill her vase,  
Or in her little garden place,  
And water every day.

'Tis dated back beyond the flood  
Of grief through which we came,  
And every page some story tells  
Connected with her name.  
We thought not then of losing her  
Nor deemed her end so high—  
Until that fatal fever came,  
The grave we never thought to name—  
We knew not how to cry.

It speaks of health and "length of days,"  
Of many years to come,  
In which we hoped the little one  
Might bless and cheer our home.  
It tells of all her little ways—  
Her little sayings too;  
No conversation o'er went on,  
But she employed her little tongue  
And told us all she knew.

Her gran'pa from the village came,  
Or homeward from the field,  
'Twas hurried on, away she ran,  
And forth her welcome pealed.  
It tells how like a "busy bee,"  
Each moment she embraced,  
And "gathered honey" while she could,  
The same as if she understood  
She had no time to waste.

Did gran'ma to the garden go,  
Of her Dahlias, the pride  
Was beneath that little bonnet,  
Trotting by her side.  
Angels have plucked the Dahlia  
And borne it to the skies,  
Where never-fading flowers smile—  
They'll weave a garland for our child  
To wear—in Paradise.

Death of Winnie and Willie.

[Some month since we published the death of two beautiful children bearing the above names. These deaths occurring in the same dwelling, though of different parents and from different sections of country, were peculiar. The friendship and sympathy of the mothers of these sweet little children were thus cemented by the death of their loved ones. This communication comes from one who feels and can appreciate, and we hope that from the same pen we may often receive communications, but of a nature far different than of sorrow, although this comes as friendship's anthem, and will be a pleasant requiem over the innocent but "passed away."]

"They have gone," the beautiful visions  
Came and vanished from our sight;  
Crushed the gems that now are sparkling  
In a diadem of light.

Like a little dewy blossom  
Opening gently to the air,  
'Till the spoiler came and touched it—  
Closed its withering petals there.

Weeping household, listen! softly  
Spirit wings are hovering high;  
Lo! thy lost ones now are welcomed  
With the seraph group on high."

The mourners' wail has been wafted away;  
away over the deep to a fair little isle in mid ocean,  
and as the gentle breeze came to us from the sea,  
it told of the sad bereavement which had befallen  
our friends in the outer world; it told in language  
but too plainly read, two gems had left  
this tenement of clay to visit the region beyond—  
the region from whence no traveler has ever re-  
turned to tell the tale of his wanderings or dis-  
closures. And it is, can it really be that Winnie  
and Willie have gone to the home where changes  
never come? where the rainbow never fades? To  
play by the clear crystal brook on whose surface  
shadows never fall?

It hardly seems possible that two such prom-  
ising children, under the same roof, but of different  
parents, and of the same disease, who but a few  
short, alas, two short months ago, were plump,  
rosy pictures of health, and buds just to be  
proud of, unfolding so rapidly every hour that we  
had pictured their useful career, and allotted them  
a position to fill, and a character to act, in life's  
drama, that our next tidings borne to us on old  
ocean's bosom, would be, their little seats were  
vacant; their little wagon and rattle put away for  
the last time, and worst of all, their little prattle  
was hushed forever. It might be to us who hear  
with mortal ears, but I fancy their little lisping  
tongues are singing songs to Him who crowns  
their youthful days with health and happiness,  
then called them to a happier home beyond the  
setting sun, before their feet had become familiar  
with the paths of wickedness and traps which the  
enemy of mankind has set to allure and entrap the  
young and innocent, whose downfall would cause  
the mother's heart to break, and the father to go  
down in sorrow to his grave.

Yes, mothers, death has been in your midst, and

borne from your circle of five, one darling jewel,  
the youngest; the tiny baby; the most dear; the  
one oftenest looked after, because the most help-  
less. Winnie, the gentle, golden-haired, rosy-  
cheeked little Winnie, so quiet, you would think a  
child, a creeping child were in the room. I well  
remember her smile; 'twas a streak of sunshine,  
and those two pearly white teeth, just through,  
helped add to the child-like beauty, and shadowed  
forth what time might do. But her developing  
will be in another world, with angels for teachers,  
and a kind parent to guide her lisping tongue  
aright.

"The cup of life just to his lips he prest,  
Found the taste bitter and declined the rest;  
Then gently turning from the light of day,  
He softly sighed his little soul away."

Dear mother, thy Willie boy, like a summer  
bird, that drooping pines when cheerless autumn  
lowers, has spread his bright wings for the green  
woods, laughing waters and bright tinted flowers,  
which ever grow and never fade, upon the banks  
of the river eternally. No doubt you will often  
list in vain for the patter of those chubby feet, and  
sorrow for those eyes which always met your own  
with a welcome beam, and expressed, more than  
his baby dialect could, his wants and needs, and  
told before committed, of roguish acts and mis-  
chievous doings, in contemplation, many times be-  
fore forbidden by yourself. Remember, 'tis only  
adding another bright link in the chain which  
binds you to the gone-before. Heaven has  
brighter, more lasting attractions for you than  
those whose circles are unbroken, and who with  
one embrace can fold to her bosom all she holds  
dear on earth. But the hearts are few that do not  
treasure some sorrow from the world.

It will cost a hard struggle, as you go around  
the house, so still and quiet now (the weary still-  
ness makes your heart ache), to pick up and put  
away the little bonnet and hat, the dresses and  
aprons, the half-worn little shoes and stockings,  
which were taken off that last fatal night when  
the king of terrors made his approach. But they  
will be laid away one by one, and kept as sacred  
mementos of the early called, and at the anniver-  
sary of their deaths will be taken out, sighed and  
wept over, their little heroic exploits narrated per-  
haps for the hundredth time, until it will become  
more like a dream than a reality, a joy that came  
but to depart, for

"Only time can give relief,  
To the weary lonesome grief."

But in all this, you have your consolation, for  
you "sorrow not as those who have no hope." God  
has chastened you in love, not anger; then  
send back to the source, that starting tear, and re-  
member they were but gifts from heaven, transi-  
tory buds, loaned for a little season from the heav-  
enly hand, to knit more closely domestic ties, and  
render home more inviting. Their going but  
draws you nearer heaven, for where the heart is,  
there is our home; and admonishes others to be-  
ware lest their little charges which He has sent  
for some wise purpose, become too closely en-  
twined around the heart-strings, that the sum-  
moning of the one may not snap the delicate cords  
of the other, for by a blow but too keenly and  
deeply felt, has that just and glorious Giver given  
you an example that the most precious gems can  
be taken and the most sacred ties severed. Yet,  
"He doeth all things well," and

"The Christian's faith forbids our grief;  
God chasteneth in love."

FRANK VENNIS.

Trifles.

[We earnestly commend the following sketch. It contains a great truth, which, if properly con-  
sidered, would save many a family from that po-  
verty which a waste of "small things" has brought  
upon them. We could point out hundreds of cases,  
within our own knowledge, where the father of a  
family felt too poor to take a newspaper, and yet  
we could show him old iron enough around his  
farm to pay for a newspaper ten years. We could  
also show him where little wastes deprive him of  
enough annually to educate his children. But to  
the sketch, which we extract from the Michigan  
Farmer, contributed by "A Farmer's Wife."]

"Do not pare those potatoes so thick," said a  
lady in my hearing to her sister, who was visiting  
her from a distant State, and kindly volunteered  
to assist with the dinner.

"The thickness of a potato paring is nothing to  
me," said the sister pleasantly, "though I am poor,  
and always have been and always expect to be;  
but to you, who own your thousands, and have  
every comfort around you, perhaps, it may be of  
some importance. And some people, too," with a  
sly wink at another lady visitor, "attach so much  
importance to a rag, that they will not sweep one  
into the fire, or let one go to waste in any way.  
For my part, I do not think it pays to save rags  
and carry them to market, for two cents a pound,"  
but, on noticing a shade of sadness cross her sister's  
brow, she turned to the listening visitor and re-  
quested her opinion on such trifles.

"I will admit," said she, "that these are trifles,  
but just such small matters as these make up hu-  
man life, especially woman's life. It is little drops  
of water, you know, that form the ocean, and  
towering mountains are composed of little grains  
of sand, piled up together; so do these little, every-  
day matters, make up the sum total of human ex-  
istence. The thickness of your potato paring is a  
small affair indeed; but, pardon me, you say you  
are poor and always have been. Now, may not  
your habit of paring potatoes be carried out in  
your domestic affairs generally, and consequently  
have something to do with your poverty; and your  
sister's economy have something to do with her  
home comforts?"

"I never thought of this before," said she, "but  
perhaps it may be so."

"And now," said the visitor, "for the rags. I  
think it is our duty to save every shred, even if we  
get nothing for them. You would not like to be  
deprived of your weekly papers, would you? No,  
certainly not. Well, if rags paid for taking care of  
them, and taking them to market, your paper per-  
haps would be beyond your reach. And then,  
aside from our papers that we value so highly,  
what luxuries are books. The hand that wrote  
them, perhaps, is mouldering in the dust, but  
there they are—works of philosophers, sages, poets,  
teachers of religion, men of science, and those that  
soared on fancy's wing through realms of imagina-  
tion; still they live! And what is the material,  
of which they have composed those enduring mon-  
uments to their memory and fame? It is rags.  
Do not burn the rag; it may come back to you,

with thoughts traced upon it calculated to lead the  
soul from earth to heaven. Trifles that seem to us  
light as air, are often attended with momentous  
results."

"There, there!" said the lady, "you may stop.  
Give you a potato-paring and a rag for a text, and  
you would preach us quite a sermon."

GROVER & BAKER SEWING MACHINES. REMOVAL.

THE GROVER & BAKER S. M. COMPANY HAVING  
assumed the business heretofore conducted by  
MR. S. O. BRIGHAM,

For the Sale of our Machines in this City,  
Take this occasion to announce our REMOVAL from the  
premises lately occupied by him, to the more

COMMODIOUS AND CENTRAL STORE,  
No. 118 Montgomery Street,

AND WOULD INVITE THE SPECIAL ATTENTION OF  
Ladies,  
And all who have an interest in

DOMESTIC ECONOMY,  
And the Emancipation of the FEMALE SEX from the  
wearisome and overburdening Slave-work of the  
NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES,  
The superior Excellence and unmetakable Advantages  
of which over those of all other Manufacturers, cannot  
fail to be apparent to the most casual inquirer.

We have lately perfected, and introduced into this  
market, several  
NEW AND IMPROVED STYLES,  
Which, while embracing all the essential and exclusive  
qualities secured by the Original

GROVER & BAKER PATENT,  
Have in addition many New and Valuable Improve-  
ments, and are more simple in construction;  
make less noise, run faster, and perform

A Greater Variety of Sewing,  
than any other Sewing Machine extant.  
The capabilities of our Machine are not limited to any  
particular description of Cloth Sewing, but ex-  
ecute with the most wonderful rapidity and nicety,  
Every description of Fine or Coarse Sewing,  
UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT  
Can be procured of us, for either Old or New Styles of  
Family Machines.

That our Machines may dispense their benefits through-  
out the State, in the shortest possible time, we  
HAVE MADE A LARGE REDUCTION  
from our former Rates, and with pleasure announce  
our Prices—from

\$75 to \$160;  
Varying, according to size and finish.

For Bag-making,  
And all Manufacturing where Sewing is required, our  
MANUFACTURING MACHINES  
stand pre-eminent, and their qualities are too well  
known to require comment.

Samples of Work and Descriptive Catalogues of  
Machines, Prices, etc., sent per mail. All Machines  
warranted. All orders for NEEDLES, DUPLICATE  
PARTS, COTTON, Etc., must be accompanied by Cash.  
GROVER & BAKER S. M. COMPANY,  
No. 118 Montgomery Street.  
R. G. BROWN, Agent. 11-3m

THE "NE PLUS ULTRA" SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE  
(Under Howe's License).  
MANUFACTURED BY THE GLOBE MANU-  
FACTURING COMPANY,  
339 Broadway, New York.

MAY BE TRULY REGARDED as the "Ne Plus  
Ultra" of Sewing Machines, as all who are wish-  
ing to find a Machine which is capable of doing any  
kind of Sewing for Tailors and Housewives, with a sat-  
isfaction heretofore unknown—should lose no time in  
ordering one of the PATENT LEVER MACHINES,  
which are to occupy a similar position towards other  
Sewing Machines, that a PATENT LEVER WATCH  
(and every one knows its value) occupies towards a  
Lepus or other second-rate watch.

This Machine makes the "Lock Stitch," which looks  
the same on both sides of the fabric, and which cannot  
be ripped.

PRICE \$50.  
In all respects equal to Machines heretofore sold at a  
hundred dollars and upwards.

Specimens of Sewing done by the PATENT LEVER  
MACHINE, will be forwarded to any part of the country,  
upon the receipt of a postage stamp.

N. B.—An energetic and reliable Agent is wanted in  
every town and village of the United States and Cana-  
da, to sell the above named Machine. An advantageous  
arrangement will be made with the right kind of Mer-  
chant who is willing to have the exclusive agency.

SPECIAL NOTICES. THE HOME OF BEAUTY.

"Creative Genius! from thy hand  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and  
worship at the shrine of Genius? Imagination can rear tem-  
ples, and people them with gods; but Genius is required to  
make them live—to live to our vision, live before us models of  
themselves.

Here is our castle,  
And here our gods;  
By they are mortal.  
Around these festooned halls  
The good, the great, the living and the dead,  
And yet they speak—speak all:  
"We cannot meet the sparkling eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us.  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng:  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous thoughts come,  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty?  
Behold these flowers that gem the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, such like a brother,  
Joined hand in hand they're linked together;  
Here, too, stand, the poet and the seer,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us, him who all this beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

Daguerrean Gallery,  
Corner Sacramento and Montgomery streets.

SLEEP! SLEEP! SLEEP!  
"To each and all, a fair good night,  
And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best?

Sleep! Sleep! Sleep!  
Rest that refreshes most true!  
The rest that, while sleeping, our health doth renew,  
Is found on a mattress that's made of FULU!

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Economy tells us to buy and to keep  
The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
On the mattress from JACOB SCHRIEBER!  
If bechore life single, then life will not jingle  
Till they're married and purchase one wicker!

So come to J. SCHRIEBER'S, they go where, where,  
Those famous mattresses made out of FULU!

PIANOS. MELODEONS, Alexandre Organs, and Music!

Prices Greatly Reduced!  
HORACE WATERS,  
No. 333 Broadway, New York.

AGENT FOR THE SALE of the best  
Boston and New York Pianos and Melodeons.  
For the latest assortment of Made Merchandise  
in the United States. Pianos from five differ-  
ent manufacturers, of every variety of style—from those to  
plain rosewood cases, for \$200, to those of the most elegant  
finish for \$1000. No house in the Union can come in competi-  
tion for number, variety and celebrity of its instruments,  
nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with  
or without iron frames, have in their new scale an improved  
action, in power and compass of tone equaling the grand, with  
the beauty and durability of the square Piano. The Press and  
best Musicians have justly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action of every climate.

Horace Waters' Melodeons (tune the equal temper-  
ment), superior in each desirable quality. Can also furnish  
Pianos, Carharts, and Smith's Melodeons. Prices from \$45  
to \$125; for two sets of reeds, \$125; two banks of keys, \$20;  
organ pedals, \$25; Melodeons, \$25, \$35 and \$50; a liberal  
discount. Each instrument warranted to give perfect satis-  
faction, or purchase money refunded.

Alexandre Organs, five stops, \$100; eight stops, \$125;  
eight do with percussion, \$225; twelve stops, \$225; twelve  
do, size large, \$250; twelve do with percussion, \$300; fifteen  
stops, etc., \$375.

Second-hand Pianos, at great bargains, constantly in  
store. Price from \$30 to \$150.

Music.—One of the largest and best catalogues of Music  
now published; all Music and Musical Works published in the  
United States for sale by this House. Also, Martin's celebrated  
Guitars; all kinds of Musical Instruments; and Musical mer-  
chandise, at the lowest prices. Music sent wherever ordered,  
post paid. Catalogues sent by mail. A liberal discount  
made to dealers, teachers, seminaries and clergymen.

TESTIMONIALS OF THE  
Horace Waters' Pianos and Melodeons

"The Piano came to hand, and in first-rate order. It is  
beautiful instrument and no mistake."  
John Hewitt, of Cambridge, N. Y., who has had one of the  
Horace Waters' Pianos, writes as follows: "A friend of mine  
wishes me to purchase a Piano for her. She likes the one you  
sold me in December, 1856. My Piano is becoming popular  
and, I think, I think I can have one of two more; or  
they will be more popular than any other make."

"We have two of Waters' Pianos in use in our Seminary,  
one of which has been severely tested for three years, and we  
can testify to their good quality and durability."—(Wood &  
Grady, Carroll, Illinois.)

"H. Waters, Esq.—Dear Sir: Having used one of your  
Pianos for two years past, I have found it a very superior  
instrument.—(A. Gray, Principal Brooklyn Heights Seminary.)

Rev. Hiram Haynes, writes as follows: "Preston Hollow, N.  
Y., July 22. Mr. Waters—Dear Sir: I feel that the Melodeon  
safe and in good order; am well pleased with the external  
appearance, and the tone also. Hope I shall have occasion to  
order one or two more the present season."

Tops, N. Y., Aug. 5, '58. Horace Waters, Esq.—Sir: The  
Melodeon you sent me was duly received in good order. I am  
now fully prepared to say that the instrument is highly satis-  
factory; and I beg you will accept my thanks for the very  
liberal terms on which you furnished it. And for the very  
pleasant manner in which you have fulfilled, and more than ful-  
filled, all my promises. Very respectfully, &c., J. L. Smith.

"The Piano I received from you is a fine one, and gives satisfac-  
tion. I regard it as one of the best instruments in the place."

"The Melodeon has safely arrived. I feel obliged to you for  
your liberal discount. Will be glad to see you in these parts."  
[Rev. J. M. McCormick, Parquetville, S. C.]

"The Piano was duly received. It came in excellent con-  
dition, and is very much admired by my numerous family.  
Accept my thanks for your promptness."—(Robert Cooper,  
Warrenham, Bradford county, Pa.)

"You Piano pleases us well. It is the best one in our coun-  
ty."—(Thomas A. Latham, Campbellton, Georgia.)

"We are very much obliged to you for having sent us such a  
fine instrument for \$250, and we shall take pains to recommend  
it."—(Brink, Held & Co., Buffalo, Delaware.)

"The Horace Waters' Piano is known as among the very  
best. We are enabled to speak of these instruments with con-  
fidence, from personal knowledge of their excellent tone and  
durable quality."—(N. Y. Evangelist.)

"We can speak of the merits of the Horace Waters' Pianos  
from personal knowledge, as being of the very best quality."  
[Christian Intelligencer.]

"Nothing at the State Fair displayed greater excellence in  
any department than the Horace Waters' Pianos."—(Churchman.)

"The Horace Waters' Pianos are built of the best and most  
thoroughly seasoned material. We have no doubts that boxes  
can do as well, perhaps better, at this than at any other house  
in the Union."—(Advocate and Journal.)

"Waters' Pianos are the best and most reliable comparison with  
the best made anywhere in the country."—(Home Journal.)

"Horace Waters' Pianos are of all, rich and even tone,  
and powerful."—(N. Y. Musical Review.)

"Our friends will find at Mr. Waters' store, the very best  
assortment of Music and of Musical Works to be found in the United  
States, and we urge our southern and western friends to give  
him a call whenever they go to New York."—(Graham's Mag.)

Warerooms, 333 Broadway, N. Y. [

## Home Refinement.

The following is really worthy a careful perusal. It contains many hints of value to our country friends. We believe however that the readers of our journal are as fond of the luxuries of home as any class in the country, and our experience has been that there is a higher and better feeling in this respect than in former years; this feeling is gaining ground. We hope the following truths will be duly considered and their importance well weighed. "Jessie May," in the Wool-Grower, writes:

How many homes might be rendered bright and happy by the addition of a few cheap luxuries; how many hearts softened and purified; and how many rough exteriors polished by more careful attention bestowed upon those refinements of life which are within the reach of all. It is an erroneous idea that gentility and delicacy of feeling belong only to the higher classes of society; their germs may be found in the bosom of the lowliest peasant, and only a little cultivating is required to cause them to beautify and enliven the features so coarse and expressionless, and clothe the uncouth figure with ease and grace.

And of what does the cultivation consist? Simply in a studious regard for the feelings of all with whom we are acquainted, which will prompt us to the performance of those numberless little acts of kindness and attention (which are not formalities when dictated by a loving heart), and an acquaintance and familiarity with those little surroundings of taste and refinement which blend comfort with elegance, and render the humblest cottage a little paradise of enjoyment.

No one is too poor to use kind words, and the simple "thank you," and "if you please" are luxuries which every laborer may enjoy from the lips of his wife and children, though the fare upon his table may be poor and meager. I have often wondered that so many people should cherish the idea, that because they live in the country, it matters not what they have, or how they behave in the family, so long as there are no guests present. It matters not how awkwardly the children don their "company manners," or what inconveniences they are subjected to in the absence of numerous comforts which they would certainly possess in a city residence. "Never mind!" they say; "we live in the country, and politeness is not expected here. This, that, and the other 'nicknack,' is all very well for town people; but country people must not be fastidious."

Now, I beg your pardon, my friend; but I do not see why people should not be as genteel and as comfortable in the country as in town. For instance, you can train your children to speak respectfully to their elders, kindly to each other, and in a pleasant tone to all. They should behave just as well at table, by the fireside, and at their sports at home, as you would wish them to at a city friend's house. Cultivate in your own family circle that cheerful kindness of feeling which will lead each to anticipate the wishes of the rest; and let every kind act be rewarded by a "thank you," every request be preferred with a "please." Oh, how unpleasant it is to hear a child say: "Give me these!" or, "I want this!"

Again, if you are in "comfortable circumstances," I do not see why you cannot afford dressing gown and slippers for the father of the family; the cost is little, and the weary farmer needs and enjoys such little comforts as much as the editor or the banker. Almost every son of the soil and well-to-do mechanic might have napkins upon his table, neat curtains at his windows, a comfortable lounge, in place of a sofa, a picture or two upon the wall, and an astral lamp, with a vase of flowers, and the last magazine upon his stand at the evening fireside. Almost any woman can afford to make a neat afternoon toilette, and she should consider it a duty she owes herself and family to "find time somehow" to wash the little ones, put on their clean bibs, and make herself and children presentable every afternoon. The pleasure a man feels in coming in, after the toils of the day, to such a home, is surely of as much importance as the good opinion of a guest, and this enjoyment may be had in a wilderness as well as anywhere.

Don't be so eager to acquire wealth, my humble friend, as to deny yourself the cheap luxuries and the sweet refinements of a pleasant home, so easily obtained, and in the possession of which you will derive so much satisfaction.

## Cold Water to Cure Scalds.

A writer in the Ohio Cultivator says: I placed a large tub of cold water, with plenty of ice in it, by the side of a large kettle full of water, which was boiling very fast. I then rolled up my sleeve above the elbow, and thrust it into the kettle of boiling water up to the elbow, then immediately into the tub of ice-water, letting it remain a few seconds, then into boiling water again, repeating this process ten times a minute, without injury or inconvenience, not even making my arm look red. From this experiment I suggested the propriety of using cold-water baths immediately after being scalded. I have practiced the above remedy with entire success during the last ten years. Cold water is always handy where there is hot water. The sooner cold water is applied after scalding, the surer will be the cure.

How to Identify Stolen Fruit.—When the thief gets off undiscovered with his booty (the finest peaches, nectarines or apricots on the wall), it is usual to give them up for lost. Who could identify fruit? Who could say these things were stolen from me, and not from somebody else? Any person can do so who will take a very little trouble beforehand, in anticipation of the chance of robbery. Let him set a mark on his most promising pieces of fruit, when in a green state, by affixing to them on the side next the sun, an adhesive label of his initials, or any other private mark. When the fruit is ripe, the labeled spot will still remain green; and when a capture is made, the thief will be petrified at finding that there is conclusive evidence against him, even in the peach itself. This precaution is described in Notes and Queries—English! of course.

HEALTHY HOMES.—If unnecessary death and disease be things for which any one is to account; if the suppliers of our dwellings are answerable for economizing at the cost of life; if they have any duty in building for others; in short, if any man be responsible for human life wasted by human agency; if at the "head of every man's brother" shall be required the "life of man," then should every part "of our dwellings be contrived according to whatever our latest science may prove necessary," in order to make them healthy homes.

A Contented Wife.—It is a blessed thing for a poor man to have a contented, loving wife—one who does not wish to live in a style beyond her husband's income, just because her next door neighbor does—one who can be happy in the love of her husband, her home, and his beautiful duties without asking the world for its smiles or its favor.

SHAD cannot live through a second season. The spawn of this year are caught for the next year. Such is the theory of experienced and intelligent fishermen. The general uniformity in the size of the fish is one of various reasons for this belief. It is true of no other fish. Trout live for many years.

## WHEELER &amp; WILSON MANUFACTURING COMPANY'S SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premiums again awarded by the American Institute, at the Crystal Palace, Nov. 8, 1857. Also, highest Premiums awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

## SEE THE FIRST PREMIUM SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES took the FIRST PREMIUM at the Mechanics' Fair, Sept. 1853.

Wheeler & Wilson's Sewing Machines Were recommended the HIGHEST PREMIUM at the State Fair, Maryland, August, 1853.

Wheeler & Wilson's Sewing Machines Were recommended as the BEST FOR FAMILY USE, at the San Jose Fair, Sept. 1853.

Wheeler & Wilson's Sewing Machines ARE SIMPLE, not liable to get out of order, make a stitch alike on both sides of the fabric sewed, turn the hem, use the cotton from an original spool, by use of a NEW TENSION, and are capable of sewing the FINEST AND COARSEST fabrics, LEATHER INCLUDED.

H. C. HAYDEN, Agent, corner Montgomery and Sacramento streets, SAN FRANCISCO.

## SAFES! SAFES!!

LILLIE'S IMPROVED WROUGHT AND CHILLED IRON SAFES. Fireproof, Powder-proof, Drill-proof, and Burglar-proof.

With Lillie's Unpickable Powder-proof Lock.

The best Safe made for resisting both fire and thieves, as proven in numerous instances.

As to a recent test by fire, reference is made to the late burning of the Crystal Palace, in New York city, at which all other Safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Cairo.

Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl Street, N. Y.: Dear Sir: You ask about Lillie's Safes, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned up, the 31st of December last, and at that time we had one of those in our office and three in our warehouse. The Safe in our office was filled with our books and papers. The Safe in the warehouse had our records and correspondence. Although the ornaments were melted off, being exposed to the hottest of the fire several hours, the inside was unharmed. We cheerfully recommend them as being far superior to any other Safe for fire and burglar-proof qualities. There is no warping or swelling, and no necessity for a new Safe, as in the ordinary kind after having been once burned.

Yours, truly, BUEL &amp; MOORE.

Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of to-day is received. In reply we are happy to say the Safe we bought of you last spring (Lillie's Patent) came out of the fire on Sunday night, all right. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the Safe shows a few cracks, but nothing, in our opinion, to injure it. The fire was a severe one, consuming our store and the adjoining ones on each side, and the Safe was exposed to an intense heat. You will please send for the safe, repair it, and return it to our office, and much oblige, yours, CHAS. WARREN &amp; CO., No. 245 River street.

[From the Troy Daily Times, October 6th.]

LILLIE'S PATENT! A GREAT TEST!

The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of Safe than which none more thorough could have been desired. Those who were on the ground say that it was the hottest burning they ever saw; the waves of the safe manufacturers were in an excited situation. Lillie's Safe, of this city, Stearns &amp; Martin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns &amp; Martin's Safe was burnt out, others were complete wrecks; Lillie's alone were unharmed, except the frying of the paint upon the inside doors. The inside of the Safe could not have arranged a better and a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

[From the New York Times, October 6th.]

Go to the ruins of the Crystal Palace, and examine the so-called Fire-proof Safes, manufactured by Stearns &amp; Martin, and other Sheet-Iron Safe makers, most of which are a mass of ruins. This unexpected test will open the eyes of the public. Also, examine Lillie's Chilled Iron Safe, which requires only a coat of paint to make it as good as new.

A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 33 Sacramento street.

Lillie's Celebrated Bank Locks.

On hand, and for sale. The best Bank and Vault Lock in the world.

JONAS G. CLARK &amp; CO., IMPORTERS AND MANUFACTURERS

FURNITURE, 128 Washington street, SAN FRANCISCO.

WE ARE NOW MANUFACTURING OUR FINEST FURNITURE, and would invite the attention of the public to OUR PRESENT STOCK.

The Largest ever offered on the Pacific Coast.

Oct. 1. 9-3m JONAS G. CLARK &amp; CO.

THE AMERICAN TRADES COMPANY. WHAT THEY MANUFACTURE:

The American Smoker. CONSISTING of a great variety of unique and beautiful patterns of CIGAR TUBES, also several varieties of PIPE TUBES. The peculiarity about these articles is that each one is arranged so as to receive a damp sponge, through which the smoke of the burning Cigar or Tobacco has to pass on its way to the mouth. The damp sponge not only cools the smoke, but extracts from it the nicotine and the poisonous property of the Tobacco, which renders the breath less offensive. Smokers will find in the use of these Tubes a luxury never before attained except by using the Turkish water-pipe. Their use will also greatly promote the health and the habitual smoker and preserve the sweetness of the breath.

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JUNE 3, 1859.

NUMBER 18.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$5 a year in advance.  
Advertisements and Subscriptions must be paid for in advance.

### The Value of a Knowledge of Chemistry.

Its importance in Medical Science—Its value to the Farmer, Stock-Raiser, and all great interests connected with the Natural Sciences.

[We give a few extracts from the Address of Dr. Rowell, delivered before the Legislature during last session, at the request of the members thereof, at the time that aid was asked of the State in behalf of a Laboratory for the University of the Pacific. It certainly is to be regretted that this petition was not granted. The value of Chemistry in all these great interests is fully and clearly pointed out in these excellent remarks of Dr. Rowell, to which we call attention.]

Suppose a case of murder occurs by poison: if it be strychnine or arsenic it might be analyzed. That is not a complicated matter. But if it should occur by prussic acid, or other modes of secret poisoning, well known and long practised, I say to you that it could not be detected by analysis in this State. We have not in California any apparatus suitable to make the analysis. The testing of the vegetable poisons, by chemical experiment, is an important subject, and is engaging the attention of chemists all over the world. But this is not all that we want to test. We want to test our vegetables, to discover their uses in the arts, in coloring and dyeing, in printing, in tanning, in brewing and distilling. We have peculiar plants and shrubs, and trees, peculiar earths and soils, as well as a peculiar air, a peculiar electrical phenomena, and peculiar water. They ought to be tested. They ought to be developed. Our health, our happiness may depend upon it, as well as our wealth. There is not a good voltaic pile in California. There is not a powerful galvanic battery, or anything else, to pursue the great subject of electro-magnetism, which is engaging so much attention elsewhere.

We have a variety of medicinal plants in California; and probably they have peculiar virtues, adapted to the peculiar forms of disease here; but we have no means to analyze and test these medicinal plants. We gather them, we smell of them, we dry them, we guess at what their properties are. But we have not the chemical apparatus to separate them into their constituent elements, and see what they are made of. What were those peculiar medicinal plants put here for? I can conceive of no reason, unless to cure the peculiar forms of disease that prevail here; according to that compensatory law of nature, which I spoke of. It is certain that disease has peculiar forms and manifestations here, requiring treatment essentially different from that pursued in the Atlantic States and in Europe. Every physician, I presume, will bear me out in this. For example, who will explain that peculiar type of sore throat, that strikes down so many of our little ones, and often adult persons, both male and female? I know of no one that can explain it, or ever has explained it. The important thing is to cure it. Now it may be that in the vegetation that clothes our hill-sides—in the silent dell, in the deep forest, or on the open plain, the vegetable exists that can make the cure, according to nature's kindly law, which, in bestowing an evil, if it may be called so, bestows also a counterbalancing good. It may be, I say, that the antidote is under our feet, or at our side, or in the shrub that adorns our door-yards. But there is nothing but chemical analysis that can tell us the properties of those vegetables, and we have not the apparatus to make that analysis.

But it is not human beings alone that have manifestations of disease in this State, which are peculiar. Stock and fowls die strangely. Out of fifty hens, a dozen sicken and die in a day. This is of frequent occurrence. What is the cause of this? No wound, no disease is apparent; but they die. What is the reason of this? It is not so in Maine, it is not so in New Hampshire, it is not so in Vermont, Connecticut, and Massachusetts; not so in New York, not so in England, Scotland, France, or Germany. What killed them? Nobody has told, nobody can tell. A farmer has a dozen hogs; half of them sicken and die in a day. They do not appear to have any disease that ever was heard of before; but they die—and so suddenly, so strangely, as if secret poison cut them off. All this goes to show that there are secrets of nature around us that are not found out—that there are seeds of death scattered which elude our search—that in the air, earth, or water, there is something which we do not understand; some mineral, some vegetable, some impalpable fluid, some excess or deficiency somewhere, which is death. To discover it is the thing; and to do that we have got to analyze natural objects, and examine into what they contain. We must experiment upon the air,

the earth, the water, the mineral and vegetable kingdoms. This can not be done without apparatus suited to the purpose.

[Why will not some of our rich men do what the Legislature refused. The apparatus would cost only \$5000. Five men, \$1000 each, could do the State great service. Who heads the list?]

### Letter from Sacramento Valley.

[LET our readers peruse carefully the remarks of our friend and farmer. His observations are just and his prophecies will be found to be correct. We are yet in our infancy as a State, and all our great agricultural, mining and commercial settlements will soon begin to exhibit an evidence of growth and expansion hardly conceived of by those who never dreamed of the future.—THE PEOPLE ARE COMING.]

The people are coming,  
O'er ocean and plain,  
Their approach sounds like the big drops  
That herald the rain.

We would simply state that we know the residence of our friend; have seen it; and, some two years since, it looked like an oasis in the desert; for, all around was a dry, parched-up barren; his residence the only cultivated spot. Now, hundreds of handsome residences, between Sacramento and Stockton, prove what he has asserted; and so it will prove around all our cities.]

EDITOR FARMER: For the past ten days, the weather has been changing from hot to cold: some days old Sol will come out in all his brightness and burn hotly upon our heads, with no breeze to fan us, we are compelled to seek some shady place, and then wait until evening; perhaps the next, a real northwest-bender will come up, so that an extra garment is needed to make us comfortable—it is similar to your Bay-breezes.

To ride over the plains on a summer-day, when the grass is parched up by the heat of the sun, it has the appearance of a barren and unfruitful soil, not worth the time and expense of cultivation. It was so thought by some, who would hardly believe there is such a difference, after a few years experience. It presented such an appearance when we first came here; and we were told by many, it was foolish to leave our former residence in the city, with all its gaiety and social life, for such a desolate and lonely habitation as this presented at that time; but thinking differently, and choosing the country residence, we made the attempt; and, so far, has proved successful, far beyond our expectations. Those who preferred rural life, seeing what could be done, took up a quarter section and commenced improving their homes. Now, every acre of land, for miles around, has been sought for; and houses are dotted all over, showing a vast improvement within the space of three years. I predict, before many years roll around, that merchants, and those who are carrying on an extensive business in the city, will seek residences in the country for their future homes, improve and adorn them with fruit, flowers, shrubbery, and shade trees; the land will be divided into smaller sections, so that each can have a portion, and thereby increase the number of rural homes; a branch from the Valley Railroad will start out from Sacramento to Stockton, running to and fro; thus the land will become more valuable, and beautiful homesteads and parks will adorn the way-side, so that you have but to jump on board the cars and soon reach the "City of the Plains," engage in your daily business, where there is hurry and bustle "on the go," and at night return to your quiet and secluded home and enjoy the cool and refreshing evening amid your own family circle. Sacramento is destined to be a large city, and will exhibit her advantages to her own benefit before many years.

Our land is mostly level, but here and there a hillock is seen. We have chosen a knoll, upon which our cottage is built, from which we have a fine view of the surrounding scenery: Looking to the southwest, you have Mount Diablo in full view; to the westward appears the Coast Range, extending west beyond the range of vision; to the north-west, you see the towering Butte, with its snowy cap, high in the air. You need not go to Switzerland to watch the mighty avalanche; for you have it here rolling down the Butte, carrying destruction in its course down the valley below. To the east, you have the Sierra Nevada range of mountains in full view; watch, and you will see the iron-horse passing by and snorting in the distance; the Stockton stage runs by daily; the steamers are seen plowing their way through the waters, and sail-vessels coursing up and down the river. On Sabbath morning the church-bell is heard echoing in the air.

SACRAMENTO VALLEY, May 30, 1859.

AGRICULTURAL STORE AT SACRAMENTO.—The Farmers of Sacramento and all the upper counties will find a most excellent stock of goods of every description that a farmer wants, at Messrs. Chas. Zeiler & Co.'s large agricultural and hardware store. This firm has been long established, and their attention to the true interests of their patrons, and their courtesy insure to all a pleasure in dealing with such a house. Harvesters should call on Messrs. Zeiler, or send their orders to them; they can be sure of prompt and faithful attention to their interests.

### Letter from France.

[BY OUR REGULAR CORRESPONDENT.]

[The physicians of our State will peruse with interest the letter of "Le Docteur."]

PARIS, FRANCE, April 7, 1859.

EDITOR FARMER: France claims to exhibit a higher state of civilization; to be the most refined and enlightened; to afford more facilities for acquiring a complete and perfect education, in every branch of intellectual effort, than any other country in Europe. Paris, as the center of her wealth and luxury, aims also to be acknowledged the center of science, of knowledge, and of art; and here men congregate, from every quarter of the world, to pursue their various studies; for there is no branch of human knowledge, but what has here its teachers and professors. In Medicine, it has stood preeminent for years. But, medical education in Europe is of a much higher grade than in America. The system of instruction embraces not only those studies connected with medicine, but all the collateral sciences and the various branches of natural history. The Schools are not independent establishments, like many existing in our own country; but always connected with some University, which determines the duration of study, regulates the examinations, and awards the degrees and honors. No one is allowed to matriculate in the medical department without having received a classical education, and producing his diploma of "bachelor of letters." The longer duration of the period of study, is another of their important features, and extends from four to five years. The examinations are said to be rigid. They occur annually, and are regarded as the test by which the ascent is made from one class to another. The amount and extent of clinical instruction, is another peculiar characteristic of the system pursued in the European Schools. Indeed, so important is this considered, that in some instances the hospital is the chief part of the establishment, and all the practical lectures on medicine and surgery are delivered within its walls. These hospitals are all supported by the Government, and for the purpose of instruction, foreigners of every nation are gratuitously and fully admitted. The only requirement is, that the individual be a medical student or an educated physician. The patients are all at the disposal of the different professors, for the purpose of clinical instruction; and all the dead, unclaimed by their friends, are placed at the disposition of the students for post mortem examinations, for dissections, and for the study of normal and pathological anatomy.

In France, the Medical Schools have for many years enjoyed a great and well-deserved reputation; and the advantages they afford to the student, have attracted them from all quarters of the civilized world. The final examination for the degree of "doctor of medicine," is held in public and *à viva voce*, each professor limited to an hour. The thesis is printed; then discussed by the professors and *agregés*, and the candidate required to sustain it against all opposition and to repel every attack. The *concours* is an additional contest among the graduates, for appointments under the professors, and is regarded as a fair criterion of tact as well as ability. The competitors are obliged to treat their subjects both orally and in writing, before the faculty, and to maintain and defend their opinions publicly.

In consequence of the greater facilities afforded, the majority of the physicians on the Continent are men well educated, not only in their profession, but in general literature and all the collateral sciences. The officers, in all the great hospitals, are their best men; not only the greatest in intellect, but the highest in morals, in character, and in good reputation.

Here, too, all the hospitals, of every description, lunatic or otherwise, are open to the inspection of the public on certain specified days and at particular hours. The officers of these institutions are not ashamed to have them seen, nor afraid that the people should know how the patients are treated by the attendants and servants of the establishment. But, we hope and pray, that the time is not distant, when no one will be permitted, when no one will dare, to practice medicine or surgery, who has not received a liberal education and then obtained a degree or license from some University.

Then the people will be protected from those infamous charlatans, and uneducated things, who overrun the country, impose upon the people, and obtain position through intrigue and impudence alone.

Yours truly, LE DOCTEUR.

DOWNING'S LANDSCAPE GARDENING.—This splendid work has just appeared in New York, in a new edition, with a supplement of one hundred and fifty pages, by its accomplished editor, Henry Winthrop Sargent, Esq. It is one of the finest works upon this science ever published. N. P. Willis has paid it a high compliment in one of his unique and beautiful commendatory notices.

GRASSHOPPERS.—Can it be that we are to have a visitation of these pests again so soon? The Tehama Gazette says a great number of them were observed on the plains a few days since. No damage has as yet been observed to have been done by them, although they were numerous enough to become so if inclined.

### Breeding as an Art.

The question of the true value of pedigree is embarrassed with another of equal difficulty. In following pedigree (says the American Stock Journal) the breeder finds it convenient to breed in and in, or in other words breed together two animals nearly related; and the question is, how far experience warrants this in and in breeding? It seems to be every where conceded that man must not connect with near relations. This is considered to be fully settled by experience; and the instincts of our nature seem to admonish us of this great law. But because this is a law of man's nature, it by no means follows that it is a law of animal life, as some have rashly concluded. With regard to most animals we find no instinct forbidding the intercourse of near relatives, and to a considerable extent it seems a matter of chance. In the case of many insects, breeding in and in is the law of their existence. The female honey-bee has no connection with the males of strange swarms, but her intercourse is with the males from her own hive. Many insects fertilize themselves.

Some experienced breeders of cattle and horses think that breeding "in" and then "out" produces the best results. By breeding "in" and then "out" is meant breeding an animal into the same family from which it sprung, and then into a family of the same breed several degrees of relationship removed from it. The English race-horse you may breed to pure blood, and yet the two animals may be only very distant relations. But if you are desirous of establishing a new breed or variety you must to some extent breed "in and in" in order to perpetuate the qualities prized in the original, and to give to the stock bred that fixedness of type and uniformity which is of great importance. But this alone is not sufficient; care must be taken to select animals that bear the closest resemblance to the original, including form, size, color, movement, expression of countenance and temper.

There will be found to be a great and striking difference in the power of animals of the same blood in transmitting to their offspring their own peculiarities. This power will exist in a much higher degree in the offspring strongly resembling the original, than in those possessing less resemblance. But it must not be forgotten that it is impossible to determine with absolute certainty what the character of the offspring of an animal will be, simply by a careful consideration of its pedigree, or comparison of its form and temperament with the original type. Attention to these will enable the breeder to form an opinion of the character of the stock the animal will be likely to produce; and this opinion, if the result of a well informed judgment, will prove, in many important respects, correct. Further than this we cannot go. In selecting animals for breeding purposes, great care should be taken that we do not allow ourselves to be enticed into the choice of an inferior animal by a long and brilliant pedigree. However important, and however much we may desire it, we should never allow purity of blood to blind us to defects in form or substance.

### Committees of Award.

At the Floral Fair, Oakland, commencing June 14, and continuing five days.

The Board of Directors of the Agricultural Society of the county, held a meeting at Oakland, on Saturday last, when the following Committee of Awards for the Floral Fair, to be held in June, were appointed:

On Fruits.—Rev. O. C. Wheeler, J. S. Silver, E. S. Holden, Rev. S. B. Bell and Joseph Aram.  
On Plants and Flowers.—W. Wadsworth, W. H. Bovee, Monsieur Prost, Rodman Gibbons, and Dr. R. E. Cole.

On Vegetables.—Dr. H. Gibbons, I. A. Wilcox, H. M. Vesey, A. D. Eames, and A. A. Cohen.  
On Cereals.—Lucien Huff, C. C. Breyfogle, Martin Murphy, Sen., A. M. Crane, and Wm. Hayward.

On Machinery.—J. W. Osborn, John M. Horner, Robert Blacow, H. Kennedy, and H. Luelling.  
On the Fine Arts.—John A. Lent, Dr. Worthington, J. Ross Browne, Hon. Wm. P. Rodgers, and Rev. S. B. Bell.

Needlework.—Mrs. R. E. Cole, Mrs. S. B. Bell, Mrs. C. C. Breyfogle, Mrs. Holt, and Mrs. J. Ross Browne.  
Miscellaneous Articles.—A. Gould, P. E. Edmondson, R. A. McClure, G. W. Fountain, and A. Luelling.

Bread, Etc.—Col. Warren, Fred. McCrellish, C. L. Goodrich, W. Bradford, and F. B. Murdoch.

The Board appointed an Executive Committee to arrange all the preliminaries, and attend to all matters pertaining to a grand ball, to be held in the Society's Pavilion on the 20th of June, consisting of H. O. Smith, Chairman; C. L. Goodrich, Secretary; F. K. Shattuck, J. L. Wilson, and Samuel M. Davis.

The admission price to the Floral Fair was fixed at 50 cents, or season tickets \$2.  
Several other matters of minor importance were attended to, and the Board adjourned to convene Saturday, June 11th, at 10 o'clock, A. M., in Oakland.

We have received from the President and the ex-Committee, complimentary tickets to the Fair and the Floral Ball, for which courtesies we make due acknowledgments.

THE STRAWBERRY MARKET.—This delicious fruit comes into market not only by the hundred and thousand pound lots, but by the ton—large, rich and fine; and the price has come down so as to place the fruit within the reach of all. The present year will be an abundant one.

### The Fair at Oakland.

We had the pleasure of a call from the President of the Alameda County Agricultural Society, Rev. A. H. Myers, the early part of this week, who assures us of the widely extended interest felt among all the people for the coming Floral Fair. Mr. Myers informs us that the exhibition will prove far better than the most sanguine anticipations of those who so enthusiastically commenced the undertaking. We received from the President a list of the several Committees, which we publish below, to show the different departments that are cared for. It is to be hoped that the several Committees will take especial pains to be present, and prepared to act. Every man on the Committees should signify his acceptance or rejection of the task, and be prepared to cooperate for the good of the interest which has been assigned, and should study the duties of that Committee. For ourselves we feel highly flattered by being placed on the Bread Committee, one of the most important, connected as it is with the comforts of home, and being the "staff of life;" and we already feel assured that this department will show that Alameda county will stand preeminent for excellence in break making. We hope the Committee will confer with each other often, and devise the best plans for this important subject. See Bread, in another column.

### Enthusiasm—Come One! Come All!

His zeal none seconded, as out of reason judged, Or singular, and rash.

The following letter came to us from Oakland, as commendatory of our zeal in behalf of the coming Fair; we can look back to the years '50 to '52, when our zeal for the same cause was just the same; but we remember well what was said at that time about *Fairs*, agriculture and horticulture. The words of Milton applied to us then with their full force, but we rejoice to know a patient, persevering will is sure to win, and now we behold the glorious result of early zeal, and were we to reply to Rusticus, we would give him the words of the poet Cowper:

"No wild enthusiast ever yet could rest  
Till half mankind were like himself possessed."  
And thus we have labored, and we see even Rusticus a true enthusiast, and we hope to see a thousand more at Oakland at the coming Fair.

RURAL RETREAT, Alameda, May 31, 1859.

EDITOR FARMER: Many thanks from the florists and pomologists of Alameda county, for the very deep interest you have and are taking in the coming "Floral Fair." True! you could not well do otherwise, as your whole heart and soul have been and are to be, devoted to this noble, pure and ennobling work of adorning and beautifying California Homes; for it was said by high authority: "out of the abundance of the heart the mouth speaketh." If willing hands and devoted hearts can secure success to a noble cause, the "Floral Fair" must win. Let all our citizens determine to make this a joyous occasion; and the "Fair," such as "California" shall not be ashamed of. Come one! come all! and participate in the delights of those who love and admire the beauties of "Flora" and "Pomona."

Yours, &c.,  
RUSTICUS.

### Agricultural Society in El Dorado.

A meeting of the citizens of El Dorado county was held in the town of Coloma, on Saturday, the 28th ult., pursuant to notice, for the purpose of organizing an Agricultural Society for the county. Thomas Robertson was called to the Chair and A. H. Hawley appointed Secretary. After the adoption of the constitution and by-laws, the election of permanent officers for the Society being next in order, the following gentlemen were elected: Thomas Robertson, of Coloma, President; J. M. B. Weatherwax, of El Dorado, and S. Farnsworth, of Cave Valley, Vice Presidents; A. A. Van Guilder, of Coloma, Secretary; H. T. Larkin, of Diamond Springs, Treasurer; A. T. Taylor, of Placerville, and H. Harkness, of Georgetown, Directors.

It was resolved that the Society be incorporated according to the laws of the State; that the officers take all necessary steps for a perfect organization; and that the Society meet at Coloma, on Saturday, the 18th of June, 1859, at 10 o'clock, A. M.

FRUIT PROSPECT IN THE MOUNTAINS.—During the past week, says the San Andreas Independent, of the 28th ult., we have visited quite a number of orchards and gardens situated within five or six miles of this place, in all of which, we saw abundant prospects for a supply of summer and fall fruits. Peaches were very little injured by the late frosts, except the Early Yorks, and they only in the most unfavorable localities; a good many of our fruit-growers have apple trees, which will bear no inconsiderable amount of fruit this season; apricots look very fine; plums, pears, almonds and grapes, will be very plenty. Cherries, wherever they have been tried, look like a failure, not only this season, but for all time to come; the tree grows luxuriantly, blooms and bears a little fruit for a year or two, when it is attacked in the trunk and on the main branches, by some insect which deposits an egg, which matures into a very small worm; this eats under the outer bark of the tree, causing it to gum, and in a short time completely deadens the wood and destroys the tree. We have noticed this phenomena in nearly all the orchards containing cherry trees three or four years old.

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

## The Great Condor of Northwest America.

(Continued.)

This bird is closely allied to the Condor of the Andes, but is distinct in features and habits from the *calharis* tribe, with which it has been confounded, and which are rarely more than one-third its size. It soars at elevations of six to sixteen thousand feet, and is found throughout the length and breadth of the Rocky Mountains, Sonora, Sinaloa, and Pacific Mexico, the sierras of both Californias, the Northwest Coast, and is often seen near San Francisco. It is particularly fond of fish, and is often found on the seashore watching for fish thrown on the beach, or even steals from the Indians when catching salmon and mountain trout in the lakes and rivers of the great plains and of the coast. A dead whale thrown ashore is sure to bring some of them in sight, and a hunter killing a deer in the mountains is confident of their appearance as soon as the beast is wounded. They are also said to attack wounded deer and other animals, and kill them, and sometimes carry off alive smaller creatures. They are also said to carry off fish caught in river, sea and lake shallows; and though they will eat dead meat, they will not, like the buzzard, eat carrion—but this last is a mistake. When hungry they are exceedingly difficult of approach, but when gorged with food they are stupid, and fly or move with slow awkward motions. They soar at great heights in circles, like the buzzard, without moving their wings; but on a straight line, they fly and sail by starts and flaps at intervals of two or three minutes. Its range of vision is probably as extensive as that of the Andean Condor, which is said to sight its objects at a greater distance than any other living creature.

There is said to be another species of the California Condor or Vulture, which is stated to be of the same size and general features, and is found in Southern and Lower California and Northern and Middle Mexico, in the arid or elevated districts. This variety is described as having a brownish red caruncle or comb on the head, like the Condor of the Andes. It is asserted by some of my friends who have hunted over the first mentioned districts, to be sometimes seen in the neighborhood of Los Angeles and San Diego; but as yet we have never met with it. Some writers on Natural History have assumed that the California Condors are stray members of the southern flock, who have escaped north from their haunts in Ecuador and Peru; but this is evidently a mistake, as the Great Condor of the Andes is figured in the work of Ovis, on the "Regne Animal," as having long outer white wing-feathers, and with a caruncle, which makes it entirely different in plumage and appearance from ours.

The Condor family has this difference from the vulture tribe, inasmuch as it is an inhabitant of the volcanic elevated prairie and arid districts of the American continent; whereas, the true vulture is more an inhabitant of the stinking, alluvial forests and coast districts of the tropics and intertropics. As scientific travelers extend themselves over the world, doubtless they will find in the elevated waterless countries of Australia, Asia and Africa, and the mountains of Borneo and New Guinea, analogous varieties of the American bird, which are peculiarly fitted by nature for living in regions where no dense vegetation of the earth's surface obscures the vision. We have often thought that the great Roc of Captain Sinbad—who dropped him, in a happy California mood of treasure giving, in a valley of lustrous diamonds—as an Arabian Nights exaggeration of some unknown and undescribed class of Asiatic Condors. As more than one of Sinbad's fables are beginning to be looked upon as truths in disguise since the discovery of California gold, it may perchance be considered a wise hint to our dissatisfied and restless prospectors, to train our native Roc with chunks of glutinous fresh meat, sufficient to bear the weight of a bristled miner, and soar away into the upper regions with man and camp equipage, to voyage on until he can descry the secret valley at the bottom of which lie those celebrated crystals of egg-shaped diamonds, which have haunted the imaginations of philosophers and Californians since the year of grace 1848. At any rate, if the rich valley is not found, the voyager, if he can get down, will have the honor of seeing and feeling more than any other of the sons of Adam, and be a constant object of admiration to the daughters of Eve, to whom belong, by proscription, the descendants of adventurous Sinbad, and the sons of hairy Neptune, and Nimrod the famed hunter before the Lord, when giants dwelt on the earth; the bones of whose earthly tabernacles may yet be found in some of the caves near the mammoth trees of Calaveras. Thus it will doubtless be found on trial, that there is nothing even in feathered animation but that may be subjected by the Lords of American creation, to some purposes of use or gain.

Note of 16 Nov. 1854. Since writing the foregoing, some other points have been gathered from old hunters and trappers, which as they generally agree, are worthy of record.

One of these Robin-Hood men informs me that three years ago he caught two young Condors in the Redwoods of Santa Cruz county, and kept them over a month. When young they are covered with a dirty white down, have a strong smell, and are three months old before they fly.

The female lays two eggs a year, which are hatched in about six weeks, near the middle of March; the eggs weigh about twelve ounces, and are the best kind of eating of the egg kind. They sometimes lay on the ledges of high rocks, but quite as often on tall trees, in the old nests of hawks and eagles. The placer diggers of Northern Mexico use the quills for putting their gold dust in. Three of these birds will eat a deer, and when they attack a man or animal in defense, will nick a lump of flesh out in a minute. The barrel

of the outer wing-feathers is four inches long by three-eighths of an inch in diameter; when the bird is standing, the long wing-feathers will overlap those of the tail more than six inches.

The upper beak is of a horny white, with a thick, sharp, solid, curved-down and pointed end, and overlaps the lower by five-eighths of an inch. The beaks are full one-sixteenth of an inch thick. The ear is half an inch long, and one and a half inch from the eye to the termination of the upper jaw-bone.

When flying, the white band of the wings does not extend over the breast, but the breast and belly appear as an intermission of black. They float in the air, rather than sail, and their motions aloft form the most elegant and graceful feature of the bird's habits—fit object for any fair lady to ride a hundred miles to see.

On the 13th inst., at one o'clock in the afternoon, some object attracted a flock of the Condors. At first, one suddenly appeared, but in the course of fifteen minutes I observed twenty of them, circling at an altitude of some four thousand feet and immediately over the beach. When in the air, they may be distinguished with a spy-glass from the buzzard, by the white band under the wings. They are generally seen on the sea shore at Monterey, in the latter fall months, in clear weather; but sometimes they make their appearance in a foggy atmosphere. As they come, so they go—a company will be out of sight in fifteen minutes. They appear "to drop from some cavern in the sky," as described of the vulture of South Africa, by Le Vaillant, many years since.

Never stoops the soaring vulture  
On his quarry in the desert,  
On the sick or wounded lion,  
But another vulture watching  
From his high aerial look-out,  
Sees the downward plunge and follows:  
And a third pares the second,  
Coming from the invisible ether,  
First a speck and then a vulture,  
Till the air is filled with pinions.  
So disasters come not singly,  
But as they watched and waited,  
Scanning one another's motions  
When the first descends, the others  
Follow, follow, gathering flock-wise,  
Round their victims, sick and wounded,  
First a shadow, then a sorrow,  
Till the air is dark with anguish.—[Hiawatha.]

One of these birds, killed a few days ago in Carmel bay, near Monterey, a friend informs me, measured, including breast, eleven feet from tip to tip of wing. It is even possible that the oldest birds approach in dimensions the Condor of Chili and Peru. It is not known to what age they attain. Probably there are three or four species of the Sarcoromphus, in the territories before designated, which hunters have confounded as being the same bird. The Condors range throughout the Sierra Nevada, and the Tularé and Sacramento plains.

The historian of Sebastian Vizcaino's California voyage, in describing the country and animals around Monterey, in December, 1602, mentions, among other birds, the vulture—doubtless meaning the Condor. This expedition disembarked at Monterey beach, and encamped with their sick crews, under an encinal of oaks, where a small stream came down from the Redoubt hill. Several of these oaks are still standing, but the great encinal which covered the beautiful slopes of Monterey at that time, has been mostly cleared off for firewood. On one of the granite masses on the site of this encampment, may still be seen the holes made in the rocks by the Indians, for pounding their acorns and grass seeds.

The site of this town, according to the above authority, was roamed over by an astonishing variety of the animal kingdom, most of which are recognizable at the present day. As the expedition stopped on land nearly a month, they had ample time and opportunity to make careful observations.

## The Female of the California Condor.

In the foregoing notes of the writer, some mistakes have occurred in reference to the female of the Sarcoromphus Californianus, from their infrequent appearance during our observations. On 26th July, 1855, one of the female birds was shot near the beach of our town, which was the first instance wherein we had the opportunity of comparing the two sexes together, from specimens killed within our own direct knowledge. The sex of the bird was ascertained by dissection by our friend Dr. James L. Ord, of Monterey. The female has very distinct exterior features from those of the male bird. It appears in flying, to be considerably larger than the male, yet this one weighed twenty pounds, which is the usual weight of the other sex, as ascertained from five specimens. The entire upper exterior of the female is of a dusky brownish-black plumage and hue. The wings have a triangular white band underneath, which band is mottled with blackish brown spots, immediately over the wing bones. The white band is five inches broad at mid-wing. The feathers next to the shoulder joint (pin-feathers of wing near to the breast), are six in number, dashed blackish near the roots, and of a light salmon color to the ends, and are ten inches long. One of the wings measures four feet three inches long, by eighteen inches broad in the middle; it has seven outer wing-feathers, the largest of which is two feet long. It has no exterior band of white feathers or white tips to the wings, as in the male bird.

The upper plumage of the back, tail and wings is of shining dusky brownish-black; that of the breast and belly is of a lighter cast, similar to those of the male. Besides the seven long wing feathers, it has twenty-six inner ones on each wing. The tail feathers are fifteen inches long, and in number twelve. From the outer or elbow wing joint to end of wing feathers is two feet and seven inches. From the back to extremity of tail feathers it measures four feet; from socket of the neck on back to the vent, it is fifteen inches long. The circumference of the body and wings folded in, is about five feet.

The color of the bill and beak is of blackish horny brown color; their shape, size, and other features exclusive of color, are same as in the male bird. The nostrils are oval and go through and through, i. e. you can see daylight through them, and are half an inch long by one-eighth of an inch

broad, and situated nearly half way between the eyes and end of the beak; the nasal groove or line, but slightly defined and about one inch in length from nostrils, and does not extend more than half way to end of beak. The tongue and inside of mouth is similar to that of the male, and likewise colored yellowish. The tongue of both birds is serrated sharply downwards toward the gullet, while the roof of the mouth has hard spinous points inclining the opposite direction, which enable the birds to bring their deglutinating and masticating powers into immediate effect, as the food is thus quickly passed into the digestive organs in the state of a comminuted pulpy mass, like the "thrill chewed softer" of a sailor on short allowance of tobacco.

Its head and neck are of a curious dusky copperish-olive, blackish-brown color, and covered with a thick furry down or feathers of same color, looking like the nap of an old hat. This is continued down the neck to near its base. The head is six inches long, by two and a half inches breadth and depth. The skin immediately at the base of bill is bare of down, as it is also around the eyes, which have a yellowish olive circle inclosing the lids. The iris of the eye is of a greenish pink. The neck, from base of head to connection at the back-bone is thirteen inches long, and two and a half inches in diameter. The thigh, as in the male, is covered with feathers to knee-joint, and is two inches thick near the body; the legs from thigh-joint to end of toe-nails are nineteen inches long; from knee-joint to end of claws, ten inches; front of legs below knee covered with scales colored blackish, with yellowish rings—under parts of dirty yellow. The foot is six inches long; foot when spread radiates about three and a half inches, and thickly corrugated on its lower surface; upper part of toes is blackish; claws are black and never sharp in either sex. The features are similar in size and proportions to that of the male bird, only a little larger. The circumference of the body across the breast and inside of the wings, with the feathers on, is twenty-five inches; the same parts of the bird when skinned measure twenty-two inches around; the length of the first wing-bone (of the skeleton) is thirteen inches long and half an inch in diameter; the vertebra of the neck (skeleton) is seventeen and a half inches long and one and a half inches in diameter; the head across the crown measures ten inches in circumference; the entire skeleton of the animal when well dried, weighs only three pounds avoirdupois. The bones of the thigh are one-sixteenth of an inch thick, and the bones have very little marrow, but are well braced up with bony spines; the bones of the legs and wings are as hard as ivory, but very light. The female bird described had but little of the musky bright yellow fat, over the breast and over the lower entrails, as was found in the male.

We have never seen in any work on California or its natural history, a description of the female bird above described; and it seems that it has not been heretofore delineated in any work of a popular character. It is not as often seen as the male; twenty of the latter may be in sight, with only two or three of the opposite sex. The same feature obtains in these parts with the Cathartes or Zopilotes of this country, which also have a black head for the female bird, while the head of the male is of a bright red.

Many of the Condors make their nests in the high mountains east and south of the Carmelo Valley, and also near Santa Cruz and in the Santa Lucia range, where they may be seen at all seasons of the year, but in greater numbers from July to November. These huge creatures may often be seen fighting each other over a carcass on the beach; generally striking with their outstretched wings, and running along the ground like the common turkey-buzzard, with the dolorous looks of a feathered mugger. It is found extremely difficult to preserve the colors of either bird (of the head and neck), as they exist in nature, in dried specimens; the bright lemon color of the head of the male is lost after a week's keeping.

The California Condor may therefore be described generally as follows: Male, with bright yellow head and upper neck; Female, with dark, copperish olive neck and head, covered with feathery down on head and most of the neck; plumage brown-black. Both birds about same weight; female appearing considerably larger than the male.

The following are some new facts from a male specimen shot near Monterey in July, 1855, by one of our friends, which measured eight feet across the wings and breast, and weighed over twenty pounds. On dissecting the animal, it was found to have an immense development of the internal viscera. The stomach contained fish, meat, and muscles with the shell on—the shells in a half digested state; it held by measurement half a gallon of water. It has two gizzards, the upper one small as a chicken's, but the lower and larger one four times the size of the first. The large gizzard has a very singular appendage of a bunch of long stiff bristles on the inside, mingled with hard warty excrescences. The inside of this gizzard is lined very roughly after the fashion of coarse sand paper. The gut is six feet long; heart, liver, lungs, and gall-bladder, same size as those of a young pig. The large gizzard was filled with the hair of animals which the bird had eaten, and was about the capacity of four fluid ounces. The whole of these viscera had an abominable smell of musk. The meat of the animal though, is of a bright arterial red, and of very fine grain. During the early part of the present month (July), large quantities of sea-lions have been killed on the southern coasts for the oil; the carcasses of these animals on the beach may be seen at times surrounded by hundreds of the Condor. A friend of ours informed us that he saw, a few days ago, as many as three hundred of these creatures near such feeding ground, within the distance of a league.

The voracity of these birds is astonishing, and is always noticed by observing travelers in California and the North Pacific countries. This feature of its character was noted by Lewis and Clarke, the first American travelers from the Mississippi to the Western Ocean; or they describe a similar species

of the Vulturidæ. A friend of ours engaged in the cattle trade, informs us that in going from the Mission of Santa Clara towards San Francisco, in 1850, he accidentally dropped a quarter of fat beef from his cart, while a number of the Condor were in sight. On discovering his loss, after a few minutes, he turned back and observed the Condor in numbers which he estimated at over three hundred, hovering over and near his lost beef. On coming up with it, he was surprised to find that the fat and kidneys of the quarter, with all the inner meat, had been completely cleaned off the bones, and the piece had lost more than half its weight.

A large grizzly being killed on the Sur rancho, in this county, some fifteen years ago, the vaquero left the bear on the plain near the sea shore, to return to the house, about three miles off, for assistance to skin the animal. Before the herdsmen arrived back, which was in about two hours, a flock of Condors had cleaned the entire carcass of its flesh and viscera, leaving nothing but the skin and skeleton.

The same custom of capture and sport which the foregoing writers mention as practised in Peru and Chili, was followed in places by the rancheros and vaqueros of California with the Condors of the country, and may even to this day. A vaquero gets into the inside of a fresh hide, with the carcass of the recently killed animal near by, and being armed with a covering over the hand, seizes the bird by the feet whilst he is partly gorged. Or he sets the noose of a lasso of small hide rope, with a choice tit-bit in the centre, and as soon as the Condor "puts his foot in," the enemy hauls his trap in quickly, and immediately gets a purchase around some stick or the beast's horns, the better to secure his prize from escaping, or from its attacking any incautious looker on, with its formidable beak and wings. The rancheros sometimes pit them against bears and dogs, or turn a small enclosure into an extempore cock-pit, with eagles for combatants. We have never had the opportunity of witnessing any of these fights between the ornithological gladiators.

(TO BE CONTINUED.)

## The Great Discovery in Vegetation.

[The following article by the lamented Downing, dated April, 1851, we copy from Rural Essays.]

It is one of the misfortunes of an editor to be expected to answer all questions, as if he were an oracle. It is all pleasant enough, when his correspondent is lost in the woods, and he can speedily set him right, or when he is groping in some dark passage that only needs the glimmer of his farthing candle of experience, to make the way tolerably clear to him. But correspondents are often unreasonable, and ask for what is little short of a miracle. It is clear that an editor is not only expected to know every thing, but that he is not to be allowed the comfort of belonging to any secret societies, or any of those little fraternities where such a charming air of mystery is thrown over the commonest subjects.

We are brought to these reflections by a letter that has just come before us, and which runs as follows:

Dear Sir:—I have been expecting in the last two numbers, to hear from you on the subject of the great discovery in vegetation, which was laid before the committee of the State Agricultural Society at its annual meeting in January last. You were, if I mistake not, a member of that committee, and of course, the fullest disclosures of the secret of the gentleman who claims to have found out a new "principle in vegetation," were laid before you. No formal report has, I think, been published by the Society. The public are, therefore, in the dark still. In this right, when the discoverer is now urging the Legislature of this State to pass a bill giving him a bonus of \$150,000 to make his secret public for the benefit of all cultivators of the soil? Either the thing is pure humbug, or there is something worthy of attention. Pray enlighten us on this subject. Yours, &c.

Yes, we were upon that committee, and nothing would give us greater pleasure than to unburden our heart to the public on this subject, and rid our bosom of this "perilous stuff" that has weighed upon us ever since. But alas! this gentleman who has been urging his great discovery upon the attention of Congress and the Legislature for ten or twelve years past, put all the committee under a solemn vow of secrecy, though we protested at the time against his expecting that a horticultural editor should preserve silence touching any thing that is told him *sub rosa*.

And yet we would not treat our correspondent rudely; for his letter only expresses what a good many others have expressed to us verbally. We shall, therefore, endeavor to console him for the want of the learned dissertation on vegetable physiology which he no doubt expected, by telling him a story:

Once on a time there was a little spaniel, who lived only for the good of his race. He had a mild countenance, and looked at the first, enough like other dogs. But for all that, he was an oddity. Year in and year out, this little spaniel wandered about with a wise look, like the men that gaze at the stars through the great telescopes. The fact was he had taken it into his head that he was a philosopher, and had discovered a great secret. This was no less than the secret of *instinct* by which dogs do so many wonderful things, that some men with all their big looks, their learning, yes, and even their wonderful knack of talking, cannot do.

It was curious to see how the little spaniel who had turned philosopher, gave himself up to this fancy that had got into his head. He had a comfortable kennel, where he might have kept house, barked, looked after trespassers, where he might have been well fed, and had a jolly time of it like other dogs.

But no, he was far too wise for that. He had, as he said, found out something that would alter the whole "platform" on which dogs stood, something that would help them to carry their heads higher than many men he could name, instead of being obliged to play second fiddle to the horse. If the community of dogs in general would but listen to him, he would teach them not only how to be always wise and rich, how to be strong and hearty, but above all, how to preserve their scent—

—for the scent is a pleasure that dogs prize as much as some old ladies who take snuff. In short, bring about a canine millennium—for he assured them that not only was every one of them entitled to his "day," but that "a good time was coming."

And why, you will say, did not our philosopher divulge for the benefit of the whole family of dogs? "It is so pleasant to do something for the elevation of our race," as the traveled monkey thought when he was teaching his brothers to walk on their hind legs. All the dogs in the country could not but owe him a debt of gratitude, since they would soon become so wise that they might even teach their masters something of instinct. And then they would be so happy—since there would not be a downcast tail in all the land—for the whole country would be in one perpetual wag of delight.

Al! dear reader, we see that you, who put such questions, know nothing either of philosophy, or the world. As if the people who discover why the world turns round, and the stars shine, throw their knowledge into the street for every dog to trample on. No, indeed! They will have a patent for it, or a great sum of money from the government, or something of that sort. It would be a sorry fellow who should think that every new thing found out is to be given away to every body for nothing at all, in that manner. To be sure, it would, perhaps, benefit mankind all the more; but that is only half the question. "If you think the moon is made of green cheese," said our curly philosopher to his friends, "you are greatly mistaken. I am well satisfied, for my part, that that is only a vulgar error. If it had been, John Bull would have eaten it up for lunch a long time ago."

So our philosopher went about among his fellow dogs, far and near, and spent most of his little patrimony in waiting on distinguished mastiffs, Newfoundlanders, and curs of high degree. He went also to all conventions or public assemblies, where wise terriers were in the habit of putting their heads together for the public good. Wherever he went, you would see him holding some poor victim by the button, expounding his great secret, and showing how the progress, yes, the very existence of dogs, depended upon the knowledge of his secret—since it would really explain in a moment everything that had been dark since the days when their great-grandfathers were kept from drowning in the ark. Only let the congress of greyhounds agree to pay him a million of money, and he would make known principles that would make the distemper cease, and all the other ills that dog-flesh is heir to, fade clean out of memory.

Some of the big dogs to whom he told his secret (always, remember, in the strictest confidence), shook their heads, and looked wise; others, to get rid of his endless lectures, gave him a certificate, saying that Solomon was wrong when he said there was nothing new under the sun; and all agreed that there was no denying that there is something in it, though they could not exactly say it was a new discovery.

Finally, after a long time spent in lobbying, and after wise talks with all the members that would listen to him, yes, and after exhibiting to every dog that had an hour to give to him, his collection of dogs' bones that had died solely because of the lamentable ignorance of his secret in dogdom, he found a committee that took hold of his doctrine in good earnest—quite determined to do justice to him, and vote him a million if he deserved it, but, nevertheless, quite determined not to be humbugged by any false doggerel, however potent it might have been to terriers less experienced in this current commodity of many modern philosophers.

It was a long story that the committee were obliged to hear, and there were plenty of hard words thrown in to puzzle terriers who might not have had a scientific education in their youth. But the dogs on the committee were not to be puzzled; they seized hold of the fundamental principle of the philosophic spaniel, tossed it, and worried it, and shook it, till it stood out, at last quite a simple truth (how beautiful is deep philosophy), and it was this—

THE GREAT SECRET OF PERFECT INSTINCT IN DOGS, IS TO KEEP THEIR NOSES COOL.

Of course, the majority of the committee were startled and delighted with the novelty and grandeur of the discovery. There were, to be sure, a few who had the foolhardiness to remark, that the thing was not new, and had been acted upon, time out of mind, in all good kennels. But the philosopher soon put down such nonsense, by observing that the fact might, perchance, have been known to a few, but who, before him, had ever shown the PRINCIPLES of the thing?

And now, we should like to see that cur who shall dare to say the canine philosopher who has spent his life in studying nature and the books, to such good results, shall not have a million for his discovery.

## Strawberries in Sonoma County.

THE Petaluma Journal, of the 27th ult., is acknowledging a liberal present of rich and delicious strawberries from Messrs. Plumer & Vahlburg, of that place, agents for the sale of Mr. J. W. Cassidy's strawberry crop, makes the following mention of the strawberry-patch of the latter:

"Availing myself of an invitation to visit his grounds, we paid Mr. Cassidy a visit last Tuesday evening, and were well paid for the time. His inclosure, located within fifteen minutes' walk of our office, we find to contain about twenty acres of choice land for the cultivation of strawberry plants, fruit trees, and vines. Notwithstanding Mr. C. entered into possession of the premises less than five months since, we found five acres of exceedingly thrifty strawberry plants, all in bearing condition, and some eight or ten acres set out with peach, apple, pear and plum trees, grape-vines, gooseberries, etc., all in a healthy and thrifty condition. The strawberry plants, although not set out until the latter part of January and February, have already produced more pounds of fruit than have been gathered from a forty-acre field, located in the celebrated strawberry region of Oakland. This statement Mr. Cassidy makes from personal knowledge, the field referred to in that locality belonging to a friend of his. We might further add, that Mr. C.'s plants are not only of the same variety (the British Queen), but also from this friend's grounds. Thus conclusively proving that our soil and climate are better adapted for producing an early crop of fruit, at least. Mr. C. says he expects to send into market, the present season, from three to four tons of strawberries. A good beginning, certainly.

The Native Strawberry also, it seems, is being cultivated with success at Petaluma, as the following from the same paper attests: "Some weeks since we stated that Mr. J. W. Brackett, of this city, had growing in his garden a large patch of native strawberry plants, and, at the same time, expressed a belief that time and careful cultivation would prove the native plant a valuable variety. During the present week, Mr. B. has presented us with a dish of berries, taken from these vines. The fruit is of good size, and fair flavor, much superior to the fruit from the uncultivated plants. This is the third season since Mr. B. commenced the trial, and he says he can discover a decided improvement in the size of the fruit from year to year."

SCRATCHES IN HORSES.—It is said that this often troublesome disease, unless very bad, may be cured by washing thoroughly with soap-suds, and then rubbing with hard fried oil of salt meat. Keep clean, and wash and grease every other day until cure is effected. Leaving mud to dry upon the legs of a horse, is one great cause of this disease, and many horses are injured by want of care and cleanliness when driven in muddy weather.

AFTER an event is irretrievable, nothing is more absurd than the discussion of what might have been done.

## Miscellany.

## THE WASHINGTON TRAGEDY.

We have refrained, says the Prairie Farmer, from making any comment upon this sad and terrible affair, which has filled the papers recently and been the subject of comment, censure and mourning. Until now we have found nothing that satisfactorily expresses our own feelings. Here we have it. The following should soften you, reader. It is christian. Read it and—

## JUDGE NOT.

BY C. H. WEBB.

Bridle your virtue, Tether the tongue;  
Pity the fair vine blighted so young;  
Why not the tomb? Sad shattered life,  
Think of her doom—Widow, yet wife!

Tears, like sad rivers, Roll through all time;  
He his heart's torrent Poured for its crime.  
Billows of soul Swell o'er her breast,  
Pleading with God—There let him rest.

Still to another Life is as Death;  
Home and its idol Gone with a breath!  
Blood on his hand, Stain on his bed;  
Pity them all—Living and dead.

Those whose life current flows calm and quiet,  
Whose love and whose passion Never ran riot,  
Judge not too harshly: Few fall by design;  
Pray for the erring—Their fate may be thine!

Bridle your censure, Tether the tongue;  
Charity's blessings Ever are young;  
He knows the temptation Who measures the sin,  
May His matted mercy Shield all of our kin.

## Education of English Girls.

The following most excellent article by Rev. J. C. Bodwell, in the "Happy Home," we commend to our readers, more especially parents:

Step into Mosely's in Summer street, and you will see one indication of a good time coming for daughters—ladies' boots, with soles of a thickness which it will cheer every man's heart to look at—and fashionable too—the very latest fashion! Now it is not a matter for rejoicing and even for devout gratitude, that it is actually fashionable for women to wear shoes which will keep their feet dry and warm?

Our countrywomen have long endured great and cruel hardships in this particular, compelled to wear so flimsy an article, as if all the shoemakers were in league with consumption and death; while their husbands and brothers have walked by their side in boots which protected them from all harm. This hardship and cruel inequality of the sexes has been national, as the custom of pinching the feet of women has been peculiar to the Chinese. European women have been wearing the fast becoming fashionable with us, never dreaming of anything else as at all consistent with common sense. English duchesses have worn shoes from time immemorial which our country misses would have considered very vulgar. And so English duchesses have retained their plumpness and bloom and joyous health to fifty and sixty years of age, while our women have lost the last rose before thirty, and have gone in frightful numbers to an early grave.

This whole subject of the training of our girls must undergo a thorough revision. Many other things need looking after besides shoes. Our climate has, unquestionably, something to do in transforming the round and ruddy Anglo Saxon lass to the pale and slender Miss of Boston and New York. But sadly defective education does a great deal more. The differences in the training of English and American girls begin in the nursery, dating from the first weeks of existence, and extend over the entire period from infancy to ripe womanhood. As it is my desire to furnish something that may be useful, rather than entertaining, I shall speak very plainly, and somewhat in detail.

One of the first maxims applied to the management of both girls and boys in England is, in the words of one of their old physicians, "plenty of fannel, plenty of milk, and plenty of sleep." I am quite sure that a great many of our young mothers do not understand the importance of every part of this maxim. It does not require a professional eye to discern that many an infant suffers from want of fannel, although the inexperienced mother has no conception of it. The child looks warm, and is warm to the touch, but is irritable, restless, unable to sleep. Were you never troubled during the night without knowing the reason, till you awoke in the morning and found that though you had not any sense of chilliness, yet you wanted more covering to make you sleep soundly? Infants require a good deal of warmth, and cannot be healthy without it.

As to food, every mother in England understands that an infant must not be fed with all kinds of trash, gingerbread, cake, pie, &c. Nothing of the kind is permitted to be given them. The shops of London—grocers, druggists, and pastry cooks—abound in simple articles of diet, prepared especially for infants, as "biscuit powder," "baked flour," "tops and bottoms," "patent American corn flour," "Arabian revelant," &c., &c. Plain, simple, and nutritious, is the rule here. Through the entire period of childhood, and even of youth, the diet of English girls is extremely simple. No tea and coffee, no hot bread—indeed, it is a very common rule in well ordered English families that no bread must be cut for old or young, till the second day from the baking—and very little of pastry or sweet meats of any kind. Plain bread and milk, and fresh beef and mutton, roasted, or boiled, or broiled—not baked nor fried—with plenty of vegetables, make up the principal food of English children. Pork, veal, and salted meats are allowed very sparingly, as all-English mothers know they are difficult to digest, and especially injurious to a child that has the slightest constitutional tendency to scrofula.

A well lighted nursery is considered indispensable, as it is well understood that a dark nursery will kill a scrofulous child. Their odious and abominable window-lax, modified and relieved of its worst features within a few years, makes Englishmen anxious to get as much light as possible into their dwellings, whereas we cover our houses with windows to an absurd extent, and then, still more absurdly, and very injudiciously, beyond all question, shut out nearly all the light with blinds. English children must have abundance of fresh, out-door air, every day, if possible; and an important part of the duty of the nurse-maid is to take the children out several hours every fine day, including the infant. One of the most beautiful pictures in the London parks, and indeed everywhere all over England, is the innumerable nursery-maids, themselves radiant with health, with their still more innumerable children. Thus the English girl is early trained to a habit and love of walking, which she never loses, and in this way secures round limbs, and expanded chest and ruddy countenance while still a child. It is hardly necessary to say that the shoes of English children have thick soles and that their clothing throughout is very carefully adapted to the season and the weather.

I saw a fair American mother laugh when I said that the mothers of England are very particular not to allow their children, before they are old enough to walk, to sit much on the carpet, as it is a posture unfavorable to erectness and fullness of figure. They are therefore, taught with special pains to roll themselves on the carpet, and to lie

on the stomach, all of which have a direct tendency to secure a perpendicular spinal column and broad, full chest.

It is a beautiful feature of English families, that the children, instead of being pushed into a precocious maturity of dress and manners, and habits, are children all along; their parents love to have it so—simple, free, joyous, playing, laughing and romping all their day. It is not the least of the advantages of this, that when womanhood comes, as come it will, in spite of everything, it sets easily and gracefully upon them.

English children do not go to fashionable parties or keep late hours. It is a special study to provide them abundance of healthy sports, and, above all, to make home radiant with cheerfulness through the day; and when the night comes, the young misses instead of staying up and being called ladies, are called girls, and sent to bed.

**Distinguished Potatoes.**—In Gerard's time, 1597, Virginia potatoes, as they were then called, were just beginning to be known. A sweet potato had been previously known, which was used as a kind of confection at the tables of the rich. Of these, Gerard says: "They are used to be eaten roasted in the ashes; some when they are so roasted, infuse them, and sop them in wine; and others, to give them the greater grace in eating, do boil them with prunes, and so eat them. And likewise others dress them (being first roasted) with oil, vinegar and salt, every man according to his own taste and liking; notwithstanding howsoever they be dressed, they comfort, nourish and strengthen the body." These were sold by women, who stood about the Exchange with baskets. The same writer says of the common potato, which, for a considerable time after its introduction, was a rarity, that "It was likewise a food, as also a meate for pleasure, being either roasted in the embers, or boiled and eaten with oil, vinegar, or dressed any other way, by the hand of some cunning in cookerie." They were originally the size of walnuts.—[Philip's Progress of Agriculture.

As old darkey was endeavoring to explain his unfortunate condition: "You see, it was dis way, as I can member; first my fader died, and den my mudder married agin, and den my mudder died, and my fader married agin, and somehow, I doesn't seem to have no parents at all, nor no home, nor no nothing."

## SAFES! SAFES!!

LILLIE'S IMPROVED WROUGHT AND CHILLED IRON SAFES. Fire-proof, Powder-proof, Drill-proof, and Burglar-proof. With Lillie's Unpickable Powder-proof Lock.

The best Safe made for resisting both fire and thieves, as proven in innumerable instances.

As to a recent test by fire, reference is made to the late burning of the Crystal Palace in New York city, at which all other Safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Cairo. Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl Street, N. Y.: Dear Sir: You ask about Lillie's Safe, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned on the 25th of December last, and at that time we had one of those Safes in our office and three in our warehouse. The Safe in our office was filled with our books and papers. The Safe is unharmed, and everything it contained came out in perfect order. We have not yet received our books and papers, except the new coat of paint is all it. The fire in the warehouse was complete, and our expectations. Although the ornaments were melted off, being exposed to the hottest of the fire several hours, the inside was unharmed. We cheerfully recommend them as being far superior to any other Safe for fire and burglar-proof qualities. There is no warping or twisting, and no necessity for a new Safe, as in the ordinary kind after having been once burned.

Yours, truly, BUEL & MOORE.

Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of today is received. In reply we are happy to say that the Safe we bought of you last spring (Lillie's Patent), came out of the fire on Sunday night, all right. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the Safe shows a few cracks, but nothing in our opinion, to injure it. The interior is perfect, containing our stock and the public. One on each side, and the Safe was exposed to an intense heat. You will please send for the safe, repair it, and return it to our office, and much obliged, yours, CHAS. WARREN & CO., No. 245 River Street.

[From the Troy Daily Times, October 6th.]

The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of Safes than which none more thorough could have been desired. Those who were on the ground say that it was the hottest burning they ever saw; the whole of the "Safe" manufacturers were in an exposed situation. Lewis Lillie of this city, Stearns & Marvin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns & Marvin's Safes were burnt out, others were completely wrecked. Lillie's alone were unharmed, except in the firing of the paint upon the inside doors. The Institute could not have arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

[From the New York Times, October 6th.] Go to the ruins of the Crystal Palace, and examine the so-called Fire-Proof Safes, manufactured by Stearns & Marvin, and other Sheet-Iron Safe makers, most of which are a mass of ruins. The same is true of the Safes of the Crystal Palace. Also, examine Lillie's Chilled Iron Safe, which requires only a coat of paint to make it as good as new.

A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 33 Sacramento street.

**Lillie's Celebrated Bank Locks,** On hand, and for sale. The best Bank and Vault Lock in the world.

**Five Hundred Pounds FRENCH SUGAR-BEET SEED.**

An invoice of SUGAR-BEET SEED has been received at our Office, which will be sold on very reasonable terms. We would urge more attention to this important Root Crop, as nothing can be better or cheaper for Dairy Stock, or Swine. Fifty tons can be raised per acre, easily, upon good alluvial land. This Seed is fresh, of superior quality, and will be sold low, in lots to suit. Apply at Farmer Office, 130 1/2 Washington St. (op-stairs). 112

## GROCERIES, DAIRY PRODUCE, ETC.

A. L. EDWARDS & CO., NEW STOCK OF CHOICE

## GROCERIES,

At 81 Clay street, above Front,

A. L. EDWARDS & CO. HAVE JUST OPENED

a fine assortment of

Choice Family Groceries,

which they offer at the lowest rates:

FLOUR—Superior brands of domestic.

CORN MEAL—Fresh, in 10, 25 and 50-lb. sacks.

BUCKWHEAT MEAL—Hominy, coarse and fine, Corn-starch.

COFFEE—Old Mocha and Green Java, and superior Rio.

TEAS—Superior fresh Green and Black, in 5, 12, and 30-lb. tins.

CANDLES—Chemical, Sperm, Wax, and best quality Adamantine.

SUGAR—Crushed, Powdered and Brown.

CHEESE—California and Durham Farm.

PICKLES—English and California Pickles, in pints and quarts.

PIE-FRUIT—English and American Pie-Fruits, in glass and tin.

Oil—China Nut-Oil, in tins and jars.

YEAST POWDER—Preston & Merrill's, Hope Mills and California.

MUSTARD—California, English and French.

OLIVES—The most desirable brands.

Cocoa—Paste, Shells, and cracked Cocoa, Broma, Cheese, &c.

STARCH—Glennfield Patent.

Meat—Meats in quarts and half-gallon jars.

Cream Tartar and Soda.

Preserves—all kinds Jams, Jellies, Sauces, &c., in glass and tin.

Our customers may rely upon every article sold by us.

The Prices, in every respect, Low.

Goods delivered free of charge to any part of the city.

A. L. EDWARDS & CO.,

10-3m No. 81 Clay street, above Front

**FORDHAM, JENNINGS & CO.,**

**GROCERS,**

Steamboat Block,

Corner Front and Jackson streets,

IMPORTERS, JOBBERS, AND RETAILERS,

And Dealers in

FLOUR, PROVISIONS,

FINE WINES, TEAS,

WOODEN-WARE, & C.,

Families', Hotel, Ship, Farmers' and Ranchers' Stores,

Put up to Order, and at the Lowest Rates.

Goods delivered as usual.

**LEWIS GIBSON,**

DEALER IN

Foreign and Domestic Wines and Liquors,

ALSO,

GROCERIES AND PROVISIONS,

No. 28 Battery Street (near the corner of Pine),

SAN FRANCISCO.

Advances made on consignments of Country Produce and Merchandise. 13-3m

**FOR SALE, BY LEWIS GIBSON, 25 Battery street—**

600 bags Oats, 100 bags Rye, 100 bags of Extra Flour;

Together with a general assortment of Wines and Liquors, Groceries and Provisions. 13-14

## IMPROVED FIELD FENCE.

PATENTED JANUARY 25, 1859.

PERMANENT OR PORTABLE.

It is made of boards or rails in the following manner: Take

two sticks or posts of timber 2 1/2 inches square, and about

14 feet long, either round or square, their length may be varied

according to the height intended for the fence. Lay them

across each other in such a manner that the ends which rest

on the ground, will be about 5 1/2 or 6 feet apart, leaving about

18 or 20 inches of each post above the point of intersection to

reach the top rail, board or pole. They may be secured at

the point of intersection by having and nailing; or if the

posts are split, by bolt and screw. A miter box may be used

to saw and halve the posts. Next take two cleats about 1 inch

thick and 3 inches wide; nail the short cleat across

one post to the other, so as to leave a triangular space

large enough to receive the rail or board. Then nail the long

cleat to the posts parallel with the short one, and about 12 or

14 inches below it. These cleats serve to strengthen the post,

and the rails or boards rest on them.

For board fence use a stick 2 1/2 inches square and 2 1/2 feet

long; nail it to the cleats, also to one of the posts about one

inch from the point of intersection; this is to stand perpen-

dicular, and the boards are to be nailed to it. For rails, two

perpendicular strips of board, about 1 1/2 inches wide should be

nailed to the cleats to keep the rails in place; or a loop of

wire attached to the posts or hung on the second rail in which

the lower rail may be suspended, can be used if preferred.

Now to set up the fence, set up two posts and put in the rails

or board, no dipping of post-holes or rotting off of posts, or sagging over; it is not affected by frosts or winds. This fence is believed to be the best—all things considered—ever offered to the public.

Town, County, or State Rights, for sale on the most desirable terms. Address

Klinton, Chas. Co., N. Y., Patentee.

IL WINCHESTER, Iowa Hill, Agent for California.

Letters addressed to Editor Farmer, will receive immediate attention. 13-3m

**BOY FOR A FARMER.**—A place is wanted with some good Farmer, for an active and intelligent BOY, about nine years of age. Any person that would like to adopt such a boy, can learn of an opportunity, by applying at the Farmer Office.

## AGRICULTURAL.

## AGRICULTURAL STORE.

4000 sold in 1856, 4500 sold in 1858.

15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim

to have manufactured and sold anything like so large a number

of Reaping and Mowing Machines during the same time,

while my experience dates back to the origin of my ma-

## The California Farmer.

SAN FRANCISCO:  
FRIDAY..... JUNE 3, 1859.

## A Special Agent in the Eastern States.

Mr. E. A. HAY, who left here in the steamer of the 5th inst., on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.

We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.

We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

## The Farmer—Our City Carrier.

HAY employed Mr. J. F. LARRABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

## Where Our Gold Goes.

We know the mass of our citizens can have but little idea of the immense amount of provisions imported into San Francisco. The value is enormous; and although all are strenuous in advocating "home manufactures," we are aware that unless our people better understand demand and supply, we cannot have a regular market nor a reliable price for any article of home produce. We now ask a careful attention to the following, as among some of the great staples which are now imported in such immense quantities, and which should demand the serious consideration of every well-wisher to our State. Can we not raise our own beef and pork? Can we not make our own butter and cheese? Can we not make our own soap and candles? Can we not make our own boots and shoes? Give but a just and proper attention to this subject. Go to work and increase our population 500,000, and we shall soon set the wheels in motion that will do this.

The following figures will show the amount of these articles, as taken from the manifests of six *clippers* recently arrived from New York and Boston: Flour, 4222 barrels; Soap, over 8000 boxes; Candles, 6500 boxes, 2200 half boxes; Butter, near 300 barrels, 1000 half barrels; Pork, 350 barrels, 2000 half barrels; Lard, 2000 cases; Beef, 200 barrels; Hams, 350 boxes and hives; Bacon, 200 hogheads and boxes; Boots and Shoes, 3000 cases; Dried Apples, 1500 half barrels. When it is remembered that these arrived in three days, the value of our imports for weeks, months, or a year, can be estimated; and when it is recollected that we are large producers as a State, we have one very gratifying fact that we may rely upon: we are increasing in population and in resources. We could add other articles that could be made here, and are made—Pickles, Preserved Fruit, Starch, &c. The present condition of Europe should awaken reflection in the mind of every farmer. Let a war break out in Europe, and then the day of great things is at hand.

## Strawberry Planters.

A MOVEMENT was made the present week by the strawberry growers, at Oakland, to make some general rule for mutual good, so as not to overstock the market, and to maintain a fair and equitable value; but as all could not agree, it was given up. Large quantities are coming in daily now, and next week will, in all probability, far exceed the present in quantity. This fruit has sold as low as 10 to 12 cents a pound, at wholesale, for British Queen; Hovey has commanded 12 1/2 to 15 cents. D. E. Hough has raised some enormous White Chilian strawberries, weighing about ten to the pound, which are selling at 25 cents each, to send East by the steamer. He has them in glass jars, preserved. Mr. Pillsbury, in the Washington Market; J. Bryant Hill & Co., and Graves & Williams, on Merchant street, and the stalls everywhere, are full of this splendid fruit; and never before, on the face of the earth, has there been shown finer fruit than our Market can now display. Everybody can take their fill of this choice fruit.

OUR EASTERN CORRESPONDENTS.—We think we can boast of a very gratifying letter from our correspondent B. We certainly feel proud to hear from one so well qualified to judge the merits of our journal, speak thus in its praise; but most of all we glory in the *meed of just praise bestowed upon our Ladies' Department*. That deserves all that can be said of it, and we feel proud indeed, and feel honored by having such correspondents. We feel a true satisfaction in believing that the lady writers of the FARMER are exerting an influence for good throughout our land. We cannot omit to make an extract from a letter recently received from an intellectual friend, who thus speaks of our journal:

"The FARMER goes on swimmingly; it has positively done more good to moralize society in this God-forsaken land than has any other paper in this State; it has developed its agricultural and mineral wealth; it has given aid, counsel and wisdom to the ignorant; it has been a journal that has found its way to the 'centre table' of many a fireside to make the inmates blessed and happy. The Ladies' Department is a receptacle, a reservoir of the most priceless gems, where a bevy of fair ones weekly congregate to let the truth slip from their pens without any restraint or unfair criticism."

The letter said much more in praise, but this is the tone of many a generous letter, for which we are duly grateful.

Our correspondent E. being ill at New York, his letters will come to us more fully next mail. The general news letter and the social chat of friend B. will prove interesting. Our State owes a debt of gratitude to B. for his earnest efforts in behalf of the best interests of California.

WE HAVE received the Circular of the Surveyor General, relative to Swamp and Overflowed Lands, which is an important document, and should be widely disseminated.

## The Yosemite Valley.

The great interest felt among our citizens for this famed place, and their desire to visit it, induces us to give all the information in our power, so as to aid those that shall visit it, and also to those abroad in other States and countries to come to our golden State, and witness one of the most wonderful scenes that nature has laid open to the view of man.

The name of this valley we hope will be fully established this season. We had hoped our contemporary of Hutchings' Magazine was satisfied that Yosemite was correct, but we see he still persists by advertising *Yo-hamite*. We need only resist by advertising *Yo-hamite*. We need only resist by advertising *Yo-hamite*. We need only resist by advertising *Yo-hamite*.

The name Yosemite is derived from a nick-name given the Ah-wah-ni-cha tribe inhabiting the valley at the time of its discovery. This name was given them by Indians of other tribes, from the fact of their living in a country abounding in bears, and hence the confusion of the names; as a grizzly is called by different tribes Yosemite, Yo-ami-tah-eh, Yo-hamite, and O-suma-tah. We have conversed with parties who first discovered the valley (in 1850), and with many persons who have been settlers since that date, and we have Indian tradition and authority to support us, and therefore we are confident we are correct.

That all the history of this great valley may be established, no original names should be changed. Those Indian names, so long identified with the valley, its mountains and waterfalls, should be perpetuated; and all future names should be so appropriate, so identified—either with the discoverers of the valley, or with the people of that country and our State—that these names shall remain by consent, and be perpetuated.

In our last issue we left our readers amid the wonders of the mighty forest of Mariposa. There they have walked, wondered, and felt the voices stirring their higher natures;—there they could walk and talk with God. We now leave Eden Valley, but if possible take our friend Clark with us as a pilot, and cross the rippling river, whose music lulled you to sleep the past night, and begin your ascent up again into the lofty mountains that rise in grandeur all around you. Now you need all your eyes, and an extra pair; and you will feel the value of your opera-glass, if you have wisely brought one, for as you rise, bright and beautiful views break upon your sight on every hand. At this season, thus early, you will see the white snow-drifts and snow-clouds; the mountains with ice and snow on their heads, and green grass and bright flowers at their feet. You will meet the bounding deer, the horned elk, and the timid fawn. Perhaps you may hear the growl of a grizzly. You will see abundance of hare and rabbit, and other small game. There will be sport for the hunter, and may add to the pleasure of your feast beneath the trees on the mountain's top. You will have enough to see, enough to enjoy, if the heart is in the right place. Travelers should not be in too much haste, but take time to enjoy the scenes; along this entire route of about seventy miles, there are a hundred scenes worthy a day's study. Rich meadows that look like an Eden, almost tempting one to break from the world and lead a hermit's life. A careful observer of scenery will catch some of the grandest scenes in nature from these heights along the entire route. After making nearly twenty miles, the first view of the valley will break upon you at

## INSPIRATION ROCK.

Here, we venture the assertion, no lover of nature can examine the surroundings of this scenic point and not pronounce it one of the grandest in the world. Here, standing upon a towering ledge of granite, more than 2000 feet high, almost perpendicular, you take your first view of the VALLEY OF THE YOSEMITE.

There, at your feet, down, down in a deep recess, completely walled in by granite mountains, lies one of the richest, brightest, most beautiful spots of earth. So gorgeously beautiful to the eyes does it appear, that it seems more like places we dream of than a living reality. Here will the magnetic charm seize you—here you will feel a change come over you—here you will begin to live within yourself, and desire to commune with yourself; from this moment you will feel the power of nature and the God within you will be heard—i. e., if God lives within you at all.

Behold, there, the bright green velvet-like carpet, painted in rich colors, with bright flowers; see the transparent river, like a stream of liquid silver, its bank lined with trees of more than usual beauty, in form and foliage, and here, for miles up the valley, you can constantly discover new and bright beauties for the vision to feast upon.

From this point, with a good glass, that everybody should have (acromatic or marine glasses), the visitor can look up the valley, and over to the high peaks, until the snow-capped mountains are lost in the clouds above. From this point, also, visitors often tumble heavy boulders of rock from thence to the valley below, a distance of some 2,000 feet; as they descend they often bear down mighty trees and loose rocks, and rushing down into the valley, sending back a roaring sound like heavy thunder. After receiving that inspiration which this point always infuses into the lover of the beautiful, you are prepared to ride on, holding communion with yourself, with nature, and with God. Thus prepared, you soon begin the descent that leads you into the

## VALLEY OF THE BEAUTIFUL.

where for two weeks, at least, you can make yourself happy.

THE YOUNG MEN'S CHRISTIAN ASSOCIATION FAIR.—This Fair was a complete success, from its opening on Tuesday evening to its close on Saturday evening. The Fair was well attended by Christians of every denomination. The ladies did nobly, giving their time and influence. We learn that about \$2000 will be realized by the Association in aid of their plans. This we rejoice to hear.

RECEIVED.—Invitations.—A courteous invitation came to us to attend the grand opening ball and festivities announced to take place at the Valley of the Yosemite, June 14th. Also, invitation to visit Hualdaburg at their coming Agricultural Fair, 14th to 18th Sept., which will be a good one. We shall try to be there.

## The Schools of Our Early Home.

Through the kind remembrance of the School Committee, Rev. Theodore A. Whitney, Theodore Matchett, Esq., Wm. Wirt Warren, Esq., of our Village Home (Brighton, Mass.), in the good old "Bay State," we have received the report of the School Committee of that place, for 1858-9. It comes to us laden with pleasant recollections of early days, names, places—friends all "to memory dear,"—it comes to us to tell of great and rapid progress, of enlarged sympathy, and love of the cause of education.

As we glance over the names recorded there, we are reminded of

"Our early days! How often back  
We turn on life's bewildered track,  
To where, o'er hill and valley plays  
The sunlight of our early days."

We feel a true pride on looking over a handsome pamphlet of about forty pages, to find our native village stand almost at the head of the list in the cause of education, with only about 3,000 inhabitants. There was paid for education the last year, \$6,388 46; equal to \$10 33 for every child; the pupils being a little over 600. Massachusetts contains 333 towns, and Brighton stands No. 4. That little rocky gem near the sea, Nahant, stands at the head of the list, with sixty children; the appropriation is \$1,200, equal to \$20 each. Brookline stands No. 2; \$12,950 for schools; \$19 59 each pupil. West Roxbury, No. 3, \$13 40 each pupil. Dorchester, No. 4, \$13 27. Somerville, No. 5, \$10 69. Brighton, No. 6, \$10 33. We notice also with pride, that several pupils have entered Harvard University, Yale College, and West Point, direct from the high school; and those that have graduated from those colleges, all have done so with honor to themselves, parents, their native town, and the schools from whence they originated.

By the standing laws of the Board of Education, there are eight weeks of vacation during the year, and the following days are kept as holidays: Washington's birth-day, Fast-day, May-day, Independence, Commencement, Thanksgiving, and Christmas days; these are standing holidays; these and regular vacations they enjoy; other than these, the schools keep the year round.

As we look back and recall our humble labors some twenty years since, in behalf of these schools, we remember some lads that were then in their "early lessons;" we see by this report, several that have graduated at Harvard—thus the car of time rolls on. This report has given us much pleasure, and we return our sincere thanks to the gentlemen of the committee, and commend their noble efforts in behalf of Education, and hope the example of this town may excite all others to equally noble strife.

THE CAUSE OF EDUCATION.—This great lever of human elevation—this great promoter of human happiness is being fully appreciated now in our State. From every city and all the principal towns we hear of schools and colleges, and seminaries of learning, both public and private. Scarce an exchange do we take up but we find some gathering of teachers and pupils, parents and children, to rejoice over the success and progression of their favorite fountain of knowledge. Not a week in the year that we do not receive some kind and courteous invitation to attend some festive scene or some intellectual enjoyment. These all speak of progress, light, education. Before us now, upon our table lie several pamphlets and letters, all for this cause. A kindly and courteous invitation from the Principal and Faculty of the Female Collegiate Institute of the University of the Pacific, for their commencement, June 7th and 8th. Also, Catalogues of the University, of each Department. Then the Collegiate Institute of Benicia, of C. J. Platt, Esq., which takes place on the same days, 7th and 8th June. The Oakland College, also. These institutions are the lights of our golden State, where sons and daughters are trained to be the support and blessing of the State. To each and to all we join with our best and most earnest wishes, with thousands of others, for their complete prosperity, and hope all interested will make it their duty and pleasure to be present if possible.

THE GENESSEE NURSERIES.—These celebrated nurseries, situated at Rochester, New York, are attracting very great attention, not only in every old State in the Union, but on the Pacific coast. Messrs. Frost & Co., made very successful shipments to their patrons on this coast last year. We know of many parties that bought from their nurseries, and from each and all, we have had the most satisfactory reports of the character of the trees and plants, as well as their style of packing, and the reasonableness of their charges. From every person that has dealt with this house, we have an assurance that prompts us to recommend their establishment in the highest terms; and while our duty always prompts us to give a preference to what can be procured here, still there is much yet to be imported, and we wish our State to have every tree, shrub and plant of worth and beauty.

THE RIPENING FIELDS OF GRAIN.—While coming down the river from Sacramento, on Wednesday of last week, on the Antelope, one of the finest days and evenings, thus far, of the year, the banks of the Sacramento, here and there, gleamed with bright belts of golden grain; the contrast between the dark green foliage of the gardens and grassy fields, and the bright grain, formed a scene of rural beauty rarely equaled at this season of the year; the grain (barley), in its bright golden color, gave the appearance of being nearly ready for the harvest.

HORN DISTEMPER.—A writer in the "Prairie Farmer," suggests the following as a remedy of this disease among horned stock: "Split the end of the tail and put a table-spoonful of turpentine in the hollow back of the horns; repeat it for several days." Symptoms of the disease are—the hair stands up straight on the backbone, a dry nose, and the horns next the head will be cold. The splitting the tail, and putting turpentine back of the horns, is undoubtedly a good remedy, but we ask if it is not going to extremes?

## The Temple! The Temple!!

The materials with which this most magnificent work has been built, was brought from the country. The "cedars" stood in our forests. The "olive-wood" grew upon our mountains. The gold and silver and many precious specimens, came from our "hills," our "river-beds," or our "valleys," and these from the "country round about." And we would appeal to our fellow citizens in the country everywhere that can possibly make it convenient to come to the city, to come and view this Temple. They may "never look upon its like again." This piece of workmanship is the most costly, most elaborate, and most perfect piece of mechanical skill that has ever been undertaken, we believe, in the world—the entire cost being over \$20,000. It is impossible to do it justice, either in an advertisement or by any written description. It should be seen to be appreciated; and every parent and child—every teacher and pupil—every lover of biblical history, should by all means see this Temple before it passes to the old States and Europe. Its size, the cost of taking it apart and removing it, will preclude the possibility of its being exhibited at any other place than San Francisco in our State. The mechanics of our State and the Masonic fraternity in the interior, should by all means see and examine this wonderful piece of work. It is worthy a visit from the extreme borders of our State. We are pleased to know that it has been received with so much favor already, and the sanction of such persons as Rev. Dr. Scott, Rev. Dr. Peck, Rev. Rabbi Henry, and many highly esteemed Masonic brethren, bears testimony of its truth and worth. We feel proud of this work as a triumph of California mechanics. It is to their honor that this great work has been commenced and completed in the Golden State. We learn that Rev. Mr. Diehl will present the visitors an address, or such remarks as will be appropriate and interesting, both day and evening. Mr. Diehl being an excellent German scholar, will make it interesting for this large and worthy class of our citizens. Mr. Diehl will also be able to explain to all in French and Spanish such portions as will please. The history of the Holy Land has been a theme of study by Mr. Diehl for a long time, and therefore it is very appropriate to secure him for these entertainments.

FORTUNE FAVORS THE BRAVE.—Good News of Gen. Allen.—The following we clip from the Hydraulic Press of the 28th ult.:

"We are gratified to hear, and so will be a host of others, that General Allen has struck some rich diggings, in ground adjoining his tail sluice, which was not before deemed valuable. He went into his present mining enterprise with all the courage and faith of a young man, for which, and for many other noble qualities, he deserves all the success that can possibly befall him."

If ever we rejoiced at the good fortune of a friend, we rejoice at the above. The bravery manifested by our good friend the General, at the shabby trick played him by fickle Fortune—the repeated overturning of apparent certain plans, and the sealy actions of politicians in the trying hours of his dark days, only make his sunny day show the brighter.

Oh, we do rejoice, General—may fortune now tip her horn of plenty into your lap, until you cry enough.

SETTLER EXCITEMENT.—The claimant of "Smith's Ranch," at Bodego, Sonoma county, having received a patent for the same, left this city during the week with about forty armed men, for the purpose of ejecting the settlers, about fifty in number, on the ranch. The settlers in the county, on receiving intelligence of the approach of the posse, assembled to the number of about two hundred, surrounded the intruders and marched them back to Petaluma under guard, whence they re-embarke for San Francisco, thus happily avoiding bloodshed, which seemed seriously threatened. The settlers claim that the grant is fraudulent.

SMITH'S GARDEN.—This favorite resort of thousands is now unfurling its banner for Pomona. Splendid strawberries push out from under the rich green leaves with their blushing faces, as tempting as anything Pomona can offer. Our mouth watered at the sight of them—but their taste—no, we will not tell how delicious. Go yourself, reader, and luxuriate there, and roam among the flowers and—cucumbers. By and by the fifty acre peach orchard will bend beneath its burden of luscious fruit. Go then, also, and luxuriate—there is no better place.

BREAD, THE STAFF OF LIFE.—We are pleased to notice the conspicuous interest that has been shown in this important article of domestic comfort. We feel confident that the ladies of Oakland and vicinity will do themselves all due honor in this matter, and that at the Floral Fair there will be "bread enough and to spare." The woman or girl that makes the "best bread," and wins the first prize will be a prize that will honor all that claim kindred with her; and all due honor should be accorded to her. We shall soon give the premium list in full, and shall be glad to hear from all interested.

THE MAGNOLIA—Just Like the General!—We learn that General Reddington, the worthy agent of the California Steam Navigation Company, has a fine plant of the Magnolia Glauca in full bloom. Now we know the General is in his glory, for he is a true worshipper of the beautiful, and it is just such men that can appreciate a magnolia in bloom. May his life be fragrant with flowers, as his heart is full of kindness and generous good-will.

RECEIVED.—An Address on Agricultural Education, delivered at the State Fair, Syracuse, N. Y., by J. R. Williams, Esq., President of the Agricultural College of Michigan. President Williams is sound on this doctrine. We shall give some of his views ere long. We have heretofore made extracts from the writings of President Williams.

HUTCHINGS' MAGAZINE for June, has come to hand. It is illustrated with fine views of California localities, and the California Condor.

## How a Good Ranch was paid for.

We can give a most interesting fact, which we learned from a gentleman who now occupies a splendid estate on the American river, Sacramento county:

After we had examined a large orchard, garden and building, the proprietor related to us how he came into the possession of so good a ranch. In 1851, he had hired this ground and planted a large field of onions. The yield was enormous, the quality extra; the ground was literally covered with them. He sold and sold—he filled a warehouse in the city, and continued to sell from the crop; with the receipts of this yield he bought the land. He built a large house and paid for it; he filled the house with the sacks of onions, completely full—paid for his house, paid for his land, and had his purse full of gold left—realizing from this first crop, over \$15,000 profit. Who says farming don't pay? Dr. Hubbard, of the Garden on the American river, was the man.

THE HOUSE OF REFUGE.—The House of Refuge, or, more properly speaking, "The Industrial Institute," built by our City Government, and destined to rescue many a youth from ruin, is now receiving deserved attention from good men everywhere. Its promised good is shadowed forth in the voluntary joining of several lads, who desire to be made useful and taught some employment that shall make them good and useful men. Recently we paid a visit to this institution, and was highly gratified to find so excellent a building and so healthy a situation. The land is excellent, the position good, and, if properly cultivated, the land itself will pay a considerable portion of the expenses of the Institute. We were courteously attended to by Capt. Hennell and his assistants. We had the pleasure of a good long talk with the boys; and all feel sure they will be good boys, under the kind and watchful care of their excellent superintendent. There are some boys there of more than usual intelligence; they show remarkable shrewdness, and will make active and useful men. The lads showed us their rabbits, which are very large and handsome ones, and they came to us (perfectly natural) they should come to their *Warren*; and we learn that Capt. Hennell makes a gift to boys for superior rabbits, hens, etc. We are much pleased at the opening prospects of the Institute. It is most creditable to our city and the benevolent gentlemen who have originated and fostered it into being.

REMEDY FOR PUTID SORE THROAT.—Deadly diseases require timely remedies. This disease may be speedily checked by giving the following prescription—A teaspoonful every hour until it operates as a cathartic. Keep it always on hand to be given upon the first symptoms: One teaspoonful of strained honey; one tablespoonful of gunpowder; and a piece of freshly burnt alum of the size of the end of your thumb; mix well together. This forms the sure remedy called the Black Ointment. Try it, and save your little ones you love so dearly, and with whom it is so heart rending to part. This prescription is efficacious to all who are thus afflicted.

H. A. CAWDS.

We copy the above from the Placerville Observer, which says: "From the alarming fatality of this disease, we are inclined to the belief that it is beyond the skill of California doctors, and as it is assuming the shape of a terrible scourge, it demands the serious consideration of the entire faculty. We have heard of several simple remedies, one of which has been furnished us for publication [given above], but, from what we have seen and heard of the disorder, it requires more than ordinary treatment, and in most cases nothing but the cautery, or some such alternative, has proven of any benefit. The disease is contagious, and during its prevalence, people should keep their children at home."

A CHANCE FOR CARPENTERS.—We call the attention of our carpenters to the new fence advertised in our columns. Here is a chance for carpenters in every county to buy a patent right for the county or town, and make a snug little pile, for it is the best fence ever contrived. Farmers would do well to buy the right for themselves. We have received a power of attorney to execute deeds, and shall be glad to confer the right on all that want to try the fence.

SUPERINTENDENT OF PUBLIC INSTRUCTION.—We notice by the Journals of the day, that Rev. A. H. Myers, of Alameda, is announced as a candidate for Superintendent of Public Instruction. We have been much pleased with the devoted interest manifested by our present Superintendent, but if a change is to be made, we think the capabilities of Mr. Myers are such, and the interest he has ever shown, will be a guarantee that he will faithfully perform the duties devolving on him.

CHAPIN'S SELECT SERMONS.—Thatcher & Hutchings, New York publishers, are putting to press "Chapin's Select Sermons," twenty in number, which were delivered in Broadway Church. This most distinguished preacher's sermons are full of spirit and beauty; and this work will, undoubtedly, command a great sale. We were favored by the author with a copy, in pamphlet form, of a recent Discourse of great value.

ROSE TREES.—Mr. Wm. O'Donnell, of the Mountain View Nursery, San José, has brought to this city some of the finest grown roses we have seen this season. They are real trees, with a clean single stem some three or four feet high, then branching into a finely formed head, loaded with blossoms. They were quickly disposed of at Badger's.

RUIN AND CRIME.—Hall's Journal of Health states a somewhat significant fact, viz: that of the five thousand persons tried last year before the New York Court of Sessions, only ninety-four were sober when arrested.

TO PURCHASERS OF FINE STOCK.—All persons who may desire to import the best kinds of Stock—either Horses, Horned Stock, Sheep or Swine, or Domestic Fowls—can do so during the present month, and have them come out in charge of the AGENT we have just dispatched for the purpose of bringing out some of the finest Stock that can be bought. This is a rare chance, as we can save to purchasers considerable expense, while we secure great care of the Stock and an assurance of safety.

WE ARE AGENTS of the BEST STOCK BREEDERS in the Eastern States, and can secure to purchasers rare bargains, as we have special advice by last mail, of the best Stock offered for sale.

## DOMESTIC SUMMARY.

STRAWBERRIES are plentiful at North San Juan, at four bits a pound—the private gardens affording them in abundance, and of very large size.

The continued absence of Sheriff Fair, of Siskiyou, is looked upon in that quarter as an indication that he has absconded.

G. W. Hoag, of Red Bluff, says the Beacon, has in his orchard large quantities of nectarines, apricots, peaches and plums, some of which will be in market by the middle of the month.

M. T. Worthington, of Nevada, has 30 tons of Victoria Pie Plant for sale. The Journal calls him the most successful cultivator of the plant in the State. Nothing can be raised in the mines!

It is explained, that the Indian boy hung by the mob at Red Bluff, for setting fire to Col. Stevenson's house, was not taken from the hands of the authorities. They had previously discharged him.

The wife of the Hon. R. N. Turner, of Yuba county, presented her niece lord an armful of young hoppers on the 18th inst., to wit: twin sons, weighing respectively 14 and 16 pounds.

S. A. Griggs, Esq., of Coloma county, has a hog on his ranch eight months old, weighing 220 pounds, the grandfire of which weighed 1,400 pounds when full grown.

The Marysville Democrat attributes the tardy spring, with its extraordinary cold and heavy gales, to the uncommon activity of the internal forces of the earth, as indicated by remarkable volcanic eruptions and earthquakes.

The Mountain Messenger, of Laporte, Sierra county, announces the commencement of the sixth year of its existence, on the 29th ult. This is a ripe age for a California journal; but we think the Messenger is of the perennial variety, and will know no decay.

A branch of a gooseberry bush, from the garden of Mr. L. Sanderson, of Stockton, the Republican thinks, must have broken off by the enormous load of fruit upon it. There could not have been much less than a quart upon the little branch.

During the past week several parties of ladies and gentlemen passed through San Andreas, en route to the Big Trees. The snow has all disappeared from that region, and as the roads are now in excellent condition, no better season could be selected for a visit to the Trees.

The U. S. Supreme Court has decided that the entire freight upon goods carried, cannot be collected until all of the goods are delivered, though the owner may be required to pay a pro rata of the freight money upon receiving portions of the property.

The Hydraulic Press says, the air at the lower end of San Juan Hill was filled with winged ants on Wednesday afternoon, for a distance of a quarter of a mile. They seemed to blow from the north with the prevailing wind, and continued to come for a long time. The water in the ditch was darkened with them as they fell. A similar visitation was noticed in other places.

The President of the Placerville and Humboldt Telegraph Company states, that arrangements have been made for the immediate resumption of the work on the line, and the wires will be stretched in the direction of Salt Lake as rapidly as possible. We may expect to be in direct telegraphic connection with the Mormon city this season.

HARVEST is about commencing in Tehama county, and volunteer barley is now ready to be cut. The Red Bluff Beacon says, we can safely say that harvest will commence the latter part of this week, and last for thirty days. From the large quantity of harvest implements brought up and recently sold, we have every reason to believe the hay and grain crop will be at least an average one.

MUSKETOS are so plenty in Pitt River Valley, says the Beacon, that travelers are obliged, in riding along, to run their animals at full speed, occasionally, in order to get clear of the swarms that collect about their ears. Travelers arriving by the boats also complain bitterly of the prevalence of these blood-suckers along the Sacramento river. Our town is clear of these annoyances, but we can't say as much for the flies.

ANOTHER Garden, says the North San Juan Press, in noticing that Stewart & Cottle have about five acres of loose warm soil under cultivation, is located just out of town, on a hill side, beyond the brewery. The inclosure is watered by a fine spring, contains a great variety of excellent vegetables, and some three hundred peach and apple trees. Who says the mountains are not fit for agriculture, when gardens are as numerous, almost, as mining claims?

THE Wayside Spring, says the Hydraulic Press, ought to be the name of an establishment which some public benefactor has opened about half way up the long wearisome hill, between French Corral and Woods' crossing. He has brought the cool waters of a spring to the side of the dusty road, where man and beast can be freely refreshed. A good deed, whatever the motive. We never see a trough of clear water by the wayside without blessing the unknown man who placed it there, and thinking he has not lived in vain. [We concur.]

THE citizens of Nevada, contemplate a general celebration of the approaching national anniversary, and extend to the county at large an invitation to co-operate. It is expected that the Masons, Odd Fellows, Sons of Temperance, Good Templars and the Nevada Rifle Company, will all unite in costume, to swell the procession, and invest the occasion with an air of novelty hitherto unknown in similar celebrations in our mountain towns. The exercises will be held in a grove and will probably consist of a procession accompanied by one or more brass bands, the reading of the Declaration of Independence, an oration and a free dinner—the whole to conclude with a grand ball at Grass Valley, in the evening.

SPRING in Nevada county, is thus noticed by the Hydraulic Press, of the 28th ult: There was a heavy shower of rain in this part of the world last Sunday night, which irrigated the ranches and gardens in splendid style, free of charge. The Sunday before there was also a fine May shower. The elements are especially propitious to the agriculturists this spring. All the grain, grass and vegetable crops look fine, and the trees and bushes are loaded with fruit. Ten miles up the ridge the season is not so much advanced, vegetation being at least two weeks behind. While the oaks in this vicinity have been clothed in full, deep-green foliage for several weeks past, those up the ridge a short distance are just putting forth their pale furry leaves. With the exception of a few days of cloud and cool wind, the weather has been warm of late, and the snows

are rapidly melting. The paradise season of this delicious climate is fairly upon us again. The days open and close in glory, and the cool starry nights fall upon the earth like a benediction.

THE Yreka Chronicle says an army of crickets and grasshoppers, such as desolated the farms of Shasta valley in 1855, has again appeared, to the terror of agriculturists, but great delight of the Diggers, who regard it as a favor of the gods, and gather up the insects as "hi you muck-a-muck." On Tuesday of last week, an army over half a mile in width and of unknown length, made their entry in the gardens bordering on the eastern portion of Yreka; and in passing through them, so thick and numerous were they, that every footstep would crush numbers.

JOHN E. Ager, S. W. Langton, and others, have filed in the office of the Secretary of State, a certificate of their association, under the name of the "California and Utah Camel Association," the object of which is the introduction and employment of the Camel on the Pacific coast. The capital stock is \$12,000, in shares of \$100 each—the duration of the company to be twenty years. The trustees of the company are John A. Ager, E. G. Bryant, and John J. Cooper. The principal office will be at Downville, Sierra county.

IN relation to the Sonoma Agricultural and Mechanical Fair, the Petaluma Journal says: We would remind such of our readers as have not already done so, of the importance of becoming members of the above-named Society. Of the importance of the success of the coming Fair, to be held at Healdsburg on the 14th, 15th, 16th, and 17th of September, we need not speak, so closely is it identified with our own individual and social relations. Let all, therefore, become members of the Association. The terms are—for yearly membership, \$3; for a life membership, \$25. Certificates may be procured of either of the following named gentlemen: Hon. U. Edwards, C. L. Robinson, and J. Q. Shirley, Petaluma; Hon. J. O'Farrell, and Samuel Potter, Bodoga; J. Morin, L. Clyman, and J. M. Hudspeh, Anality; W. Wright, C. Holmes, and E. R. Budd, Santa Rosa; A. G. Oakes, W. McPherson Hill, and J. H. Clayton, Sonoma.

BIBLE AND POLITICS.—We have received from the author of this valuable work, a copy which we highly esteem. There is a style of independent and fearless discussion of truth, which makes one interested. We find much to commend. It will elicit thought, create discussion, and accomplish good.

## SPECIAL NOTICES.

## To Nurserymen.

We would call the attention of Nurserymen and others in California and Oregon, who purpose to plant largely, to our

## California Wholesale Catalogue, No. 6,

for 1839, which will be published on the 15th of June. This Catalogue will give the prices and description of

Seeding Apple, Pear, Cherry and Plum, as well as

QUINCE AND MAHALEB STOCKS,

which we can furnish in any quantity. Also,

STANDARD AND DWARF

Fruit Trees in bud, or one year from bud or graft.

## SMALL FRUITS

in great variety, as well as an extensive stock of

ORNAMENTAL TREES, SHRUBS, ROSES,

BULBS, HERBACEOUS PLANTS, ETC.,

of small size, suitable for transplanting.

For further information concerning our stock, etc., would

refer parties to our general advertisement in another portion

of this journal.

The above Catalogue will be mailed FREE, upon applica-

tion, as well as our more general Catalogues Nos. 1, 2, 3, 4,

and 5.

A. FROST & CO.,

Proprietors of the Genesee Valley Nurseries,

183m

ROCHESTER, New York.

THE Ladies' Electro-Chemical Baths—

Exactly so—as a suite of Baths, with a well furnished recep-

tion room, has been assigned exclusively to the ladies who

patronize his institution, by Dr. BOWMAN, on Sansome street,

opposite the St. Nicholas Hotel, where order, neatness and

cleanliness predominate to every department. A skillful and

attentive lady has charge of this department of the Doc-

tor's business, and our lady friends assure us that we cannot

too highly praise nor too highly recommend these baths to

universal use by our lady readers, whether as aids to cure

neuritis, rheumatism, and the other "ails that flesh is heir to,"

as for the purpose of promoting comfort, enjoyment, and the

continuance of good health. They are indeed a luxury; and

to one suffering from disease, sweeter far than "sugar-coated

pills," and how much better, those can most truly tell who

have "thrown physic to the dogs," and cleave to these health-

giving baths. 16

MRS. P. E. ROGERS—Family Sewing.

We are pleased to learn that Mrs. P. E. ROGERS, whose

skillful operation upon the GROVER & BAKER SEWING

MACHINE has elicited universal commendation throughout

the State, and at all the Fairs been awarded the highest Pre-

mium, has again resumed her business at the NEW STORE of

Grover & Baker's Sewing Machine Company, No. 118

Montgomery street, where a description of Plain and

Ornamental FAMILY SEWING will be executed in the best

style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with

neatness and dispatch. 17

THE GENUINE PITTS' MACHINE.

T. OGG SHAW'S, is the ONLY place where the Genuine

Pitts' MACHINE, made by John A. Pitts, can be had. Farm-

ers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. 13

MEXICO.—The steamship Tennessee arrived at New Orleans on the 11th of May, with dates from Vera Cruz to the 7th. Colima had fallen, after seven days hard fighting, and Coronado entered with the Liberal army, the Reactionists retiring to Guadalajara. Tepic and San Blas are in possession of the Liberals, which takes the only and last port from the government of Miramon. Large forces were gathering in the interior, for another attempt to take the city of Mexico. After the butchery at Tacubaya, Marquez did not dare to show his face in Mexico; and the common people are in the firm belief that one of his hands remains spotted with blood since the massacre.

THE SONOMA OAKS.—Our old friend Oaks, of Sonoma, with becoming patriotism, has laid his plans to celebrate the 17th of June (Bunker Hill's memorable day), with becoming festivities and a Grand Ball in the evening. Sonoma is a pleasant place, and just right for a visit into the country.

## GENESSEE VALLEY NURSERIES, Rochester, N. Y.

## Fruit and Ornamental Trees, Shrubs, &amp;c. Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality, any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements, as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

OF STANDARD FRUIT TREES, we have an unrivaled collection of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in Bud, One year old from bud or graft, and Two years old.

An immense stock of DWARF FRUIT TREES, in Bud, and one year old from bud or graft, comprising Apples, Pears, Cherries, and Plums.

SMALL FRUITS, &c., in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberry, &c., &c., including all of the new varieties (the above prices introduced up the present time, which have been found to be an acquisition.

In the Ornamental Department,

our assortment and stock is very extensive, including both the Deciduous and Evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our Stock of ROSES is unsurpassed in quantity and variety, occupying over six acres, and embracing more than 500 distinct sorts, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summer, Climbing, and Old.

HARDY BULBS furnished of every description, including the finest variety of Hyacinths, Tulips, Crocus, &c. Every season we make large importations of the finest flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

FRUIT-TREE STOCKS

we have in large quantities, which promise to be unusually fine the coming autumn. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities SEEDLING PEARS, APPLES, CHERRIES, PLUMS one and two years old; also, QUINCE and MAHALEB STOCK, for dwarfing the Pear and Cherry respectively, one and two years old.

PACKING, &c.

The greatest care and caution are given by us to the packing of Plants, the labor of which is performed by men who have had many years' experience in the business; so that parties can depend upon receiving the articles in good order. The result of our experience in packing plants for California the past season, has been such that our customers have UNANIMOUSLY expressed their very much pleased with the condition in which the plants reached them.

N. B.—ORDERS should be sent as EARLY IN THE SEASON AS POSSIBLE, to be received by us as early as the first of October, that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO ORDERS can be filled satisfactorily to customers, which are not received by us PRIOR to the 15th of November.

Catalogues.

A WHOLESALE CATALOGUE, No. 6, is published in July of each year, especially for the California trade, containing our lowest rates for trees in quantities of such sizes and ages as are desirable to be shipped to California from the Atlantic States, copies of which will be mailed free to all applicants.

For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.

No. 1.—Descriptive Catalogue of Fruits.  
No. 2.—Descriptive Catalogue of Ornamental Trees, Shrubs, &c., &c.  
No. 3.—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.  
No. 4.—Wholesale Catalogue or Trade List.  
No. 5.—Descriptive Catalogue of Flowering Bulbs, &c.

A. FROST & CO., Genesee Valley Nurseries, Rochester, N. Y.

Gardeners Wanted.

GOOD experienced, practical Gardeners can always find good situations, especially for the California trade, and charge is ever made for procuring places for them unless they desire special advertising.

Regular Dispatch Line FOR HONOLULU. THE CLIPPER BARKS.

YANKEE. CAPTAIN C. J. LOVETT, FRANCES SCHIEBER, CAPTAIN JOHN PATY, and ADELAIDE, CAPTAIN NYE.

McRUER & MERRILL, Agents, 47 and 49 California street, San Francisco. 15 3m

## SOLOMON'S TEMPLE.

This Magnificent Work of Art,

NOW COMPLETED

According to the most perfect style of architecture, as described in Sacred History, will be opened for the approval of the public, on

MONDAY EVENING, MAY 30th, AT 8 O'CLOCK.

The proprietors believe they can claim from the public their deserved approval and support.

When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement, have been so anxious to complete what ever the amount of labor it should require, or the cost it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

EXHIBITED IN THE PAVILION

Recently occupied by the

MECHANIC'S INSTITUTE,

On Montgomery street, near Market street.

The whole interior of the Pavilion has been handsomely

fitted up with

SKETCHES OF THE HOLY LAND

which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate hand-bills describing minutely this temple. Suffice it to say that all and

EVERYTHING RECORDED IN THE BIBLE

will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. S. Slatow, as master-builder, competent artist for carved work, A. M. Gilder and finisher, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows: Season Tickets admitting a gentleman and lady... \$5 00 Single Tickets..... 50 Children under 12 years, half price.

The Pavilion will be open from 10 o'clock A. M. till 10 o'clock P. M.

P. S.—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Byrne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions.

MRS. C. SHADE, Proprietress.

## Ladies' Department.

## THE SIGNAL GUN.

BY FLORENCE PERROT.

[The following lines came to us from our gifted correspondent, by the Sonora; and most singularly appropriate too, for the Sonora was three days over-due, according to the lines of the first stanza.]

The ship is three days overdue—  
And anxious hopes with eager thrill,  
Go forth in search of ship and crew—  
And listeners wait, on shore and hill  
Till day is done,  
To hear the signal gun.  
The welcome signal gun!  
A dim far speck—a cloud?—a ship?  
An echo makes the listeners start—  
A murmur goes from lip to lip  
And joyfully from heart to heart  
The tidings run—  
"It is the signal gun!"  
The longed-for signal gun!"  
Oh, she has sailed a weary way,  
O'er riven wrecks and gaping graves,  
To find a peaceful port to-day.  
The war of wintry winds and waves  
At last is won—  
There goes the signal gun!  
The welcome signal gun!

## YOUTHFUL ASPIRATION.

BY BERTHA RAY.

[The following lines by Bertha will be appreciated by all who are ever under poetic feeling, or ever yield to thought, and aspire above the dross of earth. There is much beauty and feeling in these lines.]

I would not have bright flowers to lay,  
Forever smiling on my way;  
I would not have forever spread,  
A downy pillow for my head—  
The easy chair, the sunny sky,  
That sloth and sluggards love to try,  
The boasted bliss of solitude,  
I leave for men of quiet mood.  
My aim is fixed, 'tis pure and high;  
My soul has plumed her wings to fly;  
Where eagles mount to gaze on day,  
I'll leave beneath me far away.  
As the ambitious and the base,  
I would not have unworthy praise;  
But be it mine to nobly live,  
And earn from men the praise they give.  
Through all the trying days of youth,  
I'll shield my breast and head with truth,  
Fixing on God my earnest eye,  
And sing his praise as up I fly.  
Arise! my soul, no longer stay,  
I long to try this lofty way;  
Nor ever be it of me told,  
How fortune smoothed my way with gold.  
Be mine to bear the heaviest load;  
Be mine to walk the roughest road.  
My blood is running high and warm,  
I burn to brave the blackest storm.

## Obedience.

[The annexed letter from our esteemed correspondent, "Edith Montessor," will be read by every parent with deep interest and true pleasure, and we hope to lead them to ponder well upon the important results which must follow, as the results of their own training. We would earnestly ask that careful consideration for this subject which its importance demands. Many of those who may read this letter of "Edith" may love to cultivate trees, plants, and flowers, and are careful to whom they intrust their nurseries of trees, their orchards, and their garden plants; they have been careful to hire a skillful nurseryman, a practical orchardist, and an expert and educated landscape gardener; but their children may be allowed to grow wild, poisonous moral weeds grow up around and with these "young trees of human beauty"; the branches that are to yield sweet or bitter fruit, are neither pruned or cared for; they are not grafted with the true olive, and the hearts where flowers of perennial beauty are to exhale odors of sweet incense are overgrown with worthless plants, or with thorns and briars. "Edith" is right, if parents would have their children grow up in beauty and statelyness, they must be educated; and to do this, those who have the controlling influence must themselves be educated; and it is just as impossible to look for healthy, happy, obedient, and affectionate children, where parents are wholly ignorant of the laws of nature and of the necessity of a physical as well as intellectual and moral training, as it would be to expect healthy, vigorous and select trees, plants and flowers from a nursery where the gardener knows nothing of the business in which he is engaged. "As the twig is bent the tree is inclined." "Can men gather grapes of thorns, or figs of thistles?" Grapes will be gathered on the thorn-bush just as certainly as parents may look for healthy, happy, affectionate and intellectual children to proceed from the systems adopted under the fashions and follies of the present day. "Edith" is right, the garden of the heart is the prize parterre, where mothers plant seed that will bring flowers or thorns at will.]

The first requisite of all law and authority is obedience. From thence order and harmony are evolved, and both matter and mind are made to progress in a corresponding ratio. The child is first taught to obey parental authority, and that authority should always be founded in wisdom and truth, as such alone can claim true obedience from any intelligent being, for it is but slavery to obey unjust or tyrannical laws or commands. Children seem, intuitively, to know right from wrong, and are quick to detect the slightest departure from truth in parental discipline; and when they find that they often go unpunished for what they had been forbidden to do, and as often commanded to do things that they are not made to perform, they begin to think, naturally enough, that their parents lack wisdom in giving such orders, and truthfulness in not having them carried out, and are subjected to frequent punishments which they might have avoided, had they been sure that their disobedience would always be met with the promised penalty. Family government has been too much overlooked in this age of progress, since it is the

inner circle of the world's harmony, and here most reform begin, if we ever expect that prayer to be answered, when the will of God shall be done on earth as it is in heaven. There is little doubt that most of the evils which afflict humanity are germinated in early life, and left to mature into every species of crime, in an atmosphere of ignorance and vice.

I do not wonder that there are so many distorted specimens of humanity, both in body and mind, when I see children being made to grow up, as the boy said of the oak, when asked what made it grow so crooked: "That he supposed it was because the tree had been trod on when it was little." Once, when quite a child, I stayed over night, at a house where the man had been accused of abusing his family, but he appeared so kind and pleasing all the evening that I began to think what I had heard about him could not be true. It was a very cold night in mid-winter, and towards morning one of the children, a little boy, some five or six years old, began to cry, and said he felt sick and wanted to get up. The mother requested the husband to get up and light the candle, as she did not wish to disturb the baby. I heard him get up and ask, in no gentle tones, where the matches were. She said, she had forgotten that they were all out. Then followed such a tornado of abuse and curses, as I hope never to hear again. The child was frightened and tried in vain to keep from crying, and at last, forced by pain, he said: "O, father! I must get up!" I heard him open the door, and the child gave a scream as he was thrust out into the cold snow and chilling winds and darkness of the night. The mother pleaded for her child as one utterly powerless to save, having but a feeble body and a still more feeble mind. Soon after, I heard the child's voice at the door saying, with stifled sobs: "Please, father, may I come in? I ain't sick now." He was bid to come in and go to bed, and if he made any more noise he should be put out again. How his little fingers and toes must have ached; but nothing was heard from him but involuntary sighs, which he tried to smother up with the bed-clothes.

With the feelings of love and affection thus early blighted in his young heart, and the additional inharmonious, inherited from his inhuman parent, is it strange that he grew up unloving and unloved, and before he was twenty years old was sent to the state-prison for life, for killing a man in the heat of his ungovernable temper. The law could reach him then, to punish, but was blind and incompetent to have protected him in those defenceless years of his childhood, when he was made to suffer wrongs that dried up the fountain of love and gentleness within him, making his heart a desert, over which swept the deadly simoon of evil passions.

To get at the root of evils, we must go back to the springs of life, or its stream can never be made pure. With the first forming of the young mind, woman has much to do. She should begin by looking into her own heart, and letting her affections go out towards children, even if they are not her own. The young are very susceptible of love and kindness, as they are also of coldness and rebuffs; and how much evil has been done to children by teasing and making them angry and calling it "sport," which, I fear, will appear in a very different light, when revealed upon the records of eternity. And had I the voice of an archangel, I would say to all, be kind to children; not by granting their every wish, by no means; but to study the real wants of their natures, and to help unfold their individuality. All children do not require the same treatment; although this is too often practiced, both in our families and schools. Some need much more physical exercise than others, according to their age and temperament; and there is a vast difference in the time and manner of the development of their mental faculties, for while some are quick of apprehension and of ready and retentive memory, others are slow to comprehend anything that requires mental exertion; but the latter often outstrip the former in the end, for the mental faculties of the former had been stimulated beyond their physical powers.

There are some mothers, "more nice than wise," who prohibit their children from healthful play, because it will soil their clothes! When, it is their own fault and pride, if they are dressed in anything too good for them to play and grow in as nature intended they should, in giving them the desire and disposition to play, and to find their chief happiness in the same; and, no doubt, the inordinate love of dress, which is a disgrace to our republican women, took its rise from thus turning the mind of the child from its innocent sports and rambles in the bright fields to the gaudy tinsel of dress and the enervating influence of too much indoor life.

And, above all, let none think themselves too old to learn, even if this life were their whole existence; for the mind, instead of being ever filled with knowledge, all we can gain but serves to increase its capacity, preparing the mind for a wider range of enjoyment in the bright fields of an eternal future. Love is the sunshine of the heart, knowledge prepares the soil, and wisdom sows the seeds of goodness and truth; while industry and obedience to the laws of life can alone bring them to perfection. EDITH MONTESSOR.

SIRENA COUNTY, May 12, 1859.

## "Domestic Inimorata."

[Our correspondent "Edith" sends us a few words, in reply to the unjust philippic of a certain scribbler upon the theme which will not be forgotten. "Edith" speaks nobly. Our thoughtful and grateful remembrance shall ever be accorded to those who are bold defenders of truth.]

EDITOR FARMER: As our noble advocate, N.B.H., has spoken, I have but a few words to say to those who would speak disparagingly of woman's efforts in trying to keep pace with man in his rapid strides of physical and mental progress. If woman does not labor to elevate and to make herself what she ought to be, no one else will; for man would be sadly at fault to undertake, alone, the task of teaching woman her duties, and to bring out her influence in its proper sphere; as men are blissfully ignorant of the thousand little things that constitute the sum of woman's labor, and that go

to make his home look neat, cheerful, and happy. No: Man and woman have separate duties to perform, although their labor is one; for while man, as it were, lays the sinewy warp of life, woman, like the shuttle (going hither and thither), weaves in the more delicate filling and brings out its beautiful pattern, which was designed of God, and a whole life may be but as a single thread.

If any have objections to the language of loving-kindness we use towards all, and to one another, I fear such would be angry, as we are told nations will be, when "the kingdoms of this world are proclaimed the kingdoms of our Lord and of his Christ." Let them remember, that to woman it was first said: "Go tell them I am risen!" and woman, now, heralds the approach of "the world's long-promised day." EDITH MONTESSOR.

## Bees and Honey.

ARTISTIC DESIGNS—CHUFAS FOR DOMESTIC FOWLS. In the "Ladies' Department" of the Cotton Planter, published at Montgomery, Alabama, we find "Lizzie Linn" makes some excellent suggestions about the premium list of the State Agricultural Society, and urges the attention of those interested to very important subjects. Each suggestion is excellent, and worthy of attention in every State, so as to make each State independent by means of its own resources. We ask particular attention to the suggestions of "Lizzie Linn" about Bees and Honey and about Chufas for our Domestic Fowls. Who grows Chufas?

"I observed with pleasure the premiums to be awarded to bee-hives and honey. I am surprised that so little attention has been paid to this subject in this country. There is no reason why every family in the country should not be well provided with honey, and there are several reasons why it should become as common an article of consumption as butter or flesh. In the first place, it is a great luxury; better far, than the best sugar-house sirup, or the most carefully prepared preserves. Yet many good farmers live from year to year on nothing but bread and meat, and would absolutely think they were going to ruin, if their families were in the daily habit of indulging in such luxuries as honey, fruit, etc. This arises, no doubt, from the habit of supposing that all luxuries cost money; but many luxuries (honey for instance) do not cost a tithe of the money which is paid out for meat. 'O, but we are obliged to have meat, and we can do without luxuries; honey and fine fruits, and all that kind of thing, are all very well for rich folks; but they can't support life,' quoth they. 'Can't support life,' indeed! This is quite a mistake, they do help very materially to support life. But, even if they did not, they make life more supportable. Honey, however, contains a great deal of nourishment. Did not John the Baptist live on locusts and wild honey? In the second place, it is a wholesome article of diet; it is said that persons who live much on it seldom have consumption; and it is good for coughs and colds. In the third place, it is good economy to use it as a common article of food, as it saves meat, and, in many cases, it answers in the place of sugar; peaches are nice, preserved in it; it gives to most cordial a very rich and agreeable flavor, and there are some kinds of pastry which cannot possibly be made to taste so nicely when sweetened with anything else."

"For the life of me, I cannot tell why a premium is offered for 'the best imitation of candy.' I am quite juvenile enough to smack my lips over a stick of real candy; but I rather think the counterfeit article would cause but a blank disappointment. 'No mention is made of architectural designs (which, by the way, might possibly prove as useful to the South as the spurious candy), nor of engravings; for both these, we are almost entirely dependent on the North. We should encourage them among us. We should have engravers who could engrave as well, and afford to do it as cheaply, as Mr. J. W. Orr, of New York. It is to be hoped, that the day is not far distant when we shall be independent; when we will manufacture not only all the coarse cotton goods which we use, but also calicoes, muslins, lawns, etc., and when our foreign commerce shall be carried on directly to and from Southern ports. Our Fairs are important helps towards the consummation of this end."

"Do you know that Chufas are the very best food in the world for fowls? especially those designed for the table. They give a sweet and delicate flavor to the flesh, which no other food imparts. I made this discovery by accident; our chickens having been in the habit of stealing Chufas from a neighboring field, I noticed a very great improvement in the flavor. After a while they became so fond of the Chufas, that it was impossible to keep them out of the field; they lived on them entirely, not taking any other food which we threw to them; and the flesh became absolutely delicious. I do not believe that any game in the world can be better than a Chufas-fed chicken."

WOMAN'S WIT.—Make the doors fast upon a woman's wit, and it will out at the casement; shut that and it will out at the keyhole; stop that, and it will fly with the smoke out at the chimney. You shall never take her without her answer, unless you take her without her tongue. Not even then, for she will have recourse to pantomime.

## BANKERS, ETC.

## THE "NE PLUS ULTRA"

## SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE

(Under How's License).

MANUFACTURED BY THE GLOBE MANUFACTURING COMPANY,

339 Broadway, New York.

MAY BE TRULY REGARDED as the "Ne Plus Ultra" of Sewing Machines, and all who are wishing to find a Machine which is capable of doing any kind of Sewing for Tailors and Housewives, with a satisfaction heretofore unknown—should lose no time in ordering one of the PATENT LEVER MACHINES,

which are to occupy a similar position towards other Sewing Machines, that a PATENT LEVER WATCH (and every one knows its value) occupies towards a Leptine or other second-rate watch.

This Machine makes the "Lock Stitch," which looks the same on both sides of the fabric, and which cannot be ripped.

PRICE \$50.

In all respects equal to Machines heretofore sold at a hundred dollars and upwards.

Specimens of Sewing done by the PATENT LEVER MACHINE, will be forwarded to any part of the country, upon the receipt of a postage stamp.

N.B.—An energetic and reliable Agent is wanted in every town and village of the United States and Canada, to sell the above named Machine. An advantageous arrangement will be made with the right kind of Merchant who is willing to have the exclusive agency.

Address GLOBE MANUFACTURING COMPANY, 339 Broadway, New York.

## A Horse Story.

This abridgement of a horse story is taken from William C. Prime's work, "Boat life in Egypt and Nubia," as related to him by one of the governor's officers at Edfou. It is a story of an old Shiek of the Bedouins, which has often appeared in print, but not like this:

The shiek was poor. He owned a tent, a Nubian slave, and a mare; nothing else.

The mare was the fleetest animal on the desert. From the Nile to the Euphrates the fame of this animal had gone out, and kings had sought in vain to own her. The love of a Bedouin for his horse is not that fabled affection which we read of in books. It is the love the American nabob has for his gold or a poor laborer for his day's wages. His horse is his life. He can rob, plunder, kill, and destroy, *ad libitum*, if he have a fleet steed. If he has none, he is the prey of every one who has. Living this wandering life, the old shiek was rich in this old mare, which was acknowledged to be the fleetest horse in Arabia.

Ibrahim Pasha wished the animal, as his father had before him. He sent various offers to the old shiek, but in vain. At last he sent a deputation with five hundred purses (a purse is five pounds), and the old man laughed at them.

"Then," said Ibrahim Pasha, "I will take your mare."

"Try it!" He sent a regiment into the desert, and the shiek rode around them and laughed at them, and they returned home.

At last the shiek died from a wound received in a fray with a neighboring tribe. Dying, he gave to his Nubian slave all he had—his priceless mare, and the duties of the blood, revenge.

The faithful slave accepted both, and has ever since been the terror of the Eastern desert. Yearly he comes down like a hawk on the tents of that devoted tribe, and he leaves a ball or a lance in a man or a woman. No amount of blood satisfies his revenge; and the mare and the black rider are as celebrated in Arabia as the wild huntsman in European forests, and are very much better known.

## Camels—Their Strength.

The Galveston (Texas) News says: We visited Parson's wharf to witness a feat of strength performed by one of Mrs. Watson's camels, of which there were near a dozen on the wharf, of all ages. The camel loaded was one of the largest. On the word of command being given, the camel lay down ready to receive his load, which consisted of five bales of hay, weighing in the aggregate over 1400 pounds, which was firmly bound to the pannier placed upon the animal's hump. Upon the utterance of command by the native keeper, the huge animal arose without any apparent effort to his feet and walked off in a stately manner along the wharf and through the city. We were informed that the same camel had 1600 pounds placed upon him, with which enormous weight he arose. The animals are exceedingly tractable, and seem to possess much affection for any one who treats them kindly, as an example of which Mrs. W. informs us that one of them, a pretty white one, which she had petted, would always kiss her, when she was within kissing distance, which fact we really thought, certainly proved the animal to possess an excellent taste, as well as an affectionate disposition. In their native country the average load for a full-grown camel is some 800 pounds, with which they perform their long journeys over deserts, but but little food or water.

We doubt not with the abundant forage found in all parts of Texas, and a full supply of water generally, the camel will improve in strength and general appearance, and be able to transport larger loads, at a more rapid pace, than in his native country.

## Rawhide Rope.

The somewhat novel manufacture of raw-hide cordage is carried on extensively in Nevada county by Messrs. George Shaw and Nicholas Seabert. The Marysville Democrat says they have a remarkably long ropewalk, located about midway between Nevada and Grass Valley, on the northwest side of the very excellent four-mile road which connects those two flourishing cities, and in a picturesque meadow-like spot. At Live-oak Shaft, a 13-inch rope, which had been in constant duty, night and day, for five months, becoming obstructed in its motion, by some accident, withstood the force of an eight-horsepower engine, without starting a single strand or thread, and held the machinery motionless until relieved. The manager of the work thinks it good for a long term of usefulness. The prices asked by Seabert & Shaw are: Two-inch rope, 50 cents the foot; 14-inch, 42 cents; 1-inch, 28 cents; and 1-inch, 14 cents.

So MUCH FOR SPECULATION!—New York papers speak thus: "The New York Independent confirms the statement that advices by the steamer announce that French wheat has been bought at Liverpool to ship to the United States. The same paper says there has been a heavy speculation in butter, which has terminated fatally for the speculators. The stock on hand is very large and is accumulating. The shipments to California had been considerable and shippers are awaiting remittances from San Francisco to enable them to meet their own drafts now falling due. One failure has recently occurred. The losses are very large, and those who have come under advances to the speculators are quaking." What did the CALIFORNIA FARMER say last autumn?

WASHING HORSES' FEET.—In regard to the care of horses, Sir George Stephen says: "Whenever it is necessary to wash horses' legs, do it in the morning. Most grooms, acting on a different principle, wash them as soon as the animal comes in. I am satisfied this is a bad practice. When the roads are dirty and weather wet, and the legs already soaked, washing can do no harm; but to deluge the legs with water the moment a horse enters the yard, heated with exercise, is, to my mind, as unnatural and absurd as to jump into a shower-bath after playing for an hour at cricket. My plan is a rubbing down with straw and dry brush, and the next morning wash as clean as soap and water can make them. Pick and wash the soles as soon as the horse comes in."

THE HANO OF IT.—Old Judge S., a considerable farmer of F. county, Vermont, bought a new scythe for his son Jim, and set him to work in the meadow with the rest of the hay-makers. "It don't work right," said Jim to the honored parson, after cutting a clip or two. "What is the matter with it?" inquired the Judge. "It don't hang right on the snath," said Jim, stopping to adjust the scythe anew. Scythes often plague the mowers in this way at first, and Jim's scythe was particularly obstinate. So the old gentleman tinkered it over and over again. "It don't hang any better," said Jim, plaintively. "Then hang it to suit yourself," said the Judge. "So I will," said Jim; and, hanging the scythe on a tree, he lazily left the field.

"TICKLE THEM ALL THINGS," and has proven that Wile, tar's Balsam of Wild Cherry is the remedy par excellence for the cure of coughs, colds, croup, whooping-cough, bronchitis, asthma, phthisis, sore throat, influenza, and "last, not least," consumption. Buy none unless it has the written signature of "J. L. Batts" on the wrapper.

## SPECIAL NOTICES.

## THE HOME OF BEAUTY.

"Creative Genius" from thy hand  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
And here our gods;  
But they are more  
Around these festooned halls  
The good, the great, the living and the dead;  
And yet they speak—speak all!

"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Pain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent.

While they speak, and gaze on us,  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng:  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous thousands come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty?

Behold these flowers that gem the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, life-jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned;  
Behold, cries Genius, quickly glance!  
Enough! the art is thine, H. VANCE!

Daguerreotype Gallery,  
Corner Sacramento and Montgomery streets.

SLEEP! SLEEP! SLEEP!  
"To each and all, a fair good night,  
And rosy dreams and slumbers light!"

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best?

Sleep! Sleep! Sleep!  
Rest that refreshes most true!  
The rest that, while sleeping, our heads doth renew,  
Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Economy tells us to buy and to keep  
The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
On the mattress from JACOB SCHRIEBER!  
If bedchambers be single, then life will not jingle  
Till they're married and purchase one wider!

So come to J. SCHRIEBER's, they go where, where,  
Those famous mattresses made out of PULU!

Jackson street, near Hotel International.

PIANOS. MELODEONS,  
Alexandre Organs, and Music!

Prices Greatly Reduced!  
HORACE WATERS,  
No. 333 Broadway, New York.

AGENT FOR THE SALE OF THE BEST  
Boston and New York Pianos and Melodeons.  
The largest assortment of Music Merchandise  
in the United States. Pianos from five differ-  
ent manufacturers, of every variety of style—from those in  
plain rosewood cases, for \$200, to those of the most elegant  
Sauter for \$1000. No house in the Union can come in competition  
for the number, variety and celebrity of its instruments,  
nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with  
or without iron frames, have in their new scale an improved  
action, in power and compass of tone equalling the grand, with  
the beauty and durability of the square Piano. The Press and  
First Music Masters have justly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action of every climate.

Horace Waters' Melodeons (tune the equal temper-  
ment), superior to each desirable quality. Can also furnish  
Pianos, Carharts, and Smith's Melodeons. Prices from \$45  
to \$125. For two sets of reeds, \$100; for three sets, \$150.  
Organ and base Melodeons, \$250, \$375 and \$500, a liberal  
discount. Each instrument warranted to give perfect satis-  
faction, or purchase money refunded.

Alexandre Organs, five stops, \$100; eight stops, \$150;  
eight do with percussion, \$225; twelve stops, \$225; twelve  
do, size larger, \$250; twelve do with percussion, \$300; fifteen  
stops, \$375.

Second-hand PIANOS, at great bargains, constantly in  
store. Price from \$30 to \$140.

Music.—One of the largest and best catalogues of Music  
now published; all Music and Musical Works published in the  
United States for sale by this House. Also, Martin's celebrated  
Guitars; all kinds of Musical Instruments and Musical mer-  
chandise, at the lowest prices. Music sent wherever ordered,  
post paid. Catalogues sent by mail. A liberal discount  
made to dealers, teachers, seminaries and clergymen.

TESTIMONIALS OF THE  
Horace Waters' Pianos and Melodeon.

"The Piano came to hand, and in first-rate order. It is  
beautiful instrument and no mistake."—Lee & Walker, Phila.  
John Hewitt, of Carthage, N. Y., who has had one of the  
Horace Waters' Pianos, writes as follows: "A friend of mine  
bought me a Horace Waters' Piano for \$100. She likes the one you  
sold me in December 1854. My Piano is becoming popular  
in this place, and I think I can introduce one or two more;  
they will be more popular than any other make."

"We have two of Waters' Pianos in use in our Seminary,  
one of which has been severely tested for three years, and  
can testify to their good quality and durability."—Wood &  
Gregory, Mt. Carroll, Illinois.

"H. Waters, Esq.—Dear Sir: Having used one of your  
Pianos for two years past, I have found it a very superior  
instrument."—A. Gray, Principal Brooklyn High School.  
Rev. Hiram Haynes, writes as follows: "A Boston friend,  
Mr. J. S. May, writes: 'I received the Melodeon and Piano  
sent me in good order, and well pleased with the external  
appearance, and the tone also. Hope I shall have occasion to  
order one or two more the present season.'"

Tips, N. Y., Aug. 5, '54. Horace Waters, Esq.—Sir: The  
Melodeon you sent me was duly received in good order. I am  
now fully prepared to say that the instrument is highly satis-  
factory, and I beg you will accept my thanks for the very  
liberal terms on which you furnished it, and for the very hon-  
orable manner in which you have fulfilled, and more than ful-  
filled, all your promises. Very respectfully, J. L. Smith.  
"I have received from you continues to give satisfaction.  
I regard it as one of the best instruments in the place."  
(J. L. Clark, Charleston, Va.)

"The Melodeon has safely arrived. I feel obliged to you for  
your liberal discount. Will do all I can for you in these parts."  
(Rev. J. M. McCormick, Parquetville, S. C.)

"The Piano was duly received. It came in excellent con-  
dition, and is very much admired by my numerous family.  
Accept my thanks for your promptness."—Robert Cooper,  
Warren, Bradford county, Pa.

"Your Piano pleases us well. It is the best one in our coun-  
ty."—Thomas A. Latham, Campbellton, Georgia.

"We are very much obliged to you for having sent us such a  
fine instrument for \$250, and we shall take pains to recommend  
it."—Great, Hall & Co., Buffalo, New York.

"The Horace Waters' Pianos are known as among the very  
best. We are enabled to speak of these instruments with con-  
fidence, from personal knowledge of their excellent tone and  
durable quality."—R. E. Evans, New York.

"We speak of the merits of the Horace Waters' Pianos  
from personal knowledge, as being of the very best quality."  
(Christian Intelligence.)

"Nothing at the State Fair displayed greater excellence in  
any department than Horace Waters' Pianos."—(Churchman.)

"The Horace Waters' Pianos are built of the best and most  
thoroughly seasoned material. We have no doubt that buyers  
can do as well, perhaps better, at this than at any other house  
in the Union."—(Advocate and Journal.)

HOTEL!  
Corner of Fourth and J Streets,  
SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY  
RENOVATED,  
RE-FITTED AND RE-FURNISHED,  
IS NOW OPEN  
FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON,  
Proprietor.

MAMMOTH GROVE HOTEL.  
BIG TREES. BIG TREES.  
CALAVERAS COUNTY.

THE undersigned respectfully announces to the  
public that they have recently purchased the above  
premises, and have renovated and refurbished the  
hotel in such a style as to merit the patronage of  
A FIRST CLASS HOUSE.

By reason of experience and strict attention to business,  
they hope to be able to please all who may favor them with a  
call.  
The proprietors intend to render the Mammoth Grove what  
nature designed it should be one of the  
Most Desirable and Pleasant Places  
of resort for spring, summer and autumn pleasure seekers in  
the State. We need hardly add that the Big-Tree Grove is  
among the grandest wonders of the world.

GOOD FISHING AND SPORTING  
within five miles of the hotel.  
Distance from Murphy's fifteen miles; from Cave City,  
twelve miles; from San Andreas, via Murphy's, thirty-five  
miles; via Cave City on horseback, twenty-seven miles. By  
Murphy's, good roads for carriage. SPERRY & FERRY.

Beware of Counterfeits and Imitations!!  
None genuine without the  
TRADE MARK.

The UNDERSIGNED, SOLE AGENTS of the above  
celebrated brand of SALERATUS, SUPER  
CARBONATE SODA, CREAM TARTAR  
and SOAP POWDER, caution the Public  
against all SPURIOUS IMITATIONS, as well as  
an article, in LARGER BOXES, of same manu-  
facture, but of different quality, and TOTALLY  
UNFIT FOR THIS MARKET.

These goods are MANUFACTURED EXPRESSLY  
FOR US, of the finest quality, and are always  
the same strength.  
We GUARANTEE them STRICTLY  
PURE. To prevent DECEPTION, we call  
attention to the above FAC SIMILES of the  
GENUINE.

It is ONLY packed in 12 POUND BOXES,  
and shipments arriving after 1st June, 1859,  
will have our name upon every paper.

We have established a TRADE MARK, as  
above, to counterfeit which will subject  
the offender to a penalty of not less than  
Two Hundred Dollars.

Prices according to size, from \$15 to \$350. Every Pump  
warranted to give satisfaction.

## From the Atlantic Side.

LETTER BY OUR REGULAR CORRESPONDENT.

New York, May 8, 1859.

Mr. Editor: The great New York May carnival has come and passed away, all the damage consisting in only some two hundred thousand dollars in broken furniture, which may be all very well, as it will enable the owners to get new—if they have the money to pay for it. I am fortunately yet perched upon Observatory Square, the highest point of Manhattan Island, looking down upon the city with its lofty domes and countless spires spread before and around me like a map. The din and bustle of the down-town turmoil, mingled with the staid and sober confusion of up-town denizens, rises up around me, not like the "music of the spheres," but like the low murmur of a distant water-fall, soothing and tranquillizing the mind. The glorious breeze always stirring fans the heated brow, kicks up a general dust, and then scampers off to Hurl Gate to help the "boatman row." A kind of young row was gotten up a day or two ago for the special benefit of the Seventh Ward, resulting in some dozen or so cracked pates and bloody noses.

On Thursday last our suburban neighbor Brooklyn, with her three hundred thousand inhabitants, had a grand celebration on the occasion of the introduction of the Ridgewood water into the city. All New York "and his wife" went over, and sundry cousins and aunts from Philadelphia, Baltimore, Boston, and from all parts of the country and New Jersey were there to see and to help the matter along, and wound up the celebration of the water-works by an exhibition of fire-works, very nearly amounting to a young Fourth of July and Thanksgiving, except the turkeys and pumpkin pies.

The weather is most magnificent; we have had five consecutive pleasant days, and fully expect to have several more of the same sort before long. I think in the matter of fine weather we are rather gaining upon California. But when we get to the winter we give up, and throw in all our little snow storms in the bargain.

There has been recently a serious steamboat explosion on the Mississippi, causing a fearful loss of life; besides, many were maimed for life. The *Sickles* trial ended in his acquittal. Gen. Cass has been sick, but is now said to be convalescent. The season for the various benevolent and religious anniversaries is at hand, and will be largely attended from every section of the country.

From Europe we have stirring news. The war-cry swells louder and becomes more distinct and terrible in its tones. There can scarcely be a reasonable doubt but that there will be a general and terrific conflict. Probably before this reaches you the thunder of their heavy artillery will echo among the Alps, and the tramp of mighty armies will be heard upon the plains of Italy. From present indications the rubicon will soon be passed by some one, and then may God help the people. That Europe is rapidly and surely drifting into a great and decisive contest for the mastery of the world, no one can doubt. Each intends to subdue all the others, and then trample other nations under its iron heel and grind their people into the dust.

Since writing the above, our mutual friend and co-worker, Edward A. Ham, Esq., has called upon me. His visit was as unexpected as it was agreeable to me. His familiar face called up many pleasant memories of your office, the editorial chair, compositors, types and all. Oh that I could be there again to share in your labors and your triumphs. Be assured I shall make the most of our friend while here. It gave me great pain to learn some time since, through your paper, that our amiable friend Shanks had passed away to the spirit land. Peace to his memory. I am happy to learn that our esteemed friends, Phillips and Carpenter are yet at their posts in the *FARMER* office; long may they live to continue their labor, the most honorable among men. Truly the *CALIFORNIA FARMER* and its surroundings are become the greatest and most useful institution of the country.

By the way, where do all your correspondents come from? They are as fresh, bright and sparkling as the morning dew; particularly the ladies, are as graceful and brilliant as the rose-bud. Their happy thoughts flash and flame out with gorgeous splendor; flow along like the crystal stream, refreshing, adorning, and purifying all who listen to the music of its gentle flow, and arouse, strengthen and fortify the most hallowed principles of our nature. The future of a State with such heads and hearts, able, ready, and willing to labor so abundantly in the great and glorious cause of human advancement, must be grandly magnificent.

I find myself very much in the predicament of the old preacher, who after preaching an hour and a half from a certain text without ever alluding to it, said "now my dear brethren and sisters, I will just explain one or two little matters more, and then wind up with a rousing exhortation, and leave my good brother B. to follow with some remarks illustrative of the text." So I will wind up without any very marked allusion to the news, and leave brother Ham to tell what is new or strange to your readers.

The steamer *Sonora* arrived on Wednesday night last, with the mails and passengers from New York of the 7th of May. The news brought by her has been anticipated by the *Overland Mail*. Dates from New Orleans, via Tehuantepec, are to the 12th.

Washington, May 10.—The contract for carrying the mail from New Orleans to San Francisco, via Nicaragua, was to-day awarded to Daniel H. Johnson, of New York, for \$182,000. The contract is for nine months from the first of October, and requires a semi-monthly service. The schedule time, from New York to San Francisco, is twenty-three days, and from New Orleans to San Francisco, is twenty days. The Government has forwarded to order out the troops as a posse comitatus, unless Cradock, U. S. Judge in Utah, whose course in the investigation of crimes brought him in conflict with Gov. Cumming, has been removed. The vacancy will not be filled for some time.

Nicaragua.—M. Felix Belly, not content with his magnificent Inter-Oceanic Canal project, has obtained from President Martinez a concession of the transit route also; and, until his Canal is ready for the navies of the world, he proposes to take passengers and goods through, from one sea to another, by the means provided by nature—the river, lake, and land route.

Europe.—News received at New York, telegraphed to New Orleans, from Europe to the 30th of April, states that telegraphic dispatches were received in London and Paris, from various sources, announcing that on the 26th of April, one hundred thousand Austrian troops crossed the Ticino under Guila, the Commander-in-Chief of the Austrian army of Lombardy. The troops crossed the Ticino in three different corps, and took the road to Novara, after blowing up the Buffalora bridge, over which they had passed. It was also reported that Austria, upon the announcement of the Russo-French alliance, had accepted the proffered mediation of England, and had postponed the declaration of war. England had also proffered her mediation to France, and the Emperor had taken the matter into consideration. The King of Sardinia has issued a very spirited proclamation to the army, in which he says that he regards the Austrian ultimatum as an insult to Piedmont, and he rejects it with disdain.

Warlike preparations are going forward with the greatest activity at Woolwich, and at other naval stations in England. The Lloyds and other leading underwriters generally demand war premiums on all marine risks taken by them. The London Times regards the alliance between France and Russia as a menace to England.

At Paris, on the 30th of April, the report that the Austrian troops had crossed the Ticino, was fully confirmed by official intelligence received on the morning of that day.

The Austrian official journal contains a manifesto of the Government, explaining the necessity of war with Sardinia, and denying the existence of a secret treaty between Russia and France. The manifesto is considered as tantamount to a declaration of war against Sardinia.

The second treaty between Russia and France is said to provide, that if Austria invades Sardinia, Russia shall declare war against Austria within fifteen days. The Universities of Piedmont have been closed, and the students are joining the army with great enthusiasm. Eight steam frigates, filled with troops, left Toulon on the 26th for Genoa. The French army of Italy, stationed on the slope of the Alps, consists of sixteen divisions of infantry, and four divisions of cavalry. Genoa is to be occupied by the French army as the base of operations for troops arriving by sea from Toulon and Marseilles; and Susa is to be the base of operations for the troops arriving by way of the Alpine pass. Eighty thousand troops will be in Italy before the end of the week. The Paris Patrie announces that the Emperor and Prince Napoleon would leave Paris on Wednesday of next week, to join the army of Italy. The Imperial Guard at Paris has been placed on a war footing, ready to march at a moment's notice. Prince Napoleon has been assigned to the command of the Pioneer corps d'armee, and Gen. Randon has been appointed Major-General of the army of the Alps.

A dispatch from Vienna announces that French troops have arrived at Genoa from Toulon, and had already violated neutral territory by entering Sardinia. The French Minister at Vienna had received his passports, and the Austrian Government had ordered him to quit Vienna and withdraw his legation at once.

The French Government has received intelligence of an outbreak in Algeria, consequent upon the withdrawal of the French troops, which will probably cause the troops to be sent back immediately from Italy.

Advertisements and Subscriptions must be paid for in advance.

#### Letter from Sacramento Valley.

The Season—Watering and Mulching—Small Fruits—Spare the Birds—Soil and Crops.

SACRAMENTO VALLEY, June 7, 1859.

EDITOR FARMER: Our winter and spring rains are about over. The wild flowers that decked the plains are faded. The grass has withered, and the plains have lost that beauty that they had in the spring of the year. Yet, around the country dwellings dotted here and there, are seen the catalpas, locust, pride of China, with their green foliage and spreading branches, shading them from the heat of the sun. The shrubbery and flowers too, show conspicuously; the honey-suckle, passion vine, and trumpet-flower, are seen turning around the stoop. The bearded trees of the orchards are loaded with fruit, and the grapes hanging in clusters. For the past two weeks we have been busy hauling straw for mulching purposes, and watering the fruit and flowers. Some of the farmers after threshing their grain, do not save their straw, but burn it up or do not bring it in use; it is far better to save and let it rot for manure. In watering trees, every time the ground bakes and moisture rises in the air, the hoe must be brought into use to stir the ground; but by mulching, i. e., laying straw around the trees, you retain the moisture to some extent, and save the time in keeping the mould loose. This is our plan; others may differ in opinion, and take different plans, but this is a simple measure and can be easily done; there is another benefit—the straw rolls in one season, and thereby manures the soil, loosens it, and letting a freer circulation of air and heat pass through the soil. If you have no trees to mulch, scatter it over your fields that you intend to plow. We have mulched some of our fruit trees, strawberries, raspberries, currants, &c.; by-the-by, I believe the name of strawberries first originated by putting straw between the rows to keep them clean. Our raspberries are coming on fine, if the wasps do not again destroy them as they did last year; we tried various plans, but to no purpose; the best way we found to exterminate them was to put sweetened water in wide-mouth bottles, and lay them side ways under the branches; they do not touch berries only when they are turning. Perhaps you, Mr. Editor, can tell me the best mode to kill them. Our Kentish cherries are getting ripe, and I find the brown linnets are very fond of them; we have to wrap gauze around them. We do not suffer any one to shoot these birds about the house, but rather encourage them to come, and can suffer some loss by them for what good they accomplish in picking up the bugs and worms in the garden. They build their nests around the house among the vines, and their sweet voices are heard at break of day, singing their songs of joy. But to return to irrigation once more. We have another mode to water the trees, called capillary system: plow between the trees, so as to leave a deep furrow in the center, and then let your water run. After moistening the earth down to the hard pan, some three feet below the surface, it spreads some twenty feet, and thereby giving it a thorough soaking without mulching; the moisture rises near the surface; this will do well in an orchard. Water three times is sufficient in one season, if rightly done. I think a person can do a great injury by watering too much, as in anything else; you hasten the growth of the tree too rapidly, and do not let the fruit buds form for another year, and the young and tender shoots are killed by the frost. Such has proved the case by a brother farmer near us. He proposed early in the spring, one year ago, that we should water after one plan, and be after another, and see which would do best during the season; at the end of the time he found he had shot far ahead of his mark, and completely lost many of his favorite trees, while ours were thrifty and well proportioned in size. Our soil is a clay sandy loam, and the more it is worked the better for the soil; it is better adapted for watering than deep soil, for the water sinks down to the hard pan, and there remains, running on it. The rain that falls during the winter causes the ground to be soft, and when plowed in the spring, and kept mellow, retains the moisture throughout the summer, thereby needing less water.

For fruit trees and grapes, the soil is well adapted; barley and wheat crops yield well; buckwheat does not so well, yet a fair crop can be raised.

Dix.  
Eretem.—My article on Summer Fallow, of May 21, contains the word latter, which should read former.

D.  
HOME MANUFACTURE.—Of a rifle manufactured by Mr. Shoemaker, gunsmith, of Union, Humboldt Co., the N. Californian says: The material, excepting the rough tube, was fashioned entirely here, and the workmanship, comprising all the little excellencies and improvements of the craft, equal to any produced by our eastern manufacturers.

#### The Crops in Santa Clara Valley.

EDITOR FARMER: The crops in this vicinity are better than they have been for several years; and, as there was about double the usual quantity of grain sown, there will be considerable to spare from here. The "Sonora wheat," I think, is bound to supersede all other varieties in this valley; though but a small amount was sown this season. It matures at least three weeks sooner than any other. Farmers are pretty much through haying; and, although great complaints were heard some time since about the scarcity of this crop, I am informed, and have seen enough myself, to convince me of the fact, that more hay will be saved in this valley than was saved last year. The same may be said of the fruit crop.

You remember the fuss which was made in April about the peaches and apricots being destroyed; and a little later the same hue and cry was made about the grapes. But I have had occasion to travel over this valley a "right smart chance," and though it is true the peaches, in some localities, are entire failures, yet a very large majority of the trees are as full of fruit as they ought to be. But there is one thing which, I think, mars the beauty, if it does not affect the health and consequent fruitfulness, of the peach trees in this valley: I refer to the "curled leaf." I have not seen a tree entirely clear of it, and some are very badly twisted up. I did not see any of this in the mines; and it may be, that I take more notice of it here, than those who are used to seeing it.

I was somewhat surprised to see so few potatoes planted in this valley. In 1852 and 1853 this was the principal crop raised on the low lands; but I am told that the farmers run that crop so deep into the ground during those years, that they have not been able to raise them since. Some say, however, that they are waiting for another wet season, such as that of 1852; and, when that comes, they will try their hands on potatoes once more; not that they would expect to make anything by it, but merely to change the crops. Well, I think there are some places I have seen need a change of some kind, judging from the mixture of grain on them this year. It would puzzle the best agriculturist in California, to determine what some farmers here intended their crops to be: whether wheat, barley, oats, chest, mustard, or squirrels! They are so equally mixed.

But enough for this time. If anything I write is worth publishing, use it; if not, you know what to do with it. Yours, etc., GHR.

McCARTHYVILLE, Santa Clara county, June 5, 1859.

#### Breeding Ewes.

The acquiring and maintaining a flock of ewes, in good and uniform condition and character, requires a vast amount of judgment and perseverance, combined with care and attention; judgment in selecting that breed or description which will give the greatest return (remarks the Mark Lane Express, in an able article on this subject), taking into consideration the soil and situation where they are to be kept, also in choosing male animals that will rectify and improve the imperfections of the ewes; care and attention are also necessary in drawing the ewes to that ram which appears most calculated to correct their faults, persevering in this course till they become of one uniform character; that is, not resting satisfied before you obtain them as near alike as possible, as regards symmetry, description of wool, and general appearance; it being well known that an even matching lot of ewes is highly appreciated, and commands a better price in market than motley or mongrel-looking ones. The ewe should have a straight and broad back, wide loins, deep breast, good neck (or scrag, as termed by some), the head rather long, but not broad, an open, cheerful countenance, crowned with a taft of wool, which not only adds to its beauty, but is, in a measure, a preventive of sore-head, and last, not least, a robust, hardy constitution. I will commence with, or at about, the time of weaning the lambs—a period that must be partially regulated by circumstances, as how you are provided with proper and suitable food to keep them in a healthy and thriving state, as also if there is any tendency to scour; if so, the sooner, in reason, they are removed from their dams the better, a change of the system which is most effectually accomplished by a change of food being the likeliest means of checking it. In an ordinary way, I believe the first or second week in June to be as good a time as any; this will allow of having the ewes washed and shorn. A few days should then intervene for them to get accustomed to the loss of their coats, or at any rate the weaning of the lambs should take place at as great a time as possible before or as long after; for if they take cold at this time, it is more than probable it will fly to the udder, producing inflammation, which often turns to mortification, and generally ends in the death of the ewe. I prefer deferring the weaning till after the shearing, as it cannot well take place soon enough for the milk to subside to any great degree; consequently the udder would be very susceptible of injury, and which may occur in washing or shearing. I do think (unless especial care is taken in driving to the place of washing, and allowing them to get cool before commencing) this to be the most dangerous operation of the two. Again, if the lambs are allowed to remain a few days after shearing, and they take cold, the lamb's

sucking would, in some measure, be a means of preventing its spreading to the extent it otherwise would. On removing the ewes, they should be put into a bare pasture, and at a distance, where the bleating cannot be heard by either; otherwise, both will be much excited, taking a longer time to settle and content themselves. After a day or two, the udders should be carefully attended to, and those that are full and hard (causing stiffness in the ewes' walking) should be occasionally milked. As soon as they have forgotten their lambs, and the milk is reabsorbed, I believe it a good plan to dip them in a solution of arsenic, soft soap, pearl-ash, and black brimstone, to free them from the irritation and annoyance of insects.

#### New Plants.

From foreign and domestic exchanges we find the following new plants are now being introduced, and are worthy the attention of our Nurserymen and Gardeners:

*Primula Stuartii*.—Nat. or Primulaceae. An Alpine species, from the Himalaya Mountains. It has somewhat the character of an Auricula, with flowers of an orange and yellow color, and is altogether a very striking kind.

*Rhododendron Moulmeinensis*.—From a place of that name on the east side of the Bay of Bengal, ten miles south of Mataban. Flowers white, tinged with yellow, 1½ inches in diameter. A plant 18 inches high produced 6 trusses of flowers, each truss from 10 to 14 flowers. Leaves lanceolate coriaceous, 2½ inches long. Is thought to be hardy in the south of England.

*Dipterocanthus caulescens*.—Nat. or Acanthaceae. Flowers tubular, spreading produced in the axil of the leaves, delicate white, slightly tinged with lavender, about 1½ inch in diameter; leaves nearly sessile opposite; lanceolate of a purplish color below; habit, neat, dwarf, bushy; grows freely from cuttings in a mixture of half peat and half loam. From Brazil.

*Columnnea scandens*.—Native of the West Indies. A trailing plant of great beauty, and will be found well adapted for suspending in baskets; produces its tubular shaped flowers, of a bright rosy pink, very freely from the axil of every leaf; leaves opposite, ovate, pubescent; strikes freely from cuttings; grows well in fibrous peat soil.

*Thomasia stipulacea*.—Nat. or Byttneriaceae. New Holland. A handsome white-flowered green-house plant, of easy culture, flowering in autumn and winter.

*Diplolana Dampieri*.—Nat. or Rutaceae. A New Holland plant of dwarf branching habit, with numerous small white flowers, more curious, perhaps than beautiful.

*Lysimachia nutans*.—Nat. or Primulaceae. South Africa. A very beautiful half hardy herbaceous perennial, with dark purple flowers.

*Rubus nutans*.—Himalaya. As every new species that may possibly have a bearing on pomology, has a special interest for our readers, we give the botanical character in full from the Cottage Gardener:

*Rubus nutans*.—Wall. Nat. or Rosaceae. Native of the Himalaya. Habit dwarf and creeping, branching copiously. Branches three or four feet long, lying close to the ground, and rooting at the joints; round, covered with spreading, purplish-tinted hairs. Petioles moderately long, covered with short, spreading, purple hairs. Leaves trifoliate; lateral ones ovate, and the central ones nearly round; margins slightly lobed, and roughly serrated; smooth on the upper surface, rough and hispid on the lower surface. Stipules oblong, somewhat cut at the apex, and membranaceous. Inflorescence axillary and terminal; peduncles single flowered and solitary, when axillary; but when terminal, three or four are produced together. Calyx composed of five ovate, large acuminate sepals, villous on the outside, with long, soft, purple hairs. Petals large, nearly round, pure white, spreading much. Stamens very numerous. Filaments nearly erect, filiform. Anthers large, yellow. Style as long as the filaments. Stigma concave, expanded, and with a villous margin.

Perfectly hardy, and being of neat, compact, trailing habit, it is admirably adapted for rock-work purposes. It sends out in rich profusion, its large, handsome, white blossoms in August and September. Though very scarce, it need not be so very long, because every joint, if properly pegged down, and a little earth drawn around it, will make a plant. It delights in a moderately light soil, rather moist than dry, and prefers shade to exposure.

*Placostanthus lasianthus*.—Belongs to a new genus closely allied to *Hoya*; and the present species was received in 1857 from Mr. Hugh Lowe, Jun., by whom it was discovered on the north-western side of the island of Borneo. The plant, which is not a climber, presents a noble appearance, having exceedingly handsome foliage; and it possesses a very great recommendation in being a most profuse bloomer, the clusters of flowers being produced in great numbers. The flowers are of waxy consistence, like *Hoya*, color orange; the petals reflex until they become quite perpendicular, and rest on the flower-stalk; the lower part of the petals is entirely covered with a snow-white velvety pubescence, giving them an unusually beautiful appearance. The flowers are fragrant, and 14 have expanded in one cluster on a newly imported plant.

*Ebolanthus Livingstoni*.—An interesting plant, belonging to the family of Labiate. From seed collected in Eastern Africa by Dr. Livingston. The blossoms are of a chocolate color, produced freely in terminal spikes; in habit somewhat resembling *Angelonia grandiflora*. It is not remarkable for beauty, but extremely interesting, being the first plant that flowered in England from the seeds collected by the above explorer.

*Primula elegans*.—An extremely pretty species, introduced from New South Wales. The blossoms are pure white, with very large and conspicuous yellow anthers, which give the plant a striking appearance.

*Strobilanthes sabiniana*.—Nat. or Acanthaceae. From Nepal. An excellent winter-flowering stove-plant, beginning to bloom about the earliest part of December, and lasting till the latter end of February. The individual flowers are very fugacious; but are produced in rich succession, of a purplish blue color.

*Dryas Drummondii*.—Rich. Nat. or Rosaceae. Native of the Rocky Mountains, North America. A

hardy perennial, of procumbent habit. Stems and branches woody. Flowers yellow. A very beautiful Alpine plant, but also rare; being, indeed, seldom seen in this country beyond botanical establishments. It is well suited for shady parts of rockery; and flowers more profusely, and longer in duration, in such a situation, than in pots, or in a more exposed position.

*Spathodea campanulata* (Bell-flowered Spathodea). Called also *Bignonia tulipifera*. Native tree of western tropical Africa. Flowers like bunches of crimson tulips. [Botan. Mag., t. 5091.]

*Sansiviera cylindrica* (Terete-leaved Bow-string Hemp). This has been called *S. Angolensis*, from being a native of Angola, in Western Africa. Its fibres there are used in making cordage called lilo. Experiments recently made with this cordage, prove it to be the strongest and best fitted for deep-sea soundings of any fibre known. The fibres of all the *Sansivieras* are notoriously strong. [Ibid., t. 5093.]

*Tachadenus carinatus* (Keel'd Tachadenus). Known also as *Lianthus carinatus*. Native of Madagascar. Introduced by the Rev. W. Ellis, so favorably known as the author of "Polynesian Researches" and "Three Missionary Visits to Madagascar." We are indebted to him also for "two specimens of the wonderful Lace-leaf of our stoves." Flowers purple, blooming in October. It is a beautiful shrubby plant of the natural order Gentianaceae. [Ibid., t. 5094.]

*Chrysanthemum carinatum* var. *pictum* (Painted variety of Keel'd Chrysanthemum). The species is a native of Barbary, and the very beautiful varieties here noticed were sent to Kew in the summer of 1858, by Mr. W. Thomson, of Ipswich. They were raised by Mr. K. Burridge, Leyden Road, Colchester. [Ibid., t. 5095.]

#### Fruit in the West.

Charles Kennicott, editor of the *Prairie Farmer*, at Odin, Illinois, writes thus: "Furious snow-storm here this morning (April 4th), and Mercury now (noon) standing at 33 degrees. Our peaches are just beginning to set; do not think they will be injured."

J. E. Starr, Alton, Illinois, writes us, April 5th: "Our season has been very forward. Peaches are in full bloom, but all killed. The night of the 1st, the wind veered round to the N. W. Thermometer 26 degrees. Sleet and snow. The sleet wet the fruit, and the severe cold finished it."

L. Smith Moter writes from West Milton, Ohio, April 6th: "The past two nights' freezing, I fear, has killed much of our fruit—peaches, forward cherries, &c. Ice formed a half an inch thick in places. A seedling Cherry I raised from American Amber (earlier than parent), blooms so early that the fruit is often killed now; for two years past nearly all have perished." [The Gardener's Monthly.]

SHORT-HORN SALES.—We have accounts of two sales of Short-Horns in England, the second week in March, one of which—that of Mr. Troutbeck at Blencow, near Penrith, Cumberland—deserves particular mention. The herd was one carefully bred, principally descended from the Nell Gwynne and Strawberry cows, both from the stock of Charles and Robert Collings; the attendance was between 500 and 600; the competition was spirited, and the prices high. Of 35 lots, comprising cows, heifers and heifer calves, 32 were sold for 1,897 guineas—being at an average price of nearly 60 guineas, or \$300; one of the Gwynne tribe (light roan, calved 1856), selling for \$750; another (roan, calved 1858), for \$625, and a third, same age and color as the last, for \$550. The average for all the Gwynne tribe was about \$360 per head, while that of the Strawberrys was \$190. Five bulls were sold, averaging about \$220; the youngest, which brought 37 guineas, being only thirty days old. This sale is thought especially noteworthy, as it manifests the esteem in which the Short-Horns are now held in the immediate district formerly noted for its Long-Horns, and shows the complete triumph of the stock of the Collings brothers over that of Bakewell, the great pioneer in stock improvement, whose pupils in some measure the Collings were.

Mr. Stratford, under whose direction this sale took place, also sold the day previously the herd of Mr. M. Spraggon, near Stockfield—comprising 34 lots of cows and heifers, and 13 of bulls and bull calves.

EXTERMINATING GOPHERS.—The *Contra Costa Gazette* says: We noticed while passing through Diablo Valley, a few days since, a contrivance for exterminating squirrels, with which that valley is infested. The ground for miles is perforated with holes, in which this destructive little animal burrows, and they have hitherto baffled all efforts of the inhabitants of that locality to thin them out. Recently, however, Mr. Francisco Galindo, who resides in the valley, hit upon a plan which has proved successful, and by which thousands of squirrels have been killed. Mr. Galindo dammed up the creek at the head of the valley, and running a deep furrow for several miles directly through the center, the water from the creek was let in. At intervals along the line of the furrow, an opening is made—the water rushes out, filling the holes to which the "varmints" have retreated. That brings them to the surface in quick time, and men with clubs, assisted by a troop of dogs, stand by to give them a warm reception. By this means their numbers have been greatly diminished, and there is no doubt they would be finally exterminated in that vicinity, if the inhabitants of the valley would second Mr. Galindo in his labors. They have been of great injury to the farmers of the valley, destroying whole fields of wheat, and the plan of Mr. G. seems to be admirably adapted for "cleaning them out."

SCHOOL FOR HORTICULTURE.—We notice that a New York city lady is establishing a school of horticulture for girls. We are sadly in want of such schools in the West, not only for girls but boys. We are almost wholly dependent upon foreigners for gardeners, and have few native born Americans being educated. Somebody may make money by establishing such a school here. [Prairie Farmer.]

#### Success with the Bees.

HAMILTON, of Santa Clara, has met with a great deal of success with Bees, the present year having raised over one hundred hives. Last year Mr. H., from only five hives, realized an income of \$2000, and from that time they have been increasing in rapid ratio. Mr. H. adopts the plan of dividing the swarms, using the *Harbison Hive*. Although Mr. H. has used all kinds of hives, he prefers the Harbison to all others, as they are easier managed; and in all circumstances the plan is to use the large hive with top apartments, where the object is for Bees and Honey; when only the increase of swarms, the small size only.

When the Hive is full of Bees, by lifting the apartments the apiarist can easily see the queen bee, the bee-bread, and the drones, and can select a queen bee and bee-bread cells, and working bees, and thus divide the hives evenly. A few weeks and the hive is full again, and ready for another division. When the large Hives are used, the top apartments are so arranged as to take out singly or all together when full. Each apartment contains one pound of honey. It will be remembered that the lower part of the Hives contains bee-bread, cells for young bees and the young queens, together with the drones and honey; while the upper cells contain the purest and best honey only. One of the Harbison Hives with a good healthy and full swarm, has produced two pounds of honey in a season.

Our friends in the old Eastern States that sell swarms of Bees for five dollars, and Honey for one bit and two bits a pound, may think we tell big stories in California about Bees; but when we tell them that it is often that a large swarm will send off two, three or four swarms in a season, and these again sending forth swarms, and these also again sending forth swarms, that Bees have grandchildren the first year, they may think it strange, yet it is a fact; and besides the Hive will make one hundred pounds of Honey that sells for one dollar a pound. So if the apiarist is disposed he can, and often does, sell one, two or three swarms at \$100 each swarm, and sells also one hundred pounds Honey at one dollar a pound, thus giving two, three and four hundred dollars as the income of a single hive in a single year. Such is California life. Who would not *Be* an apiarist?

#### Increase of the Honey Bee.

We have spoken of the collection of Rev. H. Hamilton, of Santa Clara, and having spent some three hours with Mr. H. we can say truly, he is an apiarist indeed. The bees know him as their friend and aid. We saw him often remove the comb, select the cell of the queen and transfer it to a hive requiring it. We saw him divide several swarms, and while his head and chest were completely covered with the Bees, he finished his work steadily, handling the bees as if they were birds. Mr. Hamilton is the Bee-Doctor-General for all around who need aid and counsel about bees, and his services are in constant requirement. Mr. H. has the *Patent Hive* of Harbison, of Sacramento, which we esteem the best for all purposes.

We visited the collection of bees of L. E. Gould, Mr. Babcock, Dr. Headon, and others, all of which we found in very excellent order. The system of division is now generally practiced, of which we shall speak hereafter.

We call attention to the card of Mr. Hamilton in another column.

#### Fruit in Santa Clara.

ALTHOUGH lots of paragraphs have appeared announcing the entire loss of all the peaches and grapes, and other luscious fruits in this great and prosperous valley, yet, just as we have always said, there will be fruit enough, and to spare.

We have visited many orchards, and although "Jack Frost" did creep up into the trees and hug the branches, yet the nice fruit hid away among the leaves, where Jack could not bite all, and now all say they will have more than they expected.

We visited the fine orchards and gardens of Mr. Gould, Mr. Sharyten, Dr. Warburton, Dr. Headon, and many others, of all which we shall speak hereafter.

FRUIT IN THE MOUNTAINS.—Never before, in any country, says the Placerville Observer, have we seen peach trees more heavily laden with fruit than they are in this locality. Already the boughs are beginning to bend and break down with their heavy burden, and unless the trees are substantially propped up, or the fruit shaken off, many orchards will be completely ruined. The time is not far distant when California will be the most bountiful fruit-producing country in the world. Ten years ago, one would scarcely have thought it possible that our thirsty red hills should so soon be metamorphosed into the teeming orchards and vineyards which now everywhere meet the eye.

LOCATION OF AN APIARY.—E. W. Phelps says: "I always prefer an eastern aspect, or one bearing a little south of east, as this gives the bees the influence of the sun in the morning, or fore part of the day, when it is beneficial to them, and during the middle of the day it will not be as oppressive as when the hives are facing the south. Whatever the aspect may be, the hives should never be exposed to the rays of the sun during the middle of the day, excepting in April and May."

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

(CONTINUED.)

It will thus be seen, that the description of the Condors of South America, as written by the foregoing authors, agrees very materially with the description we have made of the Condor of California. It is probable that our species of this family is also found in parts of Mexico, and Central and South America, where it has been confounded with the larger bird which has so long been the marvelous wonder of travelers, but which not one of them, within the narrow bounds of our literary reconnaissance, have as yet thoroughly and clearly depicted as to sexes or as to species. It is highly probable, that the Peruvian Condor is also an occasional visitor of the arid districts, and the coasts of the Pacific, south of Santa Barbara, and to Acapulco, and eastward to the Tulare country and Tejon Pass, and as Charles Bonaparte suggests, also to the table lands of Mexico and Central America. The species which is asserted to be found near Los Angeles, and has a caruncle on the head, is said to be considerably larger than the one we attempt to delineate. We have never been able to procure a specimen, and conclude there must be some mistake about it.

A few days ago, we got within about seventy yards of a number of the male and female Condor. They were feeding on the carcass of a whale on the sea shore, and must have been gorged, as we could make out every outer feature of both sexes with distinctness, except that the color of the head and neck of the male appeared of an orange color instead of a bright lemon. When it is dead, it is certainly of the latter color, but it very soon fades, and the color is scarcely preservable in specimens dried. The female appeared when standing upright, as perfectly black; glossy brown black as the cat of the necromantic alchemist Dr. Wotnamakollum—from the beak to the end of his tail-feathers he was in somber mourning. We got within thirty yards of the male, but he kept his position on a pine tree hard by, without moving more than his head in great anxiety; he appeared incapable of flight. After examining him very carefully, we left him to enjoy his gluttonous dignity. All the noise we made tramping around in the bushes and dry sticks was not sufficient to frighten him from his roost. They are usually exceedingly scary of travelers and intruders. Some times they make a smothered squeaking noise or hiss, but they are generally mute. The color of the iris of the eye, may be influenced (like the neck skin of the male, of a bright orange, and then of a very light orange or lemon), from its being gorged with its comminuted flesh food, which must send the blood flushing into all its extremities—or when it is empty or famishing of food.

Dr. Canfield, a resident of our town, tells me, that during his sojourn in the mountains of our county on the line of San Benito river, he has seen as many as one hundred and fifty Condors at one time and place, in the vicinity of antelopes he had killed—he invariably observed that they sighted their prey, or first came to the carcass from the leeward; he has often noted this feature of its habits during his camp-life there, of some three years' duration. The Condors and Turkey Buzzards often feed together over the same carcass, and generally in such cases do some fighting and biting; they may sometimes be seen soaring and traveling together in the air. Dr. S. Haley, who traveled a great deal in Nicaragua and Western Mexico on the Pacific, to Panama, informs me that the California Condor is found in all those countries.

In January, 1858, a large Condor was killed by Mr. J. B. Wright, near St. Helena, in Napa county, while flying with a nine-pound hare it had killed. The bird measured fourteen feet from tip to tip of wings. The Alta has one of the tail feathers in its office, that measures twenty-six inches in length. This is the largest specimen I have yet heard of, and must have been a very old bird. [See "Alta Calif." of 8 Jan'y, 1858.]

A male bird was killed near the Carmel Quarries last year, by one of our friends, which measured twelve feet across the wings, and we have elsewhere noted one measuring eleven feet.

The Condor is often killed by feeding on animals, such as bears and cattle, when poisoned with strychnine by the Rancheros—the poisoned meat killed them readily. The Rancheros have very little fear in California of their depredations on young cattle and stock, though it has been known within my knowledge, for five or six Condors to attack a young calf, separate it from its mother and kill it; the Californians also say they are often known to kill lambs, hares and rabbits. But the cattle owners here have no such dread of them as the Haciendados of Chili have of the southern Condor.

We think continued observations on these two species of Condors, will prove, that their natural food is dead meat or fish, or wounded animals they kill; but that they never eat spoiled, tainted, or putrid animal matter, like the Cathartes, etc., until compelled by great hunger and fasting—being intermediate in their habits and characteristics to the Eagles and Vultures.

The male bird at times, as I have seen, has presented a most gallant and dandified appearance. This may have been when his craw was empty; when youth favored him, and his amorous faculties were in fluorescence. Certain it is, we have seen him standing and looking as clean, handsome and black, as a young undertaker about to do the honors to his first burial.

Note made 30 March, 1859.—Audubon, in his American Ornithological Biography—Edinburgh, (5th vol. 1829), says of the California Condor, on page 241:

"Dr. Townsend informs me that the California Vulture inhabits the region of the Columbia River, to the distance of 500 miles from its mouth, and is most abundant in spring, at which season it feeds on the dead salmon that are thrown upon the shores in great numbers. It is also met with near

the Indian villages, being attracted by the offal of the fish thrown around their habitations. It associates with Cathartes Aura, but is easily distinguished from that species in flight, both by its greater size, and the more abrupt curvature of its wings, [exactly as observed in California]. The Indians, whose observations may generally be depended upon, say that it ascertains the presence of food solely by its power of vision, thus corroborating your own remarks on the Vulture tribe generally. On the upper waters of the Columbia, the fish intended for winter store are usually deposited in huts made of the branches of trees interlaced. I have frequently seen the Ravens attempt to effect a lodgement in these deposits, but have never known the Vulture, although numerous in the vicinity, to be engaged this way. I have never seen the eggs of the California Vulture. The Indians of the Columbia, say that it breeds on the ground, fixing its nest in swamps under the pine forests, chiefly in the Alpine country. The Willamet mountains, seventy or eighty miles south of the Columbia, are said to be its favorite places of resort. It is seen on the Columbia only in summer, appearing about 1st of June, and retiring probably to the mountains about the end of August. It is particularly attached to the vicinity of cascades and falls, being attracted by the great numbers of dead salmon. Hither therefore resort all the unclean birds of the country; these—Vultures, Turkey-Buzzards and Ravens. The California Vultures cannot, however, be called a plentiful species, as even in the situations mentioned it is rare to see more than two or three at a time, and these so shy as not to allow an approach to within one hundred yards, unless by stratagem. Although I have frequently seen this bird, I have never heard it utter any sound. The eggs I have never seen, nor have I had any account of them that I could depend upon. The color of the eye is dark hazel; I have never heard of their attacking living animals. Their food while on the Columbia is fish almost exclusively, as this food is always found in great abundance near the falls and rapids; they also feed on dead animals. Near Fort Vancouver I saw two feeding on the carcass of a pig. In walking they resemble a Turkey, strutting over the ground with great dignity; but this dignity is occasionally lost sight of, especially when two are striving to reach a dead fish, which which has been just been cast on the shore—the stately walk then degenerates into a clumsy sort of hopping canter, which is anything but graceful. When about to rise, they always hop or run for several yards, in order to give an impetus to their heavy body; in this respect resembling the Condor of South America, whose well known habit enables it to be easily taken in a pen by the Spaniards. A plan I shall try, if I ever return to the Columbia, as I am satisfied it would be successful."

Audubon continues: "Mr. David Douglas has published the following account in the 4th vol. of the London Zoological Journal: The length of this bird is fifty-six inches; the measure round the body forty inches; weight twenty-five to thirty-six pounds—[probably old birds after gorging—A. S. T., 1859]. Beak three and a-half inches long, of bright glossy yellow; head nine inches round, deep orange, with a few short scattered feathers on the fore part of the beak; iris pale red; pupil lights green; neck eleven inches long, nine inches round, of a changeable color, brownish yellow, with blue tints; body twenty-four inches long, black or slightly brown; collar and breast feathers, lanceolate, decomposed, white on the outside near the points; quills thirty-four, the third longest; extent between the tips of the wings nine feet three inches; under coverts white; upper coverts white at the points; tarsi four and three-fourths inches long, bluish black; claws black, blunt, having little curvature; tail of fourteen feathers—[we could only find twelve; A. S. T.], square at the ends, and fifteen inches long. In plumage both sexes are alike: in size the female is somewhat larger. [Douglas is incorrect about the plumage; the color of head, neck and plumage appearance of the female, are very evident in difference from those of the male bird; A. S. T., 1859].

"These gigantic birds, which represent the Condor in the northern hemisphere, are common along the coast of California, but are never seen [?—A. S. T.] beyond the woody parts of the country. I have met with them as far to the north as 49° N. lat., in the summer and autumn months, but nowhere so abundant as between the sea and the rapids on the Columbia river. They build their nests in the most secret and impenetrable parts of the pine forests, invariably selecting the loftiest trees that overhang precipices on the deepest and least accessible parts of the mountain valleys. The nest is large, composed of strong, thorny twigs and grass, in every way similar to that of the Eagle tribe, but more slovenly constructed. The same pair resorts for several years to the same nest, bestowing little trouble or attention in repairing it. Eggs two, nearly spherical, about the size of a goose egg, and jet black [?—A. S. T.]; period of incubation twenty-nine or thirty-one days; they hatch generally about the 1st of June. The young are covered with thick whitish down, and are incapable of leaving the nest until the fifth or sixth week. Food, carrion, dead fish, or other dead animal matter. In no instance will they attack any living animal, unless wounded and unable to walk. Their senses of smelling and seeing are remarkably keen. In searching for prey they soar to a very great altitude, and when they discover a wounded deer or other animal, they follow its track, and when it sinks, precipitately descend on their object. Although only one is at first seen occupying the carcass, few minutes elapse before the prey is surrounded by great numbers, and it is then devoured to a skeleton within an hour, even though it be one of the largest animals, as the elk or horse. Their voracity is almost insatiable, and they are extremely ungovernable, suffering no other animal to approach them while feeding. After eating they become so sluggish and indolent as to remain in the same place until urged by hunger to go in quest of another repast. At such times they perch on decayed trees, with their

heads so much retracted as to be with difficulty observed through the long, loose feathers of the collar; the wings at the same time hang down over the feet. This position they invariably preserve in dewy mornings or after the rains. Except after eating or while protecting their nest, they are so excessively wary, that the hunter can scarcely ever approach sufficiently near even for buckshot to take effect upon them, the fullness of the plumage affording them a double chance of escaping uninjured. Their flight is slow, steady, and particularly graceful; gliding along with scarcely any apparent motion of the wings, the tips of which are curved upward in flying. Preceding hurricanes or thunder storms, they are seen most numerous, and soar the highest. The quills are used by hunters as tubes for tobacco pipes. Specimens, male and female, of this truly interesting bird, which I shot (about 1827), in lat. 45° 30' 15"; long. 122° 3' 12", were lately presented to the London Zoological Society, in whose museum they are now carefully deposited."

The minute descriptions which Audubon makes in his note on this bird at page 243, following Douglas' memorandum, agrees very nearly with our own observations of the living animal, or when recently killed. The exceptions are in the singular elongated diamond-shaped band of feathers, (on a white skin), which covers the crown of the head of the male bird, coming down before the eyes over the sides of the head or chops; the female has no such marks, but its head and neck-skin are all of a coppery dark olive, and pretty well covered with featherlets. The wing of the female, in five specimens I have seen, living and dead, always has the white band across the under part of the wing, and this white band has a line of mottled dusky spots in the middle; a fact which can be easily proven with a glass (which I have often done), on a clear day, when the two sexes are seen soaring together in the air at certain seasons. These evident differences have been left unexplained (so far as we have been able to read), from the year 1779 to the year 1859, and often causing confusion among scientific naturalists and amateurs as to whether there might not be another species of the California Condor in existence, north or south. It is plain, that the specimen procured by Dr. J. K. Townsend, in Oregon (about 1836), and noted by Audubon in 1839, was a female—"the young individual" mentioned by him on the last mentioned page, answered in colors exactly to a female specimen examined in 1855 by Dr. Ord and myself, and heretofore detailed. Audubon's dimensions of his specimen from Townsend, were as follows: Length to end of tail forty-eight inches; bill along the ridge four inches; wing from flexure thirty-two inches; tail sixteen inches; tarsus four inches; middle toe four inches; its claw one and nine-twelfths inches. Audubon also says the iris of the eye is hazel. In ten birds I have seen killed of both sexes, they were of light pink or carmine. Another specimen mentioned in the aforesaid 5th volume, and likely the Condor figured in his splendid painted engravings, was from Douglas' specimens in the London museum, measured fifty-five inches from head to end of tail; bill along the ridge four and three-fourths; wings from flexure thirty-four inches; tail sixteen inches; tarsus four and one-quarter inches; hind toe one and five-twelfths inches; its claw one and a-half inches; middle toe four and one-fourth inches; its claw two inches.

Bonaparte in his American Ornithology vol. 4—Edinburgh 1831—says of this bird, that "it was introduced to the notice of naturalists by Mr. Menzies, who brought a specimen from California in 1795, and deposited it in the British Museum." Dr. Archibald Menzies was the surgeon of Vancouver's English Expedition, which surveyed the coast of California and Northwest America in 1792, and had also served under Capt. Cook, in 1770-75, and carried to Europe the first specimens of natural history from our present territories, on the Pacific; he afterwards attained a great reputation in the scientific world. He died in Ireland, only a few years after the discovery of California gold, at the vigorous El-Dorado age of a ninety-generian; a man held in the highest esteem among his friends and countrymen, as well as by learned men.

The first description of this bird given to the world, seems to have been made by Dr. George Shaw, in his Naturalist's Miscellany, of 1779 or 1789, probably from Menzies, on his return from Cook's voyage (it is difficult to say, exactly, as there is ten years difference in the dates of this work as quoted in the ninth vol. October 1858, of Pacific Railroad Reports). The full figures of the bird seem to have been first made by Audubon, about 1838, from stuffed specimens, in his grand illustrated work on the Birds of America, a copy of which may be seen in the San Francisco Mercantile Library; and are also to be found in Gray's Genera of Birds, published in London, 1844-49, as stated in the Railroad volume above quoted—both doubtless from dried specimens. The California Condor has been called by scientific naturalists, Sarcophagus Californianus; Vultur Californianus; Cathartes Californianus; Vultur Columbianus; Cathartes Vulturinus—and for aught we know, many other Latin names. In California it is known as Buitre—Auro—Gallinazo Grande, in Spanish; the American hunters and rancheros in California also call it Vulture and Condor, Red-headed and Yellow-headed Vulture.

It remains only to say, that preserved specimens of the California Condor are now (1859), as we are informed, to be found in the Museum of the Smithsonian Institute, Washington; in the Museum of the Philadelphia Academy of Natural Sciences; in the Museum of the California Academy of Sciences, San Francisco, and we believe, that of Stockton also; in England, in the British Museum, and the Museum of Mr. J. H. Gurney, Norwich (which is said to be one of the most valuable collection of Raptorial Birds, or birds of prey, in Europe), and in the Museum of the Garden of Plants, Paris. The two English Museums contain specimens, male and female, full grown, and accompanied by skeletons of the bird, which were forwarded by the writer from California to

Mr. G., in 1853, to more fully clear up doubts among naturalists in Europe and to add to the valuable collection of an honored friend, whose scientific tastes he had the pleasure to gratify with specimens of the variable Condor of California. The eggs of the bird have been much sought after by hunters and vaqueros, to supply the demands of Museums at home and abroad, but as yet, as far as we know without success, from their extreme scarcity and the difficult dangerous access to the haunts of the bird. The diversities of descriptions, opinions and names of these two distinguished giants of the feathered kingdom of the Pacific Americas, among learned writers and scientific men, may well cause a smile with literaires and general readers at the empiricism and uncertainties of science. It is even not yet known—only surmised, that the Condor of California is an inhabitant of the country of the Great Buffalo Prairies, at the eastern bases of the Rocky Mountain chain, where there is such abundant food for them. The buffalo itself is asserted never to have come west of the Rocky mountains, at least as far as the California Snowy Range, though in December 1858, the Territorial Enterprise, printed at Genoa, Carson Valley, is informed by a correspondent that one was seen in that vicinity, at the eastern declivities of the Sierra Nevada, quietly browsing on his daily greens of good grass. There is an old tradition, as we have been told, among some of the California Indian tribes, that the buffalo was once numerous in our El Dorado, and we see no reason to doubt it. They may have come over the Nevadas after a succession of very mild seasons. In Viscuino's Expedition of 1602, an animal is described at Monterey, which can hardly be anything else but a buffalo.

(TO BE CONTINUED.)

## Summer Management of the Grape-vine

Every one who has a garden has a grape-vine; but not every one who has a grape-vine knows how to manage it. We propose to say a few words on the subject (says the Philadelphia Gardener's Monthly) for the benefit of our amateur readers, especially as the season is now approaching when the vines will require their chief attention.

"How strangely you talk!" we fancy some of our friends exclaim; "the season is now approaching! why, we thought winter was the time to prune grape-vines!"

That is all very well; winter is, to some extent, the time to prune grape-vines; but the skill required to perform the operation at that season is not a tithe of what the grape-vine expects of you in the way of summer pruning.

Did it never occur to the pruner how absurd was the idea of allowing a vine to produce a great amount of wood for the mere fun of cutting it away again the winter? Can nothing be done to avoid this waste of wood, this abuse of the productive energy of the plant? To a great extent it can, and that by a process called summer pruning.

First, let us consider why we prune at all. We plant vines partly for their shade, and partly for their fruit. If left to grow "as doth to them seem best," two or three strong shoots will take the lead over the others, and go off like a rocket to the top of the house, arbor, or trellis, on which they may be trained. These powerful shoots, having once got the ascendancy, like other beings in the animal department of our planet, seem to strive to keep the others down; "the rich become richer, and the poor poorer;" until, before many seasons are over, the weak branches die away entirely, and their assassins are left masters of the field.

Now, this is a very unsightly affair, to say nothing of its inconvenience. To have a vine for shade, that gives no shade, because we have allowed all the leafy shoots to congregate on the highest pinnacle of their glory, is bad enough; but to have the luscious, tempting fruit so very far out of our reach besides, is enough to give them a very foxy character, though they might belong to one of the purest of the pure varieties of the genuine *Vitis vinifera* itself. From this we can learn why we want to prune. We want to balance the strength of the vine. We want to prevent the strongly inclined shoots from getting more than their share; and to do this we lay a sort of tariff on them, which somewhat shackles their movements, and allows their weaker brethren to overtake and run evenly with them. Every part of a plant is thus brought under control. The trellis is fully clothed with foliage from top to bottom, and the lowest and humblest shoot in that vegetable commonwealth holds up its head as vigorously and independently as the most favored by nature, with a position at the top of them all.

And now for this theory of protection. It is necessary to explain to the reader that the more severely we prune a grape-vine shoot, or any shoot, in winter, the stronger it will grow the next year. On the other hand, the more we prune it in summer, the weaker in proportion it becomes. If we cut down a willow in winter, the next summer it will make a growth of five or ten feet; but if you cut it down after it is in leaf, it will throw out but a few weak shoots, or probably die altogether.

This seems very incomprehensible on the surface, but with the help of physiology, can be made very clear. For instance, as soon as the leaves fall in the autumn, the tree, in a certain sense, hibernates; it needs no air, it does not breathe. But as soon as growth commences, it must have all this. Like an animal, it lives by breathing; and to effect this, it puts forth leaves. It breathes through its leaves. They are, in fact, its lungs. The sap is, indeed, drawn into the plant by the roots, just as food is taken into the system by the mouth of an animal; and after being rough or crudely prepared in the tree, is finished off by being passed through the leaves for contact with the air, precisely as blood is passed through the lungs of the more highly organized being. So it is clear that if the leaves be stripped off, we prevent the plants breathing; we injure its lungs, rapidly send the plant, if the practice be continued long, to an early and lamented grave.

We will suppose a vine two years old, and with a cane that at the last winter pruning has been left eight feet long. From the eye or buds on the top of the cane, shoots will push, which in the fall

will be perhaps half an inch in thickness, while those from the buds nearest the ground will probably be less than a quarter of an inch. This is Nature's way of working, which, in this instance, we must decidedly object to.

So, when the shoots from the top of the cane push, and have reached about three feet in length, we pinch off the strongest one to about four joints or leaves in length, the next strongest about five joints, the next six, and those we wish to strengthen, not at all. A few weeks later the shoots so pinched off will commence to push on again, but this time weaker than before. They will now have to be watched. If the last formed shoot seems to grow only as strong as the lowermost ones, so well; the object has been gained. If, on the contrary, it still pushes with greater vigor, stop it again, till it becomes what you wish it to be.

To get shoots where we want them, and as we want them, is the only object of summer pruning grape-vines. Many other kinds of fruit trees, if they grow freely and vigorously, will not bear fruit. The wood-producing and the fruit-bearing principles seem antagonistic; and summer pruning such free-growing trees, by weakening the wood-producing power of the tree, throws it sooner into bearing. But it is not so with the grape-vine. The stronger and the healthier the wood can be grown this season, the finer will be the fruit the season following.

We are ranked amongst "the meekest, mildest mannered men," but how it angers us at times to pass a vigorous healthy vine in July, and to see some ugly bifurcated animal, in pants and shirt sleeves, tearing away at the young leaves and shoots of the plant without the shadow of a reason, with all the ardor of a delightful pastime, and till scarcely any foliage is left on the vine. *And I admitting the sun and air freely through the plant in order to ripen its fruit? Without reason? Eh! Softly, my misguided friend. It is not merely the sun and air that ripens your fruit. It is the office of the leaves to do that; and the finer and healthier the leaves of your vine, and the greater the amount of these healthy and leafy appendages, the better will your fruit ripen, and the finer will it be in all respects. Have you never noticed how a vine rejoices when it can steal among the branches of a lofty tree far out of the reach of your exfoliating fingers? Did you never see how some uncared-for specimen, which never in its infancy had the advantage of an "expert" to care for it, and recommend some "warm and sunny" spot as the very place for its future welfare; did you never see how in that neglected shady spot, where the mid-day sun in vain could penetrate, and the life-giving rays of the morning sun broke in only in winter; where*

"Plants at whose name the verse seems loath,  
Filled the place with a monstrous overgrowth,  
All berried, and pulpy, and blistery, and blue,  
And livid, and starred, with a lurid hue,  
Where aqaries, and fungi, and mildew, and mold,  
Started like mist from the damp ground, cold?"

and yet where the plant seemed to revel in perpetual healthfulness; the fruit to color to perfection, and the canes to live to a fabulous age and to attain to quite marvelous dimensions. And all this, not because of the shade *per se*, but because the thrip, and spider, and myriads of insects that love to bask in the summer's sun; and the mildew, or blight, or *oidium*, or whatever you call it, that loves to spread itself where drought and moisture in the air, or extremes of heat and cold rapidly alternate, do not find a foothold.

The leaves—the leaves—take care of the leaves. Never remove for any other purpose than to weaken a strong-growing shoot. So shall your vine luxuriate and bear fruit, and afford you a grateful shade, free from most of the ills the grape-vine is heir to; and if in its nature a spark of consciousness exist, that atom of mind will expand with a fervid warmth of gratitude to the writer of this article for saving it from the barbarous treatment it may have been heretofore subjected to.

## Root-Grafting Apples.

I observe in the March number of the Gardener's Monthly, extracts from the proceedings of the Cincinnati Horticultural Society's discussions on root-grafting apples, which, if I understand the purport of their discussions, they advocate the growing of the apple by grafting on sections of the roots—to grafting or budding on seedling stocks in the nursery rows in the usual way, that is, from eight to ten inches above ground.

Our esteemed friend, Dr. Warder, says, that this question has been settled long ago in this country and elsewhere.

This theory is so much at variance with our daily experience, that I cannot for a moment doubt that if a vigorous strong-rooted tree is desirable in an orchard that those grafted or budded on wild seedling stocks, eight to ten inches above ground, are far superior to those propagated by grafting on pieces of the roots. We all know (what Dr. Warder admits), that they are nothing more than cuttings; the grafts rooting the first summer after planting, the only use of the piece-root being to keep the graft alive until it starts into growth. No doubt many of the strong vigorous-growing kinds make very good plants from cuttings, coming into bearing early, but still they lack the strong vigorous root that a wild seedling produces. This has been long known to cultivators, that all kinds of plants, grown from seed, are far more vigorous than those from cuttings; resisting winds better, and not so liable to be blown down as those grown from cuttings, where its roots are bushy, and does not extend with that vigor that seedling stocks do.

We all know that the system of root-grafting is a cheap way of growing; enabling cultivators to increase plants with great rapidity; but this does not add anything to the value of this system of propagating, except cheapness. Wm. Reio.

## Osage Orange Topiary Work.

Although every one is aware that no plant bears the shears better than the Osage Orange, yet I am surprised that it is so seldom used for the decoration of formal or Italian gardens or topiary work.

If due attention is given to summer pruning, which has the effect of checking the otherwise rampant growth of this plant, the finest effects may be obtained. Last season, while passing through the neatly kept grounds of the editor of the Horticulturist, the estimable proprietor asked me, in a jocular manner, what I thought of that specimen of *free box*, pointing to a beautiful verdant hemisphere at the opposite side of the garden. After I had expressed great admiration of it, he informed me that it was an Osage Orange that had been but a very short time under treatment. He also informed me that he intended, if possible, to surmount it with the figure of an eagle or bird, and the legs were then visible in the form of two shoots, which had been allowed to grow from the apex of the globe.

I merely mention this fact to show how easily it can be brought into any desired shape, and to urge upon your readers to experiment with it.—[R. in Gardener's Monthly.]

## Miscellany.

## AN ANSWER.

You ask a merrier strain of me—  
The shepherd pipe of Arcady,  
The vintage hymn, the hunter's horn,  
The reaper's carol from the corn!

Ah! small the choice of him who sings  
What sound shall thrill the smitten strings;  
Fate holds and guides the hands of Art,  
And lips must answer to the heart.

In shadow now, and now in sun,  
As runs the life, the song must run;  
But, glad or sad, to God's good end  
Doubt not the varying strains shall tend.

## The Mason's Last Request.

It was a very hot day in the summer of 1778. The British General, Clinton, with a formidable army, was hastening across the sandy plains of New Jersey, to join the forces of Gen. Howe, at Sandy Hook. And Washington, with an army once more regenerated into life, determined, if it lay within the bounds of possibility, to prevent that junction; and, to effect his purpose, sent on a large detachment of light troops, under Gen. Lee, to harass their movements and retard their progress, until he could come up with his main force and effect their capture or destruction.

The British were overtaken by Lee, whom I have more than once said, and now repeat it, only needed Arnold's temptations and Arnold's wrongs to have been all or more a traitor than the latter. The will was in him, but opportunity did not serve. But to return to my story. As soon as the American sharpshooters, in the van of Lee's division, began to annoy the British, the latter drew up in order of battle and prepared for defence. The Americans boldly pushed on, and were driving all before them, when, to their utter astonishment, and to the deep mortification of their gallant officers, who were flushed with the hope of a victory almost in their hands, Gen. Lee ordered a retreat. Shame mantled many a brow then and there; and, in spite of discipline, angry words broke from many a lip; for even then, as now, the word retreat sounded strangely, ay, most harshly, upon an American ear. But the order had been given by him who had command, and he must be obeyed. Yet, so angry and unwilling were those who fell back, that they did not preserve the order which they would have done had they only been yielding to stern necessity.

And the British, overjoyed at a victory so easy, were pushing their advantages, as they ever did, mercilessly; and our brave men were falling fast before them, when suddenly dashing forward upon a horse, which was white with foam, rode that matchless man, upon whom a nation's fate depended. "What means this cowardly retreat? Who dared to order it?" he thundered.

"I did!" was the angry response of Gen. Lee. "Rally your men, coward; or go and hide your face in shame!" cried Washington; that day giving full vent to a passion which hitherto, under all circumstances, he had managed to control.

"Halt, and form!" he cried again, in a voice so loud that it fell alike upon the ears of friend and foe. And, though the bullets fell like hail all about him, and brave men dropped upon his right hand and upon his left, he sat unmoved upon his horse, stemmed the tide of retreat, and checked the advance of the triumphant foe.

The carnage was terrible. Bayonet clashed against bayonet, sabre met sabre, while the sulphurous smoke almost hid the combatants from view; and they sprang at each other like fiends, lighted by the flashes of their cannon and the blaze of musketry.

One gallant officer, whose gray hairs had become tinged with blood, fought directly under the eyes of Washington, whom he loved not only as a general, but as a brother, bound by that mysterious and holy tie which equalizes a peasant with a prince. By his side three sons, of lesser rank (the youngest scarce eighteen years of age), fought all as bravely as himself.

It was at the moment when, with Washington himself at their head, the Americans drove back the foe at the bayonet's point, that he, whom I will call Maj. Carroll, who was leading his battalion on, himself on foot (for two horses had already gone down under him that day), and to whom I just alluded, saw a British officer fall, who had, with heroic gallantry, striven to stem the changing tide. Though wounded and down, the brave officer still struggled, and drawing a pistol, disabled a man whose bayonet was at his breast. Maj. Carroll's sword was raised above his head, but quickly a sign, a word, and the "widow's son" was safe; for the sword which would have slain, was now a shield; the foe, whose arm had just been raised, was now a brother, whose extended hand was ready to lift him who lay upon the earth in such distress.

But, ah! fatal pause! that generous bosom, so full of fraternal love, which did not forget duty even there, amid the wild carnage of battle, was pierced by a bullet; and the brave Carroll sank, dying, by the side of him who had called for help, and had not been refused.

Washington's eye was on him; he knew who and what he was, for he had sat with him in a place where light abounded; but he could not wait—the enemy were flying, and must be pursued.

"On!" cried the dying hero to his men. "Forward!" he shouted to his boys; "We are victorious, and I am content!"

The battle was over. The British had been swept back over the gory field which they had taken, and night had drawn its mantle over the horrors which the day exposed.

And by Maj. Carroll's side knelt the only one of his race that was left to life—his youngest son. His two oldest sons had fallen on that dear-bought field—like himself, contented that they had died for their country, and fell in the hour when victory was theirs.

"Father, what can I do for you?" said this boy, who, as he grasped his dying sire by the hand, and sustained his head upon his breast.

"Be a man, and do your duty to your country first, and to your mother next. And, lad, save my masonic regalia. He, our nation's father, invested me with it! Save it, and act so worthily that when you are of full age, you may become entitled to wear it. It is my last request!"

And soon the noble spirit of that brave, good man left his body, and went to dwell with the Great Architect of the Universe.

And, years after, when peace smiled upon our land, the son fulfilled his father's request, and that cherished regalia is yet in the possession of his descendants.

"Well," said a Yankee, proudly, to a traveling Scot, as they stood by the Falls of Niagara, "Is not that wonderful? In your country you never see anything like that?"

"Like that," quoth the latter, "there's a far more wonderful concern nae twae miles frae where I was born."

"Indeed," says Jonathan, "and pray, what kind of concern may it be?"

"Why, mon," replied the other, "it is a peacock wi' a wooden leg!"

A MAN can get along without advertising, and so can a wagon without greasing, but it goes hard.

FRANKLIN'S INTEGRITY.—But few have it in their power to do so much good or evil as printers. We know they all glory in Dr. Franklin as a father, and are wont to mention his name with veneration. Happy would it be for this if they would read the following with a resolution to imitate it.

"Soon after his establishment in Philadelphia, Franklin was offered a piece to publish in his newspaper. Being very busy, he begged the gentleman would leave it for consideration. The next day the author called and asked his opinion of it. Franklin replied:

"Why, sir, I am sorry to say that I think it highly scurrilous and defamatory. Being at a loss, on account of my poverty, whether to reject it or not, I thought I would put it to this issue—at night, when my work was done, I bought a two-penny loaf, on which, with a mug of cold water, I supped heartily, and then wrapping myself in my great coat, slept very soundly on the floor till morning, when another loaf and a mug of water afforded me a breakfast. Now, sir, since I can live comfortably in this manner, why should I prostitute my press to personal hatred and party passion, for a more luxurious living?"

One cannot read this anecdote of our American Sage without thinking of Socrates' reply to King Archelaus, who had pressed him to give up preaching in the dirty streets of Athens, and come and live with him in his splendid court:

"Meal, please your Majesty, is half penny a peck at Athens, and water I can get for nothing."

HER COLT.—The first locomotive sent Lovengood ever saw, was standing with steam up, and nearly ready to go, making no noise save a suppressed humming from the safety-valve. But, sud, in his sneaky, cautious way, clambered to the top of the tender, to find out "what sort of a beast" it was, when the engineer silly gave the whistle lever a long pull—shay—y-y! Sut lit twenty feet distant on a pile of cord wood, and after running until he got straightened up, he turned round, all eyes, and said—

"Wat in the dence did you do to it, mister?"

Just at this moment a negro came trundling a truck, with a cook stove, a joint of pipe on the blue hole, and pots and pans hanging all round. Sut took a look first at the stove and then at the locomotive; a light broke out over his perplexity and he shouted to the engineer:

"Oh, yes, I understand it all now; the darned old brute was just a nickerin' for her colt!"

## GENESSEE VALLEY NURSERIES, Rochester, N. Y.

## Fruit and Ornamental Trees, Shrubs, &amp;c.

Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality, any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements, as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

## OF STANDARD FRUIT TREES,

we have an unrivaled collection of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in Bud, One year old from bud or graft, and Two years old.

An immense stock of DWARF FRUIT TREES, in Bud, and one year old from bud or graft, comprising Apples, Pears, Cherries, and Plums.

SMALL FRUITS, &c., in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberries, &c., &c., including all of the new varieties of the above species introduced up to the present time, which have been found to be an acquisition.

## In the Ornamental Department,

our assortment and stock is very extensive, including both the Deciduous and Evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our Stock of ROSES is unsurpassed in quantity and variety, occupying over six acres, and embracing more than 500 distinct sorts, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summer Climbing Roses, &c.

HARDY BULBS furnished of every description, including the finest variety of Hyacinths, Tulips, Crocus, &c. Every season we make large importations of the finest flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

## FRUIT-TREE STOCKS

we have in large quantities, which promise to be unusually fine the coming autumn. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities SEEDLING PEARS, APPLES, CHERRIES, PLUMS, one and two years old also, QUINCE and MAHALES STOCKS, for dwarfing the Pear and Cherry respectively, one and two years old.

## PACKING, &amp;c.

The greatest care and caution are given by us to the packing of Plants, the labor of which is performed by men who have had many years' experience in the business; so that parties can depend upon receiving the articles in good order. The result of our experience in packing plants for California has been, that we have been able to ship to California, from the Atlantic States, crops of which will be mailed free to all applicants.

N. B.—ORDERS should be sent as EARLY in the SEASON as possible, to be received by us as early as the first of October, that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO orders can be filled satisfactorily to ourselves, which are not received by us PRIOR to the 15th of November.

## Catalogues.

A WHOLESALE CATALOGUE, NO. 6, is published in July of each year, expressly for the California trade, containing our lowest rates for trees in quantities of each size and age, as well as being entitled to be shipped to California, from the Atlantic States, crops of which will be mailed free to all applicants.

For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.

No. 1—Descriptive Catalogue of Fruits.  
No. 2—Descriptive Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c.  
No. 3—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.  
No. 4—Wholesale Catalogue or Trade List.  
No. 5—Descriptive Catalogue of Flowering Bulbs, &c.

A. FROST & CO., Genessee Valley Nurseries, Rochester, N. Y.

## Five Hundred Pounds

## FRENCH SUGAR-BEET SEED.

AN INVOICE OF SUGAR-BEET SEED has been received at our Office, which will be sold on very reasonable terms.

We would urge more attention to this important Root Crop, as nothing can be better or cheaper for Dairy Stock, or Swine. Fifty tons can be raised per acre, easily, upon good alluvial land. This Seed is fresh, of superior quality, and will be sold low, in lots to suit purchasers.

Apply at Farmer Office, 130 Washington St. (opposite). 12

## AGRICULTURAL.

## 125

## McCormick's Chicago Reapers!

Three Sizes—5½, 6 and 7 feet Cut,  
WITH EXTRAS FOR ALL THE DIFFERENT PATTERNS, from 1852 to 1853. [Agent for the Manufacturers for the Pacific Coast.]  
2500 sold in 1853, 4000 sold in 1852,  
4000 sold in 1850, 4500 sold in 1855.  
15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim to have manufactured and sold anything like so large a number of Reaping and Mowing Machines during the same time, while my experience dates back to the origin of my machine, in 1834, having been actively and exclusively engaged in their manufacture for the last fifteen years. I am now more largely engaged in the manufacture of these machines than ever before, and, with my improvements for 1853, do not hesitate to warrant my machine as a Reaper, Mower, and Header, and perfect working, and further to say, that farmers who may desire it are at liberty to work my machine through the harvest with any other, and keep and pay for the one preferred. The position of the Raker in my machine (as patented), upon the main frame, where there is great strength, and where the weight adds to the power of the machine, is the only right one. Other makers have to haul their Raker on the platform, where he must submit to being tossed about in his eyes by the operation of the reel, and to being jolted over the clods by the little platform-wheel over which he rides, and which is the cause of his falling overboard. This accounts, in part, for the great durability of my Machines as compared with others.

Great Council Medal awarded my machine in London, in 1851. Grand Gold Medal of Honor at Paris, in 1853.

Exposition, in 1853, are known by them to be FALSE. Highest Prize at the French Universal Exhibition, in 1856. Highest Prize of the Agricultural Society of England, in '57. Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the Manny machine, claiming the highest honors, etc., at the French Universal Exposition, in 1853, are known by them to be FALSE. The success of my machine, as indicated by figures above, is its highest praise; while the awards of Premiums, generally, are worthy of no confidence, although Responder-makers make a business of laboring and cheating to secure the little Annual Occasional Premiums of the country. Although it may not be generally understood, it is nevertheless true, that those machines have always been sold at comparatively low prices, and but for the boldness with which I introduced and sold them by thousands, for the ten years past, other smaller manufacturers would doubtless have put the price much bleaker.

I could furnish thousands of testimonials from Farmers and others, of the truthfulness of every statement I have made, and more. I may further remark, that all of the Responder Machines of any prominence in the country, are mere modifications of my machine; all other manufacturers having necessarily limited experience in comparison with my own.

A single year's severe service will satisfy the Farmer, that in point of durability, my machine is far superior to all others; besides several important advantages, referred to in my regular Annual Circular in pamphlet form, which will be furnished those who desire further information, by addressing me, or any one of my Agents.

P. S.—To correct a misapprehension from recent newspaper reports, I may say, that, while the Commissioner refused to extend my PATENT of 1845, that of October, 1847, will not expire for several years to come, and that this has been my most important Patent; and further, that Responder-makers have done heretofore, to make my machine than they have done heretofore. They must still carry their Raker on the back of the platform, and submit to other consequent imperfections.

## CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators, Manufactured by Norris, Mason & Co.; 32 and 36 inch cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1852.—Sir: J. A. & H. A. Pitts' Patent, dated June 20, 1837 (machine for Thrashing and Cleaning Grain), was only extended for a term of seven years from June 20, 1851. It has consequently expired. Respectfully, yours, J. H. HOIT, Commissioner.

SOUTHWORTH & Co., San Francisco, California.

Pitts' Patent Double-Flanion 8 and 10 Horse-Powers. To whom it may concern.—This may certify that we have a certificate of authority, of which the following is a true copy.

A. GORDON & CO.  
To whom it may concern.—This may certify that A. Gordon & Co. are fully authorized by me to sell the "Pitts' Improved Patent Double-Flanion Horse-Power," in any of the States or Territories secured to me by letters patent. Signed, JOHN A. PITTS, dated October 18, 1853.

We are this month shipping Horse-Powers of the above patent to A. B. Southworth, of San Francisco, Cal., which he is hereby authorized to sell.

A. GORDON & CO., Rochester, N. Y., October 28, 1853.

A. Gordon & Co's Iron Planet Powers, 8 and 10 Horse.

NORRIS, MASON & CO.

IRON PLANET POWERS, 8 and 10-Horse—with full Extras.

Forty Ketchum's Mowers—Iron Frame.

Extra Extras for all of the above Machines.

TWENTY NOYES' MILL-STONES, Different Sizes.

One Hundred Revolving Horse-Bakes, Eight, Ten and Twelve Feet.

200 dozen Hay-Rakes, 100 doz Batchelder's Hay-Forks, 100 doz "Horse-Road" or "Horse-Drawn" Hay-Forks, 100 doz Steel, 100 doz "Sawyer's" Scythe-Handles, 200 Thermometer Curns, 1500 Peoria Plows—(to arrive Fall Trade). Also, a general assortment of Agricultural Implements.

Farmers and dealers are invited to call before purchasing.

## Colored Plates of California Fruit.

THE beautiful Fruit Pieces which were so finely prepared, at the Fair of California at the State Fair in 1855, are on sale at the Farmer Office. Every person who wishes a beautiful Fruit Piece should have a copy.

## FARMERS, BEWARE

## CALIFORNIA

## COMBINED REAPER and MOWER,

AND

## PECK'S SANTA CLARA

## HEADER AND HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNMITIGATED FALSHOODS.

I am now building the "Manny Machine," nor infringing on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a Practical Mechanic, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "bluff-game," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but in a view to the breaking up of my business, and to the great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the Farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

## CALIFORNIA

## Combined Reaper and Mower,

IS A DECIDED SUCCESS;

and unless they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly, but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "bluff-game" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

## California Combined Reaper and Mower,

(and not the "Manny").

and I have Purchased the Invention called

## "PECK'S SANTA CLARA

## HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, "ready for the fight whenever the fight opens."

## The California Farmer.

SAN FRANCISCO.  
FRIDAY, JUNE 10, 1859.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAM, who left here in the steamer of the 5th inst., on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HAYDO employed Mr. J. F. LARRABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry," it will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

**War! War!—France and England!**  
A CAREFUL reader of the various journals of Europe cannot but discover, that amid all the contending strife of other nations, that the great contest will be, in reality, between France and England. Every intelligent reviewer of the political position of England and France, in the present critical condition of Europe, points to this fact, either by intimation or by direct statement.

There is beneath all this seeming anxiety on the part of France for the rights, the liberties, and the possessions of others, which she appears determined to maintain, a long smoldering volcanic-fire burning in a thousand secret avenues, which, by and by, will manifest itself to the astonished world. The Crimean War opened some of these lava streams of pent-up fires. France bore off the glory of the war. France was the dictator in the terms of peace, and controlled those great events in her own capital, the city of Paris: that was her plan. Ere she even entered into the treaty with England against Russia, France was then studying the capabilities of England for a greater contest. France, or rather Napoleon, was then studying the military tactics of England; learning her power, by land and by sea; learning her resources; studying her character. But deeply hidden within the heart lay buried a watch-word, which prompted mighty plans; that watch-word is *Helena*!

Let the world look to this. We believe it. No one can see the present alliance of France with Russia, and not believe a great and mighty contest will soon break upon the world. It will be the Great Battle of the World! The roar of cannon will echo from sea to sea; and the smoke of the swelling strife will darken the heavens; while the earth will be drenched with blood.

England, France, and Russia, are now the Great Powers of Europe; and they, directly or indirectly, control the lesser nations and kingdoms, which may, during the strife, be dismembered and blotted out.

There is one other nation only that appears on the map of the world, whose power and influence may be said to be steady, immovable, but onward; that power is the United States of America. Our nation must be wise now. It must look on, and gather still more wisdom. Our course, as a nation, is ever onward! Onward the star of empire takes its way! It is written. Our nation will move on steadily and triumphantly in her course to ameliorate the condition of mankind. "Onward! and onward!" It is written. Cuba will be ours; Mexico, and all the Islands of the Sea, will be gathered in—the Canadas and all; until, from Sea to Sea, the American Eagle shall give laws to the world, and guide and control nations by her wisdom and mighty influence; for so God has ordained it!

**THE GREAT STRAWBERRY PLANTATION.**—A few days since we made a visit to the great Plantation of the Strawberries, the garden of Mr. Lusk at Oakland. One plantation of fifteen, the oldest vines all in very full bearing, and the youngest vines on a lot of thirty-five acres, coming into bearing—these, we believe the largest Strawberries grown, owned by one proprietor, extant. Mr. Lusk gathers from 1,000 to 2,000 pounds daily, and as fine fruit as is sent to market.

We were invited to enter the Plantation, and to "pick and eat." We did so to our heart's content, and when we took our leave of our kind friend we were most generously provided with about a peck of as large and fine fruit as has been gathered this season. May warm suns, gentle dews and a long season reward our generous friend for his abundant liberality and courteous hospitality.

Visitors to Oakland, who wish to procure good and fresh fruit, should go and see this famous garden. It will amply repay them.

**THE ELEPHANTS AT SANTA CLARA AND SAN JOSE.** The learned Elephants were at Santa Clara on Wednesday eve, and notwithstanding the College exercises claimed and received the attentions of parents and families as their first duty, yet the great tent of Mr. Wilson was completely full, and had it not been for these exercises, the citizens could and would have been disappointed in gaining admittance, as the tent would not have held them. As it was, they nearly all went over to San Jose, where, on Thursday afternoon and evening, two exhibitions were held to crammed audiences, showing how anxious people are to "see the Elephant." Mr. Wilson has "hit a lucky lead." Parents should go and take their families. It is truly worthy a visit. It shows that man indeed has power "over the beasts of the field."

**A GOOD IDEA.**—Carriages and wagons can be very much preserved, where they are placed under sheds, by having an awning of drilling to drop down before them, upon rollers; the cost being trifling. It permits the air to circulate freely, while closed doors would confine the hot air and cause the vehicle to dry and shrink very much, collect arrangement of this kind at the sheds and by Mr. Cameron.

## New York Wool Market.

NEW YORK, May 1, 1859.—We have to report a quiet market during April, especially so up to the 21st, at which date a large sale at auction of Foreign and Domestic Wools was announced. The sale, however, has been subject, and deservedly, to much censure; it was a decided failure. A small quantity only was offered, and that mostly bid in; the balance was withdrawn. In fact, the sale has had a bad effect on this month's business, and clearly proved that similar auctions will not do for a great market like this. Liberal auction sales only, will give satisfaction to both sellers and buyers.

Since the date above mentioned, there has been more doing, but at a decline from previous rates of about 5 to 10 per cent. Domestic fleece Wool will all be taken before the new clip, the stock of which being very light, the prices will not be much lower.

Pulled Wool is in better supply, yet there is little demand for it at even the reduced rates. California and Texas Wools have been selling freely at considerably lower prices, in consequence of the large stock in market and limited inquiry. Buyers of Wool in these States will do well to operate cautiously during the new clip.

The prospects of a war in Europe seem to have much influence in the Wool market there, and the prices of fine and medium Wool have receded somewhat. Should the war actually occur, it will be felt more and have its bearing on our market for Domestic Wool, the clip of which is fast approaching, and we have but little doubt that prices will not rule as high as the farmers have been expecting. The events of this year will cause some fluctuation, and therefore deserve attention.

Fine Foreign Wool has been but little sought for during April, and although the present stock is mostly of the new clip, and in good condition, the prices are from 5 to 10 per cent lower. There is a good supply compared to that of last winter. Low Foreign Wool remains about the same as before, so far as the stock is concerned, but prices are easier at least 5 per cent for desirable kinds, and from 5 to 10 per cent for neglected qualities. Trade being considered in a healthy state, and the importations of Wool not larger than necessary, we may look for a fair business during the next season.—[Tollkämpf & Kitching, Wool Brokers.]

We publish the above circular from a New York house, to show the market as represented there, although it is very indefinite, no quotations being given. To us it appears more like a document prepared to affect a market, than one intended to give correct information; it alludes particularly to California and Texas Wools. Now our State is not a shipper to so great a degree, as to materially affect a market like New York. The shipments from our State, though gradually increasing and soon to be important, cannot so materially affect the market where millions of pounds are so readily sold.

Again, we should differ most materially with those brokers in relation to the effect of war upon the wool market of the United States. We are large consumers beyond our productions; if there should be a general war in Europe, our wool market must advance most materially, as we are large importers from Europe, and the trade will be interrupted to a degree for a while. Our grain and flour market must also be made to feel the influence of the war spirit. We are for peace, however—permanent peace—world-wide—as we believe the world will prosper most under the reign of the Prince of Peace.

## New Publications.

Is the "blue and gold" edition of Percival's Poems, now nearly ready for publication by Ticknor & Fields, is the following acrostic sonnet on a renowned Boston lady, who, some thirty years ago, was known as "the beautiful Miss Marshall." It was first published in the United States Literary Gazette in the year 1825:

"Earth holds no fairer, lovelier one than thou,  
Maid of the laughing lip and frolic eye.  
Innocence sits upon thy open brow,  
Like a pure spirit in its native sky.  
If ever beauty stole the heart away,  
Enchantress, it would fly to meet thy smile;  
Moments would seem by thee a summer day,  
And all around thee an Elysian Isle.  
Roses are nothing to the maiden blush  
Sent o'er thy cheek's soft ivory; and night  
Has sought no tarding in its world of light,  
As the dark rays that from thy lashes gleam.  
Love lurks amid thy silken curls, and lies  
Like a keen archer in thy kindling eyes."

The London Illustrated News, edited by Dr. Mackay, says: "We predict a splendid success for Dr. C. Mackay's new work on America. There, if anywhere, do we find the grand old hyperbole realized: nations born in a day; and from the specimens of his work which we have seen, including many unpublished chapters on the social politics of the country, we know that Charles Mackay, the poet, the politician, the man of wide reading and large heart, will prove himself fully equal to the theme. The title of the book is apt, comprehensive and suggestive, and one which those who have ever tried their hands at a title, and received a publisher's letter of remonstrance, will fully appreciate: Life and Liberty in America. The double meaning and the alliteration make it perfect."

The Rev. Henry Ward Beecher is becoming a voluminous contributor to general literature as well as to the special department of pulpit eloquence. His publishers, Messrs. Derby & Jackson, announce a new volume of Star Papers, a volume entitled Plain and Pleasant Talk to Farmers and Gardeners; a volume of Sermons and a volume of his most popular lectures. Mr. Beecher is a man of unwarmed mental as well as physical activity, and what is still more remarkable, there is an undiminished freshness and interest in everything he writes.

A new and enlarged edition of Webster's Unabridged Dictionary, illustrated with fifteen hundred engravings, is now in press. The forthcoming edition also contains several thousand additional words, together with a copious table of synonyms by Prof. Goodrich, of Yale College.

ALLMORE'S Dictionary of English and American Authors has been received with very great favor by students on the other side of the water, as well as in this country. Lord Macaulay has written a most flattering note to the author, dated at Holly Lodge, Kensington, in which he says: "Since I wrote to you last [Jan. 29, 1859] I have had frequent occasion to consult your Dictionary, and I have scarcely failed to find what I sought. I have no hesitation in saying that it is far superior to any other work of the kind in our language. I heartily wish you success proportioned to the labor and cost of your undertaking."

In a few days, we are informed, the Rev. J. A. Benton and Edgar Mills, of Sacramento, together with several gentlemen of this city, will take their departure for a voyage to China, the East Indies, the Holy Land, and a general tour of the Continent of Europe. Their passage, with that view, has already been engaged in the clipper-ship Storm King.

## Floral Fair at Oakland.

On Tuesday next, the grand opening of the Floral Fair will show to the friends of this State what Oakland can do. A few days since we spent a few hours on that side of the Bay, and took a peep at the Pavilion preparing for the fair. It is a handsome and very appropriate building; and when arranged and filled, as it will undoubtedly be, it will present a very attractive appearance.

The whole surrounding scenery of Oakland: the beautiful ever-green oak knolls, dotted with handsome residences; the expansive Bay; and, added to these attractions, the crowd of happy visitors, will present a scene such as has never been seen on that side of the Bay before.

Visitors from all parts of the State can be sure of a hearty reception and a pleasant time, as we are assured that the officers of the Society, and the various committees on the occasion, will take especial pains to make all visitors enjoy themselves. We learn that the citizens generally will do their best to entertain such friends as honor them from abroad. We know, from personal knowledge, that the City Hotel will make all due preparation, and friend Murray (formerly of the Western Hotel, Marysville) will do his best to gratify all who may patronize the City Hotel. We know, too, that the Eagle Hotel will be ready, and friend Davis will also be prepared to answer all who call on him. Various Restaurants are making extensive preparations also, so that there will be no want of good things for the hungry ones who attend. We make these statements, so that all may feel satisfied that they will enjoy themselves.

It is to be hoped that the Press, everywhere, will take pleasure in calling public attention earnestly, and often, to this Festival—the first ever got up at this season of the year. We hope a generous public will duly appreciate and worthily sustain it.

## The Best Bread.

By reference to the list of premiums at the Floral Fair at Oakland, it will be observed that the article of Bread occupies a conspicuous place, as it very justly should. Bread is the "staff of life," and we hope the women of Oakland and vicinity, and also the women of San Francisco (in fact, mothers and daughters everywhere), will show what can be done in the way of Bread, in all its numerous varieties. The present Fair offers a fine opportunity for the skill of the housewives of this section of our State. There is much interest felt on this subject. Much will be expected, and we hope there will be no disappointment.

It is usual for such articles to be presented upon a given day, so that all may be fresh; and not knowing the wishes of other members of the committee, or of any devised plan, we would suggest that all the Bread be presented on Thursday, the 16th, and thus give all a just chance in the contest.

## Show of Strawberries.

Most undoubtedly the exhibition of Strawberries at the Floral Fair at Oakland, next week, will be the most splendid that was ever made in any part of the world. The finest specimens, the finest varieties and the finest collections, there will be, and their should be a noble strife for excellence. It is known that the largest Strawberries grown in the world are found at Oakland, and it is the very season for them, consequently we may expect such a display from the different growers as to astonish everybody. We hope exhibitors will take pains to show the different varieties in such a way as to have them known as distinct varieties. We hope also specimens of each variety grown will be exhibited by each and all the growers.

This exhibition is not confined to Oakland, or to that county, but is open to all competitors from every county, and we hope a general interest will be felt abroad.

**EXHIBITION OF ROSES.**—This is a season of Roses, and the approaching Floral Fair at Oakland will, undoubtedly, show some of the finest specimens of the Rose ever exhibited. We would urge upon our Florists, everywhere, to make this show one of interest and beauty. Amateur Florists should see what they can do. All contributions will help and add to the general appearance and success.

**HORTICULTURAL CURIOSITY.**—The Sacramento Bee says, that Mr. E. P. Whitcomb has growing in his Nursery, near that city, several apple trees, which were budded last September, and which were on Saturday last in full bloom. They have grown from six to eight inches in height, and the blossoms have formed on the upper extremity; i. e., the fruit is developed upon wood of the present season's growth, in a manner similar to the production of the grape. The stalks used to bud upon were derived from the seeds planted a year ago. Such are far more vigorous and healthy than those derived from pieces of roots, and have the effect to cause the bud or graft to bear young.

**A LARGE BUSINESS.**—Few persons are aware of the immense number of letters conveyed from Sacramento each week by the two express companies (says the Bee), being three times the number we presume that are sent through the mail, excepting steamer letters. Wells, Fargo & Co. and Freeman & Co. sell weekly twenty-five hundred envelopes with their stamps upon them, most of which, of course, are to business men, for which they receive on an average ten dollars per hundred. This makes a total of \$250 per week paid by our merchants for express letters. Last week, Freeman & Co. had printed the names of the merchants who use most of their envelopes, and in one day sold four thousand of them. If all these letters were to go through the mail, it would swell the Post Office business considerably, although it would add nothing to the revenues, as the Express envelopes have each Government stamps on them, although they are possibly not purchased at the Sacramento office.

**NEW KIND OF FENCE.**—Mr. Samuel Davis has left at our office, for inspection, the model of Messrs. A. B. & M. Vandemark's Reversible Looking Portable Field Fence. It is an admirable invention, and the very thing suitable for those in want of a cheap and durable inclosure. We have no room this week to describe it, and must therefore defer till our next. The public are invited to call and see it. Mr. Davis is the agent for California.

## Public Examination Exercises at the University of the Pacific.

This most excellent institution at Santa Clara, has just completed the various exercises connected with this College, both in the male and female departments. The whole series of exercises were of a highly interesting character. The examination of the pupils in the several departments, preparatory to their advancement into higher classes, gave evidence of close and well directed study. These very interesting exercises at the college, drew together at Santa Clara a very large assemblage from various parts of the State, and afforded an evidence of the abiding interest now felt by all in our institutions of learning.

On Tuesday afternoon, at 2 p. m., an exhibition of the students of the Female Department was held at the rooms. The following was the order of exercises:

Opening prayer, by Rev. Dr. Peck.  
Music on the Piano.  
Salutatory, by Miss Paine—a very pleasing essay, which we shall publish.  
Song by the School—"God speed the right,"—sung with fine effect.  
Music, by the Professor.  
Essay—"Silent Influences,"—will appear in our columns.  
Music—(by a self-taught artist)—very well executed, and most creditably.  
Essay—"Works of Nature," by Miss Laird.  
Another Essay—by Misses Garside and Laird.  
Valedictory, by Miss Garside.  
Music.

About five hundred persons were in attendance, completely filling the rooms, while many were unable to gain admittance. The exhibition gave great satisfaction to parents and friends, and all present, and was highly creditable to the college. It was particularly noticed, that all the young gentlemen of the place were in attendance; this showed their excellent taste, and they made generous offerings to the pupils of fragrant roses, which completely covered the platform; a most appropriate, as well as a beautiful tribute.

Diplomas, conferring the degree of Mistress of the Sciences, were awarded to Miss Garside and Miss Laird; thus, we have evidence of the advance of due honors on worthy scholars.

On Tuesday evening, the Archanian Society held their Fifth Anniversary, at their rooms. The following is the order of exercises:

Prayer—Music.  
Influence of Oratory; J. A. Ellet. An oration of high order, and delivered in the best style, and with great power.  
Archanian Clarion; by W. F. Hughes; read in the very best style.  
Music.  
Position and Duties of American Youth; G. C. Dean. Excellent.  
Music.  
Duties of the Statesman; T. A. Coldwell. A very fine Essay.  
Music.  
Political Parties; W. F. Hughes. A very excellent Essay, containing many happy hits.  
Archanian Clarion; read by J. A. Ellet. The Clarion is a Journal or literary newspaper of this Society, and contains many gems.

Progress of Mankind; A. E. Pomeroy. One of the finest orations, full of splendid thoughts, well delivered, and receiving much applause.  
Music.

The whole exhibition was really a manifestation of true scholarship. The Essays by the young gentlemen were of a very high order, and reflected great honor upon the institution and themselves; as we shall have the pleasure of publishing several of them, we shall speak more fully of each, hereafter. The Archanian Society is a Literary Club, composed of the students, for debates, declamation, &c., and in very prosperous condition.

On Wednesday were the Commencement exercises of the College. These were held in the beautiful willow grove of Mr. Cook, a mile or more from the college, on the Almaden road. It was indeed a rural spot, completely embowered with willows.

A procession was formed at the college in the morning, at 9 A. M., and marched to the grove, preceded by a band of music; a very large attendance of the citizens, showed the deep interest thus felt in the cause of education.

The following was the order of exercises:  
Prayer, by the President.  
Music, by the band.

Salutatory—by Charles N. Senter. This was a very splendid effort, delivered in a clear, distinct voice, well modulated, full of feeling, and with fine effect, and received with warm approbation.

Dissertation—"Ambition;" George W. Blackford. This was indeed an eloquent dissertation; the theme was full of inspiration—the speaker felt it, and his delivery was full of impassioned eloquence; his manner was faultless—his gestures in keeping with his voice; he presented the true picture of his theme by his admirable style of delivery, and received his well-earned meed of praise from the auditors—their warm approval.

Degrees conferred.—The graduating class were George W. Blackford, Charles N. Senter, and Chas. S. Smyth; each of whom received their diplomas from the President.

Valedictory Oration; Charles S. Smyth. This oration occupied about three quarters of an hour; it was most happy and appropriate, and full of beautiful thoughts, delivered in a clear, distinct voice, from memory. Its length proved the ripe scholar.

Baccalaureate Address—by the President. This was one of the most earnest and most excellent addresses we have ever listened to; full of great truths, wholesome counsels to the student; abounding in good things. As it will appear in print, we can only say it will confer honor upon the author, and upon the institution over which he so ably presides.

The benediction followed, which closed the exercises of one of the largest assemblies that has ever met in this section of the country, who proved the deep interest of the occasion by their deep and earnest attention for more than three hours, which is the highest proof of the merit of the exercises. Another exhibition connected with this Institute was the exhibition of the final exercises of the young ladies on Wednesday evening. The entire school of young ladies was assembled at the room at 8 P. M. The following were the exercises: Singing by the whole school (well performed under their professor).  
Prayer by the Rev. Mr. Phillips.

Then followed a series of recitations, songs, dialogues and musical performances of a most interesting character, highly creditable to all connected. Many of the youngest performed their parts most creditably. Where all did well it would not be just to discriminate. For more than two hours an audience of about six hundred, closely crowded, a hundred or more standing, showed their interest to the last, and although the Elephants were exhibited near by, the hall was filled to its utmost, and hundreds were obliged to leave. During the recitations of the young ladies they were greeted with showers of the most fragrant roses, that filled the hall with their fragrance. There were many strangers from abroad, several distinguished clergymen and others, who were highly pleased with the complete success of this now fairly established institution. We tender our thanks to all the faculty and others from whom we received many courtesies, and we are most truly glad to record the complete success of such valuable institutions of learning in our midst. This College deserves marked attention from parents everywhere, and we have no doubt it will receive a new impetus from the present moment. We wish it the most unbounded success.

**THE MISSING SHIP.**—The ship Manitou, Capt. Honeywell, which sailed from New York, Oct. 23, is now 229 days out, and may be safely reckoned as lost. Her fate will probably never be known till the sea gives up its dead. The bark Fanny S. Perley, Capt. York, from New York, is now 191 days out, having sailed on the first December. Though long over her time, she is not given up. The season off Cape Horn has been unusually stormy. Nearly every ship arriving here bears the marks of the hard usage she received in those inhospitable latitudes. It is not unlikely that some disaster has happened on the Patagonian coast to a California bound ship. The fact which we noticed some time since, of persons on the shore of the cape signaling to the Queen of the Seas as she passed the Straits of Le Maire, may have some bearing on this. A boat was sent on shore, but the officer saw only savages on the beach, whose hostile appearance prevented his landing. The great quantity of floating candles passed by Capt. Mitchell, in the ship Hornet, on the 21st of March, is also an evidence that some disaster had then recently occurred to a ship with a California, or, at least, an assorted cargo. The truth, however, will probably never be ascertained.

**ANOTHER FEATURE.**—We understand, says the Morning Call, that arrangements have been perfected with the steamship agents by the State Telegraph Company, to land a package of the latest papers by each steamer at Monterey, as soon as telegraphic communication will have been had with that point. The news will then be telegraphed to this city, reaching here some ten hours in advance of the arrival of the steamer. If the steamer should chance to make the Heads during a foggy night, the difference would be several hours greater. This arrangement will not interfere with the time of the steamers, as the papers will be sealed in a water-tight box, and when opposite Monterey, thrown overboard. The box will then be picked up by boats from the shore. Every day the enterprise of our citizens is originating something new to annihilate time, and place the reading community in earlier possession of the news of the world.

**MIXING THE COLOR.**—A singular case of amalgamation came up before Judge Coon's Court on Wednesday morning last, which, in its details, is rather too disgusting for publication. A white woman, about thirty years of age, was charged with a misdemeanor by creating a disturbance in the public streets, and assaulting a negro woman. It appeared upon examination before the court, that the white woman is married to a negro, by whom she has one child. The husband is unfaithful, or at least the wife suspects him of infidelity, and is as jealous as Othello, the "Negro of Venice." On Tuesday, she saw her sable lord talking in the street to a woman of his own color, for whom the wife accused him of having a tender hankering. The wife grew furious, and raised the neighborhood with her cries and curses. She was ordered to appear for sentence.

The New York Times of the 13th May, says it is currently rumored, on apparently good authority, that a reorganization of the United States Mail line on the Atlantic side is about to take place, with a view to a weekly service, for the accommodation of freight, passengers and treasure, and the mails to and from California in alliance with the Pacific Mail Company. The two concerns to purchase the steamship property of Vanderbilt, and he to retain an increased interest in the Atlantic Company.

The heaviest amount of treasure shipped this season was by the Golden Age, on Monday last—being no less a sum than \$2,375,277 31. Surely the gold fields of California exhibit no signs of that exhaustion so frequently foreboded. It is, however, a matter of regret that so much of it should go abroad for what we could as well produce ourselves, or better do without altogether, when it might be so beneficially devoted to the development of other branches of industry amongst ourselves.

**SCIENTIFIC AMERICAN.**—The "Scientific American" on the 1st of July is to be enlarged and generally improved, and is calculated to be the same size and contain as much reading matter as the largest five dollar English journals of the same kind. The price of this periodical will continue as formerly, \$2 per annum. J. Q. A. Warren, No. 149 Clay street, is the authorized agent for California.

It is certainly a source of much gratification to the lovers of delicious fruit, and their name is legion, to find that never in the history of San Francisco was it so abundant, and so cheap, as at the present time. The different fruit stalls are pictures of enchanting beauty, perfect studies; and the most ravishing of strawberries, food for the gods, are marked at one bit a pound.

**ESCALAPIAN WAR.**—The Grand Jury have indicted Dr. David Wooster for perjury; the witnesses named on the indictment are Doctors Isaac Rowell, B. A. Sheldon, and C. S. Cooper, Messrs. Jacob Keomel and W. H. Oliver, J. P. The perjury is alleged to have been committed on the trial of E. P. Hodges vs. Doctor C. P. Cooper, for alleged mal-practice.

**PETITION IN FAVOR OF WAPPNER.**—For several days past, a petition has been circulating through the city for signers, requesting the Governor to exercise his executive clemency, and commute the sentence of Henry Wappner (who is to be executed on the 17th inst.), to imprisonment for life.

**ACTION TO RECOVER BACK STAMP TAXES.**—Grooby & Dibles have sued W. H. Tillinghast, City and County Treasurer, in the Fourth District Court, to recover back \$1,849 paid for stamp dues on bills of lading.

## DOMESTIC SUMMARY.

The thermometer at 5 o'clock, p. m., on Wednesday, at Stockton, stood at 90° in the shade.

The amount of cash in the State Treasury, at the close of business on Saturday, June 5th, was \$100,597.32.

The first six male teams which have reached Downsville this season, arrived from Marysville on Wednesday of last week.

A new hay baling machine, at work on the Calaveras, turned out on Saturday last, it is said, three hundred and fifteen bales, weighing twenty tons!

A PROLIFIC cow, even in this prolific State, is that of Mr. Boynton, of Columbia, Tuolumne county. A few days ago she bore, at one birth, four calves! Last year the same cow had three at one birth.

At Benicia, June 7th, a fire destroyed the buildings known as the Bella Union, the El Dorado, and the house of Mr. Birch. It was with the greatest difficulty the town was saved.

A new stage line between Martinez and Oakland has been started, by Messrs. Mett & Co., passing through Rodeo Valley, Pinole and San Pablo. A very pleasant route.

The Jewish Synagogue, at Sacramento, on Seventh street, between L and M, was consecrated last Sunday afternoon, in presence of a large concourse of persons, the building being thronged to its utmost capacity.

The Folsom Express says, that the Granite Quarries in that vicinity are being actively worked. Twenty to thirty tons a day of granite blocks are sent to Fort Point fortifications, and also to Suisun, where they are building a jail and Court House.

The State Treasurer has drawn his warrant for \$136,500, to pay the semi-annual interest, due July 1st, on the State bonds. This leaves \$12,723.36 interest money in the Treasury on the 1st of July, with which to redeem State bonds.

In Santa Cruz county, says the Sentinel of the 28th ult., the crops are more than usually good. Many farmers have commenced harvesting hay and barley. The wheat fields have generally headed out, and indicate a healthy and abundant yield.

A line of stages is soon to be placed on the road between San Diego and Los Angeles, the necessity of which has long been felt, and will give facilities for visiting the mineral springs of San Juan, which are attracting the attention of invalids.

The hay in San Mateo county this season, says the Gazette, is unusually good. The rains, which have, to a greater or lesser extent, injured the hay in late years, have not fallen this season in sufficient quantity to do any damage whatever.

The farmers in Sonoma county are actively engaged in harvesting their hay, says the Petaluma Journal of the 5th. As a general rule, the yield per acre is light, but men on whose judgment we rely, assure us that the amount harvested will be equal to that of the previous years.

Rev. Mr. Benton preached his farewell sermon last Sunday evening, to one of the largest audiences ever assembled within the walls of the church, at Sacramento, and it was listened to with profound attention and respect by all. There is much regret at his departure, although his absence is to be but temporary.

In Los Angeles, Mr. Gabriel Allen, who sowed about 350 acres of wheat and barley, informs the Vineyard, that, although some parts of his fields are an entire failure, other parts will give a fair harvest. He is now, June 3, engaged in gathering his crop, and will make about 2,500 bushels of wheat, of most superior quality, and nearly 100,000 pounds of barley.

Owing to the scarcity of pasture on the island of Santa Rosa, the Vineyard learns that the stock of cattle now on that island are to be moved to the main land. There are about 8000 head of horn cattle and 4000 sheep, which are to be landed at the rancho of Los Peablos. Capt. Barclay has contracted to take them off, and will use a steamer for that purpose.

The Southern Vineyard is informed that the Overland Mail Company will transfer their stages from the Tulare valley to the Santa Barbara and coast route, if a good stage road shall be constructed. This will be of great importance to the good people of San Luis Obispo. It will place them in frequent communication with the outside world, from which they are now almost excluded.

At a meeting of the citizens of Auburn, Placer county, held for the purpose of taking measures for the construction of a Railroad from Auburn to Folsom, to connect with Sacramento, a committee was appointed, who have since reported in favor of the organization of a company with a capital stock of \$350,000, to be issued in shares of \$100 each, so that it will be within the reach of any man to take stock who desires to do so. The committee estimate that \$350,000 per annum is paid to teamsters in Placer county for freight.

Into the San Joaquin country the trips of the steamer Henrietta, to and from Fresno City, are now performed with the utmost regularity, the steamer leaving Stockton every Tuesday and returning by Sunday. The Republican says: It generally takes inside of twenty-four hours to run down. The country on each side of the San Joaquin is overwooded for many miles, and the river and its tributaries are still rapidly rising. It is declared to be the heaviest overflow since 1852. The country in that section will be rather benefited than injured by the flood. The Henrietta left on this week's trip with a full freight. She brings down several tons of wool each trip. Several ladies visited the Tulare country on the last trip, and were much pleased with their excursion. It is a pleasant way of getting to Visalia, or to any place in that vicinity.

The new side-wheel steamer, intended for the Petaluma and San Francisco trade, the keel of which was laid in February last, at Steamboat Point, San Francisco, we learn, says the Petaluma Journal, is nearly completed, and will probably commence her trips about the middle of the present month. This boat has been constructed with a view of running to town, instead of landing at Rudestills. Her dimensions, as given by the newspapers, are one hundred and fifteen feet long, with twenty feet beam, and eighteen inch draft; high pressure engine. She has two handsomely finished cabins, the upper saloon has fourteen spacious state-rooms, besides a bar-room and clerk's office. We learn that several of the principal fruit growers and farmers of Sonoma Valley have avowed their determination of having steam communication between there and San Francisco. Last year they say they lost enough by injury to fruit shipped on salt vessels, in consequence of the natural delays, to pay the expense of running a small steamer during the fruit season. Here, then, is an opening to steamboat owners wishing to find employment.

## Execution of "Tipperary Bill."

At forty minutes past 12 o'clock, to-day (10th), the sentence of the law went into effect on this noted individual. By invitation of sheriff Deane, we attended. At half-past one, the prisoner ascended the scaffold, which was erected in the yard of the County Jail, accompanied by his confessor, the Rev. Father Magnoletto and Morris, and the sheriff's officers. He was very calm and firm, betraying neither fear nor bravado. About one hundred persons were present. After hearing the death-warrant read, he stepped forward, and in a loud and distinct voice, addressed the assembly as follows:

"Gentlemen, I want you to understand, that I have left neither an oral or written confession; I have none to make. I forgive every one in this world, as I hope to be forgiven. I freely offer up my life as an atonement for the past. God bless you all—farewell!"

He then knelt down and made a short prayer, after which, the rope was adjusted round his neck, his arms and legs fastened, and William Morris, alias "Tipperary Bill," was launched into "that sleep which knows no waking." Good order was preserved throughout. The Independent National Guards, Capt. J. B. Moore, were in attendance.

FOR THE EAST.—The steamer Golden Age carried off, on Monday 5th inst., 743 passengers, of whom 18 went by the way of Tehuantepec. The Oriaba carried off 825—in all, 1,568 in one day. Wells, Fargo & Co., remitted \$100,000 in U. S. transfer drafts.

FIRE IN SAN FRANCISCO.—On Tuesday morning, about three o'clock, a fire broke out in a building on the east side of Kearny street, between Jackson and Pacific, partially destroying five other houses. Damage, \$3,500. The fire originated in the restaurant of Frank Williams.

The rates of passage by the mail steamer on the 5th inst., were \$175 for upper saloon, \$150 for first cabin, \$90 for second cabin, and \$40 for steerage. The opposition, for first cabin \$150, second cabin \$100, steerage \$50. Both steamers were full at the time of sailing.

SUITS AGAINST PAGE, BACON & CO.—Robert and Wm. Gunn have commenced a suit against Page, Bacon & Co., in the Twelfth District Court, on a certificate of \$750.

## SPECIAL NOTICES.

SWARMS OF BEES.—Very full and excellent Swarms of Bees, now ready for delivery, can be had on application at the Office of the FARMER. These swarms are of a very extra quality, and such are not to be had very often. Persons in want of Bees will do well to make early application, as good swarms are not plenty.

## To Nurserymen.

We would call the attention of Nurserymen and others in California and Oregon, who purpose to plant largely, to our

California Wholesale Catalogue, No. 6, for 1859, which will be published on the 15th of June. This Catalogue will give the prices and description of

Seedling Apple, Pear, Cherry and Plum, as well as

QUINCE AND MAHALEB STOCKS, which we can furnish in any quantity. Also,

STANDARD AND DWARF Fruit Trees in bud, or one year from bud or graft.

## SMALL FRUITS

In great variety, as well as an extensive stock of

ORNAMENTAL TREES, SHRUBS, ROSES, BULBS, HERBACEOUS PLANTS, ETC.,

of small size, suitable for transplanting. For further information concerning our stock, etc., would refer parties to our general advertisement in another portion of this journal.

The above Catalogue will be mailed FREE, upon application, as well as our more general Catalogues Nos. 1, 2, 3, 4, and 5.

A. FROST & CO., Proprietors of the Genesee Valley Nurseries, ROCHESTER, New York.

The Ladies' Electro-Chemical Baths.—Exactly so—as a suite of Baths, with a well furnished reception room, has been assigned exclusively to the ladies who patronize the institution, by Dr. BOVANE, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A kind, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as aids to cure neuralgia, rheumatism, and the other "ails that flesh is heir to," as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than "sugar-coated pills," and how much better, those who most truly tell who have "thrown physic to the dogs," and cleave to those health-giving baths.

MRS. P. E. ROGERS—Family Sewing.—We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again renewed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 115 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

THE GENUINE PITTS' MACHINE. T. OGG SHAW'S, is the ONLY place where the Genuine PITTS' MACHINE, made by John A. Pitts, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufacturing, corner of Davis and Sacramento streets. [13] T. OGG SHAW.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as an infallible remedy for the cure of Croup, Cold, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it were a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appreciating in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED! The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight cold or a confirmed Consumption, and its power as a sedative, expectorant, and general restorative cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "L. RUTTER" on the wrapper, as well as the printed name of the proprietors.

SETH W. FOWLE & CO., Proprietors, 18 Tremont street (Massachusetts Building), Boston, Mass. For sale by—JAMES MORRILL, HENRY JOHNSON & CO., and J. H. McDONALD & CO., San Francisco; O. H. MOORE & CO., Sacramento; and by all good dealers in medicine every where.

GOOD BREAD.—Who does not like good sweet bread? What kind of food of more consequence in a family? What housewife does not always feel proud, as she places good clear baked wheaten loaves before her family? and the reverse—who does not turn away from dark, heavy and unsightly balls of what is denominated bread? Dyspepsia, night-mare, sleep-walking, and all the horrors of undigested food, lurk around those who swallow down the half-made, half-cooked bread; and then the ill-humor and fretfulness resulting from this most unfortunate of all evils in household economy. And all this for want of care and attention to ingredients, and the putting together.

Now California can boast of as good wheat as all the world can produce, and our grocers have all the needed little fixings, and recently, Messrs. J. D. Wink & Co., have offered to the California public a new ingredient for Yeast Powders, to which we would call attention, and also other Family articles, which we shall be glad to know, prove what they should be—excellent. See advertisement.

L. E. GOULD'S NURSERY.—A pleasant visit at the Nursery of this gentleman at Santa Clara, shows what can be done by steady perseverance: a very prosperous orchard, well established, besides a good grain farm. We noticed also a very fine vineyard, of which we shall speak hereafter.

GOPIER AND CORN.—H. B. G. writes us: "To prevent the gopher pulling corn, hang the seed up and smoke. This is an Indian rule, and some of my friends have tried it, and say you can rely on it." All right, try it, and report friends.

## Dr. Frank G. Johnson's SELF-REGULATING WINDMILL.

MANUFACTURED AT THE Empire and Keystone Ironworks, D. VAN PELT, Proprietor, Nos. 90 and 92 Bush street, San Francisco, Where all kinds of

IRON SHUTTERS, VAULTS, SAFES, And every description of HOUSE WORK, are executed.

THIS MILL is the PERFECTION of Windmills, and is the only one that is really Self-Regulating and Self-Protecting, where all the power revolves upon the arms and turns edgewise to the wind when a sudden gale strikes it, thereby turning off its own power, when too great; and it is so manageable that it can be stopped in a moment, when desired, by a lever on the stop-wheel, which stops it at once, by turning the fans edge to the wind. By releasing the lever pressure, the Mill immediately resumes its work; and, in short, it is stopped and put in motion as readily as a steam-engine.

All those intending using a Windmill should not fail calling at the Manufacturing and Depot, and examine the Mechanical principles, upon which reliance is had for their superiority over all other Mills known.

These Mills are made wholly of Iron and Steel (except the Fans of the arms) and, with the improvements made by the undersigned, in its construction, it is the strongest and most durable Windmill in the world. The undersigned having purchased the exclusive right of this State for the manufacture of these Mills, has much reduced the price, so that it is now the cheapest Windmill made within the State, and at the same time, it is more powerful, durable, and stronger, than any other known. The various sizes are made and kept on hand at the Manufacturing, and for sale; and will be shown to those desirous of examining them with a view of procuring the best. They need only to be seen and examined to be approved and appreciated.

## The Cheapest and Best Windmill of the Age.

The prices, at the Depot, for those adapted to Agricultural and Mechanical purposes, are the following:

8 feet 1/2 Horse-power, to 1 1/2 horse-power, \$145

10 " 3/4 " do " 2 " do " \$200

12 " 1 " do " 3 " do " \$240

14 " 1 1/4 " do " 4 " do " \$275

Farmers, Mechanics, and Miners, should examine it, for it is the very article they need to make their business profitable; with proper gearing this Windmill can be used wherever power is required, as any amount of power can be obtained by its use. Once erected there is no expense required to keep it in operation, and at all times manageable; a child can work it as it is so easily controlled. Those needing such power will please call and examine. It will only be examined to be approved and appreciated.

D. VAN PELT, Depot and Manufacturing, Nos. 90 and 92 Bush street, between Kearny & Montgomery, San Francisco.

RICE AND CORN DRILLS, THRESHING MACHINERY, Wheat and Rice CRADLES, our celebrated two and four knife Cylindrical Straw and Powder Cutters, Corn and Cob Crushers, Plantation Mills, Flows, Cultivators, etc. For other implements, see our Descriptive and Illustrative Catalogue, to be had gratuitously, on application.

Planters wishing to procure supplies of greater strength and capacity than the local ones afford, we will examine our stock. ROBERT SINCLAIR & CO., 10 3/4

## THE APIARIST.

The undersigned, Agent for the sale of the Hayblossom Bee Hive, would like this means of informing the citizens of Santa Clara Valley, that he is prepared to Sell Rights to persons to use this very best Hive. He is also prepared to give full and complete directions relative to the care of Bees and the use of these Hives.

Having given much study to the nature and habits of the Bee, he is able to give such directions for their care, and their propagation, as will be of great service to the grower of Bees.

The undersigned will visit, professionally, all who desire his aid in this County. Hives for Sale.

H. HAMILTON, near the College, Santa Clara, Santa Clara county.

## UNION HOTEL, SANTA CLARA, CAL.

JOHN H. CAMERON, Proprietor.

VISITORS to this Great Valley will find this House what the Traveler so much needs, a comfortable Home, as well as a General HOTEL and stage House. The Table is supplied with the very best markets afford, in all seasons. Every attention has been given to have the Bed Rooms and Apartments prepared for the convenience and comfort of all the patrons of the House. Santa Clara is a great center of travel: to the Springs, the Quicksilver Mines, and the Institutions of Learning near by. Stage Coaches stop at this House. Good stables, connected with this Hotel, furnish Carriage and Saddle Horses, Carriages, etc., and take the very best care of all kinds of Stock. Families, and all Travelers, will find this Hotel a pleasant place for a Summer Retreat. A share of patronage is respectfully solicited.

## SOLOMON'S TEMPLE.

This Magnificent Work of Art, NOW COMPLETED

According to the most perfect style of architecture, as described in Sacred History, will be opened for the approval of the public, on MONDAY EVENING, MAY 30th, AT 8 O'CLOCK.

The proprietors believe they can claim from the public their deserved approval and support. When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement, have been determined that it should be completed whatever the amount of labor it should require, or the cost it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

EXHIBITED IN THE PAVILION Recently occupied by the MECHANIC'S INSTITUTE, On Montgomery street, near Market street. The whole interior of the Pavilion has been handsomely fitted up with SKETCHES OF THE HOLY LAND which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate hand-bills describing minutely this temple. Suffice it to say that all and

EVERYTHING RECORDED IN THE BIBLE will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. Sluohour, as master builder, competent artists for carved work, A. Motie glider and finisher, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows: Season Tickets admitting a gentleman and lady... \$5 00 Single Tickets... 50 Children under 12 years, half price.

The Pavilion will be open from 10 o'clock A. M. till 10 o'clock P. M. P. S.—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Byrne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions. 17-3m MRS. C. SHADE, Proprietress.

## THRASHING MACHINES, HALL &amp; WOODBURY'S SEPARATORS, With Hall's Improved 10-Horse IRON-POWER.

## Table and Pocket Cutlery.

THOMAS DAY, No. 188 Montgomery Street, San Francisco,

HAS ON HAND, a large assortment of FINE IVORY TABLE CUTLERY; also common Table Cutlery with Coarse Tip, Bone and Steel Handles, etc., suitable for the country trade. POCKET CUTLERY—Pruning, Bunting, and Grafting Knives; also Bowie Knives, etc.; received by every steamer, of Wostenholm & Sons, Alexander's, and Edward Barnes & Sons, Sheffield.

For sale, wholesale. 23-3m

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, in the white-washing of an unprincipled committee at Marysville, notwithstanding; the plains of whose lands, I presume, were peculiarly sensitive to the touch of "vapor."

My Ambrotypes were not exhibited at the last Fair in this city. Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE, Corner Montgomery and Sacramento streets.

## Greatest Labor-Saving Machines of the Age!

CALIFORNIA INVENTIONS!

PECK'S SANTA CLARA HEADER AND HARVESTER!!

THE UNDERSIGNED HAVE PURCHASED OF

Edmund Peck,

All his right title and interest in and to his newly-invented PATENT HEADER AND HARVESTER, to which was awarded, at the County Fair, held at San Jose, September, 1858, the FIRST PREMIUM, over the Illinois (or Haines) Harvester, and all other Machines on exhibition. We shall manufacture for the present harvest 500 Machines of the above description, and are ready to receive orders for the same. Parties wishing to purchase Clippers or Headers, will please give us their orders. We desire making the best Machines of the kind ever offered to the public. This Machine combines many useful improvements, and was pronounced by the Committee the greatest invention of the kind. One of the above machines cut, last season, over ONE THOUSAND ACRES OF GRAIN, and the expense of repairs did not exceed TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it cannot fail to take the place of all other machines of the kind. Mr. Peck has displayed great ingenuity and skill in the advantages of which every farmer should avail himself, and we believe the community at large will be much benefited. We have already received, through Mr. Peck, from those who saw them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in THREE DAYS, one machine cut over FORTY ACRES OF GRAIN, which is more than has ever before been cut, in the State of California, by one machine, in the same time.

Send in your orders. We mean what we say. Recollect the place: 33 Sacramento street. THOS. OGG SHAW, GEO. H. MONROE.

The advantages we claim the Peck Header or Harvester possess over any other MACHINE of the kind in the State, are:

- 1st. Its being a California invention, and got up by a practical farmer, and well adapted to the wants of this country. The wheels of this machine being iron, and not liable to shrink or swell.
- 2d. It is the principle of raising or lowering. As the machine is evenly balanced, a child can raise and lower it with perfect ease while in operation, requiring no delay.
- 3d. It cuts as low as any other, or in use, and can be raised to a height of three feet, in one minute.
- 4th. It is the manner in which the machine is guided, it being so constructed that a boy of ten years can guide it.
- 5th. It has no side draft, as both wheels are of a size, and the weight is equally divided.
- 6th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.
- 7th. It takes less team to propel it.
- 8th. It is more simple and is easily understood.
- 9th. More substantial and less liable to get out of order.
- 10th. We can cut and stack with this machine, grain in good condition, for \$2 50 per acre, while in the old manner of cutting, it costs at least \$5 00; leaving you to judge as to the saving this machine has over any other.
- 11th. This machine is so constructed as to save all the grain.
- 12th. You can cut with four horses, from twenty to thirty acres per day.
- 13th. The greatest advantage of all is, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

## Report of the Committee on Reapers, Mowers, and Thrashers.

The Committee appointed to examine and report upon Reapers, Thrashers, and Mowers, and Agricultural Implements, report that they have examined the GRAIN CLIPPER INVENTED BY MR. E. PECK, of Santa Clara county, called "Peck's California Clipper," and saw it operating in grain fields. The machine cuts a swath nine feet four inches in width, has an apron or elevator the width of the length of the knife, which carries up an angle of about forty-five degrees the grain cut off, and throws it into another apron or elevator about two feet wide, and running at right angles to the first elevator, and drops the grain into a wagon that runs alongside the Clipper to receive it. The Clipper requires four horses to propel it, and one man to direct it, and three wagons to receive and haul away the grain, and a driver for each wagon to unload it, and a hand to load the grain in the wagon while it receives it from the Clipper, requiring only five hands in all. It will cut and stack TWENTY-FIVE ACRES A DAY, when the grain stands up.

It is a reel, and will gather grain well, even if it incline to an angle of forty-five degrees in an opposite direction from which the machine is moving. It will cut within three inches of the ground or three feet high, and can be elevated or lowered instantly and without stopping the team, and gathers the grain so closely and perfectly that it scarcely leaves a head in the ground. The machine runs on two main wheels, one of which has a cog wheel fastened into the spokes about midway between the rim and the hub. One wheel drives the elevators and reel, and the other the sickle. The machine is of the most simple construction, and one examining it will see the way such an invention has not long ago been in use. We do not hesitate to say that this machine EXCELS ALL OTHERS greatly in simplicity of construction, in being less liable to get out of order, in durability, in ease in operation, in the quantity of grain it will cut, and the excellent manner in which it performs its work.

In plain truth, in the judgment of the Committee, it is the best machine for farm use ever invented, and as it was invented by one of our own citizens, we recommend that it be called "Peck's Santa Clara County Grain Clipper."

We recommend a first premium to be awarded to Mr. E. Peck, for his Santa Clara County Grain Clipper. F. D. MURDOCK, Ch. Committee.

## Ladies' Department.

## HER WAYS.

BY CHARLES MACKAY.

When there is something to be said,  
In pleasure or in pain,  
To brighten joy, like sunlight shed,  
Or dry affliction's rain;  
When she'd console, rebuke, control,  
With "yes," or "no," as clear—  
She's such a way of saying it,  
'Tis pleasantness to hear.

And when there's something to be done  
At need's or duty's call,  
A courtesy, a charity,  
A kindness, great or small,  
Or daily grief that seeks relief—  
Whate'er the action be—  
She's such a way of doing it,  
She wins all hearts to see.

But saying, doing, night or day,  
'Tis difficult to tell  
The sweetest grace, of mind or face,  
That marks her to excel.  
She seldom breathes the love I crave,  
But robed in light divine,  
She's such a way of looking it,  
As proves her to be mine.

[For the California Farmer.]

## Woman—Her Position.

EDITOR FARMER: Your correspondent, 'Alabama,' comes forth in an article which teems with wholesome truths on the subject that we have been advocating right earnestly. How very refreshing it is to an earnest soul to be permitted thus to respond and breathe forth, from soul to soul, the convictions of each other, as your correspondents are allowed to do. Truly has Alabama come forth as one to whose soul's vision such doctrine, as had been at different times and by different individuals advocated, was in union. She seems to have taken a full view of the soul's progressive journeying toward that perfection of a full development of all its manifold powers for preservation, advancement, and exaltation, after an experience gained only by those who labor to obtain it, in time or in eternity. The preservation, the exaltation, the experience, which enables a woman to be independent—claiming from the world the right to labor, and claiming also for herself consideration, because she possesses heroic virtue, moral, soul-courage to labor where, and when, it is despised by so many of her sex; and those who must have recourse to it for subsistence are looked upon as inferior to those who are too important, from wealth or pride, to think of stooping to work. Such know not half the joys of life; such know but little of the soul-filling, the high destiny of an immortal human mind, going forth from conquering upon conquest, in the performance of life's duties, and, if overtaken by poverty, having within itself the power to overcome want, and laugh at reverses, by the work of her own hand and head to shut out poverty; instead of sitting down, with a pair of delicate white hands, and crying, in anguish: "O, I was not brought up to work! I never knew anything of labor of any kind! My parents were wealthy; and I cannot bear the thought of such a terrible calamity as this!"

Now, I wish to say to Alabama, that a true woman may, and often does, have to struggle painfully in silence with herself, when she is thus brought to an emergency, but she will go to work in right good earnest, and turn poverty out of her house, with all its sickly sentimental attendants, and cultivate an intimate, every day acquaintance with honorable labor; and good, sound common sense tells her she will not regard what others may think, or say, of one who is thus living in accordance with a Divine law of our being and well being. It is this consciousness in the soul, uniting with the principles of love, that has enabled woman, in many instances, to perform that which seemed to be almost beyond the power of mortal to accomplish of human labor and human suffering, for the objects of her affection, when reduced to utter destitution.

Why not toll a moderate amount, wisely, and prevent the circumstance of poverty ever overtaking us, to crush the noble aspirations of the soul; for, I hold that the circumstance of poverty is as midday upon the mind: it often leads the individual to a course of crime, which at last produces an entire paralysis of all the most noble qualities of the soul, reducing the God-given, God-like faculties of the human being to a level with the animal. And, unfortunately, our present systems of education foster this evil, by inculcating that which is fashionable and genteel; the intellect is forced, becomes prematurely active, the passions smothered, not governed, contracted, but not controlled; while the affections and the moral attributes of the child, be it of either sex, are daily growing to a greater and greater weakness. They grow up, and come forth, as intellectual, passionate men and women, versed in every species of expediency, to glitter before the balance of creation, possessed of what is considered a fashionable education, with splendid accomplishments; while, of all that part of education that goes to make them useful members of society and help to produce or maintain human happiness, they are altogether ignorant, and, in reference to which, there is exhibited an indifference somewhat akin to contempt; true affection dwarfed and stifled; moral sentiment slumbering, covered over and encased in, or with, the sparkling intelligence of an unsubstantial character, not calculated to benefit the race, because it is not of the individual, but has been forced upon and crammed into the brain, while the soul's natural attributes have been left uneducated; for books cannot educate the hand, nor do they have the power to educate the heart-affections. No; knowledge, instead of theory. The physical powers ought never to be left uninterested in the mind's same time; all that is taught should be demonstrated to the mind by actual experiment.

A man or woman may read forever of the acts of enterprising industry, but, if they are left only to read of it, as produced by and through others, without the idea of their ever selling their hands

to engage in any such employments, or the disposition inculcated to engage in such themselves, and without any practical utility of their doing so being imparted to them, is like an idle song, soon forgotten; because it is not theirs, but still remains the property of another, who, perchance, may have exhausted his energy of brain to compose a work imparting to the race a theoretical knowledge of something which they, themselves, to be benefited must practice; to know why he labored, we must go to work, if we wish to acquire useful knowledge; but the reverse of this course is fostered and encouraged by our systems of education—education by the study of that which noble minds toiled and suffered to produce is forced upon the mind, while the physical ability to carry out the instruction is neglected; indeed, in this day and age of the world, it has got to be a settled maxim, that the educated are to live by their wits, either as theologians, politicians, or some such character—anything rather than work.

As for woman: she, poor creature, is expected to be and appear as a parlor ornament, exquisitely and beautifully polished, so as to dazzle all who are fortunate enough to come under the influence of her scintillations. Most fortunately for the male portion of creation, who are noble-minded, they are generally outside of the immediate sphere of her attractions or influence, unless they can afford to be what is commonly called, "a gentleman" (I never apply this term to any such use as most people do), who can live without labor. Professional men are good in their places, if they are honest men; but the hardy sons of toil are just as good, and more useful members of society, than many of the other classes—taking what men say of them, as professional characters, it would seem they are as irreclaimably corrupt as they can well get to be; but they have social position for all that. O, scathing reflection, that men who are held up before the world as corrupt, are at the same time almost adored, as occupying the topmost round of the ladder of social society!

For shame, O man! This is your work; you know them, if woman does not. These, perchance, may and often do, find themselves well received in the parlor circles of homes where there are daughters, or a daughter who is the pride of the parents' hearts; she is accomplished in the fashionable acquirements of the day; she is prepared to shine as a model of politeness in parlor ceremonial entertainments; as a paragon in her knowledge and familiarity with the light, fascinating literature of the present century; one who can appreciate or appropriate, with a certainty of being looked upon as of vast importance in the world; around her crowds are thronging, rejoicing in her smiles; and, to the shame of fathers and brothers be it spoken, among them can be found men who should be barred from the society of virtuous woman.

I go not to the lower walks of life, as they are called, to find man insinuating himself into the affections of woman. No; he goes where he expects to win a golden prize; and the more corrupt his principles are, the more is this his aim in his pretensions to marriage; for I do insist, there is no marriage founded upon selfishness or corruption. It were something impossible. Marriage cannot grow, in such human beings, to a holy conception of its divine nature; and, unless the idea of marriage did grow up in the minds of individuals, and there were emanations of mind showing affinity and producing attraction, giving an understanding of the nature and obligations of their becoming one—without this, the estate of marriage is not attained.

And I do earnestly desire to say this much to woman, while in the world; and, therefore, I say it to Alabama; for, in her soul I think I can see reflected the same ideas which have been for many years advocated by one who would find aid in overcoming a false marriage—one resting upon considerations of wealth, or any consideration save true heaven-born affection in the soul, uniting the minds. No law can do this; it is above law. The law is ceremonial; but you might just as easily marry a man to a stone-fence by a ceremony, as to a human being, where gold was the object sought after; for they would be just as securely united to the one as the other; and, of the two, I do not know but the stone-fence would have the greatest hold upon his affections, if it inclosed his own property, for it cost money to make it.

I have used this homely figure—others may look at it and laugh; yet it conveys my idea of pretended marriage. And these kind of marriages have a great deal to do with our social evils; and, as it depends principally upon woman to put herself to work to prevent these evils, by seeking proper and true marriage, I do not fear to speak out on the subject. If a woman finds herself inclined to, or does indeed, prove false to the marriage vows, or that the marriage vows she uttered were false, for she finds she loves another than the law-sanctioned husband, and she finds herself upon the acquaintance with others, inclined to a course of infidelity to the one she is legally married to, she may doubt very much if she ever were married into a true oneness. The same rule will apply to the man.

I make no allowance for what is looked upon as seduction of married women. Still, if such women could be kept from coming in contact with men who were already corrupted, they might live and die as honest wives. And here is where there is a change needed in society: fathers, husbands, and brothers, can know if a man is of weak moral character or not. On man does rest the greater condemnation; for he flatters and importunes a vain, giddy woman to his ruin; and, at the same time, knows she is a married woman, perhaps a mother; she is weak—he is vile and corrupt; he seeks to bring her to his level, and too often succeeds; while the husband, perhaps, was the very one who thrust this man into his family association; perhaps, encouraged his specious attentions to her. After her ruin is thus accomplished, the husband is a terribly injured man; and society justifies him in the use of a dagger, or revolver, to satisfy his wounded honor. Terrible satisfaction for vows, what is the wife to do? O, she can have recourse to the law for divorce, if she can substantiate his infidelity, which is generally rather hard

to do. Does the man, who is so vile as to be false to his wife, meet with repulsion in society, or an expulsion therefrom? Or, does even the man who steals another's wife from him find the society, in which he moved before, closed against him, and he not allowed to enter the social sphere, or the home circle, of those he previously associated with? No! Is the woman who falls thrust aside, driven out, condemned, and branded with infamy, looked upon as a thing to be scorned, and utterly banished outside the pale of society? Yes!

I never did understand the justice exhibited! It has always been hidden from me, if there is any. I, for one, will not, if I know it, tolerate the presence in my family circle, or will I associate in the social sphere, with a man who has made himself a seducer, whether of an innocent young girl-woman, or the young woman-wife. Why? Because, dear Alabama (let me say it to you, I am saying it for my sex, and you are a true woman), I know the natural magnetic influence man is capable of exercising; and, to his shame be it said, to the moral degradation of a sister, only because she is naturally, in most such cases, negative in magnetic relations, while he is positive. He has learned from science, or through those who did understand it, that a positive possessed the power to act upon the negative, and produce another state, that of passive; as soon as he succeeds in this, the negative merged into passive, is entirely under his control. Why do men hate women who are positives? The reason is obvious to every thinking mind: Because they are not susceptible of being rendered passive; for positives repel. Woman, although a negative, could repel the magnetism emanating from man to influence her submission and subjugation to his will, if she were well instructed in relation to the working of natural magnetic power in our social intercourse among acquaintances, commonly called "sympathy;" for it embraces the power man uses to lead a woman to entertain as her own, his wishes in relation to her. Of this, some men may be ignorant. I know that woman, as a general thing, is in ignorance of the fact, that man is in possession of the natural power, magnetically, to infuse into her mind his own desires and his own wishes; and she, therefore, is properly called his victim when she falls.

What shall I call this power? Mental, magnetic, mind operating upon mind, by means or through the medium of an established law, "sympathy"? Alabama, am I touching upon knowledge that is covered with the rubbish of ages; the frowns of the "lords of creation;" the sneers of woman; while some men hold in utter detestation of woman ever being led into the realms of any such knowledge. Why? Because, when this is understood, he is shorn of his power to procure woman's fall. Her knowledge of the subtle workings of natural influences, will render her mind positive; she will array her mental power against this, and soon detect a transmission of thought from mind to mind; and when this is done, she will be able to read his every thought; for, however dark, he will not be able to hide them from her. Some may be ready to cry out, "superstition!" "delusion!" "witchery!" or some such thing; but never mind, Truth is mighty. This is a natural power of mind—let none gainsay its truth. If it can be disproved, let it be. If light dawns for woman, let her catch the rays and use them in discerning her brother man, and commence her work for his good, as well as her own, in making herself capable of knowing an infusion of his mind, or an emanation, from her own thoughts.

I have thus finished what I wish to say on this subject at present. N. B. II.  
OAK SHADE FARM, May 9, 1859.

DEIFYING THE FEMALE SEX.—Dr. Alexander, in his recent volume of Sermons, utters the following solemn warning: "What a horrid fraud Satan is practicing on the church, in regard to the daughters of the covenant! In fashionable circles (dare I name them Christians?) the years where girlhood merges into maturity are frequently sold to the adversary. The young American woman is taught to deem herself a goddess. If there be wealth, if there be accomplishments, if there be beauty, almost a miracle seems necessary to prevent the loss of the soul. Behold her pass from the pedestal to the altar! The charming victim is decked for sacrifice. Every breath that comes to her is incense. Her very studies are to fit her for admiration. Day and night, the gay but wretched maiden is taught to think of self and selfish pleasures. Till some lenient fashion of solemnity interrupts the whirl, the season is too short for the engagements. Grave parents shake their heads at magnificent apparel, costly gems, night turned into day, dances, at which Romans would have blushed, pale cheeks, bending frames, threatened decay; and yet they allow and submit. And thus that sex, which ought to show the sweet, unselfish innocence of a holy youth, is carried to the overheated temples of pleasure. Thus the so-called Christian verifies the apostle's maxim: 'She that liveth in pleasure, is dead while she liveth.'"

## The Tom Boy.

Some parents seem still to entertain the notion that young girls need no training except that of the mental faculties; that their forms are of less consequence than their dresses; and that a development of physical strength would impair their delicacy, and tend to make them masculine. By restricting their physical education and limiting their sphere of activity, they are condemned for life to enfeebled health, and an aimless, idle existence. Let such parents ponder the truth embodied in the following remarks, which we cut from the Home Journal:

The "Tom-boy" is an eager, earnest, impulsive, bright-eyed, glad-hearted, kind-souled specimen of the genus *femina*. If her laugh is a little too frequent, and her tone a trifle too emphatic, we are willing to overlook these for the sake of the true life and exulting vitality to which they are the "escape valves," and indeed we rather like the high pressure nature which must close off its superfluous "steam" in such ebullitions. The glancing eye, the glowing cheek, the fresh, balmy breath, the lithe and graceful play of the limbs, tell a tale of healthy and vigorous physical development which is nature's best beauty. The soul and the mind will be developed also in due time, and we shall have before us a woman, in the highest sense of the term.

When the "Tom-boy" has sprung up to a healthy and vigorous womanhood she will be ready to take hold of the duties of life, to become a worker in the great system of humanity. She will not sit down to sigh over the "work given her to do," to simper nonsense, languish in ennui, or fall sick at heart—but she will ever be able to take up her burden of duty. In her track there will be sound philosophy, in her thoughts boldness and originality, in her heart heaven's own purity, and the "world will be better that she has lived in it." To her allotted task, she will bring health, vigor, energy, and spirits, and these will give her both the power and the endurance, without which, her life must be, in some respects at least, a failure.

## Need in our Libraries.

For libraries in the rural districts there should be some works selected which will instill a love for agricultural and horticultural pursuits, and all books as have a tendency to render the children of the farmer discontented with their lot in life should be discarded at once. Instill into the minds of the young ruralists a proper love for their avocation, and all the tinsel and glitter of the artificial life of cities will have no attractions to them. What a world of misery, wretchedness and criminality, would be blotted out of existence could all the youth of our land be taught to love labor or the study of those sciences which insure the acquirement of a fund of useful knowledge, instead of idleness, dissipation, and frivolous accomplishments of fashionable society! How many farmers' sons, who by improper association become indoctrinated with the idea that farm labor is menial and degrading, have left the "Old Farm at Home," and after a round of dissipation are now reaping the bitter reward of these evil influences.—[Cincinnati.]

A curious statistical calculation is the following, which has been made apropos to the collective consumption of food in France and England: For the 20,000,000 souls of the latter country are furnished 16,800,000 horned cattle, and 60,000,000 of sheep. Manure is furnished in the proportion of the product of 19 sheep to every two acres and a half; in France 35,000,000 human beings (fifteen million more than the English) find for their meat consumption only 10,000,000 head of horned cattle, and 36,000,000 of sheep. Manure is represented by the product of two sheep to every two acres and a half of land. Now this would account for many things—for the stagnation of the population, and the decrease of the standard stature, for instance; in other words, for the evident impoverishment of the race. Agriculture and the prosperity of the human race go everywhere hand in hand; and if there are inferior oxen and few of them, lean sheep and few of them, bread will be wanting and man will be comparatively weak and sickly—all of which is the case in France.

SINGULAR FACT IN REGARD TO THE CHAMELEON.—Mr. Beckwith, the great naturalist, says: "A chameleon, the two sides of the body there seems a lack of sympathy. One eye may be looking straight forward, while the other is looking directly backward. One may be entirely asleep, while the other is wide awake. And this kind of independent and separate action applies to each side of the creature—so its limbs. It cannot swim because its limbs refuse to act in concert. Could the two sides understand one another, and agree on a prescribed course of action, it might always be awake, or half awake. But it gains nothing by its unilateral independence; the two sides are like two horses that won't work in harness. It seems strange, with such a peculiarity, that on trees or terra firma, the creature should be able to make any progress. But as the insect tribes refuse to come, so they seem, in regard to all culinary matters, to agree to sink their differences, and to move in harmony. The stomach is a potent harmonizer."

IMPORTANT DISCOVERY AT BABYLON.—A London paper states that Col. Rawlinson has just discovered among the ruins of ancient Babylon an extensive library, not indeed printed on paper, but impressed on baked bricks, containing many and voluminous treatises on astronomy, mathematics, ethnology, and several other most important branches of knowledge. These treatises contain facts and arguments which, in his opinion, will have no small operation on the study of the sciences to which they relate, and which throw great light upon biblical history and criticism, and the history of our race.

'LASSES CANDY.—Dr. Cummings, of the Brattleboro' Phenix, who knows many things, and all of them thoroughly, thus treats his readers to a recipe for making molasses candy, which is one of our "peculiar institutions." "Take two cups of molasses, one of sugar, one table spoonful of vinegar, and a piece of butter the size of a walnut. Boil briskly and constantly twenty minutes, stirring all the time: when cool enough to pull, do it quickly, and it will come white rapidly. Use the above proportions and follow directions, and you will have good candy."

A BEAUTIFUL GIRL, beautiful in youth, and health, and purity, who wakes from sleep, at touch of morning light, as the flowers do, with a cheerful grace; whose first tones, like those of the birds, are the most musical of the day; from whose brow every trace of yesterday's wear and last night's care is swept away, even as the face of nature is renewed and brightened by the summer dew: such a girl is worth the winning.

WOOD ASHES.—Those who have wood ashes, and wish their lawn to be covered with a handsome growth of white clover, should powder it pretty liberally with the ashes. It is also excellent to re-invigorate old gardens. One thing it will do in these old gardens—it will enable you to raise a crop of early turnips, sweet and solid; also your radishes, and many other vegetables will be much improved.

## SAFES SAFES!!

LILLIE'S IMPROVED WROUGHT AND CHILLED IRON SAFES. Fire-proof, Powder-proof, Drill-proof, and Burglar-proof.

With Lillie's Unpickable Powder-proof Lock. The best safe made for resisting both fire and thieves, as proven in innumerable instances.

As to a recent test by fire, reference is made to the late burning of the Crystal Palace, in New York City, at which all other safes on exhibition were burned up. Lillie's SAFE alone was unharmed.

Reference is also made to the test afforded by the burning of the Illinois Central Railroad Depot at Cairo. Read the following letters and statements:

J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl street, N. Y.: Dear Sir: You ask about Lillie's Safe, how they stood the fire, etc. We think we have had a good opportunity to try them. Our warehouse and office were burned on the 27th of December last, and at that time we had one of these safes in our office and three in our warehouse. The safe in our office was filled with our books and papers. The safe in the warehouse was filled with our tools and implements. Although the warehouse was completely destroyed, the safe in the warehouse was unharmed, and everything it contained came out in perfect order. A new coat of paint is all it will want. The safe in the office was also unharmed, and everything it contained came out in perfect order. We cheerfully recommend them as being far superior to any other safe for fire and burglar-proof qualities. There is no warranty or twisting, and no necessity for a new safe, as in the ordinary kind after having been once burned.

Yours, truly, BUEL & MOORE.  
Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of today is received. In reply we are happy to say the safe we bought of you last spring (Lillie's Patent) came out of the fire on Sunday night, all right. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the safe shows a few cracks, but nothing, in our opinion, to injure it. The fire was a severe one, consuming the store and the adjoining building of this city, Stearns & Marvin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns & Marvin's safe were burnt out, others were complete wrecks; Lillie's alone were unharmed, except in the frying of the paint upon the inside doors. The inside door could not have been arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

[From the New York Times, October 8th.]  
The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of Safes than which none more thorough could have been desired. Those who were on the ground say that it was the hottest burning they ever saw; the wares of the safe manufacturers were in an exposed situation. Lewis Lillie of this city, Stearns & Marvin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns & Marvin's safe were burnt out, others were complete wrecks; Lillie's alone were unharmed, except in the frying of the paint upon the inside doors. The inside door could not have been arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.

JONAS G. CLARK & CO., IMPORTERS AND MANUFACTURERS OF FURNITURE.

128 Washington street, SAN FRANCISCO.

WE ARE NOW MANUFACTURING OUR FINEST FURNITURE, and would invite the attention of the public to OUR PRESENT STOCK.

The Largest ever offered on the Pacific Coast Oct. 1. 93m JONAS G. CLARK & CO

THE AMERICAN TRADES COMPANY, WHAT THEY MANUFACTURE:

The American Smoker. CONSISTING of a great variety of unique and beautiful patterns of CIGARETTES; also, several varieties of PIPE. The peculiarity about these articles is that each one is arranged so as to receive a damp sponge, through which the smoke of the burning Cigar or Tobacco has to pass on its way to the mouth. The damp sponge not only cools the smoke, but extracts from it the nicotine oil, the poisonous property of the Tobacco, which renders the breath less offensive. Smokers will find in the use of these Tubes a luxury never before attained except by using the Turkish water-pipe. Their use will also greatly promote the health of the habitual smoker and preserve the sweetness of the breath.

The American Carpet Hook. is a little contrivance for putting down carpets without tacks. This is a new article, which has never before been upon the market. But it possesses the merit of enabling a person to put down or take up a carpet of the largest size in general use in fifteen minutes, without any injury to the floor or carpet. It is very cheap, cheaper in the long run, than tacks, and the great facility with which even a servant can take up and put down carpets, without the possibility of a mistake, renders it invaluable to the housekeeper.

MISCELLANEOUS.

PIANOS, MELODEONS, Alexandre Organs, and Music!

Prices Greatly Reduced! HORACE WATERS,

No. 333 Broadway, New York.

AGENT FOR THE SALE of the best Boston and New York Pianos and Melodeons. The largest assortment of Music Merchandise in the United States. Pianos from five different manufacturers, of every variety of style—from those in plain rosewood cases, for \$250, to those of the most elegant finish for \$1000. No house in the Union can come in competition for the number, variety and celebrity of its instruments, nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with or without iron frames, have in their new scale an improved action, in power and compass of tone equaling the grand, with the beauty and durability of the square Piano. The Pianos and first Melodeons I have just pronounced them equal, if not superior, to any other make. They are guaranteed to stand the action of every climate.

Horace Waters' Melodeons (tune the equal temperament), superior in each desirable quality. Can also furnish Prince's, Carhart's, and Smith's Melodeons. Prices from \$45 to \$125. For two sets of reeds, \$150; two banks of keys, \$200; organ pedal bass Melodeons, \$250 and \$300, less a liberal discount. Each instrument warranted to give perfect satisfaction, or purchase money refunded.

Alexandre Organs, five stops, \$100; eight stops, \$150; eight do with percussion, \$225; twelve stops, \$300; twelve do with percussion, \$350; twelve do with percussion, \$400; fifteen stops, etc., \$375.

Second-hand PIANOS, at great bargains, constantly in store. Price from \$30 to \$140.

Minute.—One of the largest and best catalogues of Music now published; all Music and Musical Works published in the United States for sale by this House. Also, Martin's celebrated Guitars; all kinds of Musical Instruments and Musical merchandise, at the lowest prices. Music sent wherever ordered, post paid. Catalogues sent by mail. A liberal discount made to dealers, teachers, seminaries and clergymen.

TESTIMONIALS OF THE

Horace Waters' Pianos and Melodeons

"The Piano came to hand, and in first-rate order. It is beautiful instrument and no mistake." Lee & Walker, Philadelphia.

John Hewitt, of Cambridge, N. Y., who has had one of the Horace Waters' Pianos, writes as follows: "A friend of mine wishes me to purchase a Piano for her. She likes the one you sold me in December, 1858. My Piano is becoming popular in this place, and I think I can introduce one or two more; they will be more popular than any other make."

"We have two of Waters' Pianos in use in our Seminary, one of which has been severely tested for three years, and we attribute to their good quality and durability."—[Wood & Gregory, Mt. Carroll, Illinois.]

"H. Waters, Esq.—Dear Sir: Having used one of your Pianos for two years past, I have found it a very superior instrument. I am, I trust, Principal Brooklyn High School, N. Y., July 28, '58. Mr. Waters—Dear Sir: I received the Melodeon safe and in good order; am well pleased with the external appearance, and the tone also. Hope I shall have occasion to order one or two more of the present season."

Tioga, N. Y., Aug. 5, '58. Horace Waters, Esq.—Sir: The Melodeon you sent me was duly received in good order. I am now fully prepared to say that the instrument is highly satisfactory; and I beg you will accept my thanks for the very liberal terms on which you furnished it, and for the creditable manner in which you have fulfilled, and more than fulfilled, all your promises. Very respectfully, J. C. L. Smith.

"The Piano I received from you continues to give satisfaction. I regard it as one of the best instruments in the place." J. L. Clark, Charleston, Va.

"The Melodeon has safely arrived. I feel obliged to you for your liberal discount. Will do all I can for you in these parts." [Rev. J. M. McCormick, Parkersville, B. C.]

"The Piano was duly received. It came in excellent condition, and is very much admired by my numerous family. Accept my thanks for your promptness."—[Robert Cooper, Warrenham, Bradford county, Pa.]

"Your Piano pleases us well. It is the best one in our country."—[Thomas A. Latham, Cambridge, N. Y.]

"We are very much obliged to you for having sent us such a fine instrument for \$250, and we shall take pains to recommend it."—[Frank, Hold & Co., Buffalo Democrat.]

"The Horace Waters' Pianos are known as among the very best. We are enabled to speak of these instruments with confidence from personal knowledge of their excellent tone and durable quality."—[N. Y. Evangelist.]

"We can speak of the merits of the Horace Waters' Pianos, from personal knowledge, as being of the very best quality."—[Nothing at the State Fair displayed greater excellence in any department than Horace Waters' Pianos.]—[Churchman.]

"The Horace Waters' Pianos are built of the best and most thoroughly seasoned material. We have no doubt that buyers and purchasers will pay better attention to them than any other house in the Union."—[Advocate and Journal.]

"Waters' Pianos and Melodeons challenge comparison with the finest made anywhere in the country."—[Home Journal.]

"Horace Waters' Pianos are of all, rich and even tone, and powerful."—[N. Y. Musical Review.]

"Our friends will find at Mr. Waters' store, the very best assortment of Music and of Pianos to be found in the United States, and we urge our southern and western friends to give him a call whenever they go to New York."—[Graham's Mag.]

Warerooms, 333 Broadway, N. Y. [2]

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE, No. 100 J street, corner of Seventh, SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious BIRTH-DAY, and have suffered with you in three fires and three floods, and in all I have among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducement to new patrons likewise.

FIRSTLY. I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUG-GIST as there is between a Druggist and a Doctor, and rather more so between those who have picked out the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY. Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will endeavor all the time to keep on hand the Pure Price Usually Charged.

By other Druggists, legitimate or illegitimate, and of the Purest Drugs and Chemicals.

THIRDLY. I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for Foreign and Patent Medicines, Drugs and Chemicals. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY. We Keep Open all Night! And charge no more for medicines than in the day time.

FIFTHLY. We will furnish those in indigent circumstances with MEDICINES AT COST! (the same being attested by two or three good citizens.)

SIXTHLY. Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lent heretofore by credit, we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY. We have received the agencies for the following valuable articles:

## BY THE OVERLAND MAIL.

By the Overland Mail we have New York advices to the 15th of May, and Liverpool dates to the 4th: FOREIGN NEWS.

**THE WAR—FIRST BLOOD.**—There was a sharp action at the Bridge of Buffalora on the 28th of April, which, it is reported, the Austrians after a considerable loss, took at the point of the bayonet. It is also reported that Moriara has been taken, and that the Sardinians had retreated before the Austrians. The telegraph lines through Switzerland have been cut by the Austrians.

From Vienna, of May 1st, it is reported the Austrians have occupied Intern, Palanza, and Arona, the Sardinians retreating at their approach.

**TURIN, April 29.**—The steamer which arrived at Genoa on the 27th, brought a proclamation to the Tuscan army, inviting it to advance in a compact body of 12,000 men, to reinforce Piedmont. A similar proclamation has been addressed to the troops in Romagna. Generals Canrobert and Neille have arrived here and gone to join the King. Fifteen thousand of the French Imperial Guard arrived at Genoa, making the force there forty thousand. The force in Suza is also increasing fast. The Austrians are concentrating in great masses at Piacenza, as well as at Navarre and Pavia. No decisive movement has yet, however, been made.

The Austrians have seized several Sardinian vessels on Lake Maggiore.

The Emperor Napoleon was expected to join the French army on the 3d of May.

Count Buol has forwarded circulars and notes to the foreign governments, stating the diplomatic and political reasons for the declaration of war by the Emperor of Austria.

The Wiener Zeitung publishes decrees ordering a loan of twenty millions pounds sterling.

The Prussian government has resolved to put its army in readiness to march.

A Council of Regency, instituted by the Grand Duke of Parma, had expressed its adhesion to Piedmont.

The King of Sardinia had accepted the military Dictatorship of Tuscany.

The chambers of the kingdom of Württemberg had expressed sympathy for Austria, and voted a war credit of seven millions of florins.

The Austrian ambassador had not yet left Paris. The Sultan of Turkey was preparing for war.

The Paris Monitor had published a circular note from Count Walewski to the diplomatic agents of foreign powers. It describes the present position of political affairs; expresses satisfaction at the conciliatory spirit of England, Prussia, and Russia; conveys a wish that the other powers (which compose the German Confederation) may not allow themselves to be misled by reminiscences of epochs quite different from the present; and hopes that the statesmen of Germany will perceive that it depends on them to put limits upon the expansion and duration of a war which France conscientiously feels she has not provoked.

Napoleon's manifesto, or declaration of war against Austria, had appeared in the Paris Monitor, of the 3d of May. Its purport, however, had not been received.

Sardinia had made proposals to the Spanish government to join her in the Italian cause; but Spain intended to remain strictly neutral.

Prince Gortschakoff, in a letter to the British government, does not deny the existence of a written engagement between France and Russia; but distinctly disclaims anything even bordering on an alliance against Europe.

**GREYAT BRITAIN.**—A royal proclamation has been issued, offering a bounty of £10 to seamen, with the intention of recruiting ten thousand additional men. The greatest activity prevailed in the English dock-yards, preparing for the war. Instructions from the British Admiralty were received at Woolwich, April 30th, directing all possible haste in the completion of the new class steam-frigates.

The English parliamentary elections had resulted favorably to the Derby Administration.

Cotton had again declined in the English market. Broadstuffs were quiet at the late advance. Provisions had an upward tendency.

**DOMESTIC INTELLIGENCE.**

At New York, on the morning of the 16th of May, the Flour market had advanced from fifteen to fifty cents. Mess Pork advanced twenty-five cents. Grain had also advanced. All domestic markets were much excited, and speculation was rampant.

There is no falling off of the Pike's Peak emigration, although the news from there is very discouraging.

**WASHINGTON, May 12.**—The Territorial Overland Mail routes between Neosho, Missouri, and between Kansas, Missouri, and Stockton, California, which were let to contract last year, have been discontinued, to take effect from the 1st of July next.

The failure of Congress to make the usual appropriations for the Post Office Department; the interruptions of the mails, mostly from the presence of the Indians along the lines, and the consequent reduction of mail matter to a comparatively insignificant amount, are the reasons alleged for the discontinuance of this overland service.

New York, May 12.—Paul Morphy, the chess king, who arrived yesterday in the Persia, played several games at the rooms of the New York Chess Club, winning every game. He will remain in the city a month, and then proceed to New Orleans.

The failure of Jacob Little has created quite a sensation in the Stock Board. The amount of his liabilities is estimated at two millions of dollars.

Mr. John Wise, the celebrated aeronaut, of the city of Lancaster, Pa., states that he has just completed his arrangements preparatory to a transcontinental voyage from St. Louis to the Atlantic seaboard, as a demonstrative experiment with his mammoth balloon, the "Nineteenth Century," and expects to be in St. Louis about the middle or latter part of June. The balloon is sixty-eight feet in diameter, and will require from 60,000 to 80,000 cubic feet of gas to inflate it. Should Mr. Wise succeed in his satisfaction, in this contemplated voyage across the country, it is his intention to carry out his favorite scheme of aeronauting across the Atlantic ocean.

On the 15th of May, the Lafayette Sugar Refinery and several buildings in the vicinity, in New Orleans, were destroyed by fire. Loss great.

**STILL LATER NEWS.**

The Overland Mail has arrived with dates from St. Louis to the 19th of May, and later foreign: St. Petersburg, May 30.—The official journal of the government has been authorized to declare, most positively, that there exists no treaty of alliance between Russia and any other power whatever.

**LONDON, May 4.**—The Times' "city article" says: The improvement in the funds this morning (4th), consequent upon the assurance of Mr. Disraeli of his entire confidence that no secret treaty existed between France and Russia, was less than one-half per cent, and the market at the close was heavy.

The Bank of England has increased its rate of discount to 4 1/2 per cent.

The London Times says that the invaders of Italy have not advanced over thirty-five miles from the frontiers; and it seems that though Austria started fairly for the opportunity, she has now thrown it away.

The Duke of Malakoff has had an audience with the Queen, and presented his letters recalling him to France.

PARIS, May 4.—Military volunteers for two years have been accepted. A war credit of ninety million francs is to be contracted by national subscription. The statement that Trieste and the surrounding country had been declared in a state of siege by the Austrian troops, is confirmed. Venice and Verona have also been declared in a state of siege. Gen. Olshay has imposed on the town of Novara a demand for a heavy contribution of provisions, etc. The Austrians, who had crossed the Po at Campagna, and pushed their vanguard as far as Salza, had now crossed the river.

It is reported that the Sardinian government has seized all the Austrian ships at Genoa.

The French troops are entering Piedmont in great numbers. They will soon number 100,000. Napoleon was to leave Paris about the 12th, to take command of the army.

It is reported that martial law will be proclaimed in Paris.

**DOMESTIC.**

A Washington dispatch, of the 17th May, says: The Assistant Secretary of State, John Appleton, has resigned his position in the Department.

Stephenson Block, Memphis, containing eight buildings, corner of Washington and Main streets, was destroyed by fire on the night of the 18th ult. The loss is estimated at \$150,000—partly insured.

**PEACHES.**—A Southern correspondent of the Homestead says: "If it should run out entirely at the North, as many fear, we shall be able to drain unlimited supplies from the Southern Atlantic States. The New York market was a great deal affected by Southern supplies of this fruit last season, and the production in the Carolinas and Georgia will be likely to increase, as the orchards of New Jersey and Delaware fail. Among the best varieties for this climate are the Belleharde, Early York, George IV., Royal George, St. John, Yellow, St. Stephen, and Tilton's Early.

**WILD STRAWBERRIES.**—This delicious fruit grows on the hills in the neighborhood of Santa Cruz in the greatest abundance. There is a variety which grows on the beach sand-hills near Pescadero, of the most delicious flavor, large in size and the vines prolific bearers. Several parties of ladies and gentlemen have visited the locality within the last two weeks, and have been rewarded with abundant success.—[Pacific Sentinel.

**LAND FRAUDS.**—José Matias Moreno, Secretary of the Department of California in May, 1846, has declared that his name as Secretary, placed on the alleged grant of land of eleven leagues, in Yolo county, is a forgery, and the date affixed is December, 1845, five months before Moreno became Secretary.

**DEATH OF HUMBOLDT.**—A dispatch from Berlin announces the death of Baron Humboldt, the world-renowned traveler and philosopher.

**Wholesale Produce Report.**

This represents the prices paid by the dealer to the producer. (Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

## STOCK HORSES.

## The Celebrated Trotting Stallion

## "GENERAL TAYLOR,"

WILL STAND FOR THE SEASON, commencing the 1st of April, 1859, at HUNTER'S POINT RANCH, four miles from the city, on the San Bruno Road. Terms—\$30 for the season; \$10 for each foal.

GOOD PASTURAGE and STAILING can be had, if required. One thousand acres in grass, wet and low land, with abundance of water and feed (for brood mares, all of the year. The mares are well fenced, and every care taken for the security and health of stock; but all animals are at the risk of the owners. Pasturage, \$3 a month; Stabling, with grain and hay, \$1 per day.

P. S. HUNTER, Agent, Hunter's Point Ranch, San Francisco county. N. B.—ORDERS left at the Grocery Store, south-west corner of Mission and Third streets, will be promptly attended to. 12-3m

## The Imported Thorough-bred English

## RACE HORSE

## "LAWYER,"

WILL STAND THIS SEASON (TILL THE 1st of September), at

TWELVE-MILE FARM, SAN MATEO COUNTY.

TERMS—\$100 for the season; \$30 the single leap.

Good pasturage and stabling, at the Twelve-mile Farm. Pasturage, \$30 per month. Stabling, \$1.00 per day. Well-fenced fields, and every reasonable care taken, but all animals are at the risk of their owners; and all charges must be paid before mares leave the farm.

For pedigree, or further particulars, apply to WILLIAM HOOD, "Los Gallitos," Sonoma county; Or, JOHN CUMMING, Twelve-mile Farm, or 141 Clay street, San Francisco. 13-4

## The Celebrated Trotting Stallion

## Black Hawk General Scott,

WILL STAND AT THE STABLES OF

F. K. SHATTUCK & CO., OAKLAND, ALAMEDA COUNTY.

At Fifty Dollars the Season, commencing April 1st, and ending September 1st, 1859—payable in advance.

## GENERAL SCOTT

Was imported by F. K. Shattuck & Co.,

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JUNE 17, 1859.

NUMBER 20.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (opposite stairs), San Francisco.  
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$4 a year in advance.  
Advertisements and Subscriptions must be paid for in advance.

#### Grapes on the Hill-Sides.

SUCCESS OF THE GRAPE ON HILL-SIDES—FRUIT ORCHARDS—GRASSHOPPERS—NEW FIELD FENCE—IRRIGATION, ETC. ETC.

We give the following letter from our correspondent at Oroville, and would call the attention of our readers to the fact that our "red land," in the mining districts, has been found, as we always have averred it would be, the very best land for Vineyards and Orchards. The hill-sides of the mining region are of peculiar richness; and we are satisfied that there are particles in these soils that act with electrical power in promoting the growth of all kinds of vegetation. The success of our friend, we trust, will lead to good results in that vicinity, and we are pleased to know these facts.

The Fence alluded to, is the very best. We shall address our correspondent by letter, in detail, upon that subject; and we call the attention of farmers to this excellent Fence. It is the best ever yet invented, and is a very economical Fence and very strong and safe. We append the letter:

EDITOR FARMER: In your paper of the 27th of May is an article relative to a Patent Fence (to which my brother called my attention). I am not much of a farmer; neither am I much interested in fencing in this State. But I am, and have been, experimenting for several years with the culture of the Grape and other fruits, about three miles from Oroville, near the quartz mills of Messrs. Smith & Sparks.

Thus far, I have succeeded in procuring a fine quality of grapes, of vigorous growth, upon a deep red soil; that last year produced from three-year-old vines as high as twenty-five pounds of large, fine grapes for each root. At the same time, some that I had planted on an alluvial soil, did not produce near so many pounds of grapes, but run more to wood—in some cases, to over twenty feet. If the grasshoppers do not destroy my vines, I shall produce, from sixteen hundred bearing vines, over twenty-five thousand pounds of grapes.

I think that I would rather risk grapes on the hill-sides than in the valleys. I have been in the habit of irrigating my vines on the hill-sides, but shall not do so this year; and if they succeed, as I expect they will, I shall set out eight thousand roots next winter. I set out over three thousand last winter, and they are looking fine.

I have also some two hundred bearing peach trees, that are almost ruined by being overloaded with fruit. In fact, I have a little of all kinds of fruit growing—all thriving well.

When my grapes are ripe, I will be pleased to send you a box, so as to get your opinion on the quality; for, if they are the Los Angeles, the climate has made them better. They are darker and richer in flavor than any Los Angeles grapes that I have ever seen or tasted.

Every thing with us is at least one month later this year than last. As for the grasshoppers, they are doing much damage. Already they have destroyed for Mr. Sparks two thousand vines, that he put out last winter, and were looking fine. Others, I hear, are being destroyed by them.

Now, about the Fence: I want to build about a mile and a half of board fence; and would like to build the fence mentioned in your paper. How much will it cost me to build that much fence? Part of the fence will be on a public stage-road, and no doubt would be the means of bringing it into notice in this county. I have the material now upon the ground, and want to commence my fence soon. I shall be pleased to hear from you at your earliest convenience.

Yours, with esteem, H. D. S.

Oroville, Butte county, June 3, 1859.

#### More Bees.

We paid a visit to the Apiarist, Mr. Appleton, of San Jose, and was pleased to find him very successful in growing his Bees. Mr. Appleton has about eighty hives in excellent order. His system is, rearing only as a means of increase. He does not approve of dividing swarms, or increasing any other way. He makes very strong hives by this process. We also noticed at Mr. Appleton's a number of Plum trees of the Prince Imperial Gage, extremely well loaded with fruit. The estimated product of twenty-five trees, is over fifty bushels. Some very large soft-shell Almond trees, raised from seed, make a beautiful growth and appearance, and are very handsome ornamental trees, besides bearing fine fruit. The frost this season stripped them of all fruit. These trees are two feet in circumference. The frost has been severe upon many fruit trees; apples and the Bartlett pear escaped injury; these give much promise. Mr. Appleton has a fine residence on the Almaden road, between San Jose and Santa Clara.

#### A Few Casual Remarks on the Importance of Propagating Flowers from well-saved Seed.

We trust the excellent and well-tested suggestions of the writer of the following essay upon the propagation of flowers from the best Seeds of Flowers only, will be well studied by our Florists—it is very important, and from our own experience we know the suggestions here offered are worthy of careful consideration, and, if strictly observed, will be found of great value. The same principles carried out in the raising of all culturable articles, will increase their excellence also. The article is by William Creed, of Rochester, N. Y., and published in the Horticulturist, as follows:

"Now that the season is rapidly approaching when all who are interested in Floriculture will be contemplating what selections shall be made for another year's operations, we take this opportunity of urging upon the inexperienced the importance of propagating flowers from well-saved seed, and upon which alone rests the success of the propagator. By this expression, however, we must not be understood to mean well-matured seed; but, on the other hand, the adoption of the minute of details (in its saving) necessary to maintain the present standard of excellence discernible in some of our public exhibitions, as well as private collections; and yet, perhaps, not one out of twenty of those even who pride themselves in producing good flowers, and, certainly, not one out of a hundred of the commonality of growers, ever give that attention to the subject requisite to produce satisfactory results.

Take, for instance, that familiar favorite, the Double Balsam, or its rival, the Balsamine, with its rose-like petals and diversified blossom tints; what an improvement is it upon the Lady Slipper! the former may well be styled the *chef d'œuvre* of its species in cultivation, while from the latter may be traced the origin of its present excellence, and this superiority of the Balsamine happening simply through a perseverance which apparently but few take any part. The Balsam, &c., like many other specimens of the floral world, in order to prevent its running back to its primitive state, requires the seed to be ripened only on the main stem, and all the seed-pods on side branches, as quick as they begin to set, should be picked off; if this has not been done, the seed when propagated will bear unmistakable marks of a degenerating influence working upon it. All plants producing single or semi-double flowers should be uprooted as soon as noticed.

We next bring to notice another well-merited and long-tried annual, the Ten-week Stock. This is one also requiring attention while saving seed. Depending as we do upon the single specimens of this flower for its seed, certain rules must be observed to insure any gratifying results. For example we may say, that if the seed sown this season should prove to have an excess of single flowers, throw them away; but if the double flowers predominate, it may be considered a good "strain," and worthy of the following attention, viz.: as soon as half a dozen pods have set on the centre stem, the flowers above the pods should be destroyed and some of the side branches should meet with the same treatment, but allowing only two or three pods to set and no more shoots to grow. Some growers, however, confine the pods to the centre stem only, and cut the side branches off close; but experience teaches us that a few pods may be ripened satisfactorily on the strongest of the side shoots, the entire vigor of the plant being confined to a few pods of seed. With respect to color, that is a matter of choice from which the experimenter will make his own selections.

The Asters should not be overlooked; their multiplicity of colors, as well as the great improvement accomplished by many distinguished growers, make them indispensable annual visitors. The French Pyramidal Aster, though not equal in beauty to some other varieties, nevertheless may be mentioned as being one suited to most growers, on the supposition, however, that the situation as well as soil, like those above mentioned, should be suitable to its growth and the maturity of its seed. All indifferent plants should be pulled up as early as the blossoms are seen, and none but the perfect and earliest flowers allowed to mature their seed. This variety of Aster being a profuse bloomer, all the blossoms of a secondary character on good plants should be watched and gathered from time to time, and which will prove a continual resource, when in season, for securing *bouquets* of an attractive nature, and which may be freely distributed to the admirers of this flower, and at the same time prove a benefit to the plant in influencing and maturing the seed.

We now reluctantly conclude our remarks; undoubtedly we are trespassing beyond the boundary mark allotted to such communications in the Horticulturist, and yet, but few of the most familiar annuals have been enumerated, to serve as an illustration of some important facts which should not be overlooked by any one engaged in Floriculture, and, it is hoped, will tend to promote a more universal effort in this direction, and equal to the requirements of a progressive age. There is scarcely a flower discovered in its original state, but that it has been susceptible of improvement in some desirable point. This cannot, however, be attained without effort; let us awaken ourselves, and follow the French, English, Germans and Prussians, who it must be admitted carry off the palm in this matter, and who apparently possess unusual elements of character to prosecute it perseveringly and successfully, and upon some of whom we almost entirely depend for our supplies of reliable seeds.

Those who have hitherto considered seed-saving hidden, as it were, in a labyrinth of mystery, so far as producing an unbroken succession of flowers of the highest character is concerned, should "try, try again," by securing in the first instance

the very best seed from the most reliable sources, and then adopt the care in experimenting necessary to the accomplishment of the desired ends. The subject is full of interest, and cases may be multiplied, almost without number, where a similar minuteness of treatment is required to attain satisfactory results, and which perhaps I may refer to at some future period."

#### Wild Fruits of Nevada.

Is common with other mountain sections, Nevada county contains (says the Hydraulic Press) a considerable number of indigenous fruit-bearing bushes and vines; such as the plum, strawberry, raspberry, blackberry, gooseberry, huckleberry, grape and cherry. The most plentiful of these is the red plum. The bush which bears it, and which is seldom higher than two or three feet, is found in great abundance on the ridge between the South and middle forks of the Yuba, growing best within the line of deep winter snow, and commonly on warm thin soil of recent formation lying close to the parent granite, but thriving most luxuriantly on springy slopes. It constitutes in some places the only undergrowth, covering many acres together, and has given its name to a very pretty valley. It blossoms in May and bears prolifically, the limbs hanging as full of plums as they could well be without breaking. The fruit somewhat resembles in color, shape, and size, the red river-plum of the Western and Middle States, but has not so fine a flavor, the skin, indeed, being rather bitter and astringent. Yet it is considerably used for sauces and preserves, and contains sufficient pectin to make a fine jelly. The skin can be almost entirely divested of its unpleasant taste by allowing the fruit to lie in hot water for some time, and then cooking it in fresh water. Perhaps two or three waters would be better. Unless this is done, it is apt, when eaten freely, to produce catharsis and slight griping of the bowels. For two years past the wild plum has been brought into market as an article of sale, retailing at from ten to fifteen cents a pound. It has even been taken in considerable quantities to the lower country, and readily found purchasers. It ripens from July to September, during which season many "plumming parties" are formed, consisting of men, women, and children, who drive in a wagon to the most prolific localities, spend the day gaily picking fruit, and come back at night loaded with plums, freckled and dusty yet jolly still.

Next to the plum, the most interesting indigenous fruit is the strawberry. It is found all over the country, and, indeed, through the entire State, but abounds only in certain localities, generally on hill-sides, or flats, near springs or water-courses. The fruit is very small, but sweet and delicious, and is picked by the birds nearly as fast as it ripens, which is in April or May, or even earlier in the most favored spots and mildest seasons. A successful attempt to domesticate and improve it which was made by one of our citizens, has already been noticed in the Press. Two years ago the gentleman alluded to transplanted from the woods to his garden a number of vines, which this spring exhibit a much larger leaf, grow in bushy hills, and bear fruit four times larger than the uncultivated plant without its original flavor being in the least impaired. After tasting it, the imported varieties seem rather tart and indelicate. No doubt it will much improve with further cultivation. The native strawberry has been successfully cultivated for several years in various parts of the State. As many persons in this vicinity mean to go largely into the strawberry culture by another season, it is to be hoped they will extend their favor to the native plant.

Gooseberries are probably the most abundant of our wild fruits, after the two kinds described. They do not differ in appearance and taste from the wild gooseberry which grows in the East, except by having longer, more numerous, and sharper thorns. A few attempts have been made to cultivate this fruit, but as yet no marked improvement has been observed.

Blackberries and raspberries are scarce, and need no description. The same may be said of huckleberries and grapes. The latter are very small, purple in color, having little pulp, taste like the frost-grape of the Atlantic States, only more acid, and grow chiefly along ravines and petty water-courses, which they serve to render picturesque with trailing vines. Another variety of the grape was formerly quite common and luxuriant on the banks of the rivers, but it has been nearly exterminated by mining operations. From this variety, in other portions of California, excellent wine has been made. The fruit is somewhat larger and sweeter than that of the mountain vine.

Our wild cherries are small, bright red in color, grow thickly on a low bush which thrives best in gulches and by streamlets, and have a flavor not unlike that of the choke-cherry of our infancy, only less astringent. The miners used to eat them, occasionally, in the early days when vegetables were scarce, with a view to keeping off the scurvy.

Under the head of wild fruits may be mentioned in conclusion, the hazelnut. Bushes bearing this sweet, pleasant nut, are found in different parts of the country. They are, or used to be, very plentiful on Deer Creek. They bear smaller nuts than the same kind in the Western and Middle States, and not many of them. [The bushes are very plentiful on the "Redwood" mountains in San Mateo county, and appeared to bear nuts plentifully, of large size compared with the hazelnuts of the Eastern States, though the writer of this cannot state how they compare with others.]

#### Hedges—Live Fences.

In the Oregon Farmer we find a valuable article on Hedges, by T. T. Eyre, of Salem Prairie, giving his experience with the Osage Orange and other plants, as well as his plan for growing a Hedge, with some good suggestions. He says:

"In answer to 'P. P. P.' I would say that I have been trying the Osage Orange (*Maclura aurantiaca*). I procured seed fresh from the States, four years ago, and planted it in drills. When a year old, and each year since, I have planted in hedge-rows, having previously put the ground in order. That which I first put in will turn stock this year; a part next the road, and on low ground, does not do so well.

I find that to make a good hedge requires the same land, labor and skill as to have a good orchard or nursery. The land must be dry and well worked. Land that will not raise fruit trees should not be planted with Osage Orange. The same may be said in regard to the farmer that cannot give his attention to the hedge after planting; he had better let it alone, is my advice. One-half who plant will never have a hedge.

By planting in a mellow ridge not so high as to dry out, or so low as to drown out (much like apple trees), giving the necessary after culture; clean and mellow; it will make a good and efficient hedge. But it requires patience as well as labor. I have much difficulty in making it grow across the swells.

At first I dibbled the plants in; now I plow a deep furrow straight along the ridge; previously made mellow ten feet wide, leaving a ditch on each side, and set them along the land side, pulling on them sufficient dirt to hold them to their places. I plow the mellow dirt against them, making quick work of it, and then keep it clean and mellow. As I turn it out, or quit plowing and cultivating, I shall sow the ridge to white clover. I clip once each year, using hedge-shears, and laying the clippings on the hedge.

I would say to 'P. P. P.' that my experience with the Osage Orange and the Hedgehorn (*Crataegus punctata*), that I brought from the Walla Walla Valley, indigenous to that country, and stands the frost better with us than the Osage, is the best, and nearly if not equal to the English Hawthorn (*Crataegus oxyacantha*).

The *C. punctata*, growing wild, with the Black-thorn (*C. flava*), the fruit of which is large (three and four seeds), about 1/4 of an inch in diameter, with a dark red tinge when ready to gather; excellent, and much used by the Indians for food. A large quantity of this could be gathered the coming season, for the use of and by the settlers of that region, to supply the farmers of our valleys. Those prepared could make a nice thing of it to procure seed and raise "quick sets" for sale.

Will 'P. P. P.' be so kind as to look around him for something in his own neighborhood that will make a good hedge? There may possibly be some shrub in the woods near by, of value to the farmer for fencing material. Those settling in the upper country can, by noting how and where the thorn grows, more fully determine where to plant it better than they could be told.

We have been looking very anxiously for some report from Mr. P. Prettyman, near Portland, who has a fine location, and is fencing with the White Thorn. I think I have not seen it since it was small; when he first commenced setting out timberland. Come, Mr. Prettyman, if you have a good thing of it let us know; if otherwise, let us hear. Will the Thorn answer with you, or not?"

#### New Grapes.

We were pleased to find at the garden of F. Stock, Esq., at San José, a collection of German Grapes, imported from the Rhine, some four years since. They have been carefully grown, and would have borne largely this year had it not been for the severe frosts, which destroyed nearly all the anticipated crop; a few clusters will be saved to prove their value. We esteem this a great acquisition to our State. Mr. Stock has indeed added to the wealth of our State by such an importation, and we trust he will be well rewarded. He imported about sixteen hundred vines, and those from his own father's vineyard, near Bingen, on the Rhine, and near the place of the famous Johannisberger wine.

Mr. Stock has also a fine lot of the German Prune, Cherry, and other valuable trees, portion of which came safe and will fruit. The following are a part of the varieties of the grape imported by Mr. S.: Johannisberger, Riesling, wine grape; Franken, Riesling, for table and wine; Gude-Edel, splendid grape for table and wine; Kleinberger, same; Burgunder, fine wine grape; Trawiner, wine grape; Ebblingen, same.

The first four are all white grapes; the last three are red grapes. By such an acquisition, we can show the world that we can make wine equal to the old countries.

NEW KIND OF TOBACCO.—WHO WILL TRY IT!—Some plants of a new kind of tobacco grown in Iowa, can be obtained of Capt. B. C. Donnellan, at 130 Bush street. Capt. B., informs us that the odor of this tobacco is very fine, and it may be smoked in a lady's parlor without offense. It grows very delicate, compared with other tobacco, and for this reason would be suitable here, where the complaint is that tobacco grows too rank and strong. He has been at much pains to procure the seed, and would willingly pay one dollar a pound for the tobacco when grown. Will those who have conveniences for growing, call and get some of the plants for trial. We intend to discuss the subject of tobacco raising in this State, and would be glad to hear from those who have had experience in the matter.

#### Trial of Sewing Machines.

Quite an interesting display of skill was presented at the Oakland Fair by the houses of Grover & Baker and Wheeler & Wilson. The place for the Grover & Baker machines was in the center of the Hall, where were displayed, under the charge of R. G. Brown, Esq., a very fine collection of new and highly finished machines, varying in style and cost, from \$75 to \$160—some being the best yet imported. Mrs. Rogers was at her post as usual. Her happy face, while offering her services gratuitously to give evidence of her skill as the pioneer artist in this department, drew around her a goodly number of friends constantly.

There were seven different machines on exhibition, used for stitching, hemming, quilting, gathering, embroidering leather, fine sewing, and common sewing. Dresses of muslin, silk, and merino; opera-cloaks, beautifully embroidered, and quilted garments, all attesting the great skill of Mrs. R. One superb crimson silk quilt, very beautiful, received marked notice. The elastic stitch, on flannels, is of great value. With the sewing machines, that beautiful gloss of the sewing silk, which is destroyed by hand-sewing, is preserved. The fancy work, ladies and gentlemen's slippers, etc., received merited attention. Several of these machines were inlaid with pearl and richly plated with silver; some with carved work, representing clusters of fruit and flowers; we noticed some of a portable character (the size of a writing-desk), to be used by ladies who desire to take them on a journey. The entire collection was a great addition to the interest of the Fair. They have lately received a large invoice of new and improved styles, which are selling very rapidly.

Wheeler & Wilson's machines were exhibited under the superintendence of H. C. Hayden, Esq., agent of these machines, assisted by his brother and lady, with an assistant, and occupied the entire northeastern wing of the Pavilion. The different machines, and the different styles of sewing, exhibited to the visitors by Mrs. Hayden during the Fair, attracted crowds every day and evening. The samples of work were honorable to human skill and industry. The splendid robes, opera-cloaks, ladies' dresses, etc., were truly superb. Several dresses, with innumerable tucks and frills, done in the most perfect manner, excited curiosity and wonder. One piece of work, an infant's robe, of superior style; also, a robe bonneted and frilled, most admirably done. These all won high praise. The machines were adapted to all the various styles of work. This house is daily looking for more machines; as they are selling faster than they receive them. One ship (the lost *Manitou*) carried down one hundred machines. A vessel is hourly expected with one hundred machines, when their customers will be promptly supplied, in answer to their orders now on hand.

#### Exhibition of Bread at the Oakland Fair.

This all-important article of "Domestic Comfort" did not receive that care and attention which its importance demanded. We were in hopes that there would be at least forty competitors, and there ought to have been. But the numbers were few. We should give the particulars now, but prefer to wait and give the official report in our next with premiums.

We must say, however, that there were some very fine specimens of bread exhibited. All but one were the product of young women under eighteen. One sample by a married woman by the rules, was ruled out. We regret the Executive Committee should have precluded married women and all the competitors that exhibited bread after the second day, as by this means several were excluded. It would have been better to have fixed a given day of the Fair, say third or fourth day, for all to bring or send their bread fresh. This would have called out a larger number of contributors. This, however, can be arranged for the next Fair *this Autumn*, when it is to be hoped a largely increased number of contributors will compete for the prizes.

#### The Honey-Bee.

"How doth the little busy bee, Improve each shining hour."

There is something peculiarly strange in the Honey-Bee in California—something worthy of note by the naturalist. In other States a single swarm from a hive is considered satisfactory; but here, after a swarm has sent out one, two, or three swarms, the children of the first hive send forth other broods again, thus giving in a single season, *grand-swarms*; this, now, is almost a universal theory, and is wonderful.

We know of some cases almost too remarkable to be received with credence; yet we can show the collection. We know one party, who commenced the present year with *seventeen swarms*, who now has *seventy-eight*. We know another person, who commenced with *twenty-one*, that now has *one hundred and seventeen swarms*. Can any one beat this?

THE WEATHER.—For the past week, the weather in and around San Francisco has been excessively warm, bringing into request summer garments. At San José, Santa Clara, Alameda, Contra Costa, Stockton and Sacramento, Sol's rays have been cast upon the earth with a free hand.

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

(CONTINUED.)

In none of the works spoken of in the foregoing notes, have we seen mention made of faithful portraits being taken from nature of the California Condor, nor even of the Chilean Condor. Those of Audubon and Shaw, of the California bird, were from stuffed specimens in London or Philadelphia, and of course, can be worth but very little as representatives of true life. Now, as the act of painting animals has obtained great celebrity in latter years, and occupied the life-long labors of such artists as Audubon, Rosa, Bonheur, Landseer, Doncan, and the most celebrated of those of France, Germany, and the United States, how is it that none of our numerous painters of San Francisco—and it must be confessed, that works of real merit have been executed by California artists, which would do honor to older countries—how is it, we say, that none of them have been able to spare time to take accurate portraits of the male and female Condor of our State? The birds may often be found in the vicinity of San Mateo, near the Peak called in the county map of San Francisco, Sierra de Auras, or where the office of the butcher is thrown out. We can say, for one who knows, that such paintings from nature, by competent artists (who ought to be bird-bitten), would sell at most remunerative prices, but more particularly with the accompaniment of the female bird, and if possible, the young and eggs. Europe and the Atlantic cities would show plenty of purchasers of such works, as persons of wealth and taste abound there, ready to purchase all paintings of merit from nature, of the birds and animals of California; particularly the large and more celebrated animals, as Condors, Eagles, Grizzlies, Elks, etc. Europe nor America does not, even at this late period, possess portraits of them from life by good painters. If any one wants to see what good Bird-painting is, let him examine the plate of the Mocking-bird and Rattlesnake, in Audubon's Work, at the Mercantile Library. One of the most celebrated, but profoundly painful pictures of the last twenty years, of the French school, was an after-late scene, with the birds of ill-omen preying on the remains of poor mortality. Now as nature is nature, as much in Condors as in lions and tigers, why could not a good artist take a different but fully as natural a subject; a flock of California Condors, which may be seen in the mountains from June to October, as it is desirable to have correct drawings from nature of all the natural features and attitudes of both male and female birds.

The foregoing short notices of the male California Condor, dated 11 and 16 of November, 1854, were published originally in the CALIFORNIA FARMER, of November, 1854, and were afterwards republished in several of the California papers, and also abridged by the "London Zoologist" (Magazine), of August 1855, and from this last done into German, by Dr. Carl Bolle, and published in 1857, in the 5th volume of Cabanis' "Journal für Ornithologie" of Cassel. The remainder of the notes on the Condor of Chile, were mostly compiled in August 1855, except where otherwise dated. The extended and revised addenda on the female Condor of California, and some other notes of appearances and habits, were made in the fall of 1855, and have never before appeared in print. With many other additions and extracts made in March 1859, on both species of Condors, and bearing their dates for proper comparison, I think I may say I have brought the amateur literary California history of these two celebrated birds—the largest of the flying birds—down to the latest date, and made it fuller for the reference and use of naturalists and general readers than has hitherto appeared in Europe or America.

Since the California epoch of 1848, and the stimulus communicated to all investigations, scientific and literary, it may be said that all history and literature have to be revised and re-written from the spot where human affairs took a new start—a new race over the earth and earthly affairs, past and existing; and as its volume extends, the most distant and secret recesses and haunts of man and nature will be searched out and examined, with many more eyes than the god Argus had; until the circle of ripples gliding into the world's ocean of hidden mysteries, will penetrate and classify to the very bottom of the well of truth—as far, at least, as human genius is capable of accomplishing.

MONTEBAY, 31 March, 1859.

## The Egg and Young of the California Condor.

Montebay, 28 April, 1859.—It is a strange fact, in the natural history of our Pacific domain, that though the California Condor (*Sarcophaga cal.*), has been known to the scientific world since mentioned by Shaw, in 1779, the eggs have never been met with, nor properly described from nature, but simply from hearsay. Both Douglas (1827), and Townsend (1837), as related in Audubon, failed in discovering its nest or ever getting to see its eggs; nor (as far as we are aware), has any person since their time, described it from nature. Consequently its identification and description, from undoubted specimens, become a great desideratum among naturalists, from its being the egg of the second largest of flying birds, and hitherto unknown, from the extreme difficulty and expense of pursuing the parent bird to its incubating haunts. In this note we shall be enabled to clear up all doubts on this mooted point; for Douglas assumed, and stated rather dogmatically, that the color of the egg was "jet black"—from some Indian conversations which, probably, he did not understand, or was purposely deceived by the Indians. All the orders sent from Europe and the United States, to procure the eggs for the Cabinets and Museums of the curious, learned or rich, or of Governments, seem to have hitherto failed.

One of the rancheros of the Carmelo, in hunting among the highest peaks of the Santa Lucia range, during the last week of April, present, disturbed two Condors from their nests, and at great risk of breaking his neck, etc., brought away a young

bird of six or seven days old, and also an egg—the egg from one tree, and the chick from another. There was, properly speaking, no nest; but the egg was laid in the hollow of a tall old robles-oak, in a steep baranca, near the summit of one of the highest peaks in the vicinity of the Talareitos, near a place called Concelos. The birds are said, by some hunters, not to make nests, but simply to lay their eggs on the ground, at the foot of old trees, or on the bare rocks of solitary peaks; others say they lay in old eagles' and buzzards' nests, while some affirm they make nests of sticks and moss; but the truth seems to be, they make no nests. The entire egg weighed ten and a-half ounces, and the contents eight and three quarter ounces. The color of the eggshell is what painters call "dead, dull white;" the surface of the shell is not glossy, but slightly roughened, as in the sea-pelican's eggs, but not so much. The figure is very nearly a perfect ellipse, being a model of form and shape in itself. It measured four and a half inches in length, by two and three-eighths inches in breadth (diameter), and was eight and three-quarter inches in circumference around the middle. The eggshell, after the contents were emptied (which were as clear, fine, bright and inodorous, as those of a hen's egg, with a deep orange yellow yolk), held as much as nine fluid ounces of water. Before the egg was opened, it sunk on being placed in water—probably from its being very recently impregnated. Some of the old hunters say the egg is excellent eating; this one certainly had not the faintest musky odor, nor the slightest foreign smell.

The collection of birds' eggs in the United States and Europe, by savans, and the rich and curious who are bird-bitten, has become as much a rabia and rage as was that of shells; and, rather curiously, it centers more in collections from the California birds, just now, than those from any other country. Any one, with a fully identified and arranged series of California birds' eggs could get a handsome figure for the set in New York, Boston, Paris or London. Only think, there are schools of philosophers who make a study of birds' eggs; they call it Oology, and threaten to make big books out of it.

The young Condor mentioned above, is from five to seven days old, and weighed ten ounces. (The weights used in this paper are avoirdupois). The white skin of this chick is of an ochrous yellow, and covered with a dull white, fine down; the beak was colored, the same as in the old birds; the skin of the head and neck entirely bare of down, and of ochrous yellow—the color of the legs of a deeper shade than that of the body; it had the musky smell of the old birds; the size and appearance similar to that of a two-months-old gosling; it had only been dead a couple of hours.

We are thus particular in describing this egg and the young, as they are of great interest among naturalists, from not having been described before, at least so far as we can ascertain from the latest authorities in reach, all of which are particularly directed to California subjects. The above detailed description is from nature, at any rate; if it has been noted from the same mirror heretofore, it has not come under our cognizance.

Addenda, 7 May, 1859.—The young Condor mentioned in the foregoing note, proved on opening to be a male. The *crura*, or dilatation of the gullet, was filled with the finely comminuted flesh of some animal; the *stomach* contained oat grains and straw, with undigested fragments of acorns, excrements of mice or squirrels, and small pieces of wood, stone, and earth. The beak has a small prominence on its top at the curve, which is not in the old bird, and its edge is very slightly toothed. It is not known if the parent bird feeds the young, or the chick feeds itself from food brought to them; but from the beak and tongue of the above specimen, he was as ready formed to eat and tear, as a young alligator. The egg is a little smaller at one end than the other; its shell is about three times thicker than that of a turkey's egg. My old friend, Capt. John B. Cooper, who knew David Douglas intimately, when in California, in 1829-30, informed me a few days ago, that Douglas searched in vain for the eggs of the Condor, throughout Santa Lucia range, nor could he get them at any prices he offered to the Indians or country people. The egg and young bird described above, will be found engraved in *Hutchings' Magazine* for June, 1859; and a descriptive note of the same in the S. F. Daily Herald, of 5 May, 1859.

(TO BE CONTINUED.)

## Protection against Drought.

[As so many discussions have been had in our State relative to deep and shallow plowing—and cultivating on dry soils—we are pleased to give the authority of our very oldest and most reliable journal, the Plough, Loom and Anvil, to sustain the position we have always assumed for this State]. The frequent stirring of soils between the rows is undoubtedly a protection, and, in ordinary cases, sufficient protection against drought. The air passes freely through soils frequently stirred; and whenever air comes in contact with a body colder than itself, it deposits moisture, as in a tumbler filled with ice water at the dinner table, or in particles of a soil at some inches depth, and consequently colder than the air above the surface. When the farmer sees his tumbler sweat, as it is sometimes expressed, he may be assured that so it fares with the soil six or eight inches below a well stirred surface, provided the soil were mellowed to that or a greater depth before the crop was put in. The great source of protection in our country is in deep plowing. On a soil of any decent consistency, it would be impossible that a crop should suffer from drought if the soil were pulverized to a depth of fifteen inches, because the lower portion of such a soil would retain moisture till long after the surface should have received new supplies from the clouds. If our readers are alarmed at fifteen inches as a depth which they despair of reaching, we think them too easily alarmed, but still we will meet them on higher ground. A field thoroughly pulverized to a depth of ten inches will seldom suffer from the drought. Abundant and reliable testimonies have been published, going to show that fields plowed to a depth of eight or ten inches have escaped unharmed, when on other fields, equally well cultivated, with the single exception that they were plowed but half as deep, utterly failed of giving crops. That deep plowing is a sufficient remedy against any ordinary drought, any but the very longest and severest, is an established truth.

## COMMENCEMENT EXERCISES

AT SANTA CLARA COLLEGE, JUNE, 1859.

## Salutatory Address.

BY CHAS. S. REXTER.

## LADIES AND GENTLEMEN!

It is with pleasure, mingled with no little degree of pride, that the student greets you upon an occasion like the present. With some satisfaction to himself, he feels as though he had accomplished one great and important end of life.

And while to Providence he feels grateful for this, as one of the first of temporal blessings, he is not unmindful that to you, ladies and gentlemen, is he greatly indebted for the position he now occupies.

A decade in the history of California has not passed, since, out of the chaotic mass of human beings wafted hither from the four corners of the earth, you have formed a nucleus of literary strength, and thrown around it a moral shield, without which no institution, however munificent, endowed with wealth and learning, can give that literary refinement which contributes so largely to the happiness of the human family.

And while you have made this institution denominational, the student points to it as a significant fact in the history of religious and literary progress, that you have separated its literary departments from all sectarian influences, and its doors are always open to the student, whether he be Catholic, Protestant, or Pagan.

One year ago, the first graduating class in California, justly honored and esteemed as the pioneers of literature and science upon this western coast, stepped forth from the University of the Pacific, like Pallas from the brain of Jove, completely armed and equipped for the battle of life.

We have passed through the same scenes—the same college-experiences—the same difficulties—and now approach to the same threshold from which to take our stations with them.

We trust that we comprehend as far as we have gone, the general principles inculcated in what have been our studies; that we comprehend what is the true import of an education; and lastly, what is most important, how we may best use and not abuse it.

We trust, too, that we will ever treasure up in our memories as something sacred, those great moral truths so deeply inculcated by our careful, kind benefactors.

The difficulties attending a college-course, none but a student does or can know. They do the student great injustice, who think it mere pastime to search for those great truths which lie concealed beneath a mass of materials accumulated for ages. They are precious gems, and he who would possess them, must delve for them; delve deep, beneath a sea of thought. They are not sown broadcast, like pebbles upon the ocean's shore, that every one may go and pick them up at pleasure, or even blunder on them; but he who learns must labor.

They who at evening sit around their cheerful fires, or revel in the halls of mirth and merriment, have but a faint glimmering idea of the anxiety and mental difficulties attending the student; toiling at the hour of midnight, while thousands slumber, racking his brain over some abstruse metaphysical subject, tearing the frame-work of science to atoms, and knitting it together again piece by piece—particle by particle.

But very few of those who enter college ever graduate, and many, very many, sink under the burden before they get half-way through.

The student is apparently secluded from the world in the silent retreat of his study—yet not; his mind lit up by a vivid imagination, wanders far and fast; he visits every clime and country. From nature's snow-clad hills, he views the poetical scenery of a Switzerland, or on still further north, where the sun never sets, with wondering gaze, he traces out the flittings of Aurora Borealis. The scene changes; in the twinkling of an eye he is plucking the golden fruit in the more salubrious climate of the tropical regions, and when he beholds the beauty and poetry of the skies, seized with rapture almost to inspiration, he shakes the dull earth from his feet, and mounts the heavens. On the swift wing of imagination, he flies from planet to planet, from sun to sun, and led on step by step, he ventures at length to grapple with infinity, from which he recoils, and with astonishment finds himself but a poor humble student, dallying out a scrap of time on a mote of creation.

If you ask, why the student involves himself in such difficulties, I can only answer that he is actuated by that general unquenchable thirst and desire of mankind to seek the unknown.

And when tired nature droops his weary wing under the burden, Hope, the student's friend and joy, lends her inspiring aid. And it is not infrequently that the student, when the cloud of despair hangs over his soul like darkness over the face of the deep, is cheered onward by the admonishing hand of Hope:

"Primeval Hope, the Etonian mused say,  
When man and nature mourned their first decay;  
When every form of death and every woe,  
Shot from malignant stars to earth below;  
When murder bared her arms, and rampant war  
Yoked the red dragons of her iron car,  
When peace and mercy leaped from the plain  
Sprang on the river winds to heaven again;  
All, all forebode the friendless, guilty mind—  
But Hope, the charmer, lingered still behind."

The subject upon which we propose to make a few remarks, is one, no doubt, familiar to you all. For the student is known wherever the busy hum of industry is heard. Wherever proud cities rise; wherever the press blazons forth to the world its lettered literature; wherever the dull heavy tread of the iron horse is heard, and wherever the sails of commerce whiten the bosom of the ocean, is the student known, and wherever institutions of learning are reared, is the student also known; and in a land where you see a vast multitude of human beings assembled together, on God's holy day, to worship and offer up thanks to Him from whom we receive every blessing, you may well know the student is there. In short, you find the student wherever progress and civilization make their way, or rather progress and civilization make their way wherever the student is found; and liberty never breathes in a country where the student is not.

But however intimately connected with society he is—with the glory and honor of a nation, eloquence has been exhausted upon every other subject pertaining to the arts and sciences but that of the individual student, as a student is lost in the importance and dignity of an education, or amid the ruins of some superannuated institution.

Whether the mouths of orators have been dumb upon the subject because they thought it worthy only of silent contempt, or whether they regarded it as a kind of literary obstacle, over which soaring eloquence might blunder, is difficult to decide. Our remarks apply to the student in general, of every clime and country, and it is not at all necessary, that the term be applied to those confined within the walls of a college. It is a profession, and every one is a student who seeks knowledge.

But the students of California merit particular attention; for them I have the greatest sympathy, as one naturally would who has associated with them for some years; there are not a great many of them. But what is one great consolation to my fellow-students and myself, if they are but few in number, they are *multum in parvo*; what they lose in quantity they make up in quality. However, it is not so because they are more intellectual, or superior in mental ability; but we do claim this degree of superiority for the student of California: that it requires a higher degree of moral courage to turn

the mind from the wildest freaks of adventure that ever beset the path of a student, to the more sober and steady pursuit of knowledge.

Emigrating to this country in his childhood days, he finds himself cast in a whirlpool of constant excitement, by his peculiar associations and occupations, his mind nearly a blank, ready to receive and tenaciously hold first impressions. His position is perilous when he finds his path beset by every vice and temptation that human ingenuity can invent. It is painted and presented to him in every shape and color, and seems at times almost superhuman, or, if you will allow the expression, super-saturnic. And not only is he likely to be drawn within this vortex of sin, as many are, but there are still more innocent pleasures which tend to bias the mind from all literary pursuits.

The climate is congenial; the geography of the country is adapted to more athletic sports; his mind seized with the spirit of adventure from the romantic scenes constantly spread before him, he is led from mountain to mountain, from cliff to cliff, and from their highest summit he casts his vision across the Sierra Nevada, and recalls anew the scenes of bygone days. Melancholy turns him from the view, and when he beholds the vast expanse of waters which lie before him in the West, it recalls to mind the prophetic words of the good Berkeley:

"Westward the course of empire takes its way;"

and he wonders with Young America, how long before the Anglo-Saxons will revel in the Hall of the Celestials.

From such a chaos of impressions, must the student of California divest his mind, when he enters within our college-walls to receive instruction, and it is only with a degree of moral courage worthy of the highest praise that he does it. Indeed, it is no mild task for any student to forgo the pleasures of the world, and pursue the more tedious paths of science—that, too, in the very prime of life, when

"As bees fly hame wi' lades o' treasure  
The minis wing their way wi' pleasure."

It will not be presumption to assert, that the position which the student occupies, is more responsible than that of any other class of individuals. Total, unavoidable, and involuntary ignorance, may screen a man from a great many serious responsibilities; but education involves him in them, and under the red of a most fearful judgment, the student finds himself in duty bound to comply with the demands made upon him, or in other words, he must alleviate the debt he owes to man and his Maker, or turn bankrupt to him from whom he receives every blessing.

Herein consists the importance of the student, in what he knows, however little it may be, and the relations to other beings in which he places himself. As a citizen, he holds the future destiny of his country; as a member of society he is responsible—responsible in one respect, as an example of good conduct. We do not mean to assert, however, that the student always sets a good example, but if you find it not in the refinement which education gives, you need not look for it any where else. Example is the only source of education that some people have, and it is not unimportant that that example be good.

Bad example has ever been the greatest source of sin; it has been more pernicious to mankind than all the wars, plagues and famines that ever visited the human family. It may be asserted, however, that the student has ever been the worst; but where a student errs, a student rights him—no one else can.

Viewing him from a religious point of view, we are indebted to the student for all the knowledge we possess of the Christian religion. Time has canceled out many illustrious deeds; great men whose multitude were proud to follow, have sunk into the waves of oblivion; and even the fame of modern heroes has been tarnished by the unrelenting hand of time—but that of our Redeemer is newer to-day than it was yesterday. By the perseverance and energy of the student, his teachings have been transmitted through all succeeding generations down to the present time, pure and undiluted, as it fell from the lips of the Saviour—clothed in all the majesty of heaven. Notwithstanding, he has had obstacles to overcome, which put his faith to the severest trials. Religion's perversions, false religions, matured and brought to light by the hell hallucinations of some false prophet—the evil passions of man—and lastly infidelity, the infidelity of learned men, who side by side with the unlettered Hindoo, have rolled the iron car of a Juggernaut, for the last eighteen centuries. Yet they were such from principle, and whose high moral worth as citizens of community was such, that some professing Christians might learn charity from them—not so much the doctrines they advocated made them the formidable foe of the Christian student, as their honor and sincerity—in short, their strength lay in a herculean weakness.

It might seem to be taking broad latitude to say the student has accomplished all this. But a Luther toiling at the hour of midnight, conceived the idea, and laid the corner-stone of the greatest Reformation the world ever witnessed. Paley conceived the idea of establishing the Evidences of Christianity, while attending college. Bishop Butler labored forty years in the silent retreat of his study, alone, under the discerning gaze of Heaven, and the result of his labors was a complete harmony between natural and revealed religion. He trimmed the foundation of infidelity till it had nothing to stand upon, and then swept that away. Indeed the pages of history are illumined with such names; history would not be history without them.

It might seem necessary, in the course of our remarks, to make some distinctions between the genuine stamp of the student and the counterfeit. The public are sadly imposed upon sometimes, by those who would like to palm themselves off under the devoted name of the student. But you need never be deceived by them; you may always know them; they belong to that class who are always wanting to go to school long enough just to get a bit of learning to help 'em through the world; and they go, just long enough to learn Aladdin's golden rule of arithmetic—"Addition to myself, and subtraction from my neighbors;" and then probably forget to pay their tuition fees and leave; leave, not to put in practice those great moral truths they never learned.

Frugality and economy are always commendable; they are virtuous qualities; but no genuine student will prostitute the dignity of an education to the sole purpose of counting dollars and cents.

The genuine student has a few faults; the same as other people have a great many; and if one were going to put forth a volume or two on their virtues, it would be perfectly admissible in him to treat sparingly of a fault; that is, providing he was going to write a volume or more on their merits. Some, however, are apt to look upon it as a heinous crime if the student should put on a few scholastic airs. Admitting he does; they are purely literary, and surely no one can have a better cause to back up a little vanity.

Society, in fostering and sustaining the student from childhood up to adult age, claims some recompense for his care. They expect, nay, demand, that he should stand forth the champion of the right, though he may not have the strength of the Ajax, or the swiftness of Achilles. But "thrice is he armed who hath his quarrel just." And when he stands forth the champion of the oppressed, he can show written upon the frontlet of his will, the proud and defiant words of Roderick Dhu:

"He rights each wrong where it is given  
If it were in the courts of heaven."

## Valedictory Oration.

BY CHA. S. SMYTH, AT THE ANNUAL COMMENCEMENT, JUNE 8, 1859.

## LADIES AND GENTLEMEN:

Amid the varied scenes of life's pathway there is much that awakens feelings of thrilling interest, and leads the mind to the contemplation of nobler themes. As we cast the eye backward over the lapse of time, since the discovery of the New World, we are startled by our nation's rapid advancement. The untrodden wilds that were unproductive wastes in the field of nature, have been transferred by the hand of art; and the yell of the savage and the growl of the wild beast have been hushed by the voice of civilization. A living, moving throng of intelligent human beings, filled with feelings of exultant pride, as they contemplate the progress of our country, now fill the places of the untutored sons of the forest. Coextensive with the advance of civilization, and the increase in wealth and power, has been the progress of science and the onward course of free and liberal principles. The sun of liberty, which shines so brightly in the New World, casts its cheering beams athwart the gloomy dwelling-places of a down-trodden people; and the burden of oppression weighs less heavily upon them, as they hear across the deep blue waters the happy voices of freedom's sons chanting the praises of the goddess of liberty. But while we are to them an example of political and religious liberty, the discoveries in science rival that of the older philosophers, and the rising tide of truth impelled onward from the shores of America, and swelling higher and still higher in its onward course, breaks on the shores of the Old World, and bears on its rolling wave the scattered fragments of the bark of ignorance and superstition. As our country has extended the area of its influence, and given the world clearer evidences of its wise provisions, that other element, which is the most essential to national prosperity, has also moved forward with steady course, giving to our institutions a glow of richer beauty, as it has portrayed to the world the happy consequences arising from the blending of political and religious liberty. The banner of the Cross, planted on the shores of the Western World by Columbus, now waves over a people who acknowledge the away of morality and religion. This has been the great instrument for the promotion of peace and prosperity. Without it, we never could have attained to our present position among the nations of earth. It is the cause and not the effect of our national prosperity. Entire religious liberty has opened the way to free inquiry; and the consequence is, that the people of the United States have nearer the religion of its founders, in its pristine purity, than any other nation that acknowledges its divinity. And an influence is extending from our shores, calculated to win to the true faith the nations bowed down in heathen superstition. The light illumining our peaceful shores extends beyond Pacific's broad domain, and is chasing away the clouds which overspread Asia's darkened clime, while the idols to which the people have bowed for ages in blind adoration are destined to be superseded by the simpler and purer forms of Christian worship. And the light of truth is again beginning to illumine the land of its origin, which has for ages been enveloped in the thickest gloom, waiting for the fire of Christianity, which moved westward in its course, to perform its circuit around the globe, and re-kindle on its native shore. Such being the consequences of religious liberty, restless and fanatical must the person be who desires a change of policy. May no religious proscription ever disgrace our nation; and perish the intolerant bigot that denounces every one whose belief does agree with his own, and who does not subscribe to his narrow-minded notions of Christianity.

But we are apt, when speaking in reference to our progress, vainly to imagine that we must continue to advance in a corresponding ratio, forgetting the foundation on which free institutions rest, as we view with swelling hearts the upward flight of the American Eagle. It is folly to suppose, because we have been brought safely through every storm, that we are in no danger. This blind confidence in our strength, and a disposition to pass quietly along, unconscious of the perils which surround us, have a greater tendency to hurry us on to destruction, than all the ravings of bigoted fanaticism. If those who direct the affairs of our government, and who are the guardians of our liberty, slumber at their post or prove recreant to the trust reposed in them, the ramparts of our national safety will be broken down and the seeds of anarchy and misrule scattered throughout the land. Those who dwell in eloquent and rapturous strains on the greatness of our Confederacy, and bestow no attention upon the true principles which are the palladium of our liberties, are our most dangerous counsellors, and never should receive the confidence of the American people. If enlightenment and individual and social morality keep pace with our increase in wealth and population, no cloud can ever dim the star of our prosperity. But if we listen only to the honeyed words and hackneyed phrases of aspirants for honor and distinction, and foolishly imagine that individual and political corruption will pass unnoticed by Providence, our ship of state will be dashed to pieces on the breakers that lie near the waves of fancied peace and security. But a general diffusion of knowledge has ever kept alive a feeling of patriotic devotion. It is a pleasing reflection, and one which should give us increased courage, that the storms which have beat madly about the most perfect political fabric in existence, have spent their force in harmless fury, only making it better able to withstand the shock of each succeeding tempest.

The scenes of to-day are a striking evidence of our prosperity and happiness. The assembled throng before us tells more forcibly than words could express, how rapid has been our progress as a State—how interesting are the circumstances connected with our history!—and is the most eloquent comment on the rising star of greatness which casts its radiant beams over the mountains and valleys of the Eureka State. From a wild and uncultivated wilderness, you have redeemed our fair land, and now bloom the most fragrant flowers and ripen the richest fruits, where, but a few years ago, the hand of art had scarcely begun its work of transformation. Enlightenment, peace, and prosperity, have followed in the wake of degraded ignorance and moral desolation. As citizens of California, you have reason to be proud of her position. Society now is on a level with that of the older States. The luxuries of life abound in rich profusion, and we are surrounded by a class of beings, who illustrate in a forcible manner the strength and beauty of that oft-quoted and highly interesting proverb, that "Where men is, there will woman be also."

In glancing over the past few years, there is much that awakens the heart's most thrilling emotions, and touches the most sensitive chords of sympathy. The interest manifested by you in our welfare, will be remembered with gratitude when the minor incidents of life are forgotten. To the student, encouragement and sympathy are ever motives to increased exertion. As we bid you adieu, accept our warmest thanks for the generous sympathy which you have ever manifested for us; for the flowers of pleasure with which you have strewn our pathway, with the assurance that amid all the changing scenes of life's journey, night shall ever destroy the memory of old associations, while nothing shall ever remove from our hearts the feelings which your kindness has awakened. May time but add increasing prosperity and happiness, and may no breath from the vale of sad-

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, JUNE 17, 1899.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAY, who left here in the steamer of the 5th April, on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
Having employed Mr. J. F. LARABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the Farmer into their family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

**Do You Take "The Farmer"?**  
We believe we should ask this question of everybody; especially of all who are permanently located in California. Our journal is identified with all the best interests of California. Merchants, manufacturers, and mechanics, as well as the farmers, are interested in the subjects on which our journal speaks. There are no interests of which there are not important records, such as should be known to all; for their own interests will be promoted thereby. Every branch of human industry has an important record and a kindly word; and every family in our State has an interest in these matters. The cause of Education will ever find able advocates and friends in our journal; and surely parents will desire to secure all that shall advance this cause for their children's sake. Teachers will greatly promote their own interests, by a generous interest displayed for this aid to them.

The merchant's prosperity depends entirely upon the success of the great industrial interests of a State; the manufacturer is as clearly allied; and the mechanic is the "twin-brother" of the farmer; and thus all are identified together.

It is all-important that our State receive an enlarged immigration to give life to all branches of trade and industry; in order to awaken attention to this all-important subject, we should scatter all the light possible relative to the resources of this State, through every State of our Union and over Europe; and we believe we can recommend our journal to all the friends of our State, as a means of accomplishing this work.

We therefore must respectfully ask the attention of the citizens of this State, who have kindred and friends who they may wish to interest in behalf of California, to send them the CALIFORNIA FARMER. We have abundant proof that it has accomplished, and will accomplish, much good for our State, and we know it is not egotistical in us to say this much.

We therefore hope that those who have kindred and friends in the old States, will feel the importance of the suggestion we have made; and we shall be happy to receive their orders for mailing our journal, as they shall desire—fully assured, that all who thus cooperate with us, in making known the vast capabilities of California among their friends abroad, will be amply repaid for the cost of it.

**State Agricultural Fair.**  
We learn from Sacramento that considerable feeling exists relative to the coming State Fair, as connected with the Pavilion and the action of those who have acted for the County in the purchase of the land for the County Pavilion and Fair Ground. The feeling is generally prevalent, that the interests of the county, as well as of the great mass of the citizens thereof, have been entirely disregarded; and the first intention of those who are to pay the taxes for the erection of the buildings has been lost sight of, in the desire of parties to erect the Pavilion in the City and have the Fair Ground at a different place, outside the City. Influential citizens, who are large taxpayers, feel aggrieved, and think that the true intent and purport of the vote has been set aside.

By the act of incorporation it was intended to erect a Pavilion and prepare the Fair Ground; and every one supposed that they would be in one place. No one ever supposing the Pavilion would be in one place and the Fair Ground in another, as such a thing is rarely known where the arrangement was for permanency.

We hear also, as a further proof of the gathering trouble, that the contractor for erecting the buildings has declined to go on; and the citizens are much incensed at the conduct of those who oppose the original will and intent of the people.

We regret to hear also, that some of the officers of the Executive Board of the State Agricultural Society are greatly dissatisfied, and that one, A. P. Smith, Esq. (one of the most practical and best men in the State for such a position), has sent in his letter of resignation, and refuses to have any further connection with the Society or its management. This we have all along feared.

**Collegiate Addresses.**

We take a great pleasure in calling the attention of our readers to the very excellent essays which are found in our columns this week. When it is remembered that our State is young and the colleges of our State are but in their infancy, and when it is remembered too of the many temptations of our State to draw students from close study, we think these efforts of our young students worthy of all praise. They reflect much credit upon the institutions as well as upon themselves. We have several more essays which we shall give in following numbers.

**New Pump.**—A new invention of a Pump of excellent character, is now offered in our columns. We have examined it in the factory and in the garden, and can speak with confidence of its merits. The ease and rapidity with which this pump works is remarkable. We have met with many gardeners in San Jose who speak in the highest terms of it. We shall again refer to this valuable improvement.

**Floral Fair at Oakland.**

Thus truly interesting and grand display, the first of the kind at this season of the year on the Pacific coast, opened to the public at the Pavilion at Oakland on Tuesday evening last, at 8 o'clock.

It would be difficult for the public generally to fully appreciate this enterprise unless they shall consider the amount of labor performed by the citizens and the executive board, from the commencement of the enterprise. When it shall be duly considered that this is the season of the grain harvest, and also the season of the strawberry, the great crop of Oakland and vicinity, when every moment of time is required of the cultivator, then some idea may be formed of the cost in time and means required to organize a society, get plans, build a pavilion and awaken a due interest for such an enterprise, and then collect, arrange and bring to a successful issue so important an undertaking.

We record the Floral Fair at Oakland as a complete success, worthy of all praise and highly honorable to its projectors, friends and patrons. It will do much for the cause of "Flora and Pomona" and will have a very beneficial effect in making known the beautiful town of Oakland to many who never had previously enjoyed its rural beauty.

The pavilion where this Fair is held is built in similar form to the other pavilions, for similar uses; a main body for a hall, with wings. This pavilion is 80 feet long by 40 feet wide; the wings 30 feet by 20 feet each. The pavilion is a neat structure and tastefully decorated with evergreens, flowers and pictures.

Two tables the length of the centre hall are profusely covered with early fruits and flowers, filling the pavilion with the sweetest fragrance. The odors of ripe fruits and blooming flowers are almost felt.

**MEMORIO.**—A piece of embroidery from Richmond, Ohio, wrought by Mrs. E. A. Pixley. This, however neatly and handsomely accomplished, contained within itself a value more than met the eye. It was the gift of a sister to a brother in this country, and is valued as a memento, and treasured as a priceless gift. The piece of work is denominated raised worsted work, and is of rich colors on a black ground.

**FARMER'S BOUQUET.**—A neatly arranged grain and grass bouquet composed of wheat, rye, barley, oats, and buckwheat, with grasses. The buckwheat was in blossom, forming with blossoms of the Solanum Tuberosum, a handsome centre, the balls of the latter representing fruit, so that this bouquet may be said to be an offering to Flora, Pomona, and Ceres. It was a handsome tribute. The collection of Grain was very respectable, many samples being of superior excellence. We shall give full lists of contributors as soon as the Committees have reported, together with the premiums, etc. The assortment of Vegetables was far more extensive than could have been expected from the sandy appearance of Oakland; cultivators are now beginning to learn that sand contains much that is nutritious and beneficial to the soil.

A Spanish bean, by Mr. Whitcher, some seven feet high (the English bean, long pod), was a good specimen. A sugar-beet weighing fifty-seven pounds exhibited by Mr. L. Larue, of Brooklyn, attracted considerable attention. A very pretty specimen of the asparagus gone to seed, exhibited a wonderful sport—three broad expansive branches nearly four inches wide, and from four to six feet long, with tasseled branches drooping from the sides, making a very beautiful appearance. Large stalks of the same were near by—very superior samples. The above was from Dr. Haile of Alameda. A Hubbard squash, the growth of 1898, in perfect preservation, and sweet potatoes, perfectly preserved, the growth of 1897, were on the table, grown by Rumford Brothers.

The collection of Fruits upon the tables would do honor to any show in the world; in fact, no better fruit of the kind was ever exhibited at any fair in any State. As we intend to publish an entire list of the fruits and the names of the contributors in full, we shall here only enumerate choice specimens, and any omission we now make will not be intentional, but accidental. Prominent in the exhibition were the splendid Oranges from the gardens of Mrs. Bruguiere, a beautiful spot among the hills near by. Several trees in pots, laden with apples and pears, were from the same place. The strawberries, cherries, currants, and raspberries, were never surpassed. Prominent in the collection were three pyramids of fruit from the garden of D. E. Hough, containing twenty-eight varieties of strawberries, twenty-two varieties of gooseberries, eight varieties of currants, and twenty varieties of raspberries, and two of blackberries—all fine specimens. The strawberries were most wonderfully fine; some finer than ever before exhibited. Where all were so fine it would seem almost invidious to discriminate. A. W. White, Mr. Lusk and Mr. Fountain exhibited magnificent strawberries. Other exhibitors' names we did not learn in season for this week. The following contributors also made fair displays of cherries, currants, raspberries, etc.: R. W. Washburn, of Shell-Mound; Dr. Haile, of Alameda; J. M. Horner, of Mission San Jose. Remarkable specimens of the Gov. Wood Cherry, the best cherry yet shown, was exhibited by B. F. Rynders, Esq., of Brooklyn. The cherry-cherries, by Robert Farraly, of San Lorenzo, were remarkable, really cherry-size cherries. The white currants of Mr. Washburn, and some other dishes of the Victoria and large red were very fine. The raspberries by Mr. White were beautiful. Mr. Lewelling, of San Lorenzo, exhibited splendid cherries, among them Gov. Wood; this will be a famous cherry for California. The President, Rev. A. H. Myers, exhibited fine fruits in variety. Several lady contributors added worth and beauty to the exhibition by their fruits as well as in every other department. The Japan raspberry, from Mrs. Kirkland, attracted great attention. Mrs. Barnes exhibited very handsome fruit. Many other contributors we shall report in full upon ascertaining names and varieties. Dr. Haile, of Alameda, and others, exhibited branches of the cherry-tree heavily laden with fruit.

The collections on behalf of Flora were highly

creditable. Prominent in the collection were the choice offerings of W. H. Bovee, Esq., from his private gardens: A splendid display of roses and other cut flowers; also, two pyramids of rich and fragrant flowers that added greatly to the display. Mr. Hutchison of Alameda, made a very handsome show, contributing over one hundred and fifty pots of plants, and a profusion of bouquets and cut flowers, highly creditable to him as a florist. Mrs. Bragee made a handsome display also. The collection of the President and other officers, of flowers and fruits were highly creditable. Many of the floral embellishments and wreathing of the hall were the work of the fair hands of the ladies of Oakland to whose interest and enthusiasm much of the success of the Fair is owing.

The Vegetable Department of the Exhibition was well sustained by Mr. D. L. Perkins, who presented a fine array of vegetables and vegetable seeds, highly creditable to him; and by Messrs. Potter, Boggie, Fogg, Hockmire, and many others. Among the finest vegetable specimens on exhibition were cabbages, turnips, potatoes, rhubarb, etc., very fine for the season. Of these we shall speak more particularly hereafter.

The contributions of Artistic Work were creditable; especially, the needle-work, embroidery, and raised work; numerous specimens of which were presented. They shall hereafter be noticed. Among them is a fine raised embroidery, or worsted-work, by Mrs. Lucien Huff, very rich and beautiful; also a piece of work, a map of England, by a lady seventy years ago.

The Gallery of Paintings, etc., presented some fine specimens. R. H. Vance, as usual, led the way with his fine artistic pictures. Mr. Shew showed some fine pictures; Mr. Stuart also contributed. The volunteer collection was good.

A fine collection of rare and valuable specimens and curiosities (some fifty in number) were exhibited by Dr. —, which added very much to the interest of the Fair.

We have undoubtedly omitted to mention many worthy contributions, but we will supply all deficiencies in our next publication.

The President and Directors have certainly done their very best to meet the wants of the public. Their gentlemanly and courteous manner in receiving visitors, and their attentions to the wants of all, merit the approbation of the public.

**Reception of Horace Greeley.**

THE announcement that the distinguished editor of the New York Tribune (Horace Greeley) was about to visit California, has awakened a lively interest in the minds of all classes of our community. It is not merely politicians, or party men, who are to be interested and affected by the visit of this gentleman and editor, but the people of our entire State; for it should be borne in mind, that Mr. Greeley comes to study the character of our State and her vast resources and capabilities, as well as to meet and confer with her citizens. Mr. Greeley will come to learn and to be instructed in the manifold evidences of our State's progress, and to see, by tangible evidences, the power and influence of the citizens of California, and to mark the wonderful progress this State has made in one short decade of time.

The position of this gentleman, as the editor of one of the most influential journals of our country, heralding far and wide a voice that must tell with power for our State, should not be forgotten. It is important that he should be received with that distinguished courtesy due to him, for the influence that he wields; and that opportunities should be given him, to ascertain the true position of our State and her untold resources, so that the Tribune may be the means of still further advancing our own State in her path of destiny.

Horace Greeley comes to our State as a scholar as well as an editor, to be instructed, and not merely to be courted and feasted as an editor or a politician; and, while he shall be welcomed with all due honors, for the position which he occupies, we hope and trust it will be the pleasure of our citizens, one and all, to place before this gentleman all the information possible relative to California; so that when he shall return to his highly responsible post of honor and duty, our State shall be benefited by his visit to it; and the power and potency of his pen, and the columns of the New York Tribune, shall become still more than ever the friend and herald of California and her fame, and show forth to the world some bright pictures of her future great and glorious destiny.

Such a purpose, in receiving and welcoming such a guest to our State, and such a reception as would be due to such a guest, would be worthy of our State and the man, and which we trust will be paid; so that all shall be honored thereby, and such we hope and believe will be the action of the press of California, in behalf of the citizens thereof.

**Monthly Agricultural Meeting at Oakland.**

We would respectfully suggest to the friends of Horticulture, Floriculture, and Agriculture generally, the importance of holding a series of Monthly Meetings through the summer. We believe, if all the growers of fruits and flowers would bring in their best and newest fruits and flowers every first Saturday in the month, or every four weeks or oftener, and then and there compare quality, correct names, and confer together, great good would be accomplished. We know they would all be the gainers; for it would increase the love for the science and promote a healthy competition. By a little exertion, many who never thought of exhibiting, would become interested; and, after a little, these meetings would be very numerous and attended. We hope they will awake to this very important suggestion.

**TRIAL OF THE HARVESTERS.**—To-morrow will be the great trial of the Harvesting Machines, at Oakland, under the care and direction of the Committee of the Fair. This trial will prove an interesting one. Messrs. Arthur & Son and T. Ogg Shaw & Co., with others, will be contestants for the glory and honor of the field. The result will prove which shall wear the chaplets of fame—Home Industry or Foreign Manufacture. We look to the result with deep interest.

**The Collegiate Institute at Benicia.**

The Annual Exhibition of this institute, under the direction of C. J. Flatt, Esq., was as decidedly successful as the former ones have been. A marked improvement in both the useful and ornamental departments, gives evidence of a studious effort on the part of all the teachers, to render each term worthy the high reputation which the Institute enjoys.

Not only is the situation peculiarly suitable for such educational establishments as Benicia boasts of, because of the clear bracing atmosphere, equally free from the fogs of San Francisco, and the heat of the interior, but when we find that great pains are taken to give satisfaction and meet the high expectations which are formed, we feel warranted in recommending to the notice of our readers, such an establishment as the Collegiate Institute.

The essays were of a high character; the subjects well chosen, and calculated to call forth originality of thought, as well as show the advancement of the higher classes in important studies. The "Past and Present of California," by H. Coffin, of Martinez, was well written and eloquently delivered. "Music," by Thos. P. Hooper, of Benicia, was practical throughout, treating more of the origin and the usefulness of music, and its value as an auxiliary of education, than the poetry of his subject would have led us to expect.

The "Age of the Earth" by Jos. McKenna, was an extraordinary subject for a Goethe to handle, but he seemed perfectly at home in his geological and astronomical arguments to prove the great age of the earth.

"Education," by I. Hurlburt was admirably written. The subject in the first place had evidently been carefully considered, was presented in a forcible manner and left the impression that the young gentleman understood not only how to write, but the importance of what he had chosen to write about.

The Essay on "Theoretical Farming," by Geo. M. Fall, of Marysville, will publish hereafter, because we think it will interest our readers. It is a fair sample of the efforts we have described. It was carefully delivered and won the commendation of all present.

The reading of "Young America," a journal in manuscript, by J. A. Booth of Downieville, and Jerome Stephenson of Calaveras, Editors, interested us. The articles seemed all well written. The paper was handsomely got up. The "School-boys Journal" was read by L. D. Frere and Chas. Rueger, Editors. It was a spicy sheet and created considerable merriment. "The school-boys Echo," a collection of compositions by the little boys, was very amusing; the editors, F. Gonisales and Ed. Dana, deserved the applause bestowed upon them.

A debate "Was Napoleon greater in the field than in the cabinet," affirmative by L. P. Marshall, negative by H. T. Hastings, received great applause. The question on both sides was argued with ability.

The "Recitations" pleased us very much. The best effort was "Spartacus to the Gladiators," by Bani Wing. The inflections of his voice, no less than the gracefulness of his gestures, evidently showed his ability. Willey Nichols declaimed "The Orphan boy" with delicacy and eloquence. "The Gambler," by Mahlon Osborn was a fine piece of acting. The "death scene" was remarkable in its way.

The Artist of the Institute, O. Rager, recited "The Moor's Revenge" with thrilling effect. L. D. Frere deserves particular notice for his fine declamatory powers. He recited the "Baron's last Banquet" with an eloquence that would have done credit to a veteran actor. A little fellow by the name of Milton Stevenson, recited "A leap from the Main Truck," gracefully. The comic recitations of Hugh O. Ritchie, Peter G. Loucks and W. H. McCain, were a feature of the evening's entertainment. They seemed to appreciate the humorous character of their pieces and enjoyed them quite as much as the audience did. Scattered through the programme were some happily chosen choruses.

Not only was the music of a higher order than is usually taught in schools, but the execution, spirited and characteristic as it was, deserves marked notice, and reflects equal credit upon the ability of Prof. Saries and the application of his pupils. The Piano solo by Willey Goodyear, exhibited a rare proficiency. His execution of the intricacies of a composition by Hunte, was warmly applauded. A little boy, Fred. Weinmann, performed the "Tremolo" in a very creditable manner. The Duetta by Geo. M. Fall and Henry Hastings, gave great satisfaction. The ease with which the young gentlemen modulated into different keys is worthy of notice. A comic song by Master Reichert created quite a furore. Prof. Saries informs us that the musical selections were picked out from a number of equally difficult pieces. In fact we heard Masters Goodyear and Weinmann play several brilliant pieces by Hunte, Czerny and other celebrated composers.

The attendance was very large. We noticed a number of prominent persons present from all parts of the State.

It is a pleasing duty to give publicity to so creditable an Exhibition. It proves that while we are advancing in every department of industry and art, that California with equal pride, can point to her schools and challenge a comparison with contemporary establishments at the East. In soil and climate we have natural advantages that are far superior to any other state in the Union. We offer substantial and permanent inducements to the immigrant and it is a source of comfort to know from almost every Californian who travels abroad, that after all, the enterprise and industry of our people are creating a State that even now can compare with her most favored sisters at the East.

J. H. Still & Co.—We have received several favors from J. H. Still & Co., of new magazines and papers by the steamer; among them the "Romancist," and New York Leisure Hour Companion," a new periodical, of which this is the first number; a large and handsome magazine, full of miscellaneous readings.

**Catholic College at Santa Clara.**

While visiting the University of the Pacific at Santa Clara, we paid a visit in company of friends to the Catholic College for boys, under the charge of Father Conly.

This is one of the old Mission Church and College grounds, established some forty years since, and is now a valuable property, claiming by recent decisions a part of the famous "Redman Park," a large and valuable pear orchard, whose annual income from pears has realized some \$20,000.

We were received by Father Conly with much courtesy, and conducted through the entire college and grounds, each and all the departments of study, eating and sleeping rooms, and pleasure grounds. This college has its own tailor and shoemaker; the room where the students have their clothes kept is interesting; a tier of shelves, with apartments equal to the number of students, shows the wardrobe of the student for their outer habiliments, and under charge of the tailor, they are always repaired and kept in the best of order; the same with the shoemaker.

A large and well ventilated school-room for general study, and recitation rooms.

Separate rooms where each pupil takes his lessons in music, and recitation rooms for classes in all the various branches. A large and admirable play ground, with excellent gymnastic apparatus, which is well used by the boys.

A large dining-room, where eighty-five pupils (the present number), are provided for. The sleeping room contains near one hundred beds, all numbered (ninety-three we think), are placed in four rows, in a large and well ventilated hall, second story, and where two teachers or guardians are placed; the bath-room and wash-room contains closets numbered, and where each pupil has his wash-bowl and towel, to correspond with his bed. In the sleeping-room, and while washing, no talking is allowed, silence reigns complete, and here near one hundred boys will undress and retire without a word.

We spent considerable time in the rooms where electrical and chemical apparatus and cabinet are deposited, and were highly entertained by Professor Messea and Father Conly with some very beautiful illustrations in electricity and chemistry. This institution has the most complete and perfect sets of electrical and chemical apparatus that can be found on this coast—costing about \$12,000 in Paris—large and powerful electrical batteries, sufficient to knock down an ox, or even Wilson's elephants. We witnessed the power of the battery, where a person standing upon the insulated stool would be so highly charged, that his hair would lift and stand upright upon his head, "like quills upon the fretted porcupine,"—making a man look terrific; and while thus charged, to touch him would give one a very heavy shock, and to draw the finger or hand quickly down the garments would give forth a hissing sound. Experiments with the air pump—extracting the air from a glass globe, and then connecting it with the battery, showing the electric fire and brilliant purple volumes; also connecting glass tubes to show fancy vivid lightnings. The experiments with the electrical battery—the forked lightning—the dancing peas, and various grand experiments, were highly instructive—all showing that Professor Messea was indeed master of the science. In the large workshop we found all manner of experiments going on; a large and complete laboratory, capable of performing the most scientific and intricate experiments. We saw some splendid specimens of electrolysis; among them a silver of some six and a-half pounds, with raised figures, very perfect—rare materials to work with. Platinum Aluminium—metal potassium, that burns on water; we saw this beautiful experiment, the potassium, sporting on the water, with its flame like a meteor, "one moment bright, then gone forever," the bending of glass tubes, and drawing them down to the size of a thread, and yet have their perfect tubes conductors of air; various scales and weights of perfect balance—the platinum scales, that a one-hundredth part of a grain would move. In the laboratory a large globe was being made, three feet in diameter; when finished will be most perfect. In every department we noticed all and every requisite material for perfecting the student, and at the examination which is near at hand, the students will show that they have availed themselves of their privileges, and improved them—for students cannot waste time at this institution. A valuable mineral cabinet of over one thousand specimens is also connected with the school.

We enjoyed this visit of several hours, and our friends were highly gratified, and we would return thanks to Father Conly and Professor Messea, for their courteous attentions to their visitors.

**Glorious Seventeenth of June.**

"There are moments, I think,  
When the spirit resolves  
Whole volumes of thought  
On its unwritten leaves."  
We go to press upon a day full of the most thrilling emotions; a day full of glory; a day that sealed the charter of Human Liberty with human blood. As the sun goes down upon the shores of the Atlantic, cannons send forth their pealing echoes, and their tone is caught up by us on the mighty Pacific, and echoed back again to them. The pioneers of human liberty that landed upon the bleak rock of Plymouth, saw, in faith, the bright flowers of luscious fruits that were to be the links of union upon the entire continent of America.

These godly spirits broke ground for liberty. The patriots of Bunker Hill, on this memorable day, sowed the seed—aye, and watered it with their blood; and all pioneers are gathering in the glorious harvest from this "goodly heritage."

Shall we not remember, with holy filial love, the Pioneer Fathers of early time? If we would have our memories green in coming time, let us keep alive those of olden time, and let us strive to honor them by holding in sacred trust the institutions they have left us.

**LAUNCH OF THE STEAMER RAMBLER.**—The steamer Rambler, intended for the Petaluma trade, was successfully launched on Thursday last.

Ladies' Department.

Leaves from the Pine Forest.  
BY ORVILLE C. HOWE.  
[The "Leaves from the Pine Forest" will be found of interest to many of our readers, who could sit down and recall from memory many a scene of similar character, as they look back over the "days of lang syne."]  
"Oh! what tender thoughts beneath  
These silent flowers are lying,  
Hid within the mystic wreath  
My love hath kissed in trying."—(Moore.)  
TOWNS or country! Flowers or fashion! Which doth my heart love best? My brain is dizzy with this blissful rural happiness! This life is the Pine Forest! It keeps the heart younger and greener, than when in sickly contact with the outside world. Many a moon has waned and set in the low west, since I have left these "Alpine haunts" for the gay city beyond the mountain heights. The crowded town, with its busy mart, its constant tread, its din and noise, trade and traffic, loss and gain, has lost its charms for me; and the wide-spreading country, with its tasseled corn-fields; its green waving grass; its lowing herds; its wealth and independence; its rustic enchantments—is living! The farmer's life is worth all the sickly fascination which binds the poor to the great cities, to eke out an existence half-starved, with dainty broadcloth upon a hungry, stunted stomach.  
Now, "B. C. A." I have promised to give you, with my best wishes, a few "leaves" from the journal of life, and tell you of my ever-green home, instead of "red-wood," which you thought it to be. This little Eden covers a vast area of acres, which stretch in green landscapes away beyond the range of the eye, far into the dim, uncertain twilight, where the thrush and the nightingale have never seen the pale countenance of the Caucasian race. . . . Back, back, retrospect! Back again, into the dim aisles and arches of the past! Brush away the cobwebs of oblivion, that overhang the halls of memory! Back again, and let me have one rapturous gaze of the decaying joys of youth and happy childhood!  
Many years ago, when I was a "wee tottling thing," my father moved from an eastern home of luxury and comfort into the then wilds of the beautiful Ohio—where the yell of the painted savage startled the denizens of the forest with fear and trembling. But the hurrying march of civilization was upon their heels; and they took up the bow and quiver and moved their lodges further, and further, into the wilderness. It was not as California is now—the Eden of the World; but a wild unbroken forest. My father, with a large family, in the strength and pride of his manhood, went into the wilds of a western State, many a mile from any neighbor, to "clear up" a farm and make a home for his little ones. Off came his gloves, and down came the monarch oaks, one after another, till a small "clearing" was made, spacious enough for a log-house and a garden, which were made around the stumps of trees, which took time to moulder away. My father often felt homesick (as I do now), and longed for his residence at the east; but time makes many a change in the affairs of men; and field after field reared itself in proud beauty out of the wilderness, and a large farm, on which flourished bountiful crops of grain and numerous cattle, was the crowning result of many a hard day's toil, through sunshine and rain; large fields of waving wheat and corn stood in the warm sunshine, and the horn of plenty was full, to repay the husbandman for his privations and hardships.  
These, I must say, were the happiest and most blissful days of lifetime. Often have I stood by my father, after nightfall, to see him burn a large brush-heap, and watched the lurid flames leap upward into the thick darkness, and see the bright sparks ascending, one after another, in the blue concave above, and wondered if I should always have such a great weight of happiness hugging my heart. My future dreams and aspirations of greatness never went above the chimney-top. I never thought there could be altered love, vice, and sin. My aspirations never extended beyond my home in the woods. I was as thoughtless and light-hearted as the "Maid of the Mist." Oh! that time, as it rolls around, should have made such frightful revelations and make me doubt the sincerity of my best friends. No; I have never been so happy, as when I clambered upon my father's knee, before the world's blight had scattered the jewels and roses of my youth. The falsities and gayeties of this life are not a just recompense for the glorious glee and freedom of childhood. Then I saw the turkey and deer come down close to the house and feed in security on the wild grass, till they caught sight of a human face and smelt the smoke in the air, when they fled away in the distance; for wherever man goes, the curses of his race follow him, and the beasts that roam the forest shun him like the deadly opus. Where there is ignorance there is bliss, and civilization brings its misery as well as its wealth and importance.  
I have since thought, had my father then known of this glorious California, with its broad valleys and agricultural resources, when he was young and sprightly, how many days of toil and cankerous care he would have saved; when here, in this prolific country, one can with a little ambition and labor get a good home in a year or two, and enjoy the luxuries of life, that an eastern farmer only obtains through years of rigid economy and toil. How much easier would my father have borne the burdens of life, had he known of a California, with its thousands of broad acres that are now running to waste in the wilderness. His proud, manly form would not have been bowed with such a weight of accumulating ills. His horny palms and whitened locks tell his story. He, like many others, "have learned to labor and to wait."  
Ah, my childhood home! What blessed memories do thou awaken! The cherished forms and tones of other lands and of other days, now haunt each passing hour; and oft, in the visions of sleep, are voices, well known voices, rumbling with my own, and delicious raptures of joy sweep along the corridors of the troubled soul, when I awake

to find my mother's sweet, mellow voice, and the loved ones, have passed away, like a myth or a shadow, while I wrap about me the wail of a broken spirit. I often wonder, should I return, whether they would know me; would old Towser, the watch-dog, heed my once familiar foot-steps in the hall; would he forget his trust, and bound away down the gravelled walk to meet the wanderer from the land of gold. Oh! that I might hug his shaggy neck, as in days of "auld lang syne"; and would that others, in God's providence, may still live to clasp me to their loving hearts. Shall I ever feel the warm, tender pressure of my old father's trembling hand, and the smothering caresses and kisses that my mother, my angel mother! and my loving sisters, are laying up in store for me—for the pilgrim who is drifting here and there by fortune and tide; and shall I then say, "All cares are over, I'm home at last!" When shall the husks of doubt be stripped aside, and the dove return to the ark of safety! When, oh, when! The echo answers, When?  
Now, "B. C. A." I have promised to tell you of my California home; so here's a truce to gloomy reveries, for the portraiture must be sketched; but, as I am no connoisseur in the art of painting, pen and ink must answer in place of pallet and brush. Home scenes warm the heart; and I cannot come down from the heaven of thought in a moment, "for a thing of beauty is a joy forever."  
It is useless to tell you, that Sierra Valley is one of the most beautiful patches of Mother Earth, and lies high up among the snow-capped Sierras; little rivers wind like a silver thread here and there; the scenery is as poetic, wild, and diversified, as could be found among the Alps of Switzerland, and, instead of the wild goat and chamois, are seen the deer, the grizzly, and the antelope, scrambling among the rocky crags and defiles of the mountain passes; high mountains rise upon mountains, and hills upon hills, rear their temples into the blue sky of heaven, and encompass us on either hand; a dark-green pine forest for a background; and the little valley sleeps as placidly in the sunshine and flowers as an infant. It is a little fairy world all by itself; and when one winds down the tortuous trail of the mountain pass and catches, for the first time, a glimpse of its regal beauty, he thinks he is surely at the gates of Paradise. A gleaming sunset-scene upon these hills would intoxicate the eye of an artist, and make me in love with this sinful earth—everything is in now so beautiful, dressed in the royal green of Spring. And the homes of "Alice," "Bessie," and "Edith," are busy homes, sure; and don't imagine, for a moment, because they now and then drop a line in this "Our Book," for the "Ladies' Department" of the FARMER—I say, don't think they are idle "blue stockings" (a cross between a churchyard ghost and a London doll). Not a bit of it! I can make as good a biscuit as ever tickled the palate of the Empress Eugenie, Her Majesty the Queen of England, or the Bard of Avon. My home is not the "Castle of Indolence," an "Idlewild" upon the banks of the Hudson; but a real beehive of industry and toil. I am not a Peri, if I do once in a while court the Muses. I tell you, a good wife, with strong shoes and calico dress, who knows how to manage a farm-house properly, makes a man better and happier than half a dozen languishing, sighing drawing-room belles, only fit for a show-case or a band-box.  
There! I have got to the bottom of the sheet; the twilight is thickening, and the stars will soon be peeping down over the rim of the mountain. It is sundown, and "the curfew tolls the knell of parting day; the lowing herds wind o'er the lea."  
A Lady.  
We have noticed that some young ladies are never found engaged in domestic labor. Call at their homes at any time of day, and you do not find them performing housework. They are frequently found embroidering, making a lace collar, practising on the piano, or doing nothing. We infer that they seldom or never attend to domestic labors, or else that they suddenly quit the kitchen when the door-bell rings, lest they should be caught with a broom or rolling-pin in their hands. It is well known that many young ladies detain visitors half an hour in the parlor, before they emerge from their chambers, arrayed like Paris dolls. No person, out of the families, ever saw them in a kitchen garb. The principal reason is, they think it is not lady-like. Says Mr. Arthur:  
A friend of ours, remarkable for his strong, good sense, married a very accomplished and fashionable young lady, attracted more by her beauty and accomplishments than by anything else. In this, it must be owned, that his strong, good sense did not seem very apparent. His wife, however, proved to be a very excellent companion, and was deeply attached to him, though she still loved company, and spent more time abroad than he exactly approved. But, as his income was good, and his house furnished with a good supply of domestics, he was not aware of any abridgment of comfort on his account, and he therefore made no objection to it. One day, some few months after his marriage, our friend, on coming home to dinner, saw no appearance of his usual meal, but found his wife in great trouble instead.  
"What is the matter?" he asked.  
"Nancy went off at ten o'clock this morning," replied the wife, "and the chambermaid knows no more about cooking a dinner than the man in the moon."  
"Couldn't she have done it under your direction?" inquired the husband, very coolly.  
"Under my direction! Goodness! I should like to see a dinner cooked under my direction!"  
"Why so?" asked the husband, in surprise.  
"You certainly do not mean that you cannot cook a dinner?"  
"Certainly do, then," replied the wife. "How should I know anything about cooking?"  
The husband was silent, but his look of astonishment perplexed and worried his wife.  
"You look very much surprised," she said, after a moment or two had elapsed.  
"And so I am," he answered; "as much surprised as I should be at finding the captain of one of my ships unacquainted with navigation. Don't you know how to cook, and the mistress of a family? Jane, if there is a cooking-school anywhere in the city, go to it, and complete your education; for it is deficient in a very important particular."  
We need not speak of the result, except to say that it was good. But we ask the reader, if

this young wife was more of a lady for not knowing how to cook a dinner? Would it not have been far more commendable in her to have been able to cook at such a time of necessity? If it is a woman's mission to be mistress of the family, then it is her business to know how to wash, cook and sew. Is a captain qualified to guide a ship, if he is ignorant of navigation? Is a man prepared to manage a large mercantile establishment, if he has not learned the merchant's business? Would a college faculty welcome a man to a professorship of Greek, who had never studied it? Then, what shall we say of a female who occupies the place of mistress of the family, without knowing how the work thereof should be done? We say it is a dishonor to her. She is less a lady for this inexcusable ignorance.  
Madame Roland could prepare her husband's meals with her own hands, and at night delight the most literary company of France by her brilliant powers. Mrs. Washington, the mother of the General, always attended to her domestic affairs, even in the presence of the most distinguished guests. Lafayette paid her a visit before his departure for Europe, in the fall of 1784. He was conducted to her mansion by one of her grandsons. "There, sir, is my grandmother," said he, as they approached the house. Lafayette looked up and saw her at work in the garden, "clad in domestic-made clothes, and her gray head covered with a plain straw hat, the mother of his hero." She gave Lafayette a cordial welcome, observing: "Ah, Marquis! you see an old woman; but, come, I can make you welcome to my poor dwelling, without the parade of changing my dress." Mrs. Martha Washington, the wife of the General, was no less distinguished for her management of household affairs. She was "a good seamstress, a good cook, and a good mother." She understood every department of domestic labor, and was ever ready to do what circumstances required.—[The True Woman.]

SAFES! SAFES!!  
LILLIE'S IMPROVED  
WROUGHT AND CHILLED IRON SAFES.  
Fire-proof, Powder-proof, Drill-proof, and Burglar-proof.  
With Lillie's Unpickable Powder-proof Lock.  
The best safe made for resisting both fire and thieves, as proven in innumerable instances.  
As to a recent test by fire, reference is made to the late burning of the Crystal Palace, in New York City, at which all other safes on exhibition were burned up. Lillie's SAFE alone was unharmed.  
Reference is also made to the test afforded by the burning of the Jungo Central Railroad Depot at Cairo.  
The following letters and statements:  
J. C. Morris, Esq., Agent of Lillie's Safe, No. 119 Pearl street, N. Y.: Dear Sir: You ask about Lillie's Safe, how they stood the fire, etc. I think we have had a good opportunity to try them. Our warehouse and office were burned on the 27th of December last, and at that time we had one of those in our office and three in our warehouse. The safe in our office was filled with our books and papers. The safe in our warehouse, and everything it contained came out in perfect order. A new coat of paint is all it will want. The safe in the warehouse was melted out, being exposed to the heat of the fire several hours, the inside was unharmed. We cheerfully recommend them as being far superior to any other safe for fire and burglar-proof qualities. There is no warping or twisting, and no cracking of a new safe, as in the ordinary kind after having been once burned.  
Yours, truly,  
BUEL & MOORE.  
Troy, August 11, 1857. World's Safe Company: Gentlemen: Your letter of to-day is received. In reply we are happy to say the safe we bought of you last spring (Lillie's Patent) came out of the fire in good condition. In fact, the wood work constituting the book-case, was in no respect soiled or discolored. The exterior of the safe shows a few cracks, but nothing, in our opinion, to injure it. The inside is perfectly sound, and the safe was exposed to a severe heat. You will please send for the safe, repair it, and return it to our office, and much obliged, yours,  
CHAS. WARREN & CO., No. 345 River street.  
[From the Troy Daily Times, October 6th.]  
LILLIE'S SAFE COMPANY.  
The fire at the Crystal Palace, New York, yesterday afternoon, furnished a test of safes than which none more thorough could have been desired. Those who were on the ground say that it was the hottest burning they ever saw, the waves of the safe manufacturers were in an exposed situation. Lewis Lillie of this city, Stearns & Marvin of New York, and many others, were among the exhibitors. On overhauling the ruins this morning, Stearns & Marvin's safe was burned out, others in the trying of the point upon the inside door. The last-mentioned could not have arranged a better trial had a special arrangement been made for the purpose. Nor could Mr. Lillie possibly have received a greater triumph for his remarkable invention.  
[From the New York Times, October 6th.]  
Go to the ruins of the Crystal Palace, and examine the so-called Fire-Proof safe, manufactured by Stearns & Marvin, and other Sheet-Iron safe makers, most of which are a mass of ruins. This unexpected test will open the eyes of the public. Also, examine Lillie's Chilled Iron safe, which requires only a coat of paint to make it as good as new.  
A shipment of these SAFES has just arrived, and can now be seen at the Agricultural Warehouse of T. OGG SHAW, 31 Sacramento street.  
Lillie's Celebrated Bank Locks,  
On hand, and for sale. The best Bank and Vault Lock in the world.

GROVER & BAKER  
SEWING MACHINES.  
REMOVAL.  
  
THE GROVER & BAKER'S M. COMPANY HAVING assumed the business heretofore conducted by MR. S. O. BRIGHAM,  
For the Sale of our Machines in this City,  
Take this occasion to announce our REMOVAL from the premises lately occupied by him, to the more  
COMMODIOUS AND CENTRAL STORE,  
No. 118 Montgomery Street,  
AND WOULD INVITE THE SPECIAL ATTENTION OF  
Ladies,  
And all who have an interest in  
DOMESTIC ECONOMY,  
And the Emancipation of the FEMALE SEX from the wearisome and overburdening Slave-work of the NEEDLE, to our varied Styles of  
FAMILY SEWING MACHINES,  
The superior Excellence and unmistakable Advantages of which ever those of all other Manufacturers, cannot fail to be apparent to the most casual inquirer. We have lately perfected, and introduced into this market, several  
NEW AND IMPROVED STYLES,  
Which, while embracing all the essential and exclusive qualities secured by the Original  
GROVER & BAKER PATENT,  
Have in addition many New and Valuable Improvements, and are more simple in construction; make less noise, run faster, and perform  
A Greater Variety of Sewing,  
than any other Sewing Machine extant. The capabilities of our Machine are not limited to any particular description of Cloth Sewing, but execute with the most wonderful rapidity and nicety, Every description of Fine or Coarse Sewing, UPON ALL FABRICS.  
A NEW HEMMING ATTACHMENT  
Can be procured of us, for either Old or New Styles of Family Machines.  
That our Machines may dispense their benefits throughout the State, in the shortest possible time, we HAVE MADE A LARGE REDUCTION from our former Rates, and with pleasure announce our Prices—from  
\$75 to \$160;  
Varying, according to size and finish.  
For Bag-making,  
And all Manufacturing where Sewing is required, our MANUFACTURING MACHINES stand pre-eminent, and their qualities are too well known to require comment.  
Samples of Work and Descriptive Catalogues of Machines, Prices, etc., sent per mail. All Machines warranted. All orders for NEEDLES, DUPLICATE PARTS, COTTON, Etc., must be accompanied by Cash. GROVER & BAKER'S M. COMPANY, No. 118 Montgomery street.  
R. G. BROWN, Agent.

**A Curious Story of a Homestead.**  
A BRITISH ADMIRAL'S OUTFIT AND AN EJECTMENT.  
The following we publish because we know the story of Mr. Parkinson's rights to the estate. We remember well the visit of Admiral Sir Isaac Coffin to this very homestead, many years since. We remember how he publicly spoke of his gratitude to the preserver of his life, and the gift of this homestead to him and his children. We know these facts, for they occurred in our native town, and are familiar to all the citizens, and we are glad to know the widow and her children have been restored to their rights. The Boston Traveler of April 23, says:

The town of Brighton, Mass., has been in an excited state for the past few days, in consequence of some ejectment proceedings in connection with a family of that town, the particulars of which are of a somewhat romantic character.

About thirty years ago, Admiral Coffin, who though holding a high position in the navy of England, was, as is well known, a native of this country, was on board the American ship Boston, at the time that vessel took fire, while crossing the Atlantic. The Admiral was sick in his berth, suffering severely from gout, and an attempt was made to place him on board a boat alongside, as the vessel was inevitably doomed to destruction. Smarting with pain, Admiral Coffin stoutly refused to be moved, preferring to perish in the burning ship. Finding all entreaties useless, Mr. John Parkinson, an Englishman, and a servant of Mr. Coffin, in the ship, without more ado, seized the obstinate man up in his arms and conveyed him on board the boat, by which act the life of the Admiral was preserved. Only grateful for this act, the old Admiral sought to reward Mr. Parkinson, and finally purchased for him an estate in Brighton, consisting of a house and forty-five acres of land in a pleasant situation not distant from the present Cattle Fair Hotel, where he settled down, and resided, until his death a few years ago, occasionally receiving letters from the Admiral, in which he spoke of the estate as a gift. He also, at times, sent him horses to improve the stock upon the farm, &c., &c.

At the death of Mr. Parkinson his widow, who has six or seven children, continued to live upon the estate unmolested until the present time. There was, some years ago, a petition presented in the Supreme Court by a man named Odis, for leave to sell the estate for the benefit of the heirs, but nothing was heard of any decision in the matter, and the general belief was that the intention of the Admiral to make the estate a gift to Mr. Parkinson would not at this late day be contested.

The excitement of the people of Brighton was therefore intense to learn that by instructions of Mr. John Livermore, of that town, Mr. Plummer, a lawyer, had commenced proceedings to eject Mrs. Parkinson and her children from the premises which they had so long occupied.

This was on Thursday, and under the orders of the legal gentlemen, several men proceeded to the house, removed Mrs. Parkinson's furniture to the ground in front, and took possession of the premises. That night Mrs. Parkinson passed the night in a bed placed on the piazza of the house.

A large number of the people of the town, upon hearing the facts, assembled and manifested their indignation by groans and hisses at the houses of the movers in the matter of the ejectment, and it is said that a few rotten eggs were thrown.

All day Friday, the matter was discussed, and at night another large crowd assembled about the house. Then eight or ten men wearing masks entered the house and notified the persons in charge to leave, which they did with a precipitation quite remarkable. They then replaced the furniture, putting down the carpets, &c., &c., sent to the hotel for a supply of provisions, and restored the widow to the possession of the premises. After a few groans at the obnoxious actors in the affair, the crowd dispersed.

Very probably Mr. Livermore, who is stated to have leased the premises from the claimant, and Mr. Plummer, believe they are acting in strict conformity to the legal rights of the various parties. Still, in the opinion of the people of Brighton, it is a hard case to turn a family out of their homestead, which they have enjoyed uninterruptedly for the space of twenty-eight or thirty years.

**St. John's Day at San Leandro.**—This notable day in the calendar of the Masonic fraternity, will be celebrated at San Leandro with becoming pomp. A procession, oration and ball, constitute the exercises. Rev. S. B. Bell is the orator for the occasion. The season so beautiful, the road so fine, the moon so bright, and the music that will add to the charm of all, should tempt our citizens to the enjoyment of this occasion. The Estudillo House will offer all the accommodations that can be asked for; the proprietor is *au fait* as a host, and all can be assured of a happy time.

We return thanks to the proprietor of the Estudillo House, for a courteous invitation to the festivities on the 24th, and the inclosure of a complimentary to the ball on that occasion.

**THE FLORAL BALL AT OAKLAND.**—The very successful Fair at Oakland will be closed by a Ball at the Pavilion on Monday evening, to which all who are disposed are cordially invited.

The proceeds will be for the benefit of the Agricultural Society, to aid them in completing their hall and in further advancing the plans of the Society. It will be a social gathering and will repay the cost of \$5. The trip across the bay and back by moonlight is worth the money, but the happy circle that will be present, will be worth remembering.

**Tax Editor of the Nevada National,** has recently seen a small limb of a peach tree containing 235 peaches, which fell from the tree in consequence of the weight of the fruit.

We clip the above from the Evening Telegram, and would simply inquire which fell from the tree, the 235 peaches, or the limb upon which they grew?

**IMPORTANT DECISION TO SETTLERS.**—Judge Hoffman has delivered an opinion in the United States District Court, in the case of Bartolomeo Bajorgnet, on a review of the survey, which settles a most important principle of practice under the recent decision of the Supreme Court of the United States, in the Fossett case, making it the duty of the District Court "to review, confirm, or modify the surveys of the Surveyor-General of Lands confirmed to the claimants by the decree of this Court." By the opinion of the Court, we learn that all parties deriving title from the claimant, to whom the land has been confirmed, may, upon the question of the approval of the survey by the Court, intervene by filing therein their objections. Thus, inferentially, no other parties save the United States and the claimant or his assigns can take any part in such proceedings, and which embrace his pre-emption, can only do so through the aid of a United States Attorney. Settlers who desire to show any unfairness or error in the survey of the land, will do well to be on the alert, and take measures to put the District Attorney in possession of such important facts as are within their reach.

## TO CORRESPONDENTS AND READERS.

We have a mass of manuscript from our kind correspondents, and letters from those who favor us, and we ask a kind indulgence from those who do not appear this week or immediately. By reason of our being deprived of the ability to do *advice* duty for several weeks, our table has become loaded with favors. A valuable message from our correspondent "Sallie" by last steamer, is on file; also, several others from esteemed friends abroad. All shall have due attention.

"Mountain bird" is received and on file. Many manuscripts and reports of the College received. All will appear in due time. We regret being obliged to leave out several valuable essays, which we had intended for this number.

We call attention of our readers to the valuable article from the pen of our gifted correspondent from Monterey.

We can commend the various articles in our present number as worthy of perusal, particularly that from our friend the "Stray Leaves."

**ARLOUT.**—Several errors occurred in our last issue. We ask indulgence for any omission the past few weeks, having the greater portion of that time been confined to our room by reason of a fall with our horse. We will hope speedily to make up all neglect.

The following important errors in our last we desire to correct.

In the Examination exercises at Santa Clara, the salutary essay of the young ladies' department was by Miss Laird, not Miss Paine as published.

In "Success with the Bees" at the close of the second paragraph, for two pounds of honey in a season, read 100 pounds of honey in a season.

In "Strawberry Plantations" at Oakland, where we say the largest strawberries grown, it should read the largest strawberry ground, owned by one proprietor.

**THE NURSERYMEN AND GARDENERS OF SAN JOSE.**—Our visit among the nurserymen and gardeners of San Jose will be the subject of our pen for next week. We have much to say. Colleges and Fairs have a strong claim this week.

**STOCK IN SANTA CLARA.**—We have some very interesting and valuable notes of Stock from Santa Clara recorded, of which we shall hope to speak next week.

**THE APIARISTS OF SAN JOSE.**—We paid a visit to these artists of nature last week, of which we shall report.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer. (Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

June 17.	
Wheat, $\frac{1}{2}$ cwt. \$2.50 @ 2.75	Potatoes, $\frac{1}{2}$ cwt. \$3.50 @

Advertisements and Subscriptions must be paid for in advance.

#### Close of the Oakland Fair.

The following is the most excellent address of Rev. A. H. Myers, the President, delivered at the Pavilion on Saturday evening before a large and crowded audience. It is worthy of being carefully read and remembered. We publish, although it has already been given in the Alta:

#### LADIES AND GENTLEMEN:

But a brief period has elapsed since the grizzly bear and his associates, the coyote and lion, sought their prey and found shelter among the umbrageous oaks of this lovely Encinal, where now is daily heard the busy hum of city life; under whose wide-spreading boughs the neat, lowly cottage nestles, and which has been rendered academic by the classic halls which they embower; and where, but a few years ago, poisonous and noxious vegetation held undisputed sway, are gardens, which, for floral beauty and fruitful abundance, transfer us, in imagination at least, to Eden, the birth-place of those charming and noble twin-sisters, Flora and Pomona.

How wonderful the transformation! How signal and happy the results! Truly, "the wilderness and solitary," etc. And is it not fitting, that those of us who have toiled but a brief period to bring about these results, should desire a grand gala season. A respite from toil, where, surrounded by Flora and her lovely progeny, and Pomona with her luscious stores, we may congratulate each other upon the results already attained, and strengthen our hands for the further prosecution of our work with a more intelligent zeal and devoted love.

Although, even to ourselves almost incredible, we have transferred to these distant shores the choicest and rarest flowers and fruits of the Old World and the New, and made them almost indigenous to the soil; still there remains much to be done in this department; whilst the nature of our pursuit is such as to demand and warrant close attention and constant experiments. If what we now enjoy, in the way of fruits and flowers, is the result of experiments and culture in countries where the seasons are short and the climate rigid (unfriendly to the full development of plants and fruits), with what signal and satisfactory results may we not reasonably expect our labors to be crowned in this, our mild, salubrious clime, and under our genial skies.

Our pursuit, as a science, is of comparatively recent date, even in the Old World, and our knowledge of vegetable physiology, consequently, imperfect and limited. But, that our observance of the laws which govern each plant, shrub, and tree, will insure a crop of flowers and fruit, is as certain as any other well ascertained scientific principle. Our mission, then, is to ascertain these laws in relation to each plant and flower that we cultivate, either for profit or ornament; to discover what soil, what temperature, what sun or shade, what pruning and cultivation each may require; or, as the poet unfolds the duty which every horticulturist owes to this noble and ennobling science:

"To study culture, and with artful toil,  
To till and fertilize the stubborn soil;  
To give dissimilar, yet fruitful lands,  
The tree, the vine, the plant, that each demands."

How inviting the field! How ennobling the labor which this science imposes upon us! Our State, vast in extent, embracing every shade of soil and climate, is to be made the garden of the world—to bear away the palm from Italy's fertile vales and sunny hills. We are to adorn her hills and vales with flowers of a thousand hues, whose fragrance shall fill the air, and breathe of Heaven; with the choicest fruits which Pomona pours from her overflowing lap, when, with generous heart and bounteous hand, she bestows the ripened treasures of the year: the melting pear, the burnished apple, the royal grape, the brilliant cherry, the velvet peach, the golden apricot, the delicious plum, and other luscious fruits, God's best gifts to man—save woman.

Let the pleasurable of our pursuit inspire us with an ardent zeal and untiring energy. How delightful the employment of the florist and pomologist! With an untroubled mind and grateful heart, he walks forth among his well-trained, fruitful trees, and blooming plants and bushes, to "visit how they prosper, bud and bloom," and to give to each the attention it may need; whilst, in return, recompensing every kind attention, "clap their hands for joy" and "more gladly grow," as did the flowers of Paradise, when touched by the fair hand of Eve. This was man's primitive pursuit, and the Divine Being has placed his signet upon it, by planting the first Garden, in which was formed both the useful and ornamental. (See Genesis, 2d chap., 8th and 9th verses.) Let this be our model; and, whilst we seek to gratify the appetite, also seek to please the sight and cultivate a taste for the beautiful in nature. This art ranks high in utility and pleasure.

"The garden," says Lord Bacon, "is the greatest refreshment to the spirit of man, without which buildings and palaces are gross handiworks." Said the illustrious Webster: "Nothing is too polished to see its beauty; nothing too refined to be capable of its enjoyment. It attracts, gratifies and delights all. It is a constant field, where all sexes and ages, where every degree of taste and refinement, may find opportunity for gratification."

The great Cyrus, of Persia, boasted that he planted his trees with his own hands; whilst it was a matter of pride to a Roman Emperor, Pliny, that a cherry was named in honor of his family. Solomon, the most illustrious of Israel's Kings, says: "I made me gardens and orchards, and planted trees in them of all kinds of fruit." Dionysius, at the zenith of his regal power, thus wrote to Maximilian: "Were you to come to Salona and

see the fruits that I cultivate with my own hands, you would no longer talk to me of empire." This list might be extended by citing many noble examples, closing with the name ever to be revered and dear to the heart of every lover of liberty—our own immortal Washington! who retired from the busy metropolis, and the conflicts of political ambition, to drink from these pure fountains, and to eat the luscious fruits of rural life. The more we diligently investigate the laws of vegetable physiology, the more will we be filled with wonder and reverence at the benevolent provisions of nature, and the instructive lessons which she teaches. Here are creations originally pronounced "very good!" Here are inexhaustible sources of pleasure—beauties which fade only to appear again.

These blessings are designed to please the eye and gratify the taste, to multiply the comforts and elevate the social and moral condition of man. Fruits were the primitive, and, for aught we know, the only food of our first parents in Paradise. Fruits are too generally considered the condiments and not the necessities of life; but "man does not live by bread alone," and the more freely we use healthy, well-ripened fruit, the nearer will be our approach to a refined and healthy temperament, both of body and mind. Desiring, then, to improve our condition, and become benefactors of our race, let us develop these wonderful resources of our land, and increase them to their utmost extent, until beauty and plenty dwell in every valley and reflect their images from every hill-side.

A taste for rural life and its concomitants should be cultivated and encouraged by every possible means among all classes of our community. "Homes of taste" cannot be multiplied too rapidly. "Homes" far away from the many temptations and the dissipation of city life, where, under the refining influences of horticulture, and in close communion with Nature in her varied and lovely forms, shall be trained and educated the youth, who are the nation's hope and glory, and who in a very short time will take our places on the stage of life, and to whom will be entrusted, for weal or woe, the most precious interests, both civil and religious, ever confided to human hearts and hands. In the Divine economy there are no natural influences more powerful for good. The theatricat may terrify, the thunder storm by its awful grandeur may terrify, the scene from a lofty mountain may captivate and please, but flowers in their purity, loveliness and finished perfection, fringing the borders of the eternal mountains, decorating the fields and lawns, perfuming the air by the banks of the brooklet, the mystic river or noble lake, gracing the pulseless breast of the old gray granite, everywhere, and always, are humanizing—

Forever singing as they bloom to please,  
And lend their fragrance to the passing breeze,  
"Not for ourselves we bloom—for human kind,  
The hand that made us is divine."

There cannot be a doubt, that in cultivating a love for flowers and gardening, we are creating one of the most powerful agents in moral reform.

At a late meeting of the British Association for the Advancement of Science, the Bishop of Ripon said, that "the Parish of Skipton, in Yorkshire, England, was inhabited principally by a rude, unrefined, and, to a considerable extent, immoral population, when the Rev. Mr. Boyd was appointed its rector. The first step he took towards their amelioration and improvement was to lay out and plant a beautiful flower-garden attached to the Rectory, to which he gave free access to his parishioners at all times. He afterwards encouraged some of them to ornament the gardens attached to their cottages, by giving them plants and seeds; and in the course of a very few years, this rude population was, by the kindly influence of horticulture and floriculture, transformed into a most orderly, gentle, and refined community." To which the Monthly Gardener adds: "We are particularly anxious that we, as horticulturists, should not imagine, that in cultivating a taste for flowers, we are ministering to a mere selfish gratification. The duty we owe to our neighbor is certainly not less than we owe to ourselves; for it is the misdeeds of our neighbor or the world at large, that interfere so seriously with our individual happiness. Horticulturists do not understand sufficiently their position as reformers. Every one of true manly impulses feels it his duty to join at least some one movement which he thinks will benefit humanity. Many, doubtless, do this more from a fondness of notoriety than from true benevolence; but the great bulk do not. Temperance, juvenile and other reformatories, all have their advocates; but the horticulturist can aid them all. To the wandering and the erring, the beauties of nature preach a perpetual sermon of innocence and purity, which cannot be lost on any one whose attention is once fairly drawn to the subject."

Ladies, your sympathies and best affections, we know, are devoted to this refining, humanizing, elevating pursuit. Persevere in it. What though the frost should nip, the blight should blast, or insects destroy your lovely pets, is it not a part of our earthly discipline? that we may seek to dwell on the banks of the fair "River of Life," where flowers eternal bloom beyond the reach of frost or blight. What sight on earth more beautiful and humanizing, than to see a gentle form carefully nurturing and training her floral pets. In the words of Shelley:

"The flowers of that garden sweet  
Rejoiced in the sound of her gentle feet;  
Doubtless they felt the spirit that came  
From her glowing fingers through all their frame.  
She sprinkled bright water from the stream,  
On those that were faint with the sunny beam:  
Or out of the cups of the heavy flowers  
She emptied the drops of the summer showers."

She lifted their heads with her tender hands,  
Supported their stems with her other hands;  
And if they had been her own infant life  
Could never have nursed them more tenderly."

STATE AGRICULTURAL SOCIETY PREMIUMS.—The public are very anxious to know if there is to be any State Fair this year. It is now near July, and no premium list has been published, nor any announcement of the Fair from the official board. Unless it should be done very speedily, there would hardly be time to give notice to the lower counties, or give them a chance to know what the State Society intends to do.

#### Report upon Bread at the Oakland Fair.

The undersigned, to whom was entrusted as a Committee, that most important article of domestic comfort, home-made bread, have attended to that duty, and ask leave to report.

The whole number of entries in this department was six, and comprised seven loaves of wheat bread, one plate biscuits, one loaf brown bread, and one corn cake.

Agreeable to the rules laid down by the Executive Board, by which the Committee was governed, no bread could be admitted for premium after eight o'clock P. M., of the second day (Wednesday). This rule excluded several fine samples which were presented after that time, and only left one contributor as contestant for the prize. The Committee regret this very much, for several samples were highly meritorious, so much so as to induce the Committee to present their claims to the consideration of the Executive Board, and recommend them for special premiums. The Committee held a careful examination of the several samples exhibited, and the results were as follows:

No. 48. A loaf of wheat bread, promptly and duly entered according to the rules, was the only bread that could claim examination for the prize. This bread was pure, free from deleterious ingredients, and proved upon examination (especially when graced by the premium butter), most excellent and palatable; to this loaf the Committee award the First Premium of the Society. The same contributor sent the corn bread, which is of good quality. This the Committee leave to the consideration of the Society.

No. 106. Two loaves of very white and superior wheat bread, worthy of the special premium of the Society.

No. 95. Two loaves wheat bread of superior make, perfectly sweet, and free from all impure substances.

No. 106. Biscuit of very superior make, pure and sweet, worthy special premium.

No. 138. A loaf of brown bread of excellent make, coming under the denomination of coarse wheat or Graham bread; very fine and worthy of notice.

No. 139. Two loaves of very superior, even splendid bread, and worthy of special notice from the Committee.

The Committee cannot but regret that a more general interest was not felt among the young women of Alameda county, in this important accomplishment, and they also regret that married women should have been excluded, for had they been admitted, it might have shown how much the practice of house-keeping improves them in this important accomplishment, and it is to be hoped that by another year a more universal interest will be felt for this branch of domestic blessings, so that the Committee in future can attest to the universal education of the young women of Alameda county in bread-making.

COL. WARREN,  
C. L. GOODRICH,  
F. MACCRELLISH.

#### Premiums at Oakland Fair.

The following is the full list of Premiums as reported at the meeting on Saturday evening, the 18th inst., at the Oakland Fair:

##### PLANTS AND FLOWERS.

Pot Plants—Largest collection, James Hutchison; best collection, James Hutchison.  
Roses—Best collection, James Hutchison; twelve best roses, Mrs. Bruguier; the choicest and rarest rose on exhibition, James Hutchison.  
Cut Flowers—Best exhibit, W. H. Bovee; 2d do, Mrs. Cogshall.  
Cut Roses—Best exhibit, James Hutchison; 2d do, Mrs. Bruguier.  
Bouquets—Best, James Hutchison.  
Vase Bouquets—Best, Mrs. Bruguier; 2d do, Mrs. J. S. Potter.

##### CEREALS.

Wheat—Fourteen specimens were exhibited, consisting of six varieties: Best exhibit, Capt. J. M. Moore; 2d do, L. B. Huff.  
Barley—Best, Capt. Cogshall; 2d do, L. B. Huff.  
Oats—Best, L. B. Huff; 2d do, L. Dawson.  
For exhibit of twenty-five varieties of Garden Seeds, by D. L. Perkins, special premium.

##### FINE ARTS.

Landscape, in oil—Best, Miss M. A. Shattuck; 2d do, Miss M. A. Shattuck.  
Photographs—Best, plain and colored, R. H. Vance.  
Daguerreotypes—Best, R. H. Vance.  
Ambrotypes—Best, Wm. Shaw.  
Water-color Painting—Mrs. H. H. Newcomb.  
Cameo Cutting—Best, Mrs. V. E. Howard.

##### MISCELLANEOUS.

Butter—1st, Mrs. E. J. Burdick; 2d, C. Appleton.  
Cheese—1st, Amos Hersley; 2d, Amos Hersley.  
Bees—1st, C. Appleton.  
Roofing—John Scott (Russell's Mastick Roofing), special premium.

##### FRUITS.

Raspberries—Largest collection, 1st, D. E. Hough; 2d, H. Lewelling; 3d, A. W. White.  
Cherries—Best collection, 1st, R. W. Washburn; 2d, John Lewelling.  
Currants—Best collection, 1st, A. W. White; 2d, John Lewelling.  
Strawberries—Largest collection, 1st, D. E. Hough; choice varieties, D. E. Hough; best specimens, G. W. Fountain.  
Figs—Best exhibit, Mrs. Bruguier.  
Gooseberries—Best collection, 1st, R. W. Washburn; 2d, D. E. Hough.  
Plums—Largest variety, 1st, J. G. Whitcher; 2d, A. W. White; 3d, R. E. Cole.  
Apricots—Largest variety, 1st, B. F. Rynders; 2d, Miss Harriet Landreau.

Apples—1st, Mrs. Bruguier; 2d, Robert Blacow, last year's apples.  
Peaches—Dr. R. E. Cole.  
Oranges—A fine exhibit of oranges, Mrs. Bruguier, special premium.

##### NEEDLE-WORK.

Knit Bed Quilt, 1st, Miss F. Warner; Knit Tidy, 2d, Mrs. Smith.  
Crotchet Shawl, 1st, Miss Nettie Marshall; Worst-crotchet Tidy, 2d, Miss J. Abbott.  
Best Needle-work, Miss Harriet Landreau; 2d do, Miss Sarah K. Adams.  
Best Quilt, Miss N. J. Moore; 2d do, Miss Joanna Farrell.  
Best Embroidered Table Cover, raised work, Mrs. L. B. Huff; 2d do, Mrs. S. Pixley.  
Best Laid Work, Mrs. J. B. Gogonan; 2d do, Mrs. P. W. Van Winkle.

##### REAPERS AND MOWERS.

Best Reapers and Mowers—Thos. Ogg Shaw's newly invented California Combined Reaper and Mower.  
Reapers—Best Reaper, the Morgan Machine, entered by John H. Voorhees.

##### BREAD.

Only one sample entered in time to come under the rules of the Society: 1st, Miss N. J. Moore. Five samples, submitted too late for competition; of which, the Committee recommend a special premium to that offered by Mrs. Frank F. Fargo.

##### Bees in San Jose.

The apiarists of San Jose are truly "busy as bees." We called on several of those who are successfully engaged in this branch of industry, and gathered the following facts: Messrs. Buck & Lawrence have about fifty hives; they swarm and divide, as their process of increase; they use the Longstroth hive in preference; they say the Harbison hive is good; they have taken one "grand swarm" this season. Mr. Buck now remains in Oregon—Mr. Lawrence resides here.

Messrs. Hopper & Easley have one hundred very excellent swarms; they had several "grand swarms" this season; use the chamber hive; they increase by swarms only, and are opposed to the dividing system; say swarms increase fast enough, and really believe bees do better here than in any part of the world; in Oregon they have had them increase twelve to one.

Mr. Patterson has twenty-five swarms; prefers natural swarming to any other process; commenced with eight hives this season; has now twenty-five good, strong hives, and will have, most probably, many additional ones.

##### Fine Horses.

When at Santa Clara and San Jose recently, we gave some time to look at the fine stock that we found scattered over the several parts of this county. "State of Maine" is a splendid gray horse of large size, after the style of his sire, "Messenger." This horse is now at Santa Clara, and promises much as a valuable stock horse for this State. "Messenger" may well be ranked as one of the best horses of our State—truly a most splendid animal—a fine silver-gray, of noble size—an animal hard to beat. "Messenger" stands at San Jose, and is owned by G. V. Vibbard, Esq. Such is the desire for fine horses now, that almost every stock-farm and ranch can now boast of young colts of great promise from some of the prominent horses now before the public. It is undoubtedly the case, that the present year will show, on the Contra Costa side of the bay, from Oakland down to Santa Clara county, including that section, at least one thousand fine colts to be the number of increase. The horses we have heretofore named, and many others not generally known, which are being added, will give to California a great prominence in coming years to this class of stock.

IMPORTATION OF HARVESTERS.—There has been quite a large show of harvesters by different importers, but we do not think that more than four hundred of the best reapers such as the "New York," "McCormick," "Manny" and "Hussey," have been sold, and some one hundred common ones. These, besides "Shaw's famous combined," and others made in California, may swell the sale to six hundred reapers this season. The number may be a little larger, but this will approximate to the true figure. One hundred reapers were lost on the Manito (supposed lost). There are one hundred more on the Fanny S. Perley, now about two hundred days old, and feared lost. Such facts as these show the vast extent of land in grain, and the influence of California on the manufacture of the old States. We only wish they would duly appreciate California.

ADDRESSES AT THE FLORAL FAIR, OAKLAND.—The address which was to have been delivered on Thursday last by O. C. Wheeler, was postponed to Friday by reason of his absence, and in his absence on Friday, the President of the Society supplied his place by three extemporaneous speakers, who occupied the time to the satisfaction of the audience. Dr. Gibbons, of Alameda, opened the meeting with an interesting and witty address, much to the satisfaction of the Society and friends present. Rev. S. B. Bell followed in his usual happy style, presenting many interesting and important truths upon education as connected with our "rural homes." The Editor of the FARMER occupied the balance of the time allotted, in a brief extemporaneous speech; the speakers occupied about twenty minutes each. The hall was densely filled, and the evening passed away agreeably to all.

#### Magnolia Grandiflora.

The following sketch of the success which has attended the blooming of the first Magnolia in California, will be read with pleasurable interest. We are pleased to receive from Mr. Saul, our correspondent, this explanation of the variety now in bloom, and regret we have not seen it ere this, for it is worthy a hundred miles of foot pilgrimage. We rejoice to know, also, that there are more of the same gorgeous flowering trees in successful growth in California.

Major S. J. Hensley, President of the California Navigation Company, at his beautiful grounds at San Jose (that we had the pleasure to roam over recently), has six or eight in fine, healthy condition, and from three to six feet high. Their bright, glossy leaves give great promise of success. Major Hensley will have several in bloom in another year. There is no tree that could be grown with more certainty or greater success. In the same grounds we saw the California Walnut, which had been taken from the ground at the head of the Slough, on the Sacramento river, in most luxuriant growth; and other native and foreign trees, in all their pride and beauty. We rejoice to know that our wealthy men are thus devoting their wealth to the adornment of the Homes of California. But to the interesting communication of Mr. Saul:

EDITOR FARMER: In a late number of your paper, I see that you too have a notice of the fine Magnolia now in bloom in the garden of Gen. Redington, in this city. Our city papers have also given it a general notice; and it is really gratifying to observe the interest which is being manifested in this floral gem.

But I desire to correct an error, which has got abroad, as to the name of the variety, as it is really much finer than a reader of any of the many notices of it would be led to suppose; for it is not *M. glauca*, as you and others have published, but the *M. grandiflora*, the most gorgeously beautiful of the Magnolia tribe.

There are many varieties of the *M. grandiflora*, originated from seed, and differing from the original growing in their native habitats, which is peculiar to the Southern States, from North Carolina to Louisiana, and up the Mississippi as far as Natchez. A lady correspondent of I, think, the Sacramento Union, gives in that paper a reminiscence of a Magnolia, which, years ago, she had seen blooming in a wild state in Massachusetts; and, which she supposes, that now in flower in this city to be identical with. This is not so, as the *M. grandiflora* is not hardy north of Washington City, indeed scarcely as high as that; and the variety indigenous to Massachusetts is the *M. glauca*, a very beautiful variety, but which sinks into positive insignificance in comparison with the more majestic and elegant *M. grandiflora*.

In the South, they grow to be from sixty to over one hundred feet in height, and, when in full bloom, nothing can look more gorgeous than a grove of these trees, with their large ever-green foliage (leaves from six inches to one foot in length) covered all over with their immense white flowers.

It was supposed to be introduced into Europe before 1737, and Loudon describes a long list of specimens growing there, from twenty to sixty feet in height. The same author states, that plants raised from seed seldom bloom under twenty years of age, while others, propagated by layers, will bloom when quite small. The one now in flower in the garden of Gen. Redington is under four feet in height; is now in its third bloom; and, unlike any of the other Magnolias, it will continue to bloom, at intervals, till the approach of winter. This variety is known in the South as the Laurel-leaved Magnolia, the Large-flowered Evergreen Magnolia, the Laurel Bay, Big Laurel, etc. The variety is by no means plenty, even in the Eastern Nurseries.

JAS. B. SAUL.

SACRAMENTO CITY, June, 1859.

STRAWBERRIES.—The great amounts of strawberries which the sudden warm weather threw into market about one week since, are beginning to pass away, and now the scarcity has advanced the price. This fruit having been sold as low as ten and twelve cents, has again gone up to thirty-seven, fifty, and even choice varieties and qualities, to seventy-five cents per pound. This surely pays. Very shortly the new crop will be in market and the price down again. Fruits of all kinds will soon be so plenty as to come within the reach of all. It seems surprising that with the vast amount of fruit thrown upon our market, the price should be so well sustained; it only shows that the demand is great. This should encourage growers.

THRASHING MACHINES.—We would call the attention of grain harvesters to the excellent machines now offered by Wm. Lyne, corner of Front and Oregon streets. They are Hall & Woodbury's make, and are highly esteemed, containing several valuable improvements.

CITY FRUIT.—We have received a collection of fruit from Phillips' garden, Silver street, this city highly creditable to San Francisco. It consisted of White Bigarreau Cherry, Red Currants, and Lawton Blackberries; the latter the first of the season.

## California Notes.

## CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

[CONTINUED.]

The inclosed memoranda on some others of the sarcophagus family of North America, were published in the San Francisco Daily Herald, near the respective dates of the papers, and are inserted in the present notes for comparison and reference, and as containing material in a connected form on the Condor family. It is proper to state here that it seems from the latest accounts, that the ornithology of Lower California is less known than that of the more northern or more southern countries. In Dubaut (Gilley's) voyage to the Californias, etc., in 1827, published in Paris in 1833, it is stated that there are four species of Vultures found in Lower California. How true this is, and how many of them are sarcophagus, must be left to future explorers.

## The Quelli, a Rare Bird of Sonora.

Note of 28 March, 1859. From the descriptions of three of our friends we are placed in possession of some curious facts relating to the habits and characteristics of this rare and highly curious bird—a member of the Condor or sarcophagus family of Dumeril, which we have not been able to find described or alluded to in any of the books on natural history in our possession, and it may be that it is a species unknown to naturalists.

An intelligent Sonoran of Quito near Altar in Sonora, who resided in California several years, gave me the following facts at Monterey, in November, and December, 1855, in relation to this curious bird. It inhabits particularly the Pimaria, Alta and Baja, the Papagoria, the Opataria, the Apacharia, and other Indian and little known mountain districts of Sonora, Durango, and Sinaloa to the East and South, and it is very rare even in these countries. It is called *Quelli* by the Papago Indians, who have a great veneration for it. Its weight is from eight to ten pounds. The beak is hard and curved sharply down—its color bright lemon—the iris of the eye pink or light red. On the crown of the head it has a fleshy caruncle or comb of black and white, which forms like a cravat, and also hangs on both sides of the head, and which is bare of feathers; the skin of the chops or cheeks are mottled black and white; the neck feathers are black with a ring of white feathers below forming a ruff, like a circle of swan's down on a lady's tippet; the back is striped black and white lengthwise of the bird; the upper part of the wings is also striped with black and white stripes; the ends of the wing-feathers are tipped white; the tail-feathers are striped and tipped, the same as the wings; the under surface of the wings are barred also in the same way; the wings measure from twelve to eighteen inches long from the joint at the body. The chest, belly, and lower part of body, are of lemon-colored feathers; the legs and feet are also yellow, with four toes armed with black and very sharp claws.

The female bird is of smaller size, the color similar, but more subdued. The eggs are reddish and mottled black, sharply peaked, and weigh about two ounces. They make their nests in the highest trees of the mountain sides and peaks, and always go in couples, and never in flocks. When they rise from the ground they make a whirring, rushing noise, moving very fast; they are very rare throughout Sonora, as my informant states, and extremely difficult to take. They raise two young in a year, generally male and female; when young their plumage is yellow, black and white. The full grown birds are about the size of the common turkey buzzard. In six months the young begin to fly—the females lay their eggs in the spring. They are seen at times turning over and over in the air in quick motions, from whence the Indians have a superstition that they breed in the air. The Indians also say that the male bird breaks the egg to let the chick out.

They eat dead animals or those lately killed. The tongue is red, and has a spinous process on its under part, shaped like a pen, and said by the Indians to be used in making a loud whirring noise when it rises from the ground. They eat very fast, and all other carnivorous birds hold it in great fear. My informant aforesaid, who has traveled throughout Sonora, and seen it in different localities, says it is most abundant in the Alta Pimaria, of which the Gadsden purchase forms a portion.

But the most singular part of the bird, and which makes it such a wonder among the Sonorians, is that it has four wings! or appendages used for assisting flight, on each side of its body—that is a pair of wings such as other birds, each with three assistant wings or winglets, joined to the main one, and folding under the main ones, and next to the body.

An officer of the Revenue Service, assured me on two occasions, that he had seen this bird at Guaymas in Sonora, in 1854, in possession of Capt. Spence, captain of the port, and that they were so scarce as to sell for fifty dollars apiece, and that according to his recollection, my Sonoran informant was in the main correct in his description of it. As this latter informant was well known to me and lived several years around Monterey, and left for Sonora in the latter part of 1857, and his description was taken down, as before said, in November and December, 1855, by myself, and being confirmed by the officer before mentioned who is an old acquaintance of mine, it seems to me there can be no doubt, that it is a *rara avis* probably unknown to naturalists.

A gentleman now living in Monterey, who is like the writer, an amateur naturalist, assures me also, that in a voyage he made to Guaymas and the California Gulf ports in the summer of 1854, he saw a bird of this kind in Guaymas—most likely the same one—in the possession of Captain Spence or some other foreigner there, but that it afterwards died, and from its extreme rarity and beauty, considered a great loss, as it was brought from far in the interior.

According to this informant, who read a few days ago, the notes I had taken down in 1855, or rather to his best recollection, he can only remem-

ber the size, color of the cheeks, and the singularity of the wings. The size is the same I have stated, but the color of the cheeks (which he thinks are feathered) was of a yellow color. The number of the wings was three on each side of the bird, and not four as stated in my memoranda. One of the winglets is attached to the main wing on the outside by a flexible joint, and the other winglet is attached to the under part of the main wing in the same manner; these extra wings are only seen when the bird opens its wings in rising or when at a short distance from the ground; but when standing at rest, they are folded so as not to be noticed. The under winglet when flying is extended beyond the main wing, but the upper winglet is smaller, more compact, and closer to the body—both of the winglets being opposite to the wing-joint of the body at the base of the neck. The bird, he represents, is as beautiful as it is curious, and as all three informants state, much sought after and highly prized in Sonora. It seems that only two or three specimens have ever been known to be captured, which may account for its not being mentioned in any of the books on hand in California.

This bird may be taken by some readers as only a description of the Mexican small vulture, called the King of the Zopilotes—or the small Condors of the Laplata pampas, called the King of the Vultures, or King of the Condors—or the *Sarcophagus Sacer*, or Sacred Vulture of Bartram; but from the descriptions of these rare birds, which we give herewith for ready comparison, it will be seen that there are many points of material difference between them.

King of the Zopilotes. "The Cozcaquiltit is called by the Mexicans of the city and valley of Mexico, the King of the Zopilotes (or King of the Turkey Buzzards), and they say that when these two species happen to meet together over the same carrion, the Topilote (which is found in all the climates of Mexico) never begins to eat till the other bird has tasted it—they are both mute and sometimes fly together. The King of the Zopilotes is larger than the Topilote, has a red head and feet, with a beak of deep red color, except towards its extremity, which is white; it is much scarcer than the Topilote, and is peculiar to the warm climates alone. Its feathers are brown except upon the neck and parts about the breast, which are of a reddish black. The wings are of an ash color upon the inside, and upon the outside are variegated with black and tawny. Bonare says that the *Aura* (pronounced Owra, for the Turkey Buzzard, by the Mexicans) is the *Cozcaquiltit* of New Spain and the *Tropilot* of the Indians, so that *Cozcaquiltit* and *Tropilot* are both native Mexican Indian names for two different birds. But the bird which now goes by the name of the King of the Zopilotes in New Spain, seems different from the one we are describing. This is a strong bird of the size of a common eagle, with stately air, strong claws, fine piercing eyes, and a beautiful black, white and tawny plumage. It is remarkable, particularly for a certain scarlet-colored fleshy substance, which surrounds its neck like a collar, and comes over its head in the form of a little crown.

"I had this description of the bird from a person of knowledge and veracity, who assures me that he has seen three different individuals of this species, and particularly that one which was sent from Mexico, in 1750, to the Catholic King, Ferdinand the Sixth. He further informs me, that there was a genuine drawing of this bird published in a work called the American Gazetteer. The Mexican name, *Cozcaquiltit*, which means King Eagle, is certainly more applicable to this bird than to the other. The figure in our plate (at the page 74 following) is copied from that of the American Gazetteer."

See Clavijero's History of Mexico, 1700 (Cullen's translation, Philadelphia, 1804, vol. 1, page 65, and notes).

On showing the engraving in Clavijero's volume, my Sonoran informant readily recognized it as the "King of the Zopilotes," which he well knew; but it was not the Quelli Condor, or Vulture, of Sonora.

The King of Vultures, or King of the Condor of the Pampas. (V. Papa, of Linnaeus.) "This bird is larger than a male turkey; the skin of the head rises from the base of the bill, and is of an orange color, from whence it stretches on each side of its head; from thence it proceeds, like an indented comb, and falls on either side, according to the motion of the head; the eyes are surrounded by a red skin of a scarlet color, and the iris has the color and luster of pearl." "The head and neck are without feathers, covered with a flesh-colored skin on the upper part, a fine scarlet behind the head, and a dusky colored skin before; further down, behind the head, rises a little tuft of black down, from whence issues, and extends beneath the throat on each side, a wrinkled skin of a brownish color, mixed with blue, and reddish behind; below, upon the naked part of the neck, is a collar formed of soft, longish feathers, of a deep ash color, which surround the neck and cover the breast before. Into this collar the bird sometimes withdraws its whole neck, and sometimes a part of its head, so that it looks as if it had withdrawn the neck of the body. These features of beauty suffice to distinguish this bird from others of the Vulture tribe. Its food, with all its beauty, being the same as the others, living on offal, and rats, lizards, and serpents, and the flesh entirely unobtainable." See Oliver Goldsmith's Animated Nature, 2 vol., page 44, and figure 1 of plate 10 (Whitlaw's Glasgow edition of 1840). The King of the Condors is said to make its appearance in Mexico on rare occasions.

The Sarcophagus Sacer of Bartram, or Sacred Vulture. "This bird was described by John Bartram, in his Travels in the Carolinas and Florida (Philadelphia, 1791), as abundant in Florida then, but has not been observed or identified anywhere since his time. This has tended to throw a doubt on its existence; but recent information renders it probable that this, or at least a different one from the Vulture just described, is found about Lake Okechobee, in Southern Florida, where it is called the King Buzzard. The verification of this statement, by actual specimens, would be one of the most important discoveries yet to be made in North American Ornithology." The following is Bartram's

description: "Bill long and straight almost to the point, where it is hooked or bent suddenly down, and sharp; the head and neck bare of feathers nearly down to the stomach, when the feathers begin to cover the skin, and soon become long and of a soft texture, forming a ruff or tippet, in which the bird, by contracting his neck, can hide that as well as his head; the bare skin on the neck appears loose and wrinkled, and which is of a bright yellow color, intermixed with coral-red; the binder part of the neck is nearly covered with short stiff hair, and the skin of this part of the neck is of a deep purple color, gradually becoming red as it approaches the yellow of the sides and fore part. The crown of the head is red; there are lobed lappets of a reddish-orange color, which lay on the base of the upper mandible. The plumage of the bird is white or cream-color, except the quill feathers of the wings and two or three rows of the coverts, which are beautiful dark brown; the tail, which is rather large and white, is tipped with this dark brown or black; the legs and feet are of a clear white; the eyes are encircled with a gold-colored iris; the pupil is black."

Vide Mr. John Cassin's Notes on the Raptorial Birds, on page 6 of volume 9 of the Pacific Railroad Reports, published by order of Congress, October, 1858, 1004 pages quarto, and altogether on the Birds collected by the Railroad and other Government Expeditions since 1853. This volume, and the eighth volume of the same work on Animals, was compiled by Professor Spencer F. Baird, of the Smithsonian Institute, and is as much a high renown to the Government which provided the materials, through its laborious and intelligent military and other officers, as it redounds to the eminent learning, labor, assiduity and honorable name of Baird. It is certainly a model to other savans and writers, American and European, who have not been too often wont to make acknowledgments to Californians for what seemed, to uninformed out-siders, as their own original gatherings—their own original thoughts, abstracted without acknowledgment, and put in so quietly, one could hardly recognize their own brain-work or handiwork.

## King of the Zopilotes and Bartram's Vulture.

Note of 7 April, 1859.—Conversing, yesterday, on these two rare, curious, and costly birds, with a friend of ours, who had resided in Florida several years, he says the description by Bartram of the King Buzzard, as quoted in the 9th volume of Railroad Reports, is correct. He has seen them several times around Lake Okechobee, and other parts of South Florida; also in Texas, on the coast, and, on the frontier, near Mic. He has also seen them near Vera Cruz. They are excessively scary and shy, and very rare to find in Florida now, on account of the Indian wars since 1830, and the firing of ordnance and muskets; but they used to be very numerous once; of later years, they have flown off to the more unfrequented continental countries of the Gulf of Mexico, not far from the sea; and it is very rare to see more than one or two at a time. He has never noticed the female, or seen the eggs.

This gentleman, after reading Bartram's account, says it is the same bird as the King of the Zopilotes, depicted in Cullen's Clavijero, which he recognized immediately, and that if there is any difference in feathers, appearance, or size, it must be owing to the age or sex of the bird, the season of the year, or changes in its plumage. He has seen the bird also on the west coast of Mexico, and quite numerous around Manzanillo and Colima. At Colima he had them offered to him for two dollars and a half a piece.

These opinions, however, cannot prevail against later observations, taken on the spot, by scientific ornithologists. At any rate, his remarks are highly valuable and suggestive. As this gentleman is a *medico*, as well as a great traveler by sea and land, and knows California from Shasta to San Diego, by earth as well as by water, with a ten years' experience, and has made several trips along the Mexican and Central American coasts, and traveled pretty extensively in those countries on business, his testimony is worth a great deal, though he makes no claim to being a naturalist.

Doubtless, further accounts of the more rare birds and animals of North America could be found in the American and European printed books of travel and history on the southern sections of the United States, and Mexico, and Central America, which have been published in England, France, Germany, and the United States, since the advent of the Spanish revolutions of 1820. The old Spanish missionary writers, prior to 1800, also contain valuable observations on the natural history of Spanish America, very little known, seemingly, among the learned men of Europe and the United States. California has brought to new light the great value of the literary and zealous labors of the old Catholic padres. What would the people of California have done for provisions, in 1849 and 1850, if the Friars had not provided for them five hundred thousand head of cattle and thirty thousand horses? They would have starved like Jacob's family. The priests proved the zoological, fruitful, and agricultural value of California for seventy years!

[TO BE CONTINUED.]

A NEW FLOURING MILL.—Charles Murray, Esq., of Merced Falls, is building a new and fine Mill on the Merced river, about three miles above Sealingville. The Mill will be three and a half stories high, thirty-six by fifty feet, basement of stone, balance of wood. The Mill will have three run of burrs, and will make fifty barrels of flour in twelve hours. Two run being for wheat and one for barley (stock feed). Smith's Saut Machine will be used. The Mill is being built under the superintendence of Mr. A. Miller, who will have charge of it as the miller; so that the farmers in the vicinity may rely upon being promptly and carefully attended to.

A VALUABLE AND BEAUTIFUL CALIFORNIA FLOWER-SHUB.—Among the flowers on exhibition at the Fair, was a few specimen of "Syrinya Multiflora," a very fragrant flowering shrub with beautiful white flowers, better than those known among florists at the present day. It is decidedly the best we ever saw. It is a California flower and will add greatly to the flora of our State.

EDUCATION FOR RUSTICS.—Gervase Markham, who lived at the commencement of the 17th century, himself a practical husbandman, wrote a work with the object of enlarging the knowledge of the agriculturists of his time, and of "recording the most true and infallible experience of the best husbandmen in the land." He entertained the opinion that to teach farmers reading and writing was a superfluous endeavor. He thought that, "as touching the master of the family himself, learning could be no burthen," but "if we speake as touching some especiall servants in husbandrie, as the bayliffe, the under farmer, or any other ordinary accountant, it is not much materiall whether they be acquainted therewith or no, for there is more trust in an honest score chaunt on a trencher, than in a cunning written scrowle." And there is more benefit in simple and single numeration in chaunt, than in double multiplication, though in never so faire an hand written! There are some people even in the present day, it is to be feared, who have faith in the sufficiency of chalk; but what will they say of the following mode of ascertaining the probable state of the corn-market, which belongs to the same order of intelligence, and was put forth by Markham as a well-founded piece of instruction: "If you would know whether corne shall be cheape or deere, take twelve principal graynes of Wheat out of the strength of the eare, upon the 1st day of Januarie, and when the barth of your chimney is most hot, sweepe it cleane; then make a stranger lay one of those graynes on the barth, then mark it well, and if it leape a little, corne shall be reasonably cheape, but if it leape much, then corne shall be exceeding cheape, but if it lie still and move not, then the price of corne shall stand, and continue still for that month; and thus you shall use your twelve graynes the first day of every month one after another, that is to say, every month one graine, and you shall know the rising and falling of corne in every month, all the years following."—[Philip's Progress of Agriculture.

IMPORTANT INVENTION.—Mr. John Mason, proprietor of the Eureka Brewery, has invented a machine which promises to make an important change in the art of putting up beer, ale, porter, cider, &c. The invention consists of a machine by which carbonic acid gas is forced into kegs from one to five gallons capacity, after being filled with malt liquor, by which the fermenting quality is conveyed to it, without the usual process of fermentation in the larger vats. The ale is first allowed to ferment entirely in casks until it becomes perfectly flat—the working qualities having been allowed to flow freely out at the bung-hole. When the fermentation has ceased, the ale is run off into small kegs, and then life is conveyed by charging it with the gas. By this process, all the disagreeable cathartic qualities of the ale are avoided, as the liquor is run into the kegs perfectly clear, owing to its having settled in the larger casks. This liveliness or foaming quality, contributed by the gas, remains in the beer under all circumstances until the last of it has been drawn off. Exposure to the air has no effect upon it. The value of the discovery consists in the peculiar manner in which the gas is forced into the kegs. A patent has been applied for, and the ale thus charged will shortly be in general use. As a California invention, it is worthy of particular notice.

The drinking capacity of California is great. In view of the immense amount of spirits, wines, and malt liquors imported into California for the six years terminating with 1853, the ability of our people to consume these beverages to a large extent, admits of no question. In the six years named, we imported 15,194,158 gallons of ardent spirits, 5,311,732 gallons of wine, and 205,066 packages of malt liquors; while, during a considerable portion of that time, the home production of these articles was rapidly assuming importance. Previous to the last year, the exportation of liquors from this port was not sufficiently significant to warrant much attention. The gold discoveries north, however, and the large emigration in that direction, gave rise to some demand on this market, and we exported during 1853 about 160,000 gallons of ardent spirits, together with some wines and malt liquors. The distilleries and wine presses of the State, however, must have quadrupled the amount named, in the way of production. In 1857, Los Angeles county alone produced 355,000 gallons of wine, and 10,000 gallons of brandy; and doubtless the five large distilleries and eighty-six breweries in the State turn out annually a large amount of liquor, fermented or otherwise, that is consumed here, independent of importations.—[Mercantile Gazette.

OLD WINES.—At a recent auction sale of the wines of a deceased Lord Justice in Scotland, eleven hundred dozen bottles of the choicest brands were disposed of at high rates. The best Port of the vintage of 1821 sold for about \$50 a dozen, the best Sherry sold for \$62 a dozen. The highest price given was for Johannisberg of 1835 and 1842 noted as "Prince Metternich's," which lot brought \$81 a dozen. Most of the old Madeira wine for sale in this country formerly belonged to families in Boston. The "Judge Story" brands are \$4 a bottle; Isaac P. Davis' "Eclipse" is \$8 a bottle; "Gov. Phillips, 1820," are \$10 a bottle; "Francis Amory" Madeira, bottled in 1800, is sold at \$12 a bottle!

HOW BECKLAND USED TOADS.—At his famous establishment of rare animals and insects, they are employed as insect traps. A brigade of marauding toads are conducted into the garden in the evening; they make a famous supper but in the morning their entomological employer, by a gentle squeeze, compels them to disgorge their evening meal, "and in this way many curious and rare specimens of minute nocturnal insects have been obtained." There is a suggestion for entomologists.

ECLECTIC CLUB.—A number of young men of this city, have formed themselves into an Association, with the above title, for the purpose of promoting their social, mental, and moral well-being, by means of agreeable and instructive recreations, and endeavoring to assist in developing the common powers of the intellect, as well as to encourage the practice of familiar converse. The Club is divided into four departments or cabinets, viz: Literary, Solace, Musical and Chess. All the proper officers have been elected. It is a good work, and those engaged in the undertaking deserve much credit. Additions are being made at every meeting, and, in course of time, we hope to rank it as one of the foremost institutions of the country.

HOSPITAL REPORT.—Dr. Raymond, on Monday night last, presented the Monthly Report as Resident Physician to the City and County Hospital: Number of patients at date of last report, 159; admitted during May, 66—total, 225. Discharged cured, 52; discharged by request, 9; died, 10; remaining in Hospital, 164—total, 225. Average number in the Hospital, 164; outside patients, 41; number of British patients in Hospital this day, 11. Deaths at the Hospital for May, 9.

ELECTION OF OFFICERS.—The French Societe de Repatriement, has nominated the following Board of Managers for the ensuing year: Messrs. Gantier (the French Consul), Touchard, Delafont, Abel Gay, Vassalli, Larco, Bayerque, H. Hentsch, and Mibelle. Messrs. Deplerris, Merin and Colle, were elected physicians.

## POLAR OIL.

633 Market street,  
PHILADELPHIA.

## FARMERS, BEWARE

## CALIFORNIA

## COMBINED REAPER AND MOWER,

AND

## PECK'S SANTA CLARA HEADER AND HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNMIXED FALSHOODS.

I am now building the "Manny Machine," nor infringing on the "Manny Patent," nor do I INTEND to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

## California Combined Reaper and Mower,

Wholly UNLIKE the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a *Practical Mechanic*, and have spent too much money in obtaining Drawings and Specifications from the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "BLUFF-GAME," and has been pretty well "played out." For two years the combined force have been playing upon me, not openly, but with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their assaults have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

## CALIFORNIA

## Combined Reaper and Mower,

IS A DECIDED SUCCESS; AND

and unless that they can intimidate the farmer, and force him to buy from them at a greater cost, Machine much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "BLUFF-GAME" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower, (and not the "Manny").

and I have Purchased the Invention called

## "PECK'S SANTA CLARA HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to MANUFACTURE both, in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE of INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, "ready for the fight whenever the fight opens."

THOS. OGG SHAW,  
No. 33 Sacramento street.

(For the California Farmer.)  
SISTER BELLE.

A SONG FOR MUSIC BY M. A. SARGES.

During the Crimean war a party of French soldiers adopted, with the chivalrous and romantic feelings for which they are justly celebrated, an orphan child of one of their comrades who was killed in the assault of the Malakoff. The maiden was remarkable not only for her extraordinary personal beauty, but for the purity of her mind and the sweetness of her disposition. After the war, an officer who bore an unfortunate reputation, unfortunately fell in love with her, won her love in return, and abandoned her. The vivandier died of a broken heart. Upon this incident the song is founded.

Brothers, softly steal about me,  
Hear a tale I grieve to tell,  
Listen, while we sing about thee,  
Our loved darling sister Belle.  
Chorus—Our loved darling, sister Belle.  
She was lovely as the morning,  
She was blushing as the rose,  
Friends were ever round her forming,  
She not even dreamed of foes.  
Chorus—Our loved darling, sister Belle.  
But there came one, and he jilted  
Her in whom no guile had dwelt,  
And our rose-bud drooped and wilted,  
As a flake of snow would melt.  
Chorus—Our loved darling, sister Belle.

She is gone, and all our greetings,  
Must be said this summer's night,  
No one, now, will cheer our meetings,  
No one, now, will bless our sight.  
Chorus—She is gone, dear sister Belle.

Hark! the funeral knell is ringing,  
Let us pray that she may dwell  
Ever where there's angels singing.  
Bless her Father, sister Belle.

COLLEGIATE INSTITUTE, Berkeley, June 1859.

## Graduating Speech.

Delivered at Santa Clara, June 8th, 1859.

BY G. W. BLACKFORD.

AMBITION is not a new theme presenting itself before us for investigation as one just snatched by the enlightenment of the age from the mysterious workings of nature, but it and its effects have been before the world ever since mind came in contact with mind, or mind with matter, leaving everywhere upon the record of man's history marks of its existence, though but faintly displayed in the primeval ages. For then man was in a state of simplicity in which he moved and acted only as the grosser passions of his nature prompted him, which caused no very great exertions upon his part, for his desires were few and meagre. These were easily gratified by nature's bountiful gifts, which were everywhere spread out before him. But his mind was not long to remain in this state of inactivity, for things began to assume the shape in which they were afterwards to take. Societies were formed, possessions established, bringing man both physically and mentally in contact with man, causing thereby contentions and strife, from which arose a desire for power, or that ambitious feeling which causes one man to struggle on in endeavoring to gain superiority over another, hence by this means calling forth and bringing into action those faculties of his nature which had before lain dormant, and which perhaps would forever have remained in that state had they been permitted to move on without a disturbing cause, or as the *early, careless, and the don't-care* call it, in peace, which is contrary to the very constitution of things; for how can there be peace or quietude to the human mind when the very elements themselves are warring against each other, and all nature is writhing and groaning under convulsions trying to *hate itself* upon itself. Man is not an exemption from the rest of nature's work; but was formed for an active being, with a mind capable of comprehending the beautiful, the grand, and the sublime, which are buried, as it were, from the mind's view until it has through a long series of ceaseless exertions, prepared itself for their reception, which, bursting upon it, fills the soul with admiration and exultation, a spirit of high and lofty ambition to go on in the increase of knowledge and power. Thus are things placed in the material world beyond the reach of the common faculties of man which are allowed him to know, and knowing, to add to his happiness, but at the same time cannot be comprehended without labor, severe toil, and investigation. This requires a constant force to act upon the mind to give it that impetus which would drive it onward when counteracting causes rise up to check its progress, as they do in every course of human life; and that force is ambition, for if we suppose that man was made to toil, to labor on in the increase of knowledge and virtue, it is not unreasonable to suppose that he would be endowed with a passion to stimulate him on in his intricate paths. Such we find to be the case, though not caused directly by his own actions, but by that effect which they have upon his fellow men to call forth their praise and admiration of him, which falling upon a nature formed for its reception, awakens it into life and activity. If we but reflect upon the construction of human nature we will at once see how admirably adapted it is to promote the ends for which it was designed, and in reflecting we cannot help but see what those ends are; for from the first moment of man's existence his whole being begins to increase in size and strength, which continues on through different degrees of life up to a certain period, when the physical nature stops, to give the mental—the noblest part—yes, all that is grand and sublime about man—time and room unencumbered by the accumulating of matter upon the gross body for its improvement, though the majority of the world suppose that when they have reached this grand epoch in their history that they have attained to the summit of human knowledge, and as they behold other minds soaring above them they are apt to imagine that they are endowed with supernatural power, not thinking that they had drawn before them an impenetrable veil, and had shut out ambition's fires at a time when the mind was prepared to begin its flight. Every high and lofty ambition for knowledge, for a world spread out before him its sublime mysteries, and the heavens stretching themselves above him, in which worlds rise upon worlds and systems beyond systems, giving the mind an endless chain of material for thought, which it grasps, and going on step by step, encouraged by its own God-like powers, attempts to comprehend infinity itself. What is it that has characterized the greatness of mind in all ages? What is it that has caused man to enwrap himself in the robes of seclusion, and shutting out from him the world with all its happiness and pleasures, struggles with the workings of his nature until he brings to light some of her hidden laws to illumine and bless mankind? What is it that has caused science and art to make the desire for fame? But blot this out from man's

nature and the arm of heroism becomes relaxed—the tongue of the orator becomes stiff—the ethereal aspiration of the statesman is quenched—the searching vision of science becomes dim, and the inspiration of literature becomes extinct. The world has witnessed the mournful effects of this for over four thousand years, for governments as they have existed, have been ruled by despotic power, where the force was concentrated in one head whose aim and purpose it was to keep the people in ignorance, which was accomplished by those vile laws that prohibited any from rising to the level of ignorance, which was accomplished by the descent of the blood royal, thus crushing out the very life-current of improvement, causing every noble aspiration of the human heart—causing genius to pine and die in obscurity; for think you that no great minds have existed during that long period, though they have remained unknown to us? Nay, many whose names would have been written high on the roll of fame, died because ambition's fires were quenched (like a dull worm to rot, thrust in the foul earth and was there forgot). But mark the effect that the breaking of its chains had upon it in that short space of time which was allotted to Greece and her independence, which threw open the portals of fame to all aspirations, led them to seek in the arena of strife its laurels. And see to what greatness mind attained—to what high genius soared—to what perfection oratory was carried. No period of the world's history presents itself more brilliant colors than does that; for, rising like a bright star above the dark cloud of ignorance and superstition which had enshrouded the whole universe, it shone forth resplendent with men of virtue, of noble daring, and of patriotism, which even in this enlightened and christian age would defy examples of them to be surpassed. But as soon as tyranny assumed its sway again, rewards of merit were no longer extended out for the human mind to grasp for, which caused it to slide back into its former state, and there remained comparatively quiescent, though not without feeling the degradation to which it was subject, nor without sighing continually for its liberation, which came at last with that grand struggle that achieved for America her independence; then, feeling itself once more free, began under the influence of emulation to unfold its powers, and struggling with improvement for distinction, brought forth such a train of mighty discoveries in such rapid succession as to cause the world to startle with astonishment and wonder. There are none but what love applause; there are none but what would seek to win it if the road was not a steep and arduous one. If they could only lie supinely upon their backs and have men call them great, willingly would they do it; yes, and endure the most violent and penetrating rays that ever emanated from a noon-day sun, for the honors. But that law which governs action is immutable, for it is not in man's nature to give praise where praise is not due, though in some rare occurrences it has been done, of which a few California has witnessed. Yet those who attain to eminence through false merit experience only a momentary exultation. They are raised to the top of the towering pyramid as it were, only to be dashed to pieces at its base. Many suppose that there is no other avenue to distinction or channel in which to win honor and respect, but that which leads through the muddy pool to political power, and guarded by that impenetrable covering, a sacred conscience, in they plunge to wallow in its filth and mire, caused so only by the means it is made to subserv, for politics considered as the science of government—in the establishing of laws for the preservation of peace, morals, improvement, and the defence against the aggressions of a foreign foe, is a most noble sphere for thought and action—one in which if depravity has become so predominant in man's nature as to leave but one noble principle, it should call it forth. It should create in him a high ambition—one which would be to advance the interest of his country—to give her that dignity of character which would cause her to command a universal respect among the nations of the earth. Such was the inspiration that gave to a Webster, a Clay, and a Calhoun, that greatness to which they attained and won for their imperishable names; theirs was a glorious ambition. Would that more of our statesmen; those of the present time, who are now high in official power, and those who are trying to get there, but never will, were influenced by such ambition; then would the people have some reason to rejoice in the hopes of a prosperous future. But that spirit which was infused into our country on the event of her throwing off the fetters of British thralldom, is fast dying away; and another, like that which followed the destruction of the Roman Empire, is taking its place; and that is, the scrambling for the spoils of office, which is no ambition, neither pure nor false; for both are the desire to win applause, to win a name; and every sensible man must know and feel, that plundering the public treasury will do neither.

There are some who think governments are established especially for their benefit, as a kind of machine to mould them into semi-divinities, and place them in conspicuous places, where they can stand, like some mighty colossus, under whose legs the rest of the world must pass; and with this curious kind of an idea, they become infuriated, unless they are at once placed in power, and threaten to subvert the government, to tear down its mighty fabric and bury beneath the ruins a whole nation. They tell us, all they have to do is to apply the torch to the magazine (which is buried in the South), and American freedom is no more! But we apprehend that the few politicians, who have been driven to the verge of madness by a false ambition, will find it no easy task to quench the fires of liberty that burn within the bosoms of twenty-five millions of freemen, though they may stand apparently unconcerned whilst the waters on which the "ship of state" rides are being agitated; yet, when they behold her in danger, when they see her steering for that rock upon which she will be dashed to pieces, there is not one among them but would fly to the rescue; and do the very same, if it was necessary, that their fathers had done before them—offer up their lives in her defense. Ambition, when perverted, when unrestrained, is a dangerous thing; the effects of which, the world's history presents but one unparalleled scene of crime and bloodshed; unbridled, it ruled the breasts of the ancient heroes, driving them on like devouring demons, destroying cities, laying waste noble empires; and leaving, everywhere upon their path, desolation and ruin. Alexander the Great, after he had overrun with his victorious arms nearly the whole universe and brought it under his sway, at dawn and wept because there were no more kingdoms to conquer. How like a mountain devil in the heart, rules the unrestrained ambition! Let it once but play the monarch, and its haughty brow glows with a beauty that bewilders thought, and unthrones peace forever, putting on the very pomp of Lucifer it turns the heart to ashes; and, with not a spring left in the desert for the spirit's lip, we look upon our splendor, and forget the thirst of which we perish.

But is there anything so high upon earth, but what man can turn into the vilest purpose? Is there anything so pure in his nature, but what he can corrupt? Yet he is the aggressor, and not they the aggressors; for, until that admiring, conscience, the judge which sits as sole umpire is bribed, is silenced, and the admiration of his voice no longer heeded, his actions need no other curb but it, to restrain them; but, when it becomes corrupted, ambition, like the steam upon the cars, with an insane engineer applying it on, drives him and all connected with him onward with an infuriated speed to destruction. But let us not con-

demo it as an evil passion, until it is made so; for its purpose is only to act upon the mind as a propelling power, whilst the heart must be the regulator, and govern it so as to keep it upon the right track, or else the whole machinery of man becomes disordered. There needs be, in every vocation of life, from the humblest to the most exalted, the calling forth and exercising a pure, a noble, and a lofty ambition; such an one as that which would be to stand up boldly for the right, and firm in opposition to the wrong. For everywhere around us, is going on the great battle of life, in which vice is arrayed against virtue, with its generals and its officers, trained and skilled in all the art and science of a deadly warfare, contending fiercely for supremacy; the thunders of its artillery are continually pealing upon our ears; the groans of its wounded and dying victims are borne upon every breeze, and the bloody chariots of the victors, as they issue from the conflict, drive through our very doors with a deafening shout of defiance, that even make devils themselves blush at their boldness; yet, men of chivalry pine and die amid all this carnage of war and bloodshed, mourning because they have no field upon which to display a glorious action. Where can they have a better one, though it may not be such an one as that upon which the Alexanders, the Pompeys, the Cæsars, with their embattled legions, pushed their victorious standards through the serried and fallen columns of barbarian foes to glory, yet it is one upon which they may, single-handed, cleave out a name more lasting than either? For war, with the splendor of its conquests and its triumphs, like a bright but frightful comet on its receding path, is fast fading into nothingness before an enlightened world; and soon those laurels, gained amid the groans of the wounded and the dying millions, will be looked upon but as the wreaths of the curling smoke which issue from the neathermost pits. So that he who would wish to win a lasting name, one which time nor changes can wear away, must seek other scenes besides those of the barbarous ages, and encourage not that fall spirit which dragged angels down, but that pure, ethereal glow which flames the wing of ambition for immortality.

GENESSEE VALLEY  
NURSERIES,  
Rochester, N. Y.Fruit and Ornamental Trees,  
Shrubs, &c.  
Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements, as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

## OF STANDARD FRUIT TREES.

We have an unrivaled collection of Apples, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in bud, One year old from bud or graft, and Two years old. An immense stock of DWARF FRUIT TREES, in bud, and one year old from bud or graft, comprising Apples, Peaches, Cherries, and Plums. SMALL FRUITS, &c., in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberries, &c., including all of the new varieties of the above species introduced up to the present time, which have been found to be an acquisition.

## In the Ornamental Department,

our assortment and stock is very extensive, including both the Deciduous and Evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our Stock of ROSES is unsurpassed in quantity and variety, comprising over six series, and embracing more than 500 distinct sorts, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summer, Climbing, Roses, &c.

HARDY BULBS furnished of every description, including the finest variety of Hyacinths, Tulips, Crocuses, &c. Every season we make large importations of the finest flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

## FRUIT-TREE STOCKS

We have in large quantities, which promise to be unusually fine the coming autumn. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities SEEDLING PEARS, APPLES, CHERRIES, PLUMS one and two years old; also, QUINCE and MAHALES STOCK, for dwarfing the Pear and Cherry respectively, one and two years old.

## PACKING, &amp;c.

The greatest care and caution are given by us to the packing of Plants, the labor of which is performed by men who have had many years' experience in the business; so that particular can depend upon receiving the articles in good order. The result of our experience in packing plants for California the past season, has been such that our customers have UNIVERALLY expressed themselves very much pleased with the condition in which the plants reached them. N.B.—ORDERS should be sent as EARLY in the SEASON as POSSIBLE, to be received by us as early as the first of October, that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO ORDERS can be filled satisfactorily to ourselves, which are not received by us PRIOR to the 15th of November.

## Catalogues.

A WHOLESALE CATALOGUE, No. 6, is published in July of each year, expressly for the California trade, containing our lowest rate for retail in quantities of such sizes and ages as are desirable to be shipped to California from the Atlantic States, copies of which will be mailed free to all applicants.

For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.  
No. 1—Descriptive Catalogue of Fruits.  
No. 2—Descriptive Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c.  
No. 3—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.  
No. 4—Wholesale Catalogue of Trade list.  
No. 5—Descriptive Catalogue of Flowering Bulbs, &c.  
A. Frost & Co.,  
Genesee Valley Nurseries,  
Rochester, N. Y.

PATENTED JANUARY 25, 1859.

PERMANENT OR PORTABLE.

IT is made of boards or rails in the following manner: Take two sticks or posts of timber 3 1/2 inches square, and about 9 1/2 feet long, either round or square—their length may be varied according to the height intended for the fence. Lay them across each other in such a manner that the ends which rest on the ground, will be about 5 1/2 or 6 feet apart, leaving about 18 or 20 inches of each post above the point of intersection to receive the top-rail, board, or pole. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole large enough to receive the rail or board. Then nail the long ends to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 1/2 inches wide; nail the short end across from one post to the other, and place the top-rail, board, or pole

## The California Farmer.

SAN FRANCISCO.  
FRIDAY, JUNE 24, 1859.

## A Special Agent in the Eastern States.

Mr. E. A. HAM, who left here in the steamer of the 5th April, on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.

We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.

We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

## The Farmer—Our City Carrier.

HAVING employed Mr. J. F. LARABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry," it will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

SEND THE FARMER ABOARD.—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your name and the amount, at our office, and we will mail the papers for you, free of postage.

PARTICULAR NOTICE.—In consequence of frequent mistakes occurring, we desire to inform those who are not aware of the fact, that Col. Warren, editor of the Farmer, is not J. Q. A. Warren, and that the latter has no connection with this journal. Those communicating with us will please address, Col. Warren, Editor California Farmer.

AUGUSTUS ELLIOTT is not the agent of the CALIFORNIA FARMER, nor authorized to receive money on account of this journal.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

A CONTEMPTIBLE TRICK.—We have received from several valuable correspondents information of most reprehensible efforts on the part of a worthless individual, to injure this journal by slanderous letters addressed to our correspondents. We regret to find the source from whence these vile essays emanate, to be the agencies of our contemporary the Cultivist. Having in our possession the proofs of what we assert, we shall in our next give documentary evidence. We despise such acts as much as we regret them, confident they will recoil upon the heads of those who plan to the injury of others. We deeply regret too, that good men have been deceived thereby, but a brief reflection will soon convince them of the baseness of the act, and we shall not suffer. Those who have aided and abetted such acts will have cause to regret the error they have committed.

## Have You Paid for Your Farmer.

We are constantly reminded of the value of our subscription list by the red marks and the blue, and sometimes here and there we see some black marks. If all who are on our books could see their own names it would be quite interesting. Traveling as we do from county to county, we often meet persons who are from home, or so circumstanced as not to make it convenient to hand us the V, and they desire us to send the FARMER, assuring us they will remit by mail immediately, or in a few days, or weeks. Desirous to meet the wishes of such, we enter their names; time flies, and ere we think, months pass; and thus forgetfulness on their part compels us either to appear in the light of a dun, or stop the paper and suffer a loss. This should not be, and a little reflection on the part of such persons will convince them of the injustice they are doing themselves and us too. These sums, scattered over a vast territory, are small each, but the aggregate swells to thousands, and could we have our own we could accomplish much more for all. We now ask each and all our subscribers, *have you paid for the Farmer?* If you have, you will be pleased to see us when you meet us, or when we call on you; and your first thought will not be the editor comes for his pay, but you will know he comes but to gather facts by a pleasant and friendly call that shall do both good. We are often constrained to pass some places where we desire to call, lest we should be viewed simply as a dun. We know we publish a journal worth the cost several times, and we grieve to know that some withhold too long. If all subscribers to newspapers but knew how much better they would feel if this debt was paid, they would act more promptly.

There is one thing certain: we are piling up a record of facts in our labors in this science, that will tell by and by with greater power than now; and every name that is recorded as delinquent will appear in a record of each county, in a substantial form, and every good and true name will be enrolled in such a record as they will not be ashamed to see opened and read to the world. We have not been idle in our labors for seven years in this work. There are names that gladden us to look upon; such shall be duly honored. There are some that sadden us, for they have been the means of preventing us from doing more in the cause we love. Each will have their reward when they read the *Records of Years*.

Have you paid for the FARMER? We ask this question again, so that none may have the excuse of forgetfulness as a reason for not appearing on the list of those happy ones, who, upon opening a volume that shall prove of deep interest to them, shall find recorded the names of those who have aided the cause of agriculture and paid for the FARMER.

WAR NEWS FROM LONDON.—We are indebted to Mr. Childs, the efficient messenger of Freeman & Co., at San José, on Saturday morning last, while there, for the Boston Journal and New York Herald extra, by the Overland Mail, and for other favors. Also, to Messrs. Cutler & Brother, agents of Freeman & Co., for prompt attentions.

## The Trial of Reapers at the Fair at Oakland.

This was a most interesting trial, although confined to two contestants. Only about sixty farmers and others interested, were present. The "fete" was graced by the presence of several "fair" ladies. The following is a brief sketch of the machines on trial and their work:

The New York Reaper was entered by Mr. John H. Voorhees, of the firm of Voorhees & Warder, who import these machines, and are associated with the manufacturers, Messrs. Warder, Brokaw & Child, at Springfield, Ohio. John D. Arthur & Son, of this city, are agents for the sale of these reapers. Neither the lay of the ground nor the quality of the grain were favorable to the operation of reaping machines. The ground was rolling—in some places steep; the barley short and light, and the cutting embarrassed by a thick undergrowth of green weeds. Yet both machines cut it beautifully and close. The New York Reaper has a well established reputation in this country, as well as in the old States. More than four thousand of them have been made and are now in use; and we are informed that some of them have been running for five years in this State, and are still doing good work. What other reaper can boast of like success? One of the Committee, Mr. John M. Horner, measured the swath cut by the New York Reaper, and found it six feet ten-and-a-half inches. This was in short grain, and we were informed that in heavy grain it will cut full seven-and-a-half feet. Messrs. Arthur & Son have certificates of its having cut thirty acres a day. There were no other machines but this and Mr. Shaw's on the ground, and we therefore can devote to each a larger portion of time and space, this being the first exhibition of the kind before an Agricultural Society in California. We know not what reasons prevented the importers of the McCormick and Manny machines from taking part in this trial; but we know farmers are now greatly interested in testing the comparative merits of reaping machines, which contribute so much to the wealth of California. The knife of the New York Reaper is six feet nine inches long; its wheels are high, to insure light draft. The gearing runs in a box of cast-iron, which causes it to run smoothly and accurately. The cutter-bar is wood, of well-seasoned ash, as light as can be, and yet resist the tremor which in too light machines shakes them to pieces. The contrivance to make the knife cut high or low is very simple and ingenious. The hub in which the spindle of the main wheel runs, slides up and down in a hollow standard, and thus the platform moves up and down bodily, and does not tilt to change the cut. The grain on the New York machine is thus easily raked off from a level platform. The raker stands square behind his work, and for the amount of grain to be got off we confess the work is comparatively easy, having tried it ourselves, and we think we laid it pretty well. The knife can be un-gauged in a moment by the driver. The draft of these machines, notwithstanding their wide cut, seems light. Messrs. Voorhees & Warder have, also, one hundred Combined Reapers and Mowers, now en route here in the ship Fanny S. Perley, out 195 days, and will have an ample and early supply of both the single reapers and the combined machines here for the harvest of 1860.

The only other reaper was the *California Reaper*, made by T. Ogg Shaw, of the Agricultural Works, San Francisco, and called the *Combined Reaper and Mower*. This machine we should say, in justice to Mr. Shaw, who built it on purpose for this occasion, was in bad order for trial, having to be put together on the field for the first time. Consequently this was its first trial, and the manufacturer was subject to considerable delay before the work commenced. Probably no two machines were ever on a field under like circumstances, where the crop to be harvested was so indifferent, the ground up-hill, and the machines called to action so unprepared, and that to by those unused to their workings. If we are correctly informed, the drivers and rakers were all "freshmen," with a single exception. Of the rakers we shall speak in another article. To the New York Reaper was attached four horses driven by a capital stage driver, and the Shaw machine was drawn by two large size truck horses from this city, driven by a truckman.

The Combined Reaper and Mower of Mr. Shaw can be said to be a triumph of skill and workmanship. It will cut six feet in a good field, and for perfection of work cannot be surpassed, if it can be equalled. We have seen many harvested fields, but never have we seen anything surpass the path of this reaper. Not a single spear of grain was left in its entire track; it was most perfectly done. After the reaping process, Mr. Shaw made trial of the same machine as a mower, and proved the instrument a most superior worker, taking off every blade of grass down to the very earth. This trial proved the great excellence of this machine, which, excellent as it is, can be much improved by an alteration in the apron, giving more width; also, a little more strength to the reel. This reel, by its improved form (spiral), greatly facilitates the evenness of the cutting. We think it a decided improvement. The support of the reel can be strengthened too, with advantage. We have no doubt that with this trial to stimulate makers of implements, and importers also, greater improvements will from time to time be made. Mr. Shaw deserves well of our State, for his persevering industry, and we of course, were pleased to hear the report of the Committee award to him the first premium for a combined reaper and mower. One great feature of Shaw's machine is a saving of power, working freely and perfectly with two horses and apparently doing the work that ordinarily requires four horses, thus saving quite an item of expense. It is but just to state, so that the entire public may understand, that Mr. Shaw's implement was the only combined machine on the field, while the machine of the Messrs. Arthur was simply a reaper. They intended to enter the New York Combined Reaper and Mower, made under the same patents, but the non-arrival of the Perley prevented this exhibition; this combined machine possesses all the good qualities of the reaper, cutting both in grass and grain, a swath of six

and one-half feet; and in addition to what we have already said, so far as our experience goes, in all the work we have seen done, and that is not a little, the *New York Reapers* and the *Combined Machines* are ahead of all imported implements.

We deeply regret the importers of the McCormick and the Manny reapers did not put their implements on trial. We think the farmers of this State should demand a public trial of the several machines, and we are surprised that the *Executive Committee of the State Agricultural Society* have not established such a trial. How can they ask the aid and co-operation of the farmers to the support of the Society unless they look to their interests. The grain crop is the right bower, and the vineyards and orchards the left bower, and as yet we have not heard of "the Visiting Committee to the grain fields," or orchards either. Is this all-important duty to have a go-by? It is not too late now to call out a trial of all the principal Reapers and Harvesters, including the Thrashers. Where was the Executive Committee of the State Society at this first exhibition of grain reapers?

A first premium was awarded to the New York Improved Reaper, and it was deserving of it, and as we are known to be particularly favorable to home manufactures, we hope our friends Messrs. Arthur & Son will urge the manufacture of their excellent reaper there. Make here instead of importing them, so we can use our gold to pay the working-men of our own State, for we are satisfied that we cannot manufacture as many as we want, unless a greater capital is invested, and the friends of "home industry" rally strong.

Mr. Shaw says his machine will cut sixteen acres per day perfectly, and he will never stop improving until his machine shall be so perfected as to meet the approbation of the grain growers of California.

Altogether, the exhibition was a grand one, and most creditable to Alameda county.

CHANCE FOR MONEY.—We are authorized to say that Samuel Norris, Esq., of this county, will give fifty dollars for information that will lead to the detection of any one who sells whisky to the Indians in his neighborhood. The Indians are provided with money now, from the sale of blackberries, and being in the habit of investing the same in liquor, they are made wild and noisy with excitement, to the injury of themselves and the disturbance of the neighborhoods in which they congregate. Mr. Norris offers this reward as Indian Agent for this district, and it is to be hoped his effort to stop this miserable traffic may be successful.

We call attention to the above. We like the public spirit of Mr. Norris. It speaks well for the morality of a place. Who can be so base as to wish to take the earnings of the poor Indian for that which shall degrade them more than the "pale face" has already degraded them. The early tribes of the red men were a noble race, and by instinct performed noble deeds. Let us remember such chiefs as *Massasoit*, *Logan*, and a thousand warriors whose names are wreathed in glory, and add the name of "Pocahontas;" and for their sakes do all we can to redeem and save their race. We hope the action of Mr. Norris will be followed over our State and the Union. Mr. Norris has already spoken well in behalf of the *Oaks* upon our *Prairies*; he would keep them from the marauding ax and save them to gladden our vision. Mr. Norris would now raise his voice for humanity and save that from falling beneath a sharper ax than ever fell the oak of the prairie. Let all good men aid him. The Bee says it is a *chance for money*. We think it more. We would raise the moral tone of society to stop this evil and make it a chance for *mercy and humanity*.

SELF-REGULATING WINDMILL.—We feel it important to urge public attention to the most excellent *Self-Regulating Windmill*, called Johnson's Mill, but now owned by D. Van Pelt, Esq., on Bush st. Mr. Van Pelt is one of our best and most practical mechanics, and he now puts up a Mill of superior quality. We think, with the advertiser, that this Mill is one of the best and cheapest Mills ever invented. It is a self-regulating Mill; indeed, perfect in its workings. We saw it in operation when a flaw of wind struck it; it came up into the wind bravely, like a ship under charge of a skillful helmsman; then there is music in its working; the clink of the little joints sound like the chime of some fairy cantatrice with the castanets. We cannot but admire this excellent Mill, and we have assurances from all who have used it, that it is most admirably adapted for general use. It is believed it will stand a generation in good repair. The following persons have this Mill in use: Mr. Ray, Front street; Mr. Lee, Sacramento river; G. C. Johnson, Pulgas Ranch; A. Friscony, Monterey; Joseph Livingston, Tehama; Castro Ranch, near Haywood's, and many others; to whom the proprietor can refer. We ask also the attention, in this connection, to the fine Pump advertised by Messrs. Stock, of San José, as well adapted to this Mill. See their advertisement.

SPLENDID CHERRIES.—We received from Rev. A. H. Myers, of Alameda, a branch of the "Late Duke Cherry," of royal beauty, containing the finest, the largest, brightest and fairest fruit we have seen this season. Tempting as they were, we preserved them in spirits, that we might hereafter convince the skeptical of the capabilities of California, when they call on us out of the season of fruits. If our fruit-growers would bring us specimens worth preserving, we would do them good. We want strawberries, cherries, raspberries, and all such fruits, to make a collection that will do good to all. Mr. Myers brought to market yesterday one hundred and ninety-five pounds of cherries that realized from sixty to ninety-five cents a pound.

CELEBRATION OF ST. JOHN'S DAY.—This day was celebrated with becoming interest, in many parts of our State, by the Masonic fraternity. We learn that the celebration at San Leandro was an unusually fine affair. Mr. Pitney, of the Estudillo House, having made arrangements that cannot fail to win golden opinions from all. A splendid Ball comes off this evening, when good music and happy spirits will induce the company to trip merrily till broad day light.

## Santa Clara College, S. J.

SANTA CLARA COLLEGE, June 22, 1859.

EDITOR FARMER: While acknowledging the favorable mention, made in your paper of the 17th inst., of Santa Clara College, permit me to direct your attention to a mistake into which you have inadvertently fallen. The literary exhibition which took place on the 8th inst., you have ascribed to the students of "Santa Clara College," whereas the credit of the performance is entirely due to the young gentlemen attending the Institution known as the "University of the Pacific."

There is but one "Santa Clara College," that conducted by the Fathers of the Society of Jesus; an Institution which is chartered and publicly known under that name, and to which you kindly referred in your article alluded to above as the "Catholic College of Santa Clara."

I am the more particular in these remarks, and in pointing out to your kind attention your inadvertent error, from the fact that strangers sometimes confound "Santa Clara College" with the other Institution existing in Santa Clara, a circumstance which has been occasionally productive of inconvenience to those connected with said establishment.

Your insertion of this communication will oblige You respectfully ob't servant,  
FELIX CICATERRI, S. J., President.

[Most cheerfully do we insert the above, as we are ever desirous to do ample and full honor to every person and thing worthy of notice. We readily perceive our error now, and, as we insert the above, we hope all who have read our articles will bear in mind that they were intended for the "University of the Pacific;" of which Institution Messrs. Blackford and Miss Garside, whose Essays appear this week, were members.

We take this opportunity to acknowledge, also, the very kind invitation from the Faculty of the "Santa Clara College," to their commencement exercises, which take place on the 28th and 29th of this month. We feel assured it will be a season of interest, gratifying to all who may be present.]

A TYPO "LOCKED UP."—We received the following information by the last steamer, which affords considerable pleasure to this office:

Married at Harlem, N. Y., May 18th, by the Rev. Rufus W. Clark, of Brooklyn, Mr. Edward A. Ham, of San Francisco, California, to Miss Ellen C. Trippes, daughter of the late Capt. Seth M. Trippes, of Portsmouth, N. H.

When we remember that the bridegroom has officiated in our office, as a typo, for years, we are most happy to know that fortune smiles on him thus. When he said to us he desired to take a trip to the East, we were not aware he intended to take a *Tour* at the East also. But we rejoice now, and shall doubly welcome his return. We can sincerely wish the wedded pair a life of joy and happiness, and trust the words of Moore will apply to them in their fullest meaning:

"There's a bliss beyond all that the minstrel hath told,  
When two that are linked in one heavenly bond,  
With heart never changing, and brow never cold,  
Love on through all ills, and love on till they die."

In the name of our office and many friends, we wish the bride and bridegroom many happy years, hoping soon to welcome them to our shores.

SPLENDID RESIDENCES.—"HOWARD PARK."—This immense estate, covering thousands of acres, is one of the best tracts of land in California, now the residence of Geo. Howard, Esq., of this city, and is situated at San Mateo, about twenty miles distant. It is in a high state of cultivation, and the splendid stock scattered over the beautiful hills, give it a grand and baronial appearance. We spent a little time there recently looking at the stock. The "Durham" is preferred, and of this we saw the fine bull "Orion," as fine an animal as can be found. Another animal, but not so fine, the progeny of Orion, is very promising. We saw some very fine swine, cross of Berkshire and Suffolk. The hay crop was being cut and gathered as it should be, not dried and crisped, but in a green, bright manner, thus preserving its fragrance like an herb. We shall speak further hereafter.

IMPORTED MESSENGER AND DESCENDANTS.—A gentleman fully competent to the undertaking, is preparing a precise description and history of Messenger and his immediate descendants, for publication in the American Stock Journal. In order to render this as full and complete as possible, all persons having any knowledge of these horses, are requested to aid in the matter, by communicating such facts as they may deem of interest. Information is particularly desired in relation to Mambrino, Chancellor, Whynot, Hamiltonian (General Coles), Plato, Tippoo Saib, Financier, Engineer, Ogden's Messenger, Bush Messenger, and others of which any person may have definite knowledge. Like intelligence is desired concerning any mares by Imported Messenger, and particularly as to the dam of Young Bashaw (sire of Andrew Jackson), the grand-dam of Andrew Jackson, the dam of Columbus, and of all mares by Imported Messenger which are in the pedigree of noted trotters. Communications should be sent as soon as practicable, and addressed to American Stock Journal, No. 140, Fulton street, New York.

FINE STOCK.—In a recent brief trip to San José and Santa Clara, although almost a cripple, we took notes of some valuable stock at several ranches, of which we shall give the particulars hereafter, as they may do good. Mr. Emerson, near Mountain View, has fine stock, both Durham stock and Suffolk hogs. We were pleased to see the attention paid to stock of all kinds. There is a general desire everywhere to secure the best stock in all the departments of this branch of home wealth.

AN EXCELLENT PUMP.—The pump of Messrs. F. & J. Stock, of San José, advertised in our columns, we esteem one of the best invented pumps now in use. It throws water with great power and freedom, and never gets out of repair. It can be managed by purchasers themselves—put up, taken down, and repaired if needed—without hindrance. Persons wishing a good pump, should look at this invention.

SPECIMENS OF PENMANSHIP.—There were some very superior specimens of penmanship exhibited at the Floral Fair, Oakland, that were not mentioned in the Reports of the Committees, which we think deserve marked notice; they were exhibited by W. S. Dollittle, of San Francisco, and really and truly should be remembered by the Board.

## Celebration of the Fourth of July, 1859.

At a meeting of a large number of the citizens of San Francisco, to make arrangements for the appropriate celebration of the eighty-third anniversary of our National Independence, officers and committees were appointed to carry out the intention and wishes of our citizens. The committee of arrangements, through the Grand Marshal, Thos. D. Johns, Esq., call on the citizens of San Francisco to aid in rendering the coming celebration worthy of the occasion, and creditable to us as a portion of the Great American Confederacy. Those wishing to assist in the ceremonies of the day will address the Grand Marshal, at the rooms of the Society of California Pioneers, as early as possible.

SOLOMON'S TEMPLE.—This superb work of art and genius, that so well and truly illustrates sacred history, is now receiving that attention from the best minds, that its merits justify. We would urge most earnestly that parents should go with their families, one and all. It is a sight for the mind—one that will last them for a life, and the opportunity should not be lost. Those who fail to see Solomon's Temple now, may never again have the opportunity. We are surprised that such an exhibition is not crowded every night. Besides the Temple itself, the views around the room, embracing twenty-four important scripture subjects, are alone worth the price of admission. Rev. Mr. Deihl is always present to explain in a very lucid and agreeable manner the whole subject. Citizens in the interior should not allow the Temple to go away without seeing it. A brief time only is now left before this Temple goes to Europe. There is one thing certain. The proprietor of this great work deserves the most liberal patronage from the public, and we hope the highest testimonial of merit will be accorded to it, to be carried with it to Europe.

KEEP YOUR WHEELS GREASED.—The dry season is upon us, and all teamsters, stage-drivers and stable-keepers who would preserve the flesh of their stock by easy-running wagons, coaches, and carriages of every kind, should see that the wheels are "well greased." It is not enough to merely grease the wheels, but to know that the grease is of the right kind. There are several kinds of axle-grease now offered for sale, but it is frequently found the less you use of some kinds, the better, aye, better not have it at all, for it chokes rather than relieves, while the "Hucks & Lambert Axle-grease" accomplishes the thing desired. No other kind has ever been invented that can compare with it. It is compounded on scientific principles. Mr. Hucks being a chemist, is master of his business, and the success of his axle-grease is proof of it.

SPLENDID MECHANISM.—Those who love to look at a splendid piece of mechanism, the work of an ingenious mechanic, should go to see Solomon's Temple; and there, among other things, they will see two splendid inlaid boxes, one containing nineteen thousand six hundred and fifty-two pieces. These boxes are about the size of a writing-desk, and were made by Mr. Sluithout, the builder of the Temple, and are an honor to him as a mechanic.

IMPORTED SHEEP.—Six superior merino sheep of very high quality, were imported recently by R. H. Vance, Esq., our distinguished artist, for his fine ranch at Suisun Valley. The sheep came from the famous flocks of Vermont, and will add greatly to the flocks and fleeces in California.

POPULATION OF SAN FRANCISCO.—Langley's new Directory, just issued, gives the population of the city as 78,083, divided thus: white males, 49,343; white females, 23,985; Chinese males, 2,560; Chinese females, 590; colored males, 745; colored females, 531; colored children under five years, 329.

THE WEATHER.—Linen coats and straw hats were all the go on Wednesday and Thursday last. It was sultry hot at mid-day; but when the afternoon breeze set inland from the ocean, and cooled the heated and parched street with its invigorating influence, it imparted strength alike to the sons of toil and gladdened the hearts of all with its soothing breath.

IMPROVED MICHIGAN HARVESTER.—This immense Harvester is now being built most perfectly at the foundry and workshop of Messrs. Pomeroy & Co., of Jan José. It is an improved machine, and will surprise our grain-growers by its power and excellence. It will cut, thrash, clean, and sack twenty-five acres of grain per day, with twelve horses; formerly twenty horses were required. A newly invented fan has been added. Messrs. Pomeroy & Co. are doing a fine business at their famous workshop. We were pleased to see the evidences of their prosperity; this proves the success of home industry.

EARLY SOWING.—The Santa Rosa Democrat in noticing that the wheat harvest is rapidly approaching, and that early in the season there were some apprehensions of a light crop, but the prospect now is of a good average, says: "The early sowing is more than an average, while the late sowing will fall short. In a ride of a few miles through the valley, while the wheat was blooming, we were somewhat surprised at the great difference of some fields we passed, when we were informed the soil, the preparation, and the seed were all the same in both parts of the field, the only difference being in the time of sowing—some two or four weeks. The early sowing was of a good height, thick on the ground, and large heads; the late was thin, short, with small heads, and plentifully inter-mixed with weeds."

AGRICULTURE IN THE MOUNTAINS.—The Placer Courier, published at Forest Hill, in an article on the fruit prospects in its vicinity, observes: "We will here take occasion to remark that, so far as our observation extends, those of our citizens who have turned their attention to the cultivation of the soil instead of delving for gold, have had greater success, and more generally made fortunes in a few years, than any other class of our citizens. In fact we have yet to find the first man who has opened a farm, planted an orchard for so long a time as five years, who has not at least acquired a competency; and many of them have accumulated fortunes."

Those famous mattresses made out of PULU!  
J. SCHRIEBER,  
Jackson street, near Hotel International.

## From the Atlantic Side.

[This letter from our regular New York correspondent, of May 20, was duly received by the last steamer, but was not published last week, having been mislaid. We make the following extracts:]

New York, May 20, 1859.

Editor FARMER: The 20th of May is here, tripping among the flowers, sparkling with dew-drops, smiling in beauty, basking upon the fresh-robed earth, and wearing garlands of multiform hues and of graceful splendor, to twine around the sunny brow of June as she hums on in her rosy car, flashing in the sunshine and flowers, all aglow with life and beauty.

Seasonable rains have fallen plentifully. The country, wrapped in her wailing robes, sits beneath her own leafy bowers, and the city has gone out of town to see the sights, and get a mouthful of two of fresh air.

The Spring has thus far been so bland and mild that the crops (not caring a fig about matters and things in general, or the next presidential campaign in particular) grow themselves, and no thanks to any office-holder, or "other fixings."

The Peach crop will be most abundant, provided there is a plenty of them, notwithstanding what the professional croakers say, after trying to look mighty wise. They have come so wide from the mark this Spring, and feel so mortified about the matter, that they intend to bite the Rebecca, or some other craft, and go to Texas, through "Plum Gut Channel," and stir up the Indians, just for exercise.

The fact is, since farmers have adopted the wise method of *plowing deep*, croaking does not pay in this region—hence the emigration. For three successive days we have had rain, rain, rain! Its music is like the chime of distant silver bells, floating among the sweet perfume of flowers.

We now have the prospect of an abundant harvest before us: from every part of the country the accounts of the crops are most favorable.

From Utah.— \* \* \* Trouble is brewing there. If Uncle Sam would ship the whole of the leaders to the Fejee Islands; and then, by way of example to the remaining hosts of Brigham, leave them with an allowance of bread and water, and let them know that if they were caught in any of the territories of the United States that they would be imprisoned for life, we should hear little more of that most miserable deception.

Mexico.—Is in her usually comfortable state, for she is usually most outrageously comfortable, when most rent by miserable factions and torn by intestine broils. One party triumphs to-day, another to-morrow; one borrows money from the church, with no intention to pay, the other steals it; the one promises everything nice and cheery, the other promises more; the Liberalists triumph, the Centralists immediately trample them in the dust; the priests refuse them money, they shut them up and take it. They live by killing each other, grow rich by getting poor, and fight regularly to keep the peace.

The fact is, President Buchanan, or some other President, will be obliged to in among them, and, like a teacher among a refractory set of boys, catch one and sit him down *rather smartly* in one place, and another in another, until all are quiet, and then shake his venerable finger and say: "Now, boys, do your sums and get your lessons, and let me hear a *whimper* from any one of you and you will catch it!" Uncle Sam will have to try it.

From Europe we have stirring news. \* \* \* Many here, as well as there, believe that all Europe must be baptized in blood; and that other god-fathers, than those now there, will stand by the crimson font and promise to lead the new nations in the way they should go. Some of the nations may be *neutral*, or all may become involved in one wide-spread and terrible conflagration. All parties rely on the God of Battles. Guess he would help them all at once, in the way they may wish. We will see. Let us be thankful for peace and plenty.

BABON VON HUMBOLDT and Dr. LARSEN are dead. Thus, one by one, the great and good men of the world are passing away.

Thus you see, you are likely to have plenty of news for some time to come. If my letters are too long, tear off one end, or leave out the middle. I have no time to write shorter ones at present.

Money, they say, is very easy; but I really don't know, as I have not had any lately. The last I had was mighty hard—to keep, I assure you; but I suppose it has become easier since. Hope it has, by all means.

By the bye, I noticed in one of your papers, received by the last mail, that some one has been sneering at your paper, its correspondents, etc. Judging by the extracts from his article in your journal, I presume his mind can soar no higher than to envy those so vastly his superiors in all things. At first I was disposed to take up the cudgel in favor of the lady correspondents, so slanderously traduced; but such graceful and powerful pens as they wield, will soon trace in characters of flame that will burn into his very soul ("ex-punged"), and no great loss to that.

I am anxious to see the answers of your fair correspondents to the slanders of— What did you call him? In this expectation of something rich in your next on this matter,

I am, as ever, yours truly,

B.

From Oregon.—The Portland papers of June 16, say there has been a great rise in the waters of the Columbia. The banks were overflowed, and much damage was done. The Portland Standard says: "The water is now above the highest stage reached in 1853, and constantly, rapidly rising. At the Cascades the river is forty-five feet above low water mark. Still, it is said the present flow is only that from Snake river—that the heavy flood from the Columbia above that point is yet to come. If this proves true, the water will rise equal to the great flood of more than twenty years ago."

The new route explored by Captain Simpson, shortens the distance from Camp Floyd and Genoa about two hundred miles, and the former place is thus brought within eight hundred miles of San Francisco. Captain Simpson, as soon as he returns to Camp Floyd, is under orders to explore a new route to the States, via the head waters of the Arkansas, which he expects to accomplish by the first of December.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer. (Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

June 24.	
Wheat, # cwt, \$2 50	\$2 75
Barley, # cwt, 1 75	1 45
Oats, # cwt, 1 25	1 15
Corn, # cwt, 2 25	2 50
Black wheat, # cwt, 3 00	3 00
Flour, # bbl, 7 50	10 00
Meal, # cwt, 2 00	2 00
Hay, # ton, 30 00	30 00
Galls, # lb, 3 25	3 25
Turnips, # cwt, 1 15	1 15

HIDES, TALLOW, WOOL, ETC.	
Dry Hides, each 3 00	3 50
Common coarse wool, 5 50	5 50
Best quality, do, 1 00	1 00
Extra Merino, do, 25 00	25 00
Sheep skins, wool on, 15 25	15 25
do plain, do, 12 15	12 15
Goat skins, each, 3 75	3 75
Rough Tallow, # lb, 4 15	4 15

## San Francisco Cattle Market.

June 22. The market for Beef has still further declined, but for other Cattle prices remain about the same, although the demand has fallen off considerably.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 11c @ lb. Spanish, 1st quality, 8c @ lb; 2d quality, 6c @ lb; 3d quality, 4c @ lb.

Mutton—Choice, 11c @ lb. Lamb—At 10c @ lb. Pork—Un-dressed, 9c @ lb; dressed, 15c. Veal—6c @ lb @ lb.—[Bulletin.]

## Retail Prices at Washington Market.—June 24.

Green Apples, 25c; Pears, 50c.—(from the Southern Coast.)	

## THE HOME OF BEAUTY.

"Creative Genius from thy hand  
What shall I order, beauty, rise,  
When waver thy potent, mystic wand  
To people ocean, earth, and skies!"  
What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples to her, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.  
Here is our castle,  
And here our gods;  
But they are mortal.  
Around these fastened halls  
The good, the great, the living and the dead;  
And yet they speak—speak all:  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold converse  
But as we gaze upon their clouded life,  
We know that they are silent  
While they speak, and gaze on us.  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng;  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art."

Creative Genius! here's thy home!  
And here shall wondrous thousands come;  
Here spend a season, in a temple they stand  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty?  
Behold these flowers that gem the land,  
These little children in a temple they stand  
While here and there, like angels, too  
They're smiling on their mother's knee.  
May, in their prime, each like a brother,  
Joined hand in hand, they're linked together;  
Here, too, the aged, the coldest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round the gorgeous Hall,  
This Home of Beauty, in truth we call.  
Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

Daguerrean Gallery,  
Corner Sacramento and Montgomery streets.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as to be infallible for the cure of Coughs, Colds, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it were a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appreciating in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED!  
The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well-nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Confirmed Consumption, and its power is safe, certain, speedy, pleasant, and effectual remedy cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "J. Botta" on the wrapper, as well as the printed name of the proprietors.  
SETH W. FOYLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston.  
For sale by—CHARLES MORRILL, HENRY JOHNSON & Co., and REDINGTON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD, Co., Sacramento; South & Davis, Portland, Oregon; and by all good Dealers in medicine everywhere. 23

## STOCK HORSES.

The Celebrated Trotting Stallion  
Black Hawk General Scott,

WILL STAND AT THE STABLES OF  
F. K. SHATTUCK & CO.,  
OAKLAND, ALAMEDA COUNTY,

At Fifty Dollars the Season, commencing April 1st, and ending September 1st, 1859—payable in advance.

## GENERAL SCOTT

Was imported by F. K. Shattuck & Co. in 1856; was sired by Vermont Black Hawk "Young Prince," his sire Old Black Hawk of Vermont, and dam by Lady Messenger.

For further particulars, inquire of the undersigned.  
F. K. SHATTUCK & CO.  
OAKLAND, April, 1859. 123m

The Fine Thorough-bred Stallion  
Prince Morgan,

WILL STAND FOR THE SEASON,  
AT  
MOORE'S RANCH,

San Ramon Valley, Contra Costa County,  
At the following low Rates:

To insure, #30 00  
For the season, #25 00  
Single Service, #15 00

## PRINCE MORGAN

Is grandson of Green Mountain Morgan, and sired by the celebrated Flexor Morgan. His dam is descendant of Prince Majesty and Tiger Walp. He is four years old, this spring; fifteen and a half hands high, and weighs 1075 pounds.

For reference as to his qualities, and speed, inquire at Mr. J. S. TAYLOR'S Stable, on Market street, opposite Second.

WM. MOORE. 10-3m

## MORGAN BLACK HAWK COMET

WILL MAKE A SEASON AT

MAYHEW'S RANCH,

near CENTREVILLE, from March

20th, to August 1st—where good

turfage can be obtained for MARES.

## COMET

Was sired by YOUNG BLACK HAWK, sire Old Black Hawk of Vermont, gr. g. sire Sherman Morgan, gr. g. sire Justin Morgan; dam by Morgan Tally-Ho, dam by Andrew Jackson.

Mares sent to 99 Pine street, San Francisco, care of B. F. FISH, will be attended to.

9-3m CHARLES COCKRIN, Agent.

## The Celebrated Trotting Stallion

"GENERAL TAYLOR,"

WILL STAND FOR THE SEASON, COM-

mencing the 1st of April, 1859, at HUNTER'S

POINT RANCH, four miles from the city, on the

San Bruno Road. Terms—\$30 for the season;

invariably in advance.

GOOD PASTURAGE AND STABLING can be had, if

required. One thousand acres in grass, wet and low lands,

with abundance of water and feed for Brood Mares, all of the

year. The fields are well fenced, and every care taken for the

security and health of stock; but all animals are at the risk of

the owners. Pasturage, \$3 a month; Stabling, with grain and

hay, \$1 per day.

P. S. HUNTER, Agent,

Hunter's Point Ranch, San Francisco county.

N. B.—ORDERS left at the Grocery Store, south-west

corner of Mission and Third streets, will be promptly at-

tended to. 13-4m

## The Imported Thorough-bred English

RACE HORSE

"LAWYER,"

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JULY 1, 1859.

NUMBER 22.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

Terms.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### Cattle—Improvement of our Native Races.

We ask the attention of our stock-raisers to the following excellent essay upon improving our native stock. Some year or two since, we wrote a series of articles urging the trial of our native California stock, believing with all their wild and apparently untamable character, that they possessed a physical character and grace of movement upon which to build a race of horse stock for crossing of Devon, Durhams, Herefords, or Alderneys, that would be the finest stock in the world. We still believe that our native cattle here possess the best physical powers of any race known, and are best adapted to our climate, and as we suggested in the articles we then published, we believed that time would prove our theory a good one. We recently enjoyed a pleasant interview with Robert Blacow, Esq., of Centerville, who informed us that he had been experimenting with the native stock, selecting those of fine form and good points, and had been breeding from such with blood stock. The results surpassed his highest anticipations, and he believed he would soon show a race of stock that would astonish any one. We feel highly gratified to learn such results, and to know that the theories which we had entertained and promulgated two or three years since, are now in the most successful stages of accomplishment. The communication which we now give, we hope will awaken a new and increased attention to this all-important subject. One important fact, all will admit. California can boast of a pure native race of cattle different from all other races. On this, we believe we can build. Here follows the article alluded to, from the Michigan Farmer:

Strictly speaking, we have no native race of cattle; none aboriginal to our country; none that can truly claim nativity with the animals of this continent; but all, whatever the varieties of form, size, or color, are the progeny of various English and other European races, whose progenitors were imported into our country, in the early settlement of this continent, by immigrants from different localities and countries.

These have been crossed and mixed up in a confused medley of every possible race and variety, without adherence to any established principles of good breeding, and without much attention having been given to the matter of improving them, except, perhaps, in their milking capacity. And the offspring of these, subsequently crossed in, more or less, with some of the English thoroughbred races, often with two or more of them in succession, are also recognized under the term of native cattle. They cannot be classed as a distinct breed, having no fixed peculiarities or characteristics, which they are capable of transmitting with certainty to their descendants, nor any hereditary qualities peculiar to themselves as a tribe or family. Many individuals among them are possessed of valuable and even superior properties in some one capacity, and sometimes we find more than one quality united in the same animal. But these properties are accidental in them, and not transmissible to their offspring with any certainty. Their progeny, after all the care and attention that we may bestow upon them, may turn out scrubs, instead of becoming valuable for any scientific purpose. How often do we meet with disappointment in raising calves from the best milkers of our stock, by finding at the end of three or four years of labor and expense, that our calf is a worthless cow?

Now, no one can afford to keep poor stock, or raise that which is uncertain in its results; so that we must either abandon the natives and resort to the thoroughbred races, where there is certainty in results, or we must improve the natives in some manner whereby they shall of themselves, possess the qualities which we desire in our stock, and shall also be able to transmit those qualities to their offspring hereditarily. But the thoroughbred races, however superior, cannot at once, be substituted for the natives: there are too few of them; and were it practicable, all are not prepared to adopt them. The natives, then, must be retained, and by some method improved. No doubt that a judicious selection of both males and females from the natives, and afterwards from their progeny, and so on, they might be made to combine and retain valuable properties, and to transmit them to their offspring with all the certainty of the thoroughbred races. But this course, to insure success, requires excellent judgment, great experience, indefatigable perseverance, no sparing of care or expense, the patience to endure innumerable disappointments, and calmly to wait long years for the expected results; too much for most men to attempt. One method remains, a resort to the thoroughbred races for males, and gradually to grade our stock up to the thoroughbred standard. This, we believe, will give more rapid improvement, at less cost and with more certainty, than can be obtained by any other means.

The selection of the sire, from which to breed, is made with more care than was given to the matter in the earlier days of our cattle-history, yet, even now, it is more a matter of accident, instead of calculation and design, than is consistent with either rapid or permanent improvement.

In giving primary importance to the selection of the sire, we believe the improver is progressing in the right direction; not that it is unimportant what the characteristics of the female may be, for we deem this a matter of great importance, and

one that is and has been too much neglected. But we are of those who believe that the properties of the male are more obviously imprinted on the offspring, than are those of the female (all other conditions being equal upon both sides). But to confer upon the offspring any particular set of properties or capacities with certainty, they must be super-imposed by parents derived from a race which have long possessed those properties, imbedded upon them through a long line of ancestors, and which has not been broken in upon by a cross from any race which did not possess those properties in equal perfection. If this requirement exists on the part of the sire, the offspring will be likely to follow in the line of the male and receive the impress of his peculiarities of form. But if this condition is wanting on the side of the sire, and yet exists on the part of the dam, the offspring will probably follow in the line of the female, and receive the impress of the properties possessed by her and her progenitors.

And herein, we may find an explanation of the ill-success attending the efforts to improve native cattle by the use of grade and cross-bred sires. The imperfections that we would be rid of, have long been in-bred on the part of the dam, while the chain of descent on the part of the sire, upon which should come down to the offspring the good qualities of his race, has been broken, and the progeny follow in the line of the female, instead of that of the male parent. The cross-bred animal, we believe, should be discarded, in any attempt at improvement in the natives. They are a compound of distinct elements, having no established properties to communicate, and we have no guaranty of what their progeny will be. In all cases where it is possible so to do, we should employ a high-bred sire, that is, one whose ancestral race has long possessed the properties sought to be conferred upon the progeny. And here we may allow, and even seek for, sires that are close, or in-and-in bred, if they and their ancestors possessed the required properties, as they will thereby be the more permanently in-bred upon the sire, after which we desire the offspring to follow.

To obtain improvement in the form of our stock, care must be used in the selection of the female with reference to her size as compared with that of the male, or our improved natives may be worse in form than their native ancestors. The improver must recollect that the dam should be proportionally larger than the sire, not smaller. Experience has sufficiently demonstrated that where the male is much larger than the female, the offspring will generally be of an imperfect form; but that where the female is proportionally larger than the male, the offspring is generally of an improved form. This is explained, when we recollect that the size of the fetus is proportioned to the size of the sire, and unless it has room to expand to its full size, it will be compressed and distorted by the confinement. Its continued effort at growth serves to thrust it still more and more out of its proper place and shape. The physical organism of the cow, finding itself deranged and overtasked by the large size of the fetus, strives to remedy the evil, and avoid the consequent danger of the destruction of the dam, by withholding the nutriment that should go to the growth of the young, and driving it from the system by some other channel, thus giving to the progeny all the characteristics of a starveling, even before its birth. Imperfect in its form, size and growth, and immature, it is thrust forth diseased, distorted, coarse and unnatural, a cumbersome upon nature. Subsequent care may do much to remedy, but can never entirely obliterate the evil; hence, the proper method of improving the form of animals, is to select well-formed females and couple them with males which are proportionally smaller in size than the female.

Many thousands of dollars have been thrown away, in unsuccessful attempts to improve the native cattle of the country in violation of this rule, by coupling the smaller, and often ill-formed, female, with the largest imported Durham bulls. And the ill-success so generally attending this course, demonstrates anew, the correctness of the rule. Not that the Durham breed of cattle are in fault because of such results. If they were never coupled in violation of this rule, the numerous scalawags among their progeny would be extirpated. The fault is that the improver has attempted a cross of the elephant upon the donkey, and has produced what might have been the expected result. If the improver desires a Durham cross, he should select the largest, well-formed cows to be had, and couple them with a small-framed, compact, fine-boned bull, of the purest pedigree, and which is not disproportioned to the female in size.

The claim is sometimes made, in favor of the Devons, that they are not within the operation of the rule, if any such there be. That they will invariably improve the forms and qualities of their crosses with the native cattle, without reference to the comparative size. But nature's laws are not to be annulled by names or breeds. They are within the rule, as well as others, notwithstanding the many cases which are seemingly in contravention of it. They are nearer the size of the natives, and of course there will be fewer violations of the rule, in an indiscriminate use of them, and consequently, more numerous examples of improvement in proportion to numbers. They are a very ancient breed, whose characteristic qualities have for ages been in-bred upon them, and hence are all the more likely to impress upon the offspring their peculiarities of form. They are a small boned, symmetrical, deer-like built race, the calves being, when dropped, peculiarly small, compared to the size which they subsequently attain, and the fetus being thus proportionately small, we are enabled to use them with good effect, in a vast number of cases where there is a disproportion in size, without, after all, infringing upon the substance of the rule. But there is a limit with them as well as others, beyond which we cannot pass, except the offspring proclaim that scalawags are on the increase.

We conclude, therefore, that to effect a permanent and rapid improvement of native stock, by a resort to the thoroughbred races, the improver must select cows of good size, of the best form attainable, and of the highest milking capacity, quantity and quality both being considered, and couple them with males, whether Durham, Devon, Hereford, or whatever the breed chosen, that are proportionally smaller than the cows, and which are possessed of a good form, and a pure unbroken pedigree, looking not only to the feeding

or breeding qualities that he possesses, but also to milk-giving capacity of the family from which he springs. In the offspring we should find improvement in form, in milking properties, and in feeding capacity. With the females of this cross, the same course should be pursued; always resorting to pure bred males, and adhering to the breed first selected, not changing, as is too often the case, from one breed to another.

In this manner may we hope to combine several good qualities in our native stock, rendering them fixed and hereditary therein. After which, and not before, may we carry the improvement still further, by then breeding from this improved stock among themselves, selecting the best specimens of both sexes and coupling. From the offspring of these, we may safely breed, as one of the best thoroughbred races which the world can boast.

#### Hints about Bees.

A WRITER in the Scientific Artisan says: I have concluded to send you an item or two about a very industrious class of our inhabitants, and whose wants, I think, are often neglected. Almost everybody loves honey in some form or another, for those who will not eat it are often found washing with it or taking it as a medicine. The bees example, too, is certainly worthy of imitation by mechanics as well as farmers, and I should like to see their labors encouraged. Now, it is a well observed fact, that bees go to work as soon as they can possibly venture out, and such risks do they run, that they often lose their lives in their arduous efforts. Now, since they do so much for us, permit me to recommend a return of the compliment as far as we possibly can. And I should advise, that, if the lovers of good honey expect to get much from their bees, they should feed them well, and with what they most need. The laying of the eggs is commenced just as soon as the comb can be made ready by the workers, and this cannot be done with any degree of success, very early in the spring, without some extra materials near at hand. Honey and sugar, etc., are often served up for them by some beekeepers, but my experience proves that this will not furnish all their wants, and it is something like feeding an industrious workman all the time on candy. He must have something more substantial, and so must the bee, especially when erecting their frame-work. Now what I should recommend, in addition to these sweetmeats, is a good supply of unbolted rye-meal, which every Scotchman knows has got some strength in it. Let it be supplied early in the spring, and at the same time keep the hives well protected from the weather, and it will be found that bees, like other animals, will well repay the trouble.

#### Eating Guano.

The varied appetites and tastes of man have brought out many dishes which other generations have strictly forbidden, says the Scientific Artisan, and, although rats, and mice, and snakes, and frogs, have, in many places, come into popular favor, we were not prepared for the announcement that Peruvian guano must soon become an edible luxury. Strange things have, however, happened, and for the benefit of those who may wish to enjoy this new, healthy and strengthening dish, we will give the method of preparing it, reminding them, at the same time that the process has been patented in England by a Mr. Wm. Clark, the inventor of the process and discoverer of its uses, as here set forth.

Put two and a half pounds of guano, of the Isles of Peru, with three quarts of water, in an enameled stew-pan, boil it for three or four hours, then let it cool; after standing some time, separate the clear liquid, and about a quart of this healthy extract is obtained. Now, it is proved by the opinion of learned men, that the more the ailments are acutized, the more they are strengthened; and hence, the inventor infers, that as guano is composed of matters the most so, it is, and must be, peculiarly adapted for all classes of society, and especially for those who have much exertion and have not the means of buying meat. Mr. Clark sets forth, in his specification, that two or three table-spoonsful of this extract, distributed in the food of one who lives on vegetables, is equal to at least two pounds of meat, and would give him as much strength as good meat at discretion, with the advantage that this extract gives to the vegetables a very agreeable taste! Of course, too much should not be used, or it will be as repugnant as pepper or vinegar, but if used with proper discretion, it is said to be remarkably strengthening.

By its use, too, certain maladies, sometimes almost incurable, are said to be easily removed, and phthisis, paralysis, etc., are prevented by the use of a small portion daily. There are other marvelous properties in this new extract, which we must now mention. Everybody knows that good tools are the soul of industry, and that they must be produced before great manufacturing wealth can exist. The art of working steel, in ancient times, was in such high perfection, that they were able to give this metal the softness and pliancy of silk, and the excellence of the Damascus-blade, which no nation has since been able to more than imitate. Their method of manufacture has been lost, and all efforts of modern times have proved futile in its resuscitation. Mr. Clark, however, the discoverer of this extract, claims, without the fear of being contradicted, that he has reproduced this secret, lost for centuries.

His extract of guano hardens iron, and gives it the properties of steel; while to steel it gives the fineness, sharpness, and softness, of the Damascus manufacture. This, too, is the formula, which is very simple: Temper the steel and iron in the extract of guano, at eight degrees of strength, as indicated by Baume, and it will produce these marvelous results. The more they are tempered anew the better they become, qualities contrary to the ordinary tempering. We have here presented some of the ideas given in the specifications of Mr. Clark's improvements, though we have not been minute, as we shall refer to it again.

#### Tulare County.

From the new paper, the Tulare County Record, we copy the following article, in relation to the condition and resources of this county:

"Situated in the very heart of the State, with its boundless agricultural resources, with its unparalleled facilities for irrigation, its rich mineral deposits, its broad plains covered with a perennial growth of the richest grasses, rendering its advantages for stock-raising equal, if not superior, to any in the State; with its industrious, intelligent and enterprising people, whose cottages are springing up on every green spot, and whose yellow fields, ready for the sickle of the reaper, dot the whole country; this county presents inducements to the settler desirous of securing a permanent home, and enjoying the mild and agreeable temperature of California, unequalled by any other portion of the State. We have yet many a broad and fertile acre to be taken up and cultivated, and many a desirable location for the sturdy husbandman unoccupied. Though our county already produces more than quadruple the amount of grain consumed by its inhabitants; and, though we have this season more than twenty times the amount of stock required for the home market, yet the farmers of Tulare may be said to have scarcely commenced the work of production as yet, and we speak within the bounds of reason when we say, that this county alone is capable of producing enough of bread and meat to supply the demands of the whole State of California. Every species of grain flourishes here with the greatest luxuriance; every kind of fruit grows with tropical splendor; the soil is peculiarly adapted to the cultivation of the vine, and though this branch of agriculture has been comparatively neglected, it is beginning to attract the attention of our farmers, and experience has already shown that in no part of the State will the grape flourish better than here. Though we know of no efforts as yet made to cultivate sugar-cane, yet we cannot doubt, from the mildness and extreme length of the seasons, that it would grow here as well as in any of the Southern States, and we hope ere long to see our farmers giving attention to its cultivation. Tobacco grows wild, and seems to be indigenous to the soil, and there is little or no doubt that its cultivation might be made the source of great profit; indeed, it is much more difficult to enumerate half of what our county is capable of producing, than to speak of all it will not produce. The character of its population is permanent; their object in settling here is not merely for speculative purposes, as in most of the mining districts of the State, but they are laying the foundations of permanent homes; and the hearth-stones now being laid, shall resound the merry laugh of generations yet unborn. That great thoroughfare, connecting the two distant portions of our country, the Overland Mail Line has found its most feasible route to be throughout the whole breadth of our county; and there can be but little if any doubt, that the projected Pacific Railroad, in the event of its construction, will find its most practicable course to be through the valleys of Tulare. With such unbounded resources; such facilities, and natural advantages, it takes no prophetic vision to see that our county is destined, ere long, to become one of the richest, if not the very richest, portions of the State."

#### More Heavy Fleeces.

MR. SEARLE, on the Rancho Aromas, six miles from San Juan, Monterey county, has lately sheared his fine sheep of the French Merino breed. The following statement shows the weight of one year's growth of fleece of four bucks and two ewes of this breed, with the weight and age of each sheep:

	Pounds.	Pounds.
Buck Samson, 4 years old, weighing 242; fleece, 323		
" Bobby, 2 " " " 211 " 243		
" Emperor, 2 " " " 233 " 193		
" Sultan, 17 months " " 195 " 22		
Ewe Princess, 17 " " 156 " 172		
" Mattie, 4 years " " 175 " 16		

The fleeces are "clean unwashed" wool, and lock fine. That of Samson, weighing thirty-two and three-fourth pounds, as above, can be seen at our office, having been left for inspection; and all who feel interested are invited to call, as it is well worth looking at. Mr. Searle claims his to be the greatest shearing ever done in this State, and offers to wager the ram Samson, for the next fleece, against any other sheep now in California—sheep against sheep; the wool to be well washed and dry before shearing, and of 365 days growth; the winner to take the sheep.

CALIFORNIA WINES.—We are constantly reminded of the excellent quality of the wines of California. We tasted some of the wines made by L. A. Gould, of Santa Clara, some two weeks since, that would vie with the best hock wines of Germany. Mr. G. has been very successful in making wine, although in small quantities. He has a vineyard of the Isabella and Catawba, that promise wonderful things. A strawberry patch of quarter of an acre has netted him over \$500 the present year. His vineyard and orchard are in superior order. We tasted many kinds of cherries, and also noticed his nursery which was in the very best order.

NEW CROP.—The first new wheat of the present season, was a parcel brought into Stockton about the 10th of June. The first new barley made its appearance in this market on the 20th—a lot of sixty bags, from Union City, across the Bay. In several farming districts the wheat harvest commenced about the 20th June.

HORTICULTURE FOR GIRLS.—At a meeting of the Horticultural Society of New York city, a communication was received from Mrs. L. V. Phelps, stating that she was establishing a Horticultural Society for the education of girls, and asking the Society to cooperate with her in making her school successful.

#### Santa Clara Agricultural Society.

This Society may be called one of the most, if not the most successful Agricultural Society in the State. The citizens of Santa Clara and San José, forming the county, have taken hold of the work in right good earnest, and with a liberality worthy of all commendation, have raised a very handsome sum (seven thousand dollars), purchased seventy-acre acres of fine land, well situated for all the purposes of a Fair. They intend to have a splendid Pavilion on the ground, and the Race-Track around a portion of it. They also intend to make a Park, and ornament it. They have already made their contract to fence the entire seventy-acre acres with a high tight board fence, the cost of which is \$3000. They have already paid on their purchase \$5400; they have \$1000 in treasury, and \$2000 to collect. They have received ten life members to the Society; and by their constitution they are forbid to contract a debt if they have not cash to pay with. They intend to go on the cash basis always. No gambling is allowed, by betting or otherwise, on the ground; meaning thereby to make this county society a moral enterprise certainly; or not to sanction that which is an immorality, like gambling, on their ground. This we think is an example worthy to be followed by every county in the State.

THE GREAT BODEGA RANCH.—This grant, of which so much has been said, covers a larger tract of country than would be supposed by a casual observer. The Bodega ranch, granted to Tyler Curtis, Esq., covers thirty-five thousand seven hundred and eighty-five acres, and is occupied and improved by Mr. Curtis and about thirty renters. Beside these are about sixty that are settlers, who, at the present time are at variance with the owner; yet it is to be hoped that all differences will be amicably adjusted. We learn that the present season there is growing on this vast estate, about four thousand acres of grain, principally oats and barley, and three thousand acres of potatoes, by the renters, and more than double that amount by those who are called settlers. This section is the best grazing ground in our State, and we learn that there is abundance of the most excellent feed for stock at the present time, and ample accommodation for more than two thousand head of stock on the Curtis ranch now. Persons in want will do well to note this fact.

TALL SUGAR-CANE.—The Honolulu Commercial Advertiser notices a stalk of sugar cane grown at Lahaina, which numbers thirty-eight joints, weighs twenty-four pounds, and is fifteen feet nine inches in length. The cane measured twenty-two feet including the tassel, and nine-and-a-half inches in circumference.

MOUNTAIN LAND IN OATS.—In the spring of 1848, at the Camp Spring Ranch, in Nevada, says the National, about forty acres of red land were broken up, and sowed in oats—wild and tame. The first year's growth would not pay for harvesting, but this year a volunteer crop has been cut averaging a ton to the acre, the wild variety having run out the tame. At the present price of hay, the crop is worth some \$1,200, a sum considerably larger than the value of the land at the time it was sown, after deducting the expenses. Who says the mountain lands will produce nothing but gold?

MONSTER GRAPE-VINE.—The York County Star says: "We measured a few days ago a vine, its equal in size we doubt whether is to be found in this country. It is of wild or natural growth, and we are not aware either of the quality or variety of the fruit it bears. The main vine measures thirty-seven inches in circumference, or is a fraction over twelve inches in diameter; the branches from which, to the number of a dozen or more, cover five large forest trees, running to their very tops, possibly sixty feet in height."

#### The Garden

Is a bound volume of agricultural life, written in poetry. In it the farmer and his family set the great industries of the plow, spade, and hoe in rhyme. Every flower or fruit-bearing tree is a green syllable after the graceful type and curse of Eden. Every bed of flowers is an acrostic to nature, written in the illustrated capitals of her own alphabet. Every bed of beets, celery, or savory roots or bulbs, is a page of blank verse, full of *belles lettres* of agriculture. The farmer may be seen in his garden. It contains the synopsis of his character in letters that may be read across the road. The barometer hung by his door will indicate certain facts about the weather, but the garden, lying on the sunny side of the house, marks with greater precision, the degree of mind and heart culture which he has reached. It will embody and reflect his tastes, the bent and bias of his perceptions of grace and beauty. In it he holds up the mirror of his inner life to all who pass; and, with an observant eye they may see all the features of his intellectual being in it. In that choice rood of earth he records his progress in mental cultivation and professional experience. In it he marks, by some intelligent sign, his scientific and successful economies in the corn field. In it you may see the germs of his reading, and can almost tell the number and nature of his books. In it he will reproduce the seed-thought he has culled from the printed pages of his library. In it he will post an answer to the question whether he has any taste for reading at all. Many a nominal farmer's house has been passed by the book agent without a call, because he saw a blunt, gruff negative to the question in the garden or yard.—[Eliza Burritt.]

## California Notes.

## SUMMARY OF ACCOUNTS OF THE CONDORS OF CHILI AND CALIFORNIA.

BY ALEX. S. TAYLOR.

The following is a condensed summary and comparison of the measurements, appearance, features, and habits of these giants of the feathered kingdom, made by separate writers and authors, from the year 1600 to 1859, in fourteen different accounts, as detailed in the foregoing notes.

1. **ALCIBIOS CONDOR**—1789 (observed about 1777). Wings stretched, measure sixteen feet across; plumage black, excepting the back feathers, which are entirely white; eyes black, iris reddish gray, or grayish red; bill four inches long, very thick and horny, and curved down; beak black at base, remainder, to the point, white; outer wing feathers, thirty-three inches long; diameter of feathers (barrels of quills?) four lines; thighs, ten inches and eight lines long; lower limbs (canillas), six inches long; foot, of four thick toes; behind toe, two inches long, with a claw of eleven lines long; middle toe, five inches and ten lines, without claw; claw of middle toe, twenty-two lines long; tail of the bird entire, but small in proportion to bird's figure. Female smaller than the male: Its color grayish; has not the white ruff, or collar, of the male, but a "penacho o pequeño copete!" lays two eggs, the color white, and larger than a peacock's, no weight given.

2. **GARCILASSO DE PERU** (about 1600) measures eighteen feet stretch of wings.

3. **GOLDSMITH'S CAPTAIN STRONG** (about 1740): Measures thirteen feet across stretch of wings; barrel of quill, six and three-fourths inches long, and one-half of an inch in circumference.

4. **GOLDSMITH'S PADRE FRUILLI** (about 1720): Wings measured, very exactly, twelve feet and three inches, English; great feathers of wing, twenty-eight inches long; bill and beak, four inches long, color white at beak's end, other part black; head covered with short down of brown color; eyes black, iris reddish brown; color of the thighs, belly, and back, black; thighs covered to knees with feathers; thigh bone, ten inches long; leg, five inches long; behind toe, one and a half inches long; its claw, three-fourths of an inch.

5. **MCCULLOCH'S** (Geographical Dictionary, 1846) **STEVENS** and **SMITH** (about 1827): Peru has four species of Condor.

6. **HUMBOLDT'S "PERSONAL NARRATIVE"** (1800): Condor of Ecuador never larger than the largest European Vulture. The Condor has all the ferocity of the Eagle, with the beastliness of the Vulture.

7. **VON TSCHEUDT** (1840) **CHILI, PERU AND BOUVIA**: Condor of Chili can eat eighteen pounds of meat a day. A very large male Condor at Valparaiso, from tip to tip, measured fourteen feet and two inches, English, across wings.

Bolivian Condor: Full grown bird, from beak to end of tail, five feet, English; wings, from tip to tip, twelve to thirteen feet, English; very tenacious of life. One of them, partly tamed, attacked a man in Lima, and killed a child of three years old.

8. **O. DARWIN** (1834): Condor of Atlantic Patagonia; many found; stretch of wings, eight and one-half feet across; beak to tail, four feet. Condor requires perpendicular cliffs and heights.

The Chili Condor lays two eggs, white color; is a gregarious bird; always found on sale at Valparaiso; they will live five or six weeks without food.

9. **GILLIS' CHILI** (1852), **SANTIAGO TO TALCA**: They will attack wounded or young animals very suddenly; great numbers seen; measured two males; each of them measured eleven feet across the wings; except about wings, back, and neck, the male bird is of bright black color, with occasional grayish tinges; has a ruff, or circle, of milk-white or downy feathers, an inch in diameter. This was of some birds examined, but not of others.

The circle of white is a distinguishing mark of the true Condor; even young birds possess it, but the ruff is of light blue-black. Plumage of young Condors of light blue-black; the colors change with age; it is two years before the young leave the nest in search of food; the young of a year old retains its down. Males distinguished by a thick caruncle over the head and at insertion of bill; talons, or claws, as flat as a barn-door fowl; the eye lacks fire. A Bald Eagle is superior to them in courage and agility.

**CARRER'S NOTES** (in 1854) to **GILLIS' SPECIMENS** (six in number) at Washington. Those labeled as females bear a close resemblance to males; colors the same, though of somewhat duller shades; corroborates Padre Molina's account (about 1790) as to relative sizes of male and female. He repeats Gillis' remarks about caruncle (prominent as in domestic cock) and plumage of young. Two young were seen in Santiago, which had been there over a year and were still unable to fly. As the birds grow older, colors of plumage deepen, and the age may be known by the extent and brightness of the lighter colored plumage.

10. **THE CALIFORNIA CONDOR**—**ADURON** (in 1838) from **TOWNSEND'S** Note of 1836: Seen at the Columbia river, from sea to falls, but not very numerous; breeds on the ground, under pine forests, in the highest mountains, particularly in the Willamette country; very scary and shy; never saw the eggs; the iris of dark hazel ("color of the eye"); food principally dead fish, also dead animals; assimilates to the South American Condor in habits.

11. **DAVID DOUGLASS** (about 1827) in **ADURON'S** Note of 1838: Length of bird, measures fifty-six inches; around the body, forty inches; weight of bird, twenty-five to thirty-six pounds (old birds and gorged)—A. S. T.; beak, three and one-half inches long, of bright glossy yellow; head, nine inches round, and of deep orange, with a few scattered feathers; eyes, iris pale red, pupil light green; neck, eleven inches long and nine inches round, color brownish yellow with blue tints; body, twenty-four inches long, color black, or slightly brown; wing quills, thirty-four—the third quills largest; extent across wings, nine feet three inches; under covers white, upper covers also white at points; tarsal four and three-fourths inches long, color bluish-black; claws black, blunt, and little curved;

tall has fourteen feathers; tall fifteen inches long. In plumage, both sexes are alike; the female is somewhat larger in size; nests and eggs found in most inaccessible mountains—the nests of thorny sticks and grass. They are found as far as forty-nine degrees North. Very scary and shy; abundant on the Columbia river; lays two eggs in a year, nearly spherical and jet black, incubation twenty-nine or thirty-one days, and hatch about first of June; young covered with thick whitish down—can't leave the nest till the sixth week; feeds on dead fish, etc.; attacks no live animal, except when wounded. The soaring, voracity, and other habits, and appearances of the bird, the same as observed in California. (There may be two species long in California, and the old Oregon of 1830.—A. S. T.)

12. **ADURON'S DESCRIPTION** (in 1838, at Philadelphia) from **TOWNSEND'S** COLUMBIA RIVER (dried specimens?) A young individual (female?) Length from beak to end of tail, forty-eight inches; bill, four inches; wing from flexure, thirty-two inches; tail, sixteen inches; tarsus, four inches; middle toe, four inches; its claw one and nine-twelfth inches; says the "iris is hazel."

13. **ADURON** (in 5th vol. Ornith. Biog., 1839) from **SPECIMENS OF LONDON ZOOLOGICAL SOCIETY**: Shot by Douglass in 1827—the original likely of his painted engraving; does not state sex. Measured from head to end of tail, fifty-five inches; bill, four and three-fourths inches; wing from flexure, thirty-four inches; tail, sixteen inches; tarsus, four and one-fourth inches; hind toe, one and one-half inches; its claw, one and one-half inches; middle toe, four and one-fourth inches; its claw, two inches.

14. **MALE AND FEMALE CONDOR**—DESCRIBED IN NOTES MADE BY THE WRITER (from specimens killed near Monterey, in November, 1854; July, 1855, and April, 1859): Male weighs twenty pounds; beak to end of tail feathers, measures four feet and six inches; wings stretched, measure eight feet and four inches; one wing, three feet and three inches; barrel of large wing feathers, four inches long by three-eighths of an inch diameter; tail feathers, twelve in number and fifteen inches long; from ruff, or base of neck, to vent, two feet and nine inches; thirty-two brachial feathers on each wing; the five outer wing feathers, two feet and nine inches long; breadth across the breast, eight inches; under the wings has a long triangular band of white feathers over the wing bones; the inner wing feathers are also white on the ends; head, from insertion of beak, of bright lemon color; across the crown, and in front of the eyes, and over the cheeks, has a triangular band of black feathers, like small, short camel's-hair pencils; these featherlets are inserted in a skin of white and not yellow. The female has not this crown band.

In the young, the head and neck have no featherlets. The beak is of horny white, one and six-eighths inches long, curved sharply, and over-laps lower beak by five-eighths of an inch, and toothed, very hard, sharp edges of one-sixteenth inch thick; under mandible perfect half cylinder, filled accurately with a tongue one and seven-eighths inches long, hollow and of same shape, toothed and spired very sharply—toothed edge inclining down the gullet; roof of mouth also sharply spined; ear one-half inch long, and one-half inch from the eye over the jointure of the mandibles; head seven inches long, across crown three inches; nostrils go through and through, oval, and one-half inch long by one-eighth inch broad; from edge of skull to edge of lower jaw-bone, three inches; neck bare of feathers, with skin of dirty flesh-color; length of neck, seven inches from the vertebrae joint at skull to ruff at the neck; ruff of stiff, broad, short, blackish feathers, with pinnated ends, into which its head is buried when at rest; legs, below knees, of dirty white and scaly, and feathered down to the knee-joint; legs of ten inches length, to end of claw of main toe; feet has four toes, with black, blunt claws; middle toe, five and one-half inches long, including claw, which is one and one-half inches long; the hind toe, with claw, only one and one-half inches long; breadth of foot, across palm, two and one-fourth inches; length of legs, from hip-joint to end of middle toe, fifteen inches. Egg (said to be), three inches diameter by five inches long; about one-fifth (?) larger than a goose-egg; weight (asserted to be), twelve ounces avoirdupois; color of pale blue, mottled brown; shell nearly as thick as an ostrich's egg; lays two eggs in a season, at the foot of trees on highest mountain peaks.

Egg one inch long, and one inch broad; weighs one-half ounce avoirdupois; iris of light pink; brain weighs an ounce; viscera the dimensions of a year old pig. Bird erect, stands four feet from the ground; when standing, the long wing feathers then will over-lap those of the tail by six inches; plumage, with exception of the white mentioned, of uniform smooth dusky brown-black color, flaked grayish white; outer skin of the body covered closely with compact bluish-black down; skin very thick; belly to breast, under the skin and over the viscera, with a heavy layer of bright yellow fat, of musky odor; meat of the bird of bright arterial red; large flakes of air cells over all the flesh and fat, immediately under the skin.

Mentioned by Viscaïno, as seen at the port of Monterey, in 1602.

Habits and characteristics precisely those of the Condor of Chili, and as observed by Townsend and Douglass on the Columbia river.

A bird killed near Carmel river, a few miles from Monterey, in 1854, measured eleven feet from tip to tip of wings, stretched.

Another Monterey (male) specimen, killed in July, 1855, weighed twenty pounds; measured eight feet across the wings, from tip to tip. Seen in numbers, between two and three hundreds, on the coast feeding on dead sea-lions.

Another bird killed in Santa Helena Valley, near Napa (sex not mentioned), in January, 1859, measuring, from tip to tip of wings, fourteen feet.

Female Condor—killed at Monterey, in July, 1855: Appears considerably larger when standing; weighs twenty pounds—as weighed in these specimens of females. Males weigh twenty pounds—in five specimens weighed. The whole exterior of plumage and head of female, when standing, of a dusky, brownish-black; no wing feathers with white ends;

head and neck covered with featherlets, like short nap of an old beaver hat, and colored of a copperish, dusky olive; has a white band of feathers, of five inches broad, on under side of wing, which band is mottled-black, over the wing bones; has no band of featherlets, nor high colors or spots on head or neck, like the male, except an olive-colored circle around the eye-lids; beak and bill horny and blackish; measures, standing, four feet to end of tail; circumference of body, across wings, twenty-five inches; eyes same as in male; one wing measured four feet and three inches; wings eighteen inches broad, longitudinally in the middle; largest wing feathers two feet long; tail feathers fifteen inches long, and twelve in number; the tongue and inside of mouth, similar to male; head six inches long by two and one-half inches broad; vertebrae of neck thirteen inches long and two and one-half inches in diameter; thigh two inches in diameter, near body; dimensions, features and color of legs, feet and claws, about same as in male. The entire skeleton of the bird, when dried, weighs only three pounds avoirdupois; the wing and leg bones are as hard and glossy as ivory, but very light; skull, across crown, is ten inches circumference; bones have very little marrow, but well braced with fine bony spines; the first wing bone is seventeen and one-half inches long and one-half of an inch diameter; the bones of the thigh are one-sixteenth of an inch thick. The three female birds had very little of the musky-smelling yellow fat over the chest and viscera. Male and female not often seen together, except at certain times of the year.

Eggs and young of the Condor described by the author in the S. F. Daily Herald, of 5 May, 1859; wood plate in Hutchings's California Magazine, for June, 1859, from nature: Egg dead dull white exterior; full weight, ten and one-half ounces; contents weighed eight and three-fourths ounces; egg-shell held nine ounces fluid of water; measured four and one-half inches long by two and three-eighths inches diameter, and eight and three-fourths circumference round the middle, equatorial; contents perfectly inodorous, clear and bright; surface of shell slightly roughened, not glossy; shell about three times thicker than that of a turkey's egg; form of egg elegant, nearly a perfect ellipse. The young Condor, of five to seven days old, weighs ten ounces; gullet filled with masticated meat; stomach with fragments of oats, acorns, earth, stone, etc.; entire skin ochreous-yellow, covered with whitish down; head and neck ochreous-yellow, and entirely bare of featherlets or down. Its size, and appearance of plumage, similar to a two months old gosling. A. S. T. MONTEREY, 7 MAY, 1859.

## ADDENDUM.

Note.—The Condor, or Vulture, was known in the different Indian languages of California, as far as we have been able to gather from vocabularies, by the following names—(the reader bearing in mind, its common terms among the Spanish-Californians as *Buitre*, *Auron*, and *Gallinazo*):

The Indians of the rancheria of Cas-cen, or Cascel, the site of Santa Ynez Mission, in Santa Barbara county, called it *Slok-ka-wa*.

Those of San Luis Rey Valley, in San Diego county, called it *Me-pa-va-roo*.

The Indians of Orleans Bar and vicinity, on the Klamath river, in Klamath county, called it (or the largest bird) *Chewee-Cami*.

The Indians of the Valley of San Miguel Mission, in Lower California, thirty miles below San Diego, who speak very nearly the same language as the Yumas of the Colorado, called it *Ihapa*.

The Indians of San Gabriel Mission, or its valley (the Tobis-Cangas), called it *Lo-wooo*.

The *Salones* of San Carlos de Carmelo, or those of Monterey, called it *Wa-sack-a*.

Those of Campo Seco and Dent's Ferry, in Calaveras county (the Tan-kins), called it *Bui-ick*.

Those of Petaluma and vicinity, in Sonoma county (the Yo-hios), called it *Ka-hay*.

The Condor, or Auron, is a bird of great celebrity and veneration among all the Indian tribes of California (as we have been informed), and its immense feathers used in their head and waist dresses for warriors, and in their dances and gala times.

**FATHER GERONIMO BOSCANO**, in his account of the Indians of the Mission of San Juan Capistrano, in Los Angeles county, written between 1815 and 1831, and published in Alfred Robinson's "Life in California" (New York, 1840), has the following curious statement of the "Bird Feast" of the Indians of the *Acagehem* Nation, who comprised the principal portion of the converts of the Mission aforesaid:

"The most celebrated of all these feasts, and which was observed yearly, was the one called the 'Panzer,' signifying a 'Bird Feast.' Particular adoration was observed by them for a bird resembling much, in appearance, the common Buzzard, or Vulture, but of larger dimensions. The day selected for the feast was made known to the public on the evening previous to its celebration, and preparations were made immediately for the erection of their *vauquech*; into which, when completed, and on the opening of the festival, they carried the *Panes* in solemn procession, and placed it upon the altar erected for the purpose. Then immediately all the young females, married and unmarried, commenced running to and fro with great rapidity; some in one direction and some in another, more like distracted than rational beings; continuing thus racing, as it were, whilst the elder class of both sexes remained silent spectators of the scene. The *Puplem*, as has been heretofore described, looking like so many devils; in the mean time, dancing around their adored *Panes*. These ceremonies being concluded, they seized upon the bird, and carried it in procession to the principal *vauquech*, or temple; all the assembly uniting in the grand display; the *Puplem* preceding the same dancing and singing. Arriving there, they killed the bird, without losing a particle of its blood. The skin was removed entire, and preserved, with the feathers, as a relic, or for the purpose of making their festal garment, called *Pual*. The carcass they interred, within the temple, in a hole prepared previously, around which all the old women soon

collected, who, while weeping and moaning most bitterly, kept throwing upon it various kinds of seeds, or particles of food, and exclaiming at the same time: 'Why did you run away? Would you not have been better with us? You have made *pinole* as we do; and, if you had not run away, you would not have become a *Panes*!' Other expressions, equal in simplicity, were made use of; and, as the ceremony was concluding, dancing commenced again, and is carried on for three days and nights, accompanied with all the brutalities to which they were subject.

"The Indians state that said *Panes* was once a female, who ran off and retired to the mountains, when accidentally meeting with *Chingehneich*, she changed her into a bird; and their belief is, that notwithstanding they sacrificed it every year, she became animated and returned to her home among the mountains. But the ridiculous fable does not end here; for they believed, as often as the bird was killed it became multiplied, because every year all the different *Captaines* celebrated the same feast of *Panes*; and were firm in the opinion, that the birds sacrificed were but one and the same female."

## Interesting from Kentucky.

Lexington Races—Rarey, the Horse-tamer—Kentucky Association Trotting Course—Fishing—Amusements, etc.

We copy the following letter from the N. Y. Spirit of the Times, to show the interest manifested for the Turf at Lexington, Kentucky, a place famous for the growing and exhibition of some of the finest stock ever shown in the United States. Ashland, the home of the patriot and statesman Henry Clay, is and ever will be brought to mind in connection with Lexington, or in reference to fine stock, Mr. Clay having always been the friend and patron of Agriculture in all its interests. The letter is by "The Captain," dated Lexington, May 9, and says:

The notes of preparation for the Spring races over the Association Course are now ringing cheerily, and the work goes bravely on, promising a harvest of good sport. The track swarms with trainers, stable-boys, proud owners of the competitors for prizes, admiring amateurs, and "knowing ones" on the lookout for "points" by which to profit when the day of contest comes. There are so many thorough-bloods, descended from famous sires, now in training, that the judgment of even the shrewd Pope Clark himself is clouded as to which can prove the best.

Among the racing men who are gathering in, I may mention that staunch veteran of the turf, Joseph G. Boswell, Esq., who is fresh from the South; and he and others nightly assemble, as usual, at Clark's, to discuss past and future probable triumphs, with that hilariously of spirits that clear consciences alone can produce.

For the Association Stake, John M. Clay (who, by the way, I deem one of the best breeders and trainers in the Union), has two colts in training, who are both doing remarkably well—one of them by Lexington out of Magnolia by Glencoe; the other by Star Davis out of Rally by Trustee. I have great faith in the latter, and if he be selected for the contest, and proves not first or second in the race, I shall be disappointed. This, however, is a mere matter of speculation with me. But, aside from my confidence in Star Davis (than whom I believe there is not a finer stallion now in the stud), I place implicit trust in Mr. Clay's prowess as a trainer, just as I did in my boyish days in the Burbridges, when they swept everything before them. Mr. Clay, in his devotion to the turf, like Dr. E. Warfield, brings into the service a pride and ambition that would be worthy of any vocation, and which is eminently calculated to elevate any calling. I might furnish you with a complete list of the colts that are expected to start for the Association Stake, but as they will probably reach you from another source, I shall omit it.

Mr. W. H. Rarey, the horse-tamer, has a large class here, which he meets occasionally, on county court days. He has produced quite a sensation among horse-men and farmers, and is creating a formidable regiment of wild-colt tamers. One of his ardent pupils, it is said, in a county not far distant, while recently experimenting, killed a fine young animal. This, however, is not the fault of the system, as in Mr. Rarey's hands it succeeds to admiration. The impetuous and imprudent tyro in anything is necessarily destructive.

The new trotting course, near this city, is attracting much attention, as it is in the hands of gentlemen whose high social character and ample means will insure its success. The grounds of the course include about fifty acres, and a more beautiful location could not have been selected in all the "rich blue-grass region." Col. Wingate, whose management of the Association Race Course, has brought it to an unrivaled perfection, and a popularity as broad as the Union, has also the control of the trotting course. The officers are men of probity, and of such standing as to command not only the respect of the sporting circles, but the esteem and confidence of the community at large. This new course, located as it is, and conducted as it will be, cannot fail to be a popular resort, and will develop the powers of many a "fast one," whom else would never have a name honorably recorded in the trotting calendar.

The fishing season is full upon us, and the anglers are out daily in all directions. As the woodlands have put on their welcome garniture of green, and the buds are basking in blossoming beauty, and the song-bird has resumed his perch upon each familiar bough, the stream has become more inviting than the dust and turmoil of the town. So now, with the dawn of each bright morning, you find the fishermen seeking

"Some rock's protruded side,  
Scorped and hollowed by the tide,  
With baited hook and line in hand."

We have some fine accessible streams near by, and an abundance of private well stocked ponds, which are much resorted to, and afford agreeable and refreshing sport. The fashionable fish here are new-lights, a sort of spotted silver perch, derived doubtless from the lakes, though in the running streams we have fine black bass, which furnish greatly more sport in capturing. The bait used is altogether the minnow—small, round, black and plump, which are obtained in the smaller branches. I have already had rare sport in fishing this spring, and anticipate a vast deal more ere the summer solstice. The fall fishing, however, is far preferable to the spring.

We have had a variety of amusements during the past winter; some good, and some intolerable humbugs. Many of the strolling vagabonds who go about exhibiting themselves, and who have the vanity and impudence to set up claims to talent, and in blazing capitals are announced as celebrities from the Academy of Music, New York, Wallack's Theater, Niblo's Garden, and God knows where, seem to be ignorant that we are within half a day's travel of Cincinnati, and but a day or two from your own Gotham. They doubtless take us for the lineal descendants of the renowned Rip Van Winkle, and presume that we have inherited the trance-like sleeping propensities, and never read the Spirit. To one familiar with the columns of your popular sheet, headed "Things Theatrical," the pompous announcement of these brainless mountebanks and impostors read funny enough.

If anything occurs of an interesting character, that may not be noticed by your regular correspondent, you shall hear from THE CAPTAIN.

## AGRICULTURAL.

## AGRICULTURAL STORE.

J. D. ARTHUR.

J. D. ARTHUR &amp; SON,

IMPORTERS AND JOBBERS OF

AGRICULTURAL IMPLEMENTS

Washington Street, near Davis,

HAVE JUST RECEIVED  
by late arrivals from the East,  
and will continue to receive

A LARGE AND VARIED ASSORTMENT OF

AGRICULTURAL GOODS,

Among which are the following, which will be sold at the

LOWEST MARKET RATES.

Reapers &amp; Combined Machines,

OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from  
6 1/2 to 7 1/2 feet swath.Burrall's, Manny's, Beloit's, Atkins', and all the  
various styles.

Pitt's Thrashers,

Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements  
for a full supply of Agricultural Implements in New York and  
Boston, they will be

In Constant Receipt of Fresh Goods,

well adapted to this market, by clipper ships arriving during  
the season, which we can afford, and  
WILL SELL ON AS FAVORABLE TERMS,  
As any other similar establishment on the Pacific Coast.Farmers and dealers will find it to their interest to call  
and see the subscribers, at their Agricultural Warehouses.JOHN D. ARTHUR & SON,  
Nos. 3, 4 and 5 Washington street,  
between Front and Davis, San Francisco.

125

McCormick's Chicago Reapers!

Three Sizes—5, 6 and 7 feet Cut,

WITH EXTRAS FOR ALL THE DIFFERENT PAT-  
TERNS, from 1852 to 1859. [Agent for the Manufactur-  
ers for the Pacific Coast.]2500 sold in 1853, 4000 sold in 1857,  
4000 sold in 1859, 4500 sold in 1859.

15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim  
to have manufactured and sold anything like so large a number  
of Reaping and Mowing Machines during the same  
time, while my experience dates back to the origin of my ma-  
chine, in 1834, having been actively and exclusively engaged in  
their manufacture for the last fifteen years. I am now more  
largely engaged in the manufacture of these machines than  
ever before, and, with my improvements for 1859, do not  
hesitate to warrant my machine as a Reaper, Mower, and  
Reaper and Mower, superior to any other for simplicity, dura-  
bility and perfect working; and further to say, that farmers  
who may desire it are at liberty to work my machine through-  
out the year, with any other, and keep and pay for the one pre-  
ferred. The position of the Reaper in my machine (as patent-  
ed), upon the main frame, where there is great strength, and  
where the weight adds to the power of the machine, is the  
only right one. Other makers have to haul their Reapers on the  
platform, where he must, when he has to haul the Reapers, be  
his eyes by the operation of the reel, and to being jolted over  
the clods by the little platform-wheel over which he rides,  
necessarily racking their machine to pieces. This accounts  
in part, for the great durability of my Machines  
as compared with others.

Great Council Medal awarded my machine in London, in 1851.  
Grand Gold Medal of Honor at Paris, in 1855.  
Highest Prize at the French Universal Exhibition, in 1856.  
Highest Prize of Royal Agricultural Society of England, in '57.  
Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the Manny  
machine, claiming the highest honors, etc., at the French Uni-  
versal Exposition, in 1855, are known by them to be FAL-  
SE. The success of my machine, as indicated by figures above, is  
its highest praise; while the awards of Premiums, generally,  
all others, being of no consequence, and the fact that I have  
a business of laboring and scheming to secure the little Annual  
One-horse Premiums of the country. Although it may not be  
generally understood, it is nevertheless true, that these ma-  
chines have always been sold at comparatively low prices, and  
that for the boldness with which I have sold them, and sold  
thousands, for the ten years past, other smaller manufac-  
turers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and  
others, of the truthfulness of every statement I have made, and  
much more. I may further remark, that all of the Reaping  
Machines of my premises in the country are mere modifi-  
cations of my machine; all other manufacturers have neces-  
sarily limited experience in comparison with my own.

A single year's severe service will satisfy the farmer,  
that in point of durability, my machine is far superior to  
any other. It is a fact, however, that the Manny Reapers  
are the only ones in the country that are referred to in  
my regular Annual Circular in pamphlet form, which will  
be furnished those who desire further information, by addressing  
me, or any one of my Agents.

P. S.—To correct a misapprehension from recent news-  
paper reports, I may further remark, that the Commissioner  
of the PATENT of 1845, that of October, 1847, will  
not expire for several years to come, and that this has been my  
most important Patent; and further, that Reapers manufac-  
tured cannot copy more nearly my machine than they have  
done heretofore. They must still carry their Reapers on the  
back of the platform, and submit to other consequent im-  
perfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,  
Manufactured by Nourse, Mason & Co.; 32 and 36 inch  
cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1859.—Sirs: J. A. & H. A.  
U. S. Patent, dated June 30, 1857, for Thrashing and  
Pitts' Patent, dated June 30, 1857, for a term of seven years  
from June 30, 1857. It has consequently expired. Respec-  
tfully, yours,  
J. HOLT, Commissioner.

SOUTHWORTH & Co., San Francisco, California.

Pitts' Patent Double-Pinion 8 and 10 Horse-Powers.

To whom it may concern.—This may certify that we have  
a certificate of authority, of which the following is a true copy.  
A. GORDON & CO.

To whom it may concern.—This may certify that A. Gordon  
& Co. are fully authorized by me to sell the "Pitts' Improved  
Patent Double-Pinion Horse-Power," in any of the States or  
Territories secured to me by letters patent. (Signed).  
Buffalo, October 20, 1858.  
JOHN A. PITTS.

We are this month shipping Horse-Powers of the above  
patent to A. B. Southworth, of San Francisco, Cal., which he  
is hereby authorized to sell.  
A. GORDON & CO.  
Rochester, N. Y., October 28, 1859.

A. Gordon & Co's Iron Planet Powers,  
8 and 10 Horse.

NOURSE, MASON & CO's  
IRON PLANET POWERS,  
8 and 10-Horse—with full Extras.

Forty Ketchum's Mowers—Iron Frame.  
Extra Extras for all of the above Machines.

TWENTY NOYES' MILL-STONES,  
Different Sizes.

One Hundred Revolving Horse-Rakes,  
Eight, Ten and Twelve Feet.

200 dozen Hay-Rakes, 100 doz Hatchets, Hay-Forks, 100  
doz "Blood" Mirror-Blade Scythes, 20 doz "Harris" Silver  
doz "Blood" Scythes, 20 doz "Blood" Scythes, 20 doz "Blood"  
Churns, 1500 Piece Plows (to arrive for Fall Trade).  
Also, a general assortment of Agricultural Implements.  
Farmers and dealers are invited to call before purchasing.

## THE FARMER'S SONG.

Awake and sing the song  
The farmer loved so well;  
Awake! the strain prolong  
With full and hearty swell.  
In Eden's soil our work began,  
And God the toil has blessed to man.  
Ye tribes of farmers, hail!  
Our country's pride and boast—  
From every hill and vale,  
Far inland, and the coast,  
Ye hearty throng of farmers strong  
With heart and voice lead off the song.  
Join, all ye farmers' wives,  
And take the treble parts,  
Ye blessings of our lives,  
And captors of our hearts;  
Ye lovely throngs of mothers dear,  
Join in the song with hearty cheer.  
Ye daughters of the land,  
The farmer's pride and joy,  
A choice and blooming band,  
So modest, fair and coy;  
Ye beauteous throng of country girls,  
Join in the song, with smiles and curls.  
Ye farmers' sons, arise—  
The future good and great,  
The learned and the wise,  
The future pillars of the State;  
Ye ardent throng of farmer's young,  
Join in the song with heart and tongue.  
Hark! how the rural choir,  
Their joyful anthems raise,  
While faith and hope inspire  
The harvest hymn of praise;  
The happy throng of farmer's strong,  
In chorus raise the choral song.

## Theoretical Farming.

[We present the following most admirable Essay, read before the Collegiate Institute at Benicia, by one of the pupils, G. M. FALL, son of J. C. Fall, Esq., of Marysville. This Essay will be found full of sound truths and worthy a careful study by our farmers. These are records worth preserving.]

Wise men of all nations and of all times, tell us that the cultivation of the soil is the source of all national prosperity. It is probably more especially true of our own country than of any other, that agriculture is the foundation of national wealth, and when that interest is neglected, all others feel the bad effects of it.

These truths being acknowledged, it would seem that the all important interest of agriculture should receive due attention from all governments. The benefits resulting from the application of science to the practical arts are very numerous and very great; and the question naturally arises, Has agriculture, the keystone of all other pursuits, received proper attention, and has it as freely drawn upon science as other arts? According to the census of 1850, there was about one-half of the free male population of the United States, over fifteen years of age, directly, and a large proportion of the rest indirectly, engaged in the cultivation of the soil; yet these large numbers, as everybody knows, are less instructed in the scientific branches connected with their pursuits than others are in their respective occupations. I do not think for a moment, that farmers as a class, are less intelligent than others, but I do think their lack of scientific information is owing to the difficulty of obtaining it. It is true that the teaching of agriculture as a science, is as yet, but little more than commenced in the United States. But in the old countries of Europe the establishment of schools for instruction in scientific farming is by no means an experiment; there such institutions have, for years, under the fostering care of government, been in successful operation. In the Russian empire are eight agricultural colleges of a high order. In France, the "National Agronomic Institute" was created in 1848, and by the same law, provision was made for the establishment of numerous agricultural schools throughout the empire. But in no other country is agricultural education so thoroughly incorporated with public instruction as in Prussia. That country has five agricultural colleges of a high order, twenty-eight of a lower grade, and a large number of special schools for instruction in particular branches of culture. Besides, there are seventy-two model and experimental farms in the kingdom. In these institutions are taught the various systems of husbandry, farm management, book-keeping, cultivation of arable and grass lands, horticultural and agricultural technology, mechanics, natural philosophy, agricultural botany, mineralogy, a knowledge of soils, agricultural chemistry, veterinary surgery, breeding, raising and management of animals; and, in fact, every branch of education necessary to the intelligent agriculturist. But, not only Prussia, but the smaller German States have also good agricultural schools, and their governments do a great deal for the dissemination of scientific knowledge among the farmers.

Some, perhaps, will say that this may be proper and necessary in the densely populated countries of Old Europe, but that we in the United States have rich lands enough, and can do without "book-farming." But, people must not forget that our country, vast as it is, has its limits, and the time will come when we will have no virgin soils to which we can resort for our supplies of bread-stuffs. Indeed, the attention of the people has already very strongly been turned to the subject of agricultural education, and in a few instances the State Legislatures have made partial provision for carrying out their wishes. Thus the State of Michigan has established an agricultural college. It was opened a year or two ago, and has, so far, been successful. The Farmers' High School of Pennsylvania is to be opened within the current year. Buildings are in process of erection for the "Agricultural College of the State of New York." Scientific Departments and Professors for Agriculture have been established in connection with several of the Universities and colleges of the Atlantic States, to satisfy, at least in some degree, the demand of the age for better instruction in the arts and sciences that have a direct bearing upon the practical operations of men.

At last the voice of the people was heard in the

halls of Congress. One of the worthiest bills introduced during the last session, was for donating public lands to the several States and Territories, to aid them in building up Colleges for the benefit of Agriculture and the Mechanic Arts. But, like most other good bills, it was lost. Agricultural schools would be of great benefit to our own State, California. But it may take us some time before we can succeed in having one established. We need not be ashamed to admit that our mode of farming is not in many cases conducted on correct principles. Our farmers have come from States and countries where the climate is very different from ours. It cannot be their former practice which they have to adopt, but a changed application of those principles on which their former practice was based. Therefore, it becomes necessary for them to understand those principles. A common farmer cannot be expected to be versed in sciences which he has never had an opportunity to study. But these things could be explained in an agricultural school, and science taught in such a way as would make it of less consequence to the farmer, where, or under what circumstances, he proceeded to cultivate the soil.

"Book-farming," as it is often sneeringly called, is then the intelligent application of science to agriculture. No farmer can always, and on every sort of land, produce good crops, unless he studies the truths that have been elicited by science. In this State, people are beginning to consider this matter an important one. Eventually all waste lands of California will be as greatly in demand as our valley soil is at present; and then people will see the necessity of agricultural chemistry. Farmers should know what stimulates their arable land requires: if they do not, their land will soon run out, and its productiveness be entirely lost. Farmers should better understand what their soils require. If the planters of Maryland, Virginia, North Carolina, and other Southern States, had paid strict attention to restoring to the soil what was taken from it, those States would now rank among the first in the Union for productiveness.

Those farmers who think that, when their lands are worn out, they can move to some other part of Uncle Sam's domain, must bear in mind that Uncle Sam's farm, large though it is, contains many rocky hills and sandy plains, totally barren of shrub, bush and water. No, let the people harbor no such opinion as emigrating; let them cling to their old farms, and study closely the nature of the soil. The golden rule of the farmer is, to restore exactly to the soil what has been taken from it; and if he follows this rule, he will find his farming remunerative. By failing to heed this rule, thousands and tens of thousands of acres have been lost, and are in the way of being lost. I would not have you think that a farmer can be made at school; that theory can entirely take the place of practice; but what I particularly wish to urge is, that theory is too much neglected. I do not believe a farmer will hold his plow less skillfully, or give less attention to what is called the drudgery on a farm, on account of his understanding the analytical elements of his soil. While such a knowledge will open to him an abundant field for thought, he will work understandingly, appreciating, and consequently admiring the perfections of those laws which preside over the changes of matter in its passage from *inertness to life*. This understanding, while of practical utility, expands the mind, gives an importance and a charm to agricultural pursuits, which leads to a higher standard of education in those who pursue them, and induces a larger number to engage in them. And here let me say, that I would not wait the appropriations of large sums of money by our Legislature, or even the construction of model farms; but, to commence the work, I would introduce simple text books into all our schools, public and private; the simplest text books into the public schools, and the more advanced branches into our colleges. What would be the effect? The farmer would work understandingly. He need not be an analytical chemist, but he would know the composition of soils, and the various compositions of crops to be taken from those soils. If his wheat lodged, he would conclude that his soil was deficient in silica; if the straw was too small, it required carbonate of lime; the kernel shrunken, then phosphate of lime. He would understand why pruning the roots of a tree prevents an excessive growth of timber, but enlarges the crop of fruit; why lime, though of great benefit to most clay soils, might be equally injurious when plowed into his sandy loam; why lime and barn-yard manure, used separately and at different periods on the same soil, produced the desired effect, yet, when united, were almost valueless; he would understand why clay soils should be encouraged in a climate made up of a short wet season and a long dry season; why California with the soil of Ohio, would be a desert. Such facts with their causes form the theory of farming, or "book-farming," and the man who would neglect them, would throw away the experience of his father and commence the work anew.

## NURSERY BUSINESS.

## GENESSEE VALLEY NURSERIES, Rochester, N. Y.

## Fruit and Ornamental Trees, Shrubs, &amp;c. Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

**OF STANDARD FRUIT TREES,**  
we have an unrivaled collection of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in Bud, One year old from bud or graft, and Two years old.  
An immense stock of **DWARF FRUIT TREES,** in Bud, and one year old from bud or graft, comprising Apples, Pears, Cherries, and Plums.

**SMALL FRUITS, &c.,** in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberries, &c., including all of the new varieties of the above species introduced up to the present time, which have been found to be an acquisition.

**In the Ornamental Department,**  
our assortment and stock is very extensive, including both the deciduous and evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our stock of **ROSES** is unsurpassed in quantity and variety, occupying over six acres, and embracing more than 500 distinct sorts, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summer, Climbing Roses, &c.

**HARDY BULBS** furnished of every description, including the finest variety of Hyacinths, Tulips, Crocus, &c., and a large stock of the most beautiful and reliable of the most flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

**FRUIT-TREE STOCKS**  
we have in large quantities, which promise to be unusually early and reliable. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities SEEDLING PEARS, APPLES, CHERRIES, PLUMS one and two years old; also, QUINCE and MAHALED STOCK, for dwarfing the Pear and Cherry respectively, one and two years old.

**PACKING, &c.**  
The greatest care and caution are given by us to the packing of Plants, the labor of which is performed by men who have had many years' experience in the business; so that parties can depend upon receiving the articles in good order. The result of our experience in packing plants for California the past season, has been such that our customers have UNIVERALLY expressed themselves very much pleased with the condition in which the plants reached them.  
**N.B.—ORDERS** should be sent as EARLY IN THE SEASON AS POSSIBLE, so that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO orders can be filled satisfactorily to ourselves, which are not received by us PRIOR to the 15th of November.

**Catalogues.**  
A WHOLESALE CATALOGUE, No. 6, is published in July of each year, expressly for the California trade, containing our lowest rate for trees in quantities, of such sizes and ages as are desirable to be shipped to California from the Atlantic States, copies of which will be mailed free to all applicants.  
For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.  
No. 1—Descriptive Catalogue of Fruit.  
No. 2—Descriptive Catalogue of Ornamental Trees, Shrubs, &c., &c.  
No. 3—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.  
No. 4—Wholesale Catalogue of Trade list.  
No. 5—Descriptive Catalogue of Flowering Bulbs, &c.

## SALT!! SALT!!!

**WASHINGTON MILLS,**  
Corner Market and Beale streets,  
SAN FRANCISCO.

THE UNDERSIGNED DESIRES TO CALL PUBLIC attention to the SALT now prepared and furnished from these MILLS. Particular attention is paid to furnishing

**SALT**  
Of a superior quality, for Table Use.  
Merchants, Traders, Hotel-keepers, and all purchasers, are invited to give us a call, as we shall deal with them on the most favorable terms.

Also, this SALT will be found of great value, as it is prepared with reference to PURITY from all deleterious substances.

**PROVISION PACKERS**  
will find our SALT very excellent for packing Provisions

In order that the REAL VALUE of our SALT may be known, we invite Purchasers to visit the MANUFACTORY, where we shall be happy to show them the various qualities.  
**B. T. CHACE & CO.,**  
Corner of Market and Beale streets.

## FARMERS, BEWARE

CALIFORNIA  
COMBINED REAPER and MOWER,  
AND  
PECK'S SANTA CLARA  
HEADER and HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNWARRANTED FALSHOODS.  
I am now building the "Manny Machine," nor intending on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

California Combined Reaper and Mower,

Wholly unlike the "Manny Machine," except in the use of the Knife, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a Practical Mechanic, and have spent too much money in obtaining Drawings and Specifications on the Patent Office, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "Manny Game," and has been pretty well played out. For two years the combined force have been playing upon me, not openly, but MEANLY and COWARDLY, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

AGRICULTURAL TRADE, and keep up prices at rates ruinous to the Farmer. But thus far, their means have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

CALIFORNIA  
Combined Reaper and Mower,  
IS A DECIDED SUCCESS; and

and unless they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant task, truly, but Fate decrees that they must "grin and bear it!" Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret circulars and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "Manny Game" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower,  
(and not the "Manny"),

and I have Purchased the Invention called

"PECK'S SANTA CLARA  
HEADER and HARVESTER,"

which I am also MANUFACTURING, and shall continue to do so, until my own number of machines equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE of INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, ready for the fight whenever the fight opens!

THOS. OGG SHAW,  
No. 33 Sacramento street.

**BELTING! BELTING! HOSE! HOSE!**

THE UNDERSIGNED ARE AGENTS FOR THE SALE OF  
Fulton's California Oak-tanned  
**MACHINE-BELTING**

AND  
**FIRE AND HYDRAULIC HOSE.**

WE are prepared to furnish Mill Owners, Miners and Fire Companies with the above articles of a better quality than ever before offered in this market, and at a LESS PRICE. The superior tanning qualities of the California Oak Bark, and the compact fibrous nature of the California Hide, combine to produce the best leather made for sustaining continuous strain and tension.

Both Belting and Hose are made from the solid part of hides, which are selected expressly for the purpose, in the most careful manner by Workmen of long experience in Eastern Manufactories; cold liquors only used in the tanning process. The Belting is three times stretched by Power Machines, before expressly for the purpose, and is warranted to run evenly on the pulleys. We especially call the attention of Fire Companies and Miners to the Hose. We offer to subject to every required test before sale.

In buying of us, parties may be assured that they will get the real Oak-tanned article, and will not have palmed off upon them an inferior article of Hemlock Belting and Hose. We defy competition either in price or quality. The above articles constantly on hand or made to order, of the required size, at short notice.

THOS. OGG SHAW & CO.,  
33 Sacramento street.

N. B.—We subjoin the following certificates:  
**CHIEF ENGINEER'S OFFICE, Fire Department,**  
City of San Francisco, May 1st, 1859.  
J. J. FULTON, Esq.: Sir: From the same tests, to which the two sections of Hose (100 feet) furnished to this Department by you, have been subjected, and from a careful inspection of the same, I am prepared to say that in my opinion, your Hose is fully equal to the best quality of Eastern Manufacture, far superior to that usually obtained. I shall recommend the purchase of future supplies of Hose for this Department, of your manufacture, at the prices and upon the terms offered. It is with pleasure I make this statement. Very truly yours,  
F. E. L. WHITNEY, Chief Engineer of S. F. F. D.  
SAN FRANCISCO, May 10th, 1859.

J. J. FULTON, Esq.: Sir: I have examined your California-tanned and manufactured Belting, and am convinced that it is of quality of leather and thoroughness of Manufacture, unsurpassed if not unequalled by any Belting made. I shall recommend it to my customers, and shall purchase for my own use as fast as required. Wishing you success in your Pioneer enterprise. I remain yours, &c., PETER DONAHUE,  
21-3m Proprietor of Union Foundry and Machine Shops.

Groceries and Provisions. 13-4f

**CHEENEY'S**

**IMPROVED FIELD FENCE.**

PATENTED JANUARY 25, 1859.

PERMANENT OR PORTABLE.

IT is made of boards or rails in the following manner: Take two sticks or posts of timber 2 1/2 inches square, and about 5 1/2 feet long, either sawed or split—their length may be varied according to the height intended for the fence. Lay them across each other in such a manner that the ends which rest on the ground, will be about 3 1/2 or 6 feet apart, leaving about 18 or 20 inches of each post above the point of intersection to receive the top-rail, board, or pole. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A meter box may be used to saw and bore the posts. Next take two cleats about 1 inch thick and 3 inches wide; nail the short cleat across from one post to the other, so as to leave a triangular space large enough to receive the rail or board. Then nail the long cleat to the point of intersection; this is to stand perpendicular, and the boards are to be nailed to it. For rails, two perpendicular strips of board about 2 inches wide should be nailed to the cleats to keep the rails in place; or a loop of wire attached to the posts or hung on the second rail in which the lower rail may be suspended, &c. A meter box may be used to saw and bore the posts. Now take up two posts and nail the rails or boards, nail the boards on; place the top rail in the cross-ings of the post. Lock-rails may be used by placing one end in the crossing of the post, the other end on the ground. These serve to keep the top-rails in place, and brace the posts; thus enabling the fence to withstand the effects of wind, and preventing it from being thrown down by animals, and making it stronger. Where fencing timber is scarce, the bottom rails may be dispensed with by substituting a low mound of sod or turf, or stone wall.

Expenses per 12 feet: lumber \$10 per 1,000; rails, \$2 per 100; posts, including lumber (8 feet) nails and making, 14 cents each; five rails at 3 cents each, 15 cents. Cost per 12 feet, 30 cents; or if two boards, six inches wide, and three rails are used, the cost will be about 35 cents per twelve feet. Cost per rod, from 30 to 50 cents.

The superior method of hanging a gate to one of these posts is worthy of special notice.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, JULY 1, 1893.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAW, who left here in the steamer of the 5th April, on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
Having employed Mr. J. F. LARABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the Farmer into the family as a friend to all "home industry," it will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

**SEND THE FARMER ABOARD.**—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

**PARTICULAR NOTICE.**—In consequence of frequent mistakes occurring, we desire to inform those who are not aware of the fact, that Col. Warren, editor of the Farmer, is not J. Q. A. Warren, and that the latter has no connection with this journal. Those communicating with us will please address, Col. Warren, Editor California Farmer.

**AUGUSTUS ELLIOTT** is not the agent of the CALIFORNIA FARMER, nor authorized to receive money on account of this journal.

**LETTERS BY OVERLAND MAIL.**—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

**A Wicked Act.**  
We give in another column a letter containing an expose of an act which has been committed by an unworthy person to injure the influence of our journal. We alluded to it in our last. We have often met those, who, envious of the good influence which this journal exerts toward the building up of the industrial interests of our State, and of our influence in behalf of the cause of education, and of social life and home blessings, leave no means untold to check its constantly increasing power to do good. We have often had the vile schemes of the assassin plotter laid bare before us even by the very persons whom they had designed to array against our journal, but we did not think it necessary to waste time upon such worthless persons then. Could all such plotters and slanderers but see the estimation in which they are held by those to whom they carry their venom, they would desist from their folly, for it is folly of the worst kind. Who does not fear and hate a venomous snake? And the persons that listen to the venomous slanderer should always reflect that if they hold converse, give credence, or make friendship with such, their own words may be the means of bringing back the fangs of the venomous reptile again upon themselves, for if we listen to the slanderer we shall be the subject of his sting.

We are called upon to give this letter from the fact that it originated from a valued correspondent who had seen the path of the slimy reptile. He was trusted in confidence, had been nourished into life, and like the figure often used, turned to sting the breast that had brought him to light and life; but he has lost his power; his fangs hold no venom now; he has sounded his rattle, and the "seed of the woman shall bruise his head." We regret to use our journal for this subject, but we have many letters of similar character to the one we now give, showing a concerted plan by most unworthy means, to secretly attempt to injure this paper. We regret also, to find it emanate from one now an agent of our contemporary, the Cultivist. We have in our possession, his own letters too unworthy, too unfit to be published, addressed to other parties. He had been discharged from our service for good and sufficient reasons. We found another agent of our contemporary, also, meddling and pretending to act for us. Our friends can see at once that we are now compelled to speak. We could give facts and letters to show a series of acts most shameful and unworthy, all of which are known to us, and will assuredly recoil on the heads of those who are striving to injure us. We pity such. We owe them no malice. We will not strike back. We rather aid them; if hungry, we would feed them; if sick we would minister cheerfully. Such acts as those of which we speak, only show that those who practice them are unhappy, and therefore we pity them. They may cast a shade briefly on our sun-light, but they cannot hinder our onward progress. The shadow is for a moment only. The sun with a brighter ray immediately follows; and so with those true friends in whose pathway the thing would crash. We know our friends, and know them true. The "flashing eye" and "crimsoned brow" will tell this and all others of like character who would assail us, where this reptile would go, of the scorn and indignation that they will meet in all such efforts.

Our journal will soon begin its Twelfth Volume. We have only to ask the friends of our State to go back and examine its teaching, read its records, and look at its results. We are now willing to appeal to every honest mind, and ask them if the CALIFORNIA FARMER has not done good, and that continually. Shall such efforts as the one alluded to, injure us in the estimation of a single honest mind? No! No! No! Rather it will do us good, we believe, in the true hearts of those who know how to appreciate our labors, and we feel assured that this wicked, unjust and unwise effort will bring to our columns a glorious host of contributors and a cheering list of new subscribers.

## Gardens in San Jose.

Visitors to San Jose should not fail to ride to the several Gardens in and around San Jose. There are several of considerable extent, and containing much of interest in each department of culture.

**Prevost's Garden** is one of the places of public resort. It covers a large area of ground, laid out in walks and carriage drives, and with arbors and groves; and is worthy a visit.

**Delmas' French Garden** is the Vineyard Garden, and contains many very fine squares of grapes, upon the "trellis system." These are kept in very fine order, and give promise of a great crop.

**Major S. J. Hensley's** private Garden is one of the "beauty spots" of this great valley. No garden or grounds have been designed, or laid out, in better taste; and none kept in so high a state of cultivation. Mr. Hensley has some of the finest ornamental trees in the State; ornamental shrubs and vines adorn his grounds in profusion. A complete system of furnishing water by underground pipes, with hydrants attached, render every facility to completely shower the entire grounds. We noticed one of J. S. Paxon's garden engines, which is found to work admirably, keeping the garden fresh and pure all the time. The Orchard part of this Garden is very fine; some of the finest favored and best size pear trees in the State. In fact, every part of these grounds is in fine order. The whole forming a picture of neatness, taste, and beauty.

**William O'Donnell's Nursery and Garden** is a place that must not be forgotten. A couple of years since, and it was almost a wild; now it is a "gem of a spot." A very handsome cottage, completely embowered in rich climbing flowers; over the entrance is the finest formed arch of the house-suckle and rose that can be conceived of. Mr. O'Donnell has a "home" that he can well be proud of, as it is the work of his own hands.

**Mr. Lowe**, the excellent landscape gardener, has a fine Garden and Nursery, which is well worth seeing—including some of the finest nursery trees in the valley. Mr. Lowe will have one hundred thousand trees for sale next autumn.

**Judge Daniels**, one of the old pioneers, has a "Pet Garden," of his own designing—the trees being all planted with his own hands. Judge D. is an experienced man with fruit trees, and to him much is owing for a rapid building up of the agricultural interest in that quarter. Judge D. has been one of the most efficient friends and patrons of the New County Society, the pavilion and grounds, and he is now earnestly at work, with many others, in perfecting this association.

Mr. Daniels has been quite successful in raising some fine evergreen trees to a large size; many fruit trees, in his garden, also being of very large size. He has been very successful, as well, with the Honey Bee in his garden.

**Judge Divine** has also a very neat Garden and Orchard, near the residence of Mr. Daniels.

**The Nursery of D. T. Adams** we found in excellent condition. Here are some of the best apple trees in this valley, uniform in size and of very thrifty and beautiful growth. By close personal application, Mr. Adams will exhibit a stock of trees this year that will do him great honor. He obtained much credit, even last year, for his skill. Mr. Adams has, we think, the largest and best lot of pear on the quince that can be found in our State, some twenty thousand trees. His pyramidal are really very fine, and many of them are in bearing the present year.

**Dr. China Smith** has a Nursery under way that is very promising, containing a large and valuable lot of the best varieties of trees. His Nursery, though recently commenced, shows industry and application. His standard trees are in bearing order—many of fine size.

**H. H. Winchell**, formerly of Smith & Winchell, has a New Nursery, and one that bids fair to reach great excellence. We noticed several squares of young apple trees, of the present year's growth, of remarkable size and beauty, and also the cherry and pear. The peach does not flourish in this locality, and nurserymen are turning their attention to other species of fruit trees in preference. The frosts this year have done so much injury to the peach, that many are discouraged from growing them even in orchards, except in small quantities. We are satisfied this loss of the peach now, will result in a better system ere long. This variety of fruit, as well as the vine and the fig, will soon be cultivated more on the foot-hills and hill-sides, and with greater success. We attribute the loss of the peach also, in many cases, to the too free irrigation during the summer, thus forcing them beyond a natural growth. Those orchards that have had the least water, will have the best chance when cold nights come; in fact, it is the immense quantity of water upon the surface that increases the cold, and even produces the cold in a measure. Have the friends of the artemisia wells and irrigation, not noticed a difference in the temperature since their introduction?

**FLORAL FAIR BALL.**—We omitted to do justice to the ball given at the Pavilion at Oakland on the 20th, in behalf of the Floral Fair. The arrangements were well designed, and everything well planned; but there was wanting that spirit of co-operation that would have given success to the affair. Very few of those citizens who were engaged in the Fair patronized the ball, thus throwing the onus of an expensive preparation against a sale of a few tickets, and consequently trifling income from it. We think there was a want of that courteous attention to strangers, on the part of the managers, which should ever characterize those who conduct such affairs. A ball to be a successful and pleasant one must have good managers—those who understand the etiquette of the ball room. The music was excellent. There was said to have been very great disappointment and vexation, by reason of no boat from Oakland to San Francisco, as promised, at 2 A. M. They were advertised. If these promises are not kept good, visitors will not cross the ferry at all. The number present was about one hundred and twenty, and the daylight dawned before the music ceased; so says our reporter.

## The Fourth of July.

THE roar of cannon, the ringing of bells, and the shouts of millions of freemen will again soon usher in a day fraught with more momentous interest than any other day upon the record of human history, save that day which gave birth to the Savior of the World. The 25th of December gave a Savior to the world to free man from the bondage of sin and shame; the Fourth of July gave freedom to our nation from human tyranny, and lit the flame upon the altar of human liberty that will continue to burn brighter and brighter until upon every mountain and hill-top, in every nation over all this earth, its light shall proclaim liberty to man. While we shall be thus celebrating this day the present year, in the full fruition of the glorious hopes entertained by our fore-fathers when they fought and bled that we might this enjoy, let us keep their memories in holy remembrance for the rich inheritance they have bequeathed to us, purchased at so costly a price. And while we are thus enjoying these rich blessings of liberty and peace ourselves, in a land so highly favored by heaven—while we are thus reveling, as it were, in the richest gifts ever vouchsafed to man, let us not forget that other nations are now in the midst of battle, contending for the cause of liberty, and while we celebrate this day with grateful hearts, let us pray that our nation may not by any fatal error of our government, be drawn into the bloody strife with other nations, but live in peace with all the world, and ever have an asylum to offer to the oppressed of all nations.

Let, then, the cannon roar! Let the bells send out the merry peal. Let the people join in the shout, and be glad, for "the people are free! the people are free!" Let bonfires light up our mountains and hill-tops, from the place where the morning light ushers in the rising sun, to the Rocky Mountains, and let the ringing shouts of millions of true freemen on the Atlantic and on the Pacific shores attest to the value of human liberty. Thus should this day be kept. Thus should it be consecrated not only by outward signs, but by the hearts of freemen. Let every heart be glad and rejoice, remembering that not only to man do we owe the liberties we are enjoying, but to him who is the God of battles.

## Editors Harvesting.

Just think of it—editors at work! and in right earnest too. At the trial of reapers and mowers at the Oakland Fair, a suggestion was made that certain editors then present should be put on their trial too, to see if they "knew a thing or two." The editor of the Cultivist and the editor of this journal being present, it was suggested they have an opportunity to try their hand at raking off the reapers. Believing it would be uncourteous to slight the President of the Society, before whom the trial was to be made, we suggested that Rev. Mr. Myers should lead off, which he very cheerfully consented to do, and thus several freshmen were set to work. We noticed J. D. Arthur, of Arthur & Son, one of the contestants, upon his mower, and he handled the fork very well, giving him, however, a little excitement and perspiration. J. M. Horner, Esq., also an old harvester, handled the fork with ease and spirit. Mr. Horner, it will be recollected, is one of the earliest pioneers and farmers of our State, having raised in the year 1853 over twenty million pounds of potatoes. After Mr. Horner, Rev. Mr. Myers took the machine, and performed his round with much credit, both as President and as a workman; a gentle perspiration being evidence he had worked. The editor of the Farmer being next called, performed his duty upon the harvester, we think, acceptably to those present, who seemed desirous to know if editors could work. Mr. Wadsworth, editor of the Cultivist, came in turn, and went his round very satisfactorily and performed his work well.

This we think is the first record made where the President of a Society, owners of a machine, and editors have been called to work of this kind. We highly approve of it, however, and we should hope that in trials of this kind all committees and judges should be put on trial, and see if they know how to work with a machine upon which they are to judge. If this rule could only be understood and applied at all our fairs, we think we should have better and more appropriate Committees. Make Committees work when they are to judge. We want working Committees, not honorary Committees only; that has caused much of the dissatisfaction in times past; we hope it will be remedied in future.

**COLLEGIATE SCHOOL AT OAKLAND.**—The public examination of the students of this excellent college took place on the 16th ultimo, and was highly honorable to the college, gratifying to the parents and friends of the students, and honorable in the highest degree to the students themselves. About twenty students declaimed before the audience in a manner most acceptable, and reflecting great credit upon the institution that had advanced them so rapidly forward into good scholarship. The exercises were opened with prayer by Rev. Mr. Williams, after which the Salutatory Poem was delivered by Master Frederick William Clarke, in a style and manner most honorable to himself and the theme so appropriately selected by a gifted mother, who, though confined to a sick bed, yet had by the spirit and influence of strong maternal duty and love, prepared a poem for the occasion. It will be found in another column.

**JOHNSON'S NEW COUNTY MAP OF NORTH AMERICA.**—This new illustrated and embellished County Map of the Republics of North America, with the adjacent islands and countries, is the most comprehensive and complete of any map we have ever seen. It is made up from official surveys and other reliable sources, by A. J. Johnson. It is sold very reasonable for its immense size, and is a valuable work for all to have. Mr. G. F. Kelly is agent for the sale of the map.

**OK Mr. W. Ortmann's farm**, in Alameda county, it is said, there were grown the present season, from one kernel of wheat, one hundred and fifty-seven stalks, all well headed, and averaging five feet in height. Mr. Ortmann has sixty acres of "the same sort," and expects a yield of 4000 bushels.

## Santa Clara College, S. J.

This College, under the charge of the Fathers of the Society of Jesus, held its annual exercises on Wednesday and Thursday of the present week. The whole series of exercises, during the two days, were of the most interesting character, and a large audience, varying from three hundred to one thousand or more, were in attendance; on the last evening, we should think there were nearly fifteen hundred persons present.

This College has about one hundred students, and the whole series of exercises, from the lower to the higher classes, evinced a degree of close study and good scholarship that cannot be surpassed. Many distinguished persons were present from our city; parents from all parts of the State. The scholars in the higher classes, and those who graduated, did themselves great honor; in fact, even to the very youngest, was due much credit. The exhibitions were held three times a day, for the two days, with full attendance.

Santa Clara county is famous for its interest in schools; and it reflects the highest honor on its citizens, the interest they take, and the liberal support they afford, to Schools and Colleges.

Nothing could exceed the order and perfect system adopted at this College. It is very remarkable; and we shall take pleasure in giving a full sketch of the proceedings, with some of the very excellent essays in full, in future numbers of our journal; for we love to show the good everywhere. We know no sect or party; no line of demarcation shuts out from our vision what we feel will do good. Music was a remarkable feature of this exhibition. The College Band discoursed very fine music, day and evening; and the performances on the piano, viol, and flute, were all excellent. This, too, all by pupils; although the Fathers joined in the vocal music in good earnest, and with fine effect.

The whole scene and examination was most honorable. The President, Vice President, and Faculty, were most courteous and attentive to strangers and guests—making the occasion a happy one. To them we owe much for the enjoyment of the occasion. We have never seen such large audiences at any College on the Pacific Coast.

The exercises of a dramatic character were held in the evening; and the students evinced talent, skill, and wit, of no ordinary kind. On the last evening, an audience of some fifteen hundred persons were present.

At the close of all the exercises, the premiums were awarded. Three students graduated—two are sons of Judge Burnett. After this, Judge Burnett delivered an address to the graduates and students. This address was a most happy one, pointing out, in a clear and forcible manner, the duties and trials of the student as he goes forth in the world. This address of Judge Burnett we hope to see in print.

Thus closed a most happy and interesting affair; particulars of which, we shall give hereafter more in detail.

**ST. JOHN'S DAY AT SAN LEANDRO.**—This celebrated festival day of the Masonic order was duly and admirably observed at San Leandro, by an oration by Rev. S. B. Bell, a procession, dinner, and ball. We regret we could not witness the pageant by daylight, for we learn it was most highly creditable to the Masonic order, who turned out in goodly numbers and in rich regalia. The oration was, as was expected, eloquent and instructive; the day was fine; the dinner at the Estudillo was one of Pixley's *au fait* dinners, and the day closed in glory and pleasant feelings. The ball in the evening was one of the finest affairs that has been seen on the sunny side of the Bay for years. Being present, by the urgent kindness of mine host Pixley, we can truly attest, that a lighter, happier, or more joyous assemblage of choice spirits has not been convened for many a day. We profess to be something of a judge, and we aver that fairer Castilian maids and matrons, or more lovely American belles, have not graced a ball-room on the Pacific coast, in any ball outside of San Francisco or Sacramento. The music could not be surpassed, and the supper of the host was a proof of his ability to preside over so fine a hotel as the one named. We confess we have never seen happier spirits, nor none more unwilling to break away from the music and the dance; but the day was breaking, and that seemed determined to break up the festivities, which were joyous and harmonious to the last.

**SALE OF THE LOCKWOOD ESTATE.**—This farm and buildings with standing crop of grain, cattle, horses, etc., was sold at auction on Saturday last, at San Antonio, by Henry S. Fitch, Esq., Real Estate Broker and Auctioneer, and brought very good prices. To Mr. Fitch, as a good salesman, we attribute the spirit and the success of the sale. Persons having farms and farming stock for sale, should call on Mr. Fitch, on Montgomery street, for aid and counsel (not forgetting to advertise in the FARMER also, if they want a good company and good prices). The first lot of one hundred acres of land brought fifty dollars an acre. The fifty-acre lot, with house, barns, shed, etc., brought five thousand three hundred and fifty dollars; one horse, \$185; one mule, 170; one cow, \$127 50; one do, \$76; mare and colt, \$65. The standing grain, consisting of one hundred acres of wheat, and thirty acres of barley, sold for \$15 an acre. The entire sale amounted to about \$12,000. This we think an excellent price.

**THE TULARE RECORD.**—We have received the first number of the paper with this title, issued on the 25th June, at Visalia, Tulare county.—Mr. I. W. Carpenter, proprietor. An article describing the county, and setting forth its resources, we have copied in another place. The Record announces that it is to be devoted to "news, miscellany, agriculture, and to the local interests of Tulare and Fresno counties." It is well got up; the figure-head being a view of the town, with the Overland Mail passing through, and a post marked "240 miles to S. F." The proprietor having graduated from this office, and being an old *typo*, who "has been through the wars," we are confident of his ability to make the publication of interest and value to that section. Success to it!

## A Slanderer Rebuked.

**COL. WARREN:** I would fain stifle the indignation that swells the soul, while my pen portrays a deed of darkness from one, who, while he offers an insult to age, would attempt to screen himself under the sacred name of friend. In a desire to injure your paper, has this been done to one of your correspondents of the "Ladies' Department." A man who was, and still is, a stranger, brought himself to her notice at her own residence; having the recommendation of a correspondent of the FARMER going before him, he was received kindly beneath her roof, as she does all who are not known to be vicious; for she has a soul large enough, and a heart for a spot of kindness for all. She thought she saw that he possessed talents sufficient, if properly directed, to wield an influence; she respected his talents and his educational power, as far as she is capable of seeing it wielded for the good of the race. But, alas! he descends to so low a position as make use of secret insinuations to assassinate the character of another. After several calls in a friendly way at the house, he dropped a few lines, eliciting a reply. It was given in her own guileless manner. He requested it as an autograph. A few days ago she received a second missive, wherein he states to her that she had been misled by one whom he does not name; but, as Nathan said unto David, "Thou art the man;" and hints at her extreme verandacy as a writer, or she would see the grand and lofty tumble you had caused her in the literary world. Is he the trumpet of said literary world? We should like to know. If not, he is presumptuous, to say the least of it. The article referred to, was "Domestic Inamorata" of "N. B. H." And he further advises her relative to a certain publication (which shall be nameless), by which she could see certain facts and influences portrayed. But why should she seek such papers? Is it to read the venom of others, of the same stamp as this slanderer? No matter whose name should greet her eye; no matter what was attached to that name; whether false or true; no matter if her own name should be found there, it would move her not from the position she has taken, as an advocate for Woman; her purification, and her exaltation to a mental life; above man's power; where she may learn her own true nature and her destiny, when released from the thralldom of ignorance where man has placed her, and put, as it were, his foot of authority upon her to keep her there. But to return: I wish you could have witnessed the change in the calm serenity of a woman's countenance. Her brow crimsoned; her eye flashing, lit up with an earnestness of expression of one not easily intimidated by secret insinuation, or secret plotting, to stab the character of another; or to inflame or incite her to dislike one whom she had never seen. No! She knows that there are still in the world Mordecais, and that they sit in the king's gate, and there are, also, Hamans; and, thank Heaven! there are some Esthers in the world also.

Colonel, a paper of moral tone, like yours, one fit for the fireside, is above price, and there are those in California who know how to appreciate it as a virtuous literature, a pure one for families. N. B. H., I think, is a woman who will defend herself from any attempt to bribe or threaten her into silence on the subjects she has written about. She loves that and those who seek not darkness to cover their acts. She has lived almost her lifetime mentally free. She intends to labor where she has opportunity, for the good of her sex and coming generations. No matter what others are seeking to accomplish, she follows where truth guides. She labors where Providence opens a pure channel for thought and expression—one not purchased by base cringing or falsehood, but open and free to those who advocate correct principles, exalted destinies to be filled by human beings, instead of stooping to crush the efforts or militate against the honorable occupations of others—who choose the beautiful parts of humanity for contemplation, rather than to hunt up its deformities or perversions, to caricature to the world in pictures of depravity. No; she will never affiliate in thought with those who are envious or malicious; she has no thought in common with them; she will not assimilate with those who love to linger upon and cultivate acquaintance with such characters or productions as would lead her to a constant contemplation of perfidy and selfishness in its devious windings, or under its various cloaks. No; she has affinity with none such; therefore, none need seek to injure another through hints or taunts, for she needs it not. If any wish to befriend her by information, or touching the character of others, it must be in an honorable manner, not covertly.

And now, Col. Warren, I have done a duty due to yourself as a public journalist, to your correspondent and myself, in thus giving you information of efforts to stop the writing of many of your correspondents, perhaps, beside this one, and to injure you as a man. The letter spoken of is only slightly touched upon; it is laid away, and it is the only one of such a character as it possesses, among all the silent characters where it is locked up. It will be preserved too, as a "sign manual," but not of one who meant that it should do good, but it will, notwithstanding. The time has now come for detraction to begin to hide itself from the social sphere—to be purged out of the social fabric as a disturber of peace—out of the human heart as a leper affecting those it touches. Time now is, when everything like deceit or hypocrisy should be fearlessly met by the advocates of truth, for thus it is to be overcome and banished from the world. Let man say to his brother man that which he has in his heart to say boldly, or hold his peace till he has moral courage to do so. I hope you will pardon me for taking up your attention by so long an article. I add no more.

JUSTICE, ANON.

**SANTA CLARA COLLEGE.**—The examination at the college under the charge of the Sisters of Notre Dame, at San José, took place on Tuesday last. One of the largest audiences ever present at these exhibitions, attended. We noticed parents from all parts of our State. The young ladies numbered about one hundred and twenty-five, all robed in white, and as they were seated in the fine hall for exhibition, presented a scene of beauty that we rarely meet, and the many hundreds of our citizens fully appreciated it. The exercises were highly creditable to the Institution, giving assurance that those to whom had been entrusted the care of the young ladies had been faithful as instructors. The whole exercises were conducted in the most perfect order, even to a minute of time. Several of the essays and compositions were of a very high order, and we shall hereafter give an evidence of their worth by publication, having received the manuscript. The exhibition room for embroidery, painting, and needle-work, presented an array of taste and skill never before equaled by any exhibition in our State. We have notice of some prepared for future publication, and regret we cannot say all we desire in this week's issue. All the exhibition was highly honorable to the college.

## DOMESTIC SUMMARY.

A lot of young American cows was sold at Jackson, on Tuesday last. Ten of them brought \$62 a head, and nine of them, with one steer, brought \$50 a head.

A tree at Santa Rosa, says the Democrat, which was set out a little more than a year ago, this year produced a little more than a pound of ripe, good cherries.

The crickets in Siskiyou are said to be moving down every green thing. They exhibit a partiality for onions, and consume both tops and roots. They are also cutting grain fields clear, and barking fruit trees.

The new survey of Weber's grant has been commenced, by Duncan Beaumont, Esq., County Surveyor, who acts for United States California Surveyor General Manderville. The starting point will be in the vicinity of Searles' Ranch.

A correspondent of the Petaluma Journal compares the Geysers to a vast laboratory, wherein thousands of chemists are at work with all the known chemicals. Among other productions he was able to discover sulphur, epsom salts, alum, magnesia, soda, and tartaric acid. Clouds of steam issued from a thousand openings in the earth, and boiling hot water is thrown out in all directions.

The old man, aged 60 years, named Griffith, who had undertaken to show the Yreka people how easily an old codger like him could clean the boys out in the way of physical endurance in walking, the news comes to us, has actually accomplished the task of walking 100 consecutive hours! The cream of the story is, that Griffith is a consumptive, and for months past has been upon the very brink of the grave with that disease.

The foundation of the Agricultural Pavilion, at Sacramento, is actually commenced, says the Bee, nearly one half of it being laid, and the work is progressing rapidly. The corner stone was to be laid to-day, July 1st, at 6 o'clock, p. m., with appropriate ceremonies.

The gathering of the golden grain is now being commenced by the farmers in San Mateo, says the Gazette of June 25. The crops will be, on the whole, pretty good, but will not turn out as large as was expected a few weeks since. Smut is very prevalent, we observe, in nearly all the fields of wheat in this vicinity.

In Oroville, a fire broke out June 27th. Some twenty buildings were entirely consumed, of which four or five were occupied as stores. Loss between \$18,000 and \$20,000. Part of the burnt district has been ravaged three times within a year. Most of the buildings were occupied by Chinese.

The town of Tehama was almost entirely destroyed by fire on Saturday morning. A dispatch says, the fire broke out about 3 o'clock, a. m., in the National Hotel, owned by Messrs. Betts & Deput. The wind blowing a strong gale from the north, the fire spread with fearful rapidity on both sides of D street, till it reached the river, consuming the entire business portion of the town, with the exception of the buildings of Riggs & Co. and Chard & Harvey. Most of the citizens are heavy losers, and many have lost their last dollar. Loss \$100,000.

Several boxes of speckled trout from Gold Lake recently passed through North San Juan, per Langton's Express, on the way to the valley below. The Hydraulic Press says the catching and transportation of them to the lower country may yet become a considerable business, as the catching of the famous whitefish is in Lake Superior. The summit lakes of the Sierra Nevada have other attractions beside the presence of this delicious specimen of the finny tribe. They are already becoming favorite places of summer resort, and hereafter, when art steps in to assist nature and develop the charms she only hints, will be sought by tourists and health seekers from all parts of the State. On the head of Calkin's ravine, about three miles this side of Nevada, Mr. Parlier has struck a quartz lode which pays \$20 to the ton. The lode crops out at the foot of Lone Mountain, is very thick and extensive, and may be struck in other places.

If any one desires to see what skill, patience, and perseverance can achieve, says the Columbia News, let him pay a visit to the City Mill, on Silver street. He will there find that the proprietor, Alden Sears, Esq., has fitted up, and has in good working condition, a grist mill, with which he grinds a large quantity of barley, &c., a mowing machine, a lath cutting ditto, a jig, and several circular saws, a boring machine, and numerous other labor-saving contrivances; the whole of which he has made and fitted up himself; the whole being set in motion by the water running through the town dume, affording an excellent illustration of Yankee contrivance and ingenuity.

Improvement in quartz mining is being made by the Alameda Company, near Jamestown, says the Columbia News. They have erected two new mills on their claim. The quartz, after being crushed in the usual manner in their old mill, will be conveyed through about 200 feet of fluming into their new mills, where it will be ground through rollers, as fine as flour, and then pass off through other flumes, in which are fixed some 3000 of the new patent riffles or amalgamators. It is calculated that nearly all the gold will be saved by the new process, which is very simple in all its details, and requires absolutely no attendance, and machinery performing all the work by itself.

Of the forty-two prisoners who escaped from the State prison in the outbreak on Saturday, the 25th, but thirteen had been captured alive at last accounts, and two killed, leaving twenty-seven still at large. Some four or five are wounded, and two not expected to survive. The outbreak was doubtless caused by scant allowance of food and brutal treatment of the prisoners by the overseers. Gov. Weller and other State officers have visited the prison during the week, to examine into its condition, and having become satisfied of great mismanagement, the Governor has taken steps to wrest the institution from its incompetent managers, and place it in proper hands. May be successful.

The weather of the week ending June 25th is generally conceded to have been the warmest ever known in this State. The following from our exchanges we publish as matter of record, to show the state of the weather at different places. At Placerville, the weather was warmer than ever before since the settlement of Americans on this coast. The Observer says the thermometer usually indicated from 98° to 106° at midday, and at Upper Placerville on Wednesday, June 23d, it actually rose to 115° in the shade. Another notable circumstance is that, contrary to all precedent, the air remained warm long after nightfall. At La Porte, the Messenger says it was the warmest weather ever known in that part of the Sierra Nevada—in fact it was hot as thunder. In Auburn, on Sunday, Monday, and Tuesday, the thermometer, in brick buildings, was up to 102°; at

night, it seldom fell below 96°. On Wednesday it reached 104°. The same day, at Ophir, it was up to 114°; at Gold Hill, 116°; at Mountain Spring, 110°; and at Mono Lake, on the American river, the mercury rose to 120°, and all in the shade. At Mokelumne Hill and vicinity, the range was, in the heat of the day, from 100° to 112°. At Jackson, the range was from 102° to 116°; at Marysville, 96° to 104°; at Napa, 95° to 106°; at Timbuctoo, 112° to 126°; at Oroville, 110° to 114°; at Stockton, 95° to 102°; at Suisun City, from 90° to 104°; in Shasta, 100° to 118°; in San Andreas, 94° to 112°; at San Jose, 64° to 102°; at Sacramento, 95° to 102°; at San Francisco, 70° to 90°.

A sirocco is reported to have visited portions of the southern country on the 17th of June. Nothing in comparison to it had been known for thirty years. The Santa Barbara Gazette says at 2 o'clock, p. m., suddenly a blast of heated air swept through our streets, followed quickly by others, and shortly afterwards the atmosphere became so intensely heated that no human being could withstand its force—all sought their dwellings, and had to shut doors and windows, and remain for hours confined to their houses. The effects of such intense and unparalleled heat was demonstrated by the death of calves, rabbits, birds, etc. The trees were all blasted, and the fruit (such as pears and apples) literally roasted on the trees as they fell to the ground, and the same as if they had been cast in live coals. But, strange to say, they were only burned on one side—the direction whence came the wind. All kinds of metal became so heated, that for hours nothing of the kind could be touched with the naked hands. The thermometer rose nearly to fever heat, in the shade. Near an open door, and during the prevalence of this properly called sirocco, the streets were filled with impenetrable clouds of fine dust, or pulverized clay. Speculation has been rife since to ascertain the cause of such a terrible phenomenon, and the belief is that there has been a volcanic eruption in the southern portion of this State.

## Great Race at Union Course, L. I.

The N. Y. Spirit of the Times of May 21, gives us a report of the great race between Ethan Allen and Lantieri, for \$10,000, which took place May 18, on the Union Course, Long Island. We copy:

Wednesday, May 18.—Match for \$10,000, Mile heats, best 3 in 5 to win.  
S. McLaughlin's Ethan Allen and mate... 0 1 1 0 1  
H. Jones's Lantieri and mate... 0 2 2 0 2  
Time, 2:24 1/2—2:27 1/2—2:40—2:35—2:35. Raining, and track heavy after first heat.

An immense concourse of people assembled to witness the trot, the lane from the plank road to the course being perfectly filled with vehicles of all kinds, a double row in the pastures on each side, and a single or quadruple row from the main gate to the railroad station. Probably five thousand people were upon the course, all eager for the contest to begin; and half an hour after the time appointed the horses received the word, and the rain poured down; the latter event would have caused a rush for shelter on ordinary occasions, but on this every man stood firm at his post, as firmly as if his country's salvation depended upon his individual honesty and patriotism, until the judges declared that Ethan Allen won the heat in 2:24 1/2.

## From the Sandwich Islands.

We are indebted to the Pacific Commercial Advertiser (Honolulu), of May 12th, for some interesting information, including extracts from a letter to the editor of that paper, dated Waimea, Hawaii, May 3, 1859, which we append:

"The volcano continues still in action. A considerable stream of liquid lava is nightly visible from Waimea, on its descent towards the sea, near the track of the former flow. The head of the stream has now arrived to within about fifteen miles distance of the shore. Its progress is slow; and, judging by its rate during the past week, a fortnight or three weeks will elapse before it quenches its redness in the waters of the ocean. If nothing happens to arrest or divert its course, it will probably reach the water at a point a little to the southward of Wainanali—the spot where the old stream entered the sea. Probably a length of fifteen miles of the glowing red-hot stream is visible, in the night, from Waimea; the fire extending from the head or front of the flow up the mountain, about half way to the old craters. The two upper craters continue to send up immense volumes of smoke, and on the night of April 29th, one of the lower craters was distinctly observed to throw up considerable jets of lava into the air; thus showing, conclusively, that old Pele 'still lives.'"

"The weather of late, in this elevated region, has been quite cool and rainy. On Friday last the summit of Manna Kea was the scene of a violent snow-storm, which wrapped a large portion of the mountain in a robe of shining white. The storm was accompanied, as is frequently the case, by thunder and lightning."

"Besides volcanoes and snow-storms, the Island of Hawaii possesses, as is well known, many other natural curiosities, among which, its waterfalls are not the least interesting. In Northern Hawaii there are scattered here and there, many remarkable falls and cataracts, some of which, for beauty and sublimity of surrounding scenery, possess few parallels in the world. The Valley of Waipio, which, in itself, forms one of the most interesting natural wonders of the Island, possesses two of these waterfalls. One of them, near the mouth of the valley, visible from the sea, and said to be twenty-five hundred feet high, possesses a world-wide reputation. The other, one, situated at the head of Waipio Valley, at a distance of some eight or ten miles from the sea, is, although not its rival in height, by far the most beautiful and perfect fall. At this point, the precipitous sides of the valley, assuming a perpendicular position, approach each other in a regular curve, and join, so that the valley suddenly terminates in a large basin, surrounded by smooth, perpendicular and overhanging rocks, rising to a height of fifteen hundred feet, and forming a sort of huge chimney, over the top of which pours the main body of the Waipio river. The water rushes over the brow of the rock in one broad, rapid stream, and falls in an unintermitted sheet to the bottom, and thence, flowing forth from the deep, round pool that receives it, dashes and roars away, down the valley, among the rocks. The huge precipices, the thundering waters, the dancing rainbows, the blackness of the great cave, beyond the pool and behind the fall, and the many varieties of bright-colored ferns above and on either side, form a rare combination of attractions. An artist would seldom meet a more glorious subject for a pencil."

"This beautiful fall is, unfortunately, very difficult of access. The route up the valley is rough, and in some places dangerous. The traveler will be up to his waist in water a great portion of the time, and, in one place, for a brief distance, swimming is the only method of progression. Probably few whites have ever visited the spot. The lover of natural beauties, however, if he is stout enough of limb to overcome intervening obstacles, will be richly rewarded for his labors by a visit to the head of Waipio Valley."

STRAWBERRIES.—During the past week or two this delicious fruit has been quite plenty about town [Honolulu], though mostly secured in advance by private families. Mr. Holstein, of the Agricultural Society's Garden, has about an acre of plants now in full bearing. The fruit are large and well flavored and bring readily seventy-five cents per quart.

NATIVE WINE.—We have received two bottles of choice native wine, made by Knudsen, which we shall label and call "Sparkling Kauai." We intend [says the editor of the Commercial Advertiser], to keep one bottle as a sample for future comparisons, to see what improvement years may effect in our domestic manufacture.

## Mountain Scenery.

A party of gentlemen citizens of North San Juan, says the Hydraulic Press, lately made a trip to the summit lakes, above Eureka South. In spite of much toilsome climbing, they speak enthusiastically of the invigorating atmosphere, cold sweet water, and beautiful scenery. They found the snow in some localities forty feet deep, and packed so hard that it can be traveled over with ease. Streams are bridged by it, in some places, the water flowing under an arch of solid snow. The scenery in those regions is sublime. Lofty peaks, rugged and bare of trees, rising island-like above green concavities of forest tops, afford vistas of circling mountains, azure and snow-spotted; of the looming prairies, streaked with timber-belts; of the pyramidal Buttes, blue as heaven and as soft; and of the far distant Coast Range, whose wavy line melts along the horizon. Close around the gazer, the clear still lakes are lifted up, like mirrors, framed in dripping, mossy rock, with here and there a shrub or flower. Some of these lakes, small as they are, have a depth of several hundred feet, and are tenanted by gay speckled trout. Streamlets ripple along musically from them; waterfalls weave misty shrouds among adjacent cliffs, and

"The cataract blows its trumpet from the steep."

The grand scenery of the Sierra Nevada is yet unknown to fame, and it lacks the thousand associations—personal, historic, and traditional—that give beauty and celebrity to regions of less intrinsic interest. But the day must come when these mountains will be sought by tourists and lovers of the picturesque; when the pen and pencil of genius shall illustrate their charms, and poetry link them to human song to be household memories for ever. A native race may yet grow up amongst them, imbued with all noble traits; with the clinging affection of the Swiss, the brave devotion of the Tyrolese, the warmth of the Italian, and the intellect and freedom of the Americans. This race will have its traditions and its songs. Every canon and peak, now nameless, will have a place in the vocabulary of history and romance. The roar of pines and the voice of many waters will be echoed in its music, the blue of heaven be reflected in the love-darting eyes of its daughters, and the tall cedars emulated by the forms of its sons.

A correspondent of the New York Times, writing from Fort Kearny, Nebraska, on 17th of May, says: "On the road between Atchison and this place we have met more than two thousand wagons and teams, and at least five thousand men, returning from Pike's Peak. I, this morning, met a party of eight; one of the number, an intelligent gentleman, told me that they had all been working in the mines for several weeks, and the average amount of dust taken, to the man, was about fifty cents a day. He says that in another month there will not be a hundred men left in the mines. This Pike's Peak humbug will cast another great wave of immigration to California, for about one-fifth of those who have no hope of finding gold at the Peak, are going on until they do find it. The emigration across the Plains is this spring greater than it has ever before been. We are scarcely ever out of sight of trains, either merchant or emigrant, and we pass numerous and immense droves of cattle going to California."

## SPECIAL NOTICES.

SWARMS OF BEES.—Very full and excellent Swarms of Bees, now ready for delivery, can be had on application at the Office of the FARMER. These Swarms are of a very extra quality, and such as are not to be had very often. Persons in want of Bees will do well to make early application, as good Swarms are not plenty.

## To Nurserymen.

We would call the attention of Nurserymen and others in California and Oregon, who purpose to plant largely, to our

California Wholesale Catalogue, No. 6, for 1859, which will be published on the 15th of June. This Catalogue will give the prices and description of

Seedling Apple, Pear, Cherry and Plum, as well as QUINCE AND MAHALEB STOCKS,

which we can furnish in any quantity. Also, STANDARD AND DWARF

Fruit Trees in bud, or one year from bud or graft.

## SMALL FRUITS

In great variety, as well as an extensive stock of ORNAMENTAL TREES, SHRUBS, ROSES, BULBS, HERBACEOUS PLANTS, ETC.,

of small size, suitable for transplanting. For further information concerning our stock, etc., would refer parties to our general advertisement in another portion of this issue.

The above Catalogue will be mailed FREE, upon application, as well as our more general Catalogue Nos. 1, 2, 3, 4, and 5.

A. FROST & CO., Proprietors of the Genesee Valley Nurseries, ROCHESTER, N. Y.

The Ladies' Electro-Chemical Baths.—Exactly so—as a suite of Baths, with a well furnished reception room, has been assigned exclusively to the ladies who patronize the institution, by Dr. BOWMAN, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A skillful, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as aids to cure scurvy, rheumatism, and the other 'fish' is held to, as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than 'sugar-coated pills,' and how much better, those can most truly tell who have 'thrown physic to the dogs,' and cleave to these health-giving baths.

MRS. P. E. ROGERS—Family Sewing. We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

THE GENUINE PITTS' MACHINE. T. OGG SHAW, is the ONLY PLACE where the Genuine PITTS' MACHINE, made by John A. Pitts, can be had. Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. [13] T. OGG SHAW.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, the white-washing of a war-rigged committee at Marysville, notwithstanding; the palms of whose lauds, I presume, were peculiarly sensitive to the touch of 'Sera.' My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will need the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE, Corner Montgomery and Sacramento streets.

Budding Knives.—Those who desire a very superior Budding Knife, can secure one by sending \$1.50 to our Office.

SUMMER PRUNING.—Now look to the grape-vines and young fruit trees. Thumb prune all you can. Form a good head to your fruit-trees, and watch your grape-vines; take off the laterals early, so as to give all the strength to the fruit, but do not stop the leaders. Watch these so as to make good canes. The system of cutting off all shoots roughly, after they have grown as big as the finger, is bad. It injures the vine, as does the stripping off leaves; bear in mind, the leaf is the lung of the plant.

The wife of a sea captain, in England, lately died from joy, in consequence of the return of her husband, after an absence of seven years.

## BUCKS FOR SALE.

YEARLING BUCKS, the produce of the splendid FRENCH MERINO BUCKS "SAMSON" and "NAPOLEON," out of first-class American Ewes. The Sires were bred by J. D. PATTERSON, and imported into this State by Seale & Wynn. For sale by JOHN SEARLE, Rancho Arroyos, six miles from San Juan, Monterey county. N. B.—The 224, in Fleece of "Samson" may be seen at the Farmer's office.

## ESTUDIO HOUSE, SAN LEANDRO.

THIS Hotel is established at the county seat of Alameda. It is only forty minutes drive in carriage from the steamboat landing, over one of the best and most pleasant routes in this State. This section of country is esteemed one of the most beautiful and healthy on this coast, and is resorted to by many for the benefit of health as well as for rural pursuits.

The Estudillo House can offer as fine accommodations as any country house can afford, having large, airy and well-furnished rooms, with ample conveniences for weddings, dinner parties, balls, etc.

THE TABLE will be supplied with all the season's afford, and in the best variety.

Good Stables for heavy, easy Carriages and good Horses always at call.

The proprietor only asks of visitors to call on him, to ensure satisfaction to them.

SAN LEANDRO, July 1, 1859. S. PIXLEY, Proprietor.

## SOLOMON'S TEMPLE.

This Magnificent Work of Art, NOW COMPLETED.

According to the most perfect style of architecture, as described in Sacred History, will be opened for the approval of the public, on

MONDAY EVENING, MAY 30th,

AT 8 O'CLOCK.

The proprietors believe they can claim from the public their deserved approval and support.

When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement, have labored to see that it should be completed whatever the amount of labor it should require, or the cost it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

## EXHIBITED IN THE PAVILION

Recently occupied by the MECHANIC'S INSTITUTE,

On Montgomery street, near Market street.

The whole interior of the Pavilion has been handsomely fitted up with

## SKETCHES OF THE HOLY LAND

which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

## TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate hand-bills describing minutely this temple. Suffice it to say that all

## EVERYTHING RECORDED IN THE BIBLE

will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. Sluithour, as master builder, competent artists for carved work. A. Moore glider and soldier, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows: Season Tickets admitting a gentleman and lady... \$5 00 Single Tickets..... 50 Children under 12 years, half price.

The Pavilion will be open from 10 o'clock a. m. till 10 o'clock p. m.

P. S.—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Hyne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions.

17-3m MRS. C. SHADE, Proprietress.

## THRASHING MACHINES, HALL &amp; WOODBURY'S SEPARATORS,

With Hall's Improved 10-Horse IRON-POWER.

THESE MACHINES HAVE been enlarged and many valuable improvements added to them the past season. They are now as they always have been, THE BEST Machines Improved.

Purchasers will do well to call and see these Machines before purchasing, as they will be sold low.

EXTRA CASTINGS, of all Descriptions, for repairs.

For prices and particulars, apply to or address

WM. LYNE,

118 Front street, corner of Oregon, SAN FRANCISCO.

## THE APIARIST.

The undersigned, Agent for the sale of the Harbison Hive, would take this means of informing the citizens of Santa Clara Valley, that he is prepared to sell rights to persons to use this very best Hive. He is also prepared to give full and complete directions relative to the care of bees and the use of these Hives. Having given much study to the nature and habits of the bee, he is able to give such directions for their care, and their propagation, as will be of great service to the grower of bees.

The undersigned will visit, professionally, all who desire his aid in this country. Hives for Sale.

H. HAMILTON, near the College, Santa Clara, Santa Clara county.

## The Genuine Dry PULU

IS IMPORTED FROM THE SANDWICH ISLANDS,

AND SOLD ONLY BY

JACOB SCHRIEBER,

150 Jackson street,

Next door to International Hotel.

DRY PULU is the Healthiest, Softest, Cheapest, and most Durable material for Bedding now in use.

Fleas will not live in Pulu Bedding. 25 3m

## Greatest Labor-Saving Machines of the Age!

## CALIFORNIA INVENTIONS!

## PECK'S SANTA CLARA HEADER AND HARVESTER!!

## THE UNDERSIGNED HAVE PURCHASED OF

## Edmund Peck,

All his right title and interest in and to his newly-invented PATENT HEADER AND HARVESTER, to which was awarded, at the County Fair, held at San Jose, September, 1858, the FIRST PREMIUM, over the Illinois (or Haines) Harvester, and all other Machines on exhibition. We shall manufacture for the present harvest 50 Machines of the above description, and are ready to receive orders for the same. Parties wishing to purchase Clippers or Headers, will please give us their orders. We design making the best Machine of the kind ever offered to the public. This Machine combines many useful improvements, and was pronounced by the Committee the greatest invention of the kind. One of the above machines cut, last season, OVER ONE THOUSAND ACRES OF GRAIN, and the expense of repairs did not exceed TWENTY DOLLARS.

So soon as this great labor-saving machine is known, it cannot fail to take the place of all other machines of the kind. Mr. Peck has displayed great ingenuity and judgment, the advantages of which every farmer should avail himself, and we believe the community at large would be benefited. We have already received, through Mr. Peck, from those who saw them in operation last season, orders for nine machines.

The above machine cuts TEN FEET, and last season in THREE DAYS, one machine cut EIGHTY-ONE ACRES OF Grain, which is more than has ever before been cut in the State of California, by one machine, in the same time.

Send in your orders. We mean what we say. Recollect the place:

33 Sacramento street.

THOS. OGG SHAW,

GEO. H. MONROE.

The advantages we claim the Peck Header or Harvester possesses over any other MACHINE of the kind in the State, are:

1st. Its being a California invention, and got up by a practical farmer, and well adapted to the wants of this country.

2d. The wheels of this machine being iron, and not liable to shrink or swell.

3d. It is the principle of raising or lowering. As the machine is evenly balanced, a child can raise and lower it with perfect ease while in operation, requiring no delay.

4th. It cuts as low as any Reaper in use, and can be raised to a height of three feet, in one minute.

5th. It is the manner in which the machine is guided, it being so constructed that a boy of ten years can guide it.

6th. It has no side draft, as both wheels are of a size, and the weight is equally divided.

7th. It has two elevators, one for carrying the grain back from the sickle, while the other receives it and delivers it in a wagon alongside.

8th. It takes less team to propel it.

9th. It is more simple and is easily understood.

10th. More substantial and less liable to get out of order.

11th. We can cut and stack with this machine, grain in good condition, for \$2.50 per acre, while in the old manner of cutting, it costs at least \$3.00, leaving you to judge as to the saving this machine has over any other.

12th. This machine is so constructed as to save all the grain.

13th. You can cut with four horses, from twenty to thirty acres per day.

14th. The greatest advantage of all, that this is a California-made Machine, and it can be repaired on short notice, and at a great deal less expense than any imported Machine.

## Report of the Committee on Reapers, Mowers, and Thrashers.

The Committee appointed to examine and report upon Reapers, Thrashers, and Mowers, and Agricultural Implements, report that we have examined the GRAIN CLIPPER INVENTED BY MR. E. PECK, of Santa

**THE HOUSE-FLY CORREL WITH MAN.**—The history of the fly leads our thoughts back into the obscure past, even to the earliest period of creation; and here again it testifies to the wisdom and goodness of the Creator. That the insect and its congeners were found long before man, is evident from the circumstance that traces of its fragile remains have been discovered far down in geological formations. Then, as now, each mechanical portion of its structure was suited to the element upon which it operated, or that entered the body of which it was to become a constituent part. Then, too, its wings propelled it rapidly through the limpid atmosphere, and its spiracles sifted the self-same atmosphere before admitting it into the circulating tubes. The insects that formerly existed were chiefly such as were suited to a life in the vast woods and forests, and their larvae were developed in the earth itself; but when man received possession of the earth, then the Creator altered the nature even of the human fly, and brought into existence new races, adapted in their structure and habits to the changed surface, or produced in the greater abundance the requisite forms, that had before been but sparingly distributed. These revealed among sweet-scented flowers and herbs, and their young were reared upon decaying vegetation. Even in the past history of the insignificant fly, therefore, and in the links that have connected it with creation, do we read of steadfast unity of purpose, eternal wisdom in design, and boundless power in execution.—[Samuelson's Humble Creatures.

**"El Dorado."**—These words have become very familiar, and though there is a general appreciation of their meaning, there is by no means a knowledge of their origin. In 1541, Gonzalo Pizarro, brother to the conqueror of Peru, marched from Quito to seek the fabled kingdom of gold, which, according to the traditions of the aborigines, existed somewhere east of the Andes.

"The monarch of this fabulous kingdom," was said, in order to wear a more magnificent attire than any other king in the world, to be adorned in a daily coating of gold. His body was annointed every morning with rare and fragrant gum, and gold dust was blown over him from a tube. Thus attired, the Spaniards called him El Dorado (the Gilded King). He was said to reside generally in the superb city of Maoua, in one street of which there was said to be no less than 3,000 silversmiths or silver-workers. The columns of his palace were affirmed to be porphyry and alabaster; his throne ivory, and his steps gold; the body of the palace was of white stone, ornamented with golden suns and silver moons; living lions, fastened by chains of gold, guarded its entrance."

**ASTROLOGUE OF JOHN HANCOCK.**—"Byles" letter in the New York Tribune gives an anecdote of John Hancock's hospitality, apropos of the purchase of the Hancock estate: "There were not less than fifty or sixty at table, but the host did not sit at meat with them. He ate at a little side-table, and sat on a wheel-chair, in which he wheeled himself about the general table to speak with his guests. This was because of his gout, of which he made a political as well as social excuse for doing as he pleased. On the occasion in question, when the guests were in the height of animated conversation, and just as the cloth was drawn, they were interrupted by a tremendous crash. A servant, in removing a cut-glass *aperogre*, which formed the central ornament of the table, let it fall, and it was dashed into a thousand pieces. An awkward silence fell upon the company, who hardly knew how to treat the accident, when Hancock relieved their embarrassment by cheerfully exclaiming: 'James, break as much as you like, but don't make such a confounded noise about it!' And under cover of the laugh this excited, the fragments were removed, and the talk went on as if nothing had happened. This, it strikes us, was the presence of mind of true good breeding."

**AUSTRALIAN FORESTS.**—In no part of the world did I even see such absolute mid-day darkness as occurred in many spots of this forest. Not a ray pierced the dense shade, and the eye ranged through the melancholy colonnades of tall black stems, and along the roof of gloomy foliage, until it was lost in the night of the woods—midnight with an Australian sun at its meridian! We were perhaps the more struck with its peculiarity, because the reverse is the character of the Australian bush; for the foliage of the gum-tree is so thin and so pendulous, that when the sun is overhead, one rides almost as though there were no trees. If there is such a thing as a sinistral tree—a Peter Schlemmer of the woods—it is the gum-tree. It was a singular and pretty and pretty sight to see, as we did this day, during one or two momentary bursts of sunshine, large flocks of parrots dart across our path, like a shower of rubies, emeralds and sapphires, glittering for an instant in the watery beam, and vanishing as quickly in the gloom of the wilderness.—[Travels Abroad.

**THE BRIDE.**—I know of no sight more charming and touching than that of a young and tender bride, in her robes of virgin white, led up trembling to the altar. When I thus behold a lovely girl, in the tenderness of her years forsake the house of her childhood—and the implicit confidence and self-abandonment which belongs to women, giving up all the world for the man of their choice; when I hear, in the good old language of the ritual, yielding herself to him, "for better or for worse, for richer, for poorer, in sickness and in health, to love, honor and obey, till death us do part," it brings to mind the beautiful and affecting devotion of Ruth: "Whither thou goest I will go, and where thou lodgest I will lodge—thy people shall be my people, and thy God my God."—[Washington Irving.

**AS OLD RELIGION.**—The Zend Avesta, the bible of the Parsees, is said to contain intrinsic evidence of its being composed more than 2,500 years ago. The Parsees adore one God only, eternal and almighty; they reverence the heavenly bodies and fire, as visible images of the invisible Deity, but emphatically repudiate their worship. They acknowledge in Ormuzd the Principle of all Highness; in Ahriman, the author of all evil. They believe that the most acceptable sacrifices to God are good actions; that the best court of equity is a pure conscience; that truth is the basis of all excellence; that truth is the efficacy of prayer, in the doctrine of the resurrection and the judgment, in the existence of a heaven and a hell. Their whole religion thus affords a close parallel to that of the Christians.

**ABOUT GIRLS.**—The best thing about a girl is cheerfulness. We do not care how ruddy her cheeks may be, or how velvety her lips; if she wears a scowl, even her friends will consider her ill-looking. Will not the same rule apply to grown up girls?

**CHARLES II.** when dining off a loin of beef, asked the name of it; and being told it was the loin, he said: "For its excellence I will knight it, and henceforth it shall be called *So-loin*," and so it is still called.

**NO WARDEN.**—So many worthless medicines are advertised for the cure of various diseases, and when tried "found wanting," that an invalid loses all faith in specifics. We have yet to learn, however, of the first failure of Wistar's Balsam of Wild Cherry, to cure coughs, colds, and pulmonary disease. Buy none unless it has the written signature of "J. B. Wistar" on the wrapper.

## SLEEP! SLEEP! SLEEP!

"To each and all, a fair good night,  
And rosy dreams and slumbers light!"

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best?

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
The rest that, while sleeping, our health doth renew,  
Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Economy tells us to buy and to keep  
The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
On the mattress from JACOB SCHRIEBER!  
If bachelors lie single, then life will not jingle  
Till they're married and purchase one wider!

So come to J. SCHRIEBER's, they go where, where,  
Those famous mattresses made out of PULU!

J. SCHRIEBER,  
Jackson street, near Hotel International.

**The Oxygenated Bitters.**—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Costive ness, loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acidity, Sea Sickness, Scoury, Nausea, Headache, Ennui, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and powerful *remedy* for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ largely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug; in their nature tonic, not stimulating; retaining their virtues in any climate; they are a "combination and a form indeed" of Medicine which knows no rate in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by—WALTER MORRILL, HENRY JOHNSON & Co., and READINGTON & Co., San Francisco; CHAS. A. CLARK, and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

## HOTELS.

## ST. GEORGE HOTEL!

Corner of Fourth and J Streets,"

## SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY  
RENOVATED,  
RE-FITTED AND RE-FURNISHED,  
IS NOW OPEN  
FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON,  
Proprietor.

## MAMMOTH GROVE HOTEL.

(Museum Building), Boston, Mass.

## BIG TREES. BIG TREES.

## CALAVERAS COUNTY.

THE undersigned respectfully announce to the public that they have recently purchased the above premises, and have renovated and refurnished the hotel in such a style as to merit the patronage of

## A FIRST CLASS HOUSE.

By reason of experience and strict attention to business, they hope to be able to please all who may favor them with a call.

The proprietors intend to render the Mammoth Grove what nature designed it should be one of the

## Most Desirable and Pleasant Places

of resort for spring, summer and autumn, pleasure seekers in the State. We need hardly add that the Big-Tree Grove is among the grandest wonders of the world.

## GOOD FISHING AND SPORTING

within five miles of the hotel.

Distance from Marysville fifteen miles; from Cave City, twelve miles; from San Andreas, via Murphy's, thirty-five miles; via Cave City on horseback, twenty-seven miles. By Murphy's, good roads for carriages.

By SPERRY & PERRY.

## BY THE OVERLAND MAIL.

The Overland Mail which arrived here Wednesday night, brought St. Louis papers to the 6th of June, and dates from Europe to the 25th of May by the steamer Washington.

## DOMESTIC INTELLIGENCE.

St. Louis, June 4.—The city was startled yesterday by the intelligence that Joseph Charles, one of its oldest and most valued citizens, had been shot down upon the street by Joseph W. Thornton, at one time a book-keeper in the Bortman's Savings Association in that city. Charles died this morning at 7 o'clock.

A breach of promise suit had been pending before the St. Louis Court of Common Pleas, wherein the plaintiff, Miss Carstang, placed her damages at the unusually large sum of \$100,000. On the 3d of June the jury handed in their verdict, which awarded to the injured lady the full damages she had asked for. The defendant, Mr. Shaw, is a very wealthy man, and owns estates in St. Louis alone to the value of some \$500,000. A good deal of surprise was expressed at the liberality of the jury. The action of the defendant, in attempting wantonly to blacken the lady's character, doubtless excited the sympathy of the jury and reacted against himself.

THE VIRGINIA ELECTIONS.—Richmond, Va., June 1.—The Secretary of the Commonwealth has official returns from 107 counties. Letcher's majority, so far, is 4696. There are 44 counties yet to be officially heard from. The counties officially reported include most of the Opposition strongholds. It is now believed that the Democratic majority will be 6000 or more.

HOUSE'S PRINTING TELEGRAPH.—The exclusive right to the patent of this apparatus has been purchased of the patentee, and it is expected that the improved system of telegraphing will be introduced upon the line of the Alta Telegraph Company, between San Francisco, Sacramento and Marysville, at the earliest possible moment.

New York, June 2.—The Tribune says that Flora Temple, who came out victor in the race with Ethan Allen, a few days since, has been matched again by the mare Princess, formerly owned in Chicago, where her name was Topsey, and subsequently successful as a racer in California. The time for the contest has not been fixed upon.

Washington, June 4.—Indian Superintendent Collins, of New Mexico, announces to the Indian Bureau the perfect safety of the Southern Overland Mail route. No fear of an attack need be entertained in that quarter.

Cincinnati, June 3.—A fire occurred in Covington, Ky., yesterday afternoon, in the bagging factory of Roberts & Co., which was entirely destroyed. Loss \$25,000. Insurance small. One hundred and twenty men and women are thrown out of employment. The fire extended to the Covington Locomotive Works, which was damaged to the extent of \$5000.

St. Louis, June 6.—Last night Wm. Gruen and John Montague died from the effects of overdoses of colchicum, which they supposed to be a remedy for ague.

The steam-ship Minnesota, Capt. Dupont, had arrived at Boston from China, via the Cape of Good Hope. The ship is reported to be in excellent condition. Her voyage from Cape Town was remarkable for its expedition, and greatly pleased her officers, who say she has not met her equal during the cruise. At Cape Town, Capt. Dupont collected some very fine furs from the mountains in the interior, and was also presented with a specimen which will be interesting to American naturalists, viz: the stuffed head of the new variety of antelope discovered by Dr. Livingstone in Central Africa. The specimen was one of two that Dr. Livingstone secured and gave to the Governor of Cape Colony, by whom it was presented to Capt. Dupont. Dr. Sheldon, also, has added to our knowledge of the natural history of that part of the world, by bringing home the preserved skins of many birds hitherto unknown to ornithologists. The Postmaster General received the executed bond of Mr. Johnson, the Nicaragua-California mail contractor, on the 2d of June. The bondsmen were Hiram Grimes, George W. White, and George Irvin. The contractor asserts that he can and will fulfill the obligations he has assumed.

A flash ring lately picked a lady's pocket in a New York omnibus of a purse containing a few dollars, and in so doing dropped in the said pocket a diamond ring from his finger worth \$500, which the lady found when she got home.

At a meeting of the Massachusetts Medical Society, the prize offered for the best dissertation on Bronchitis, was awarded to Dr. Daniel E. Slade.

## FOREIGN NEWS.

BATTLE OF MONTIBELLO.—The first collision between the antagonistic armies, entitled to the dignity of being called a battle, took place at Montibello, a town in Lombardy, on the 21st of May. All details of the engagement are evidently from French and Sardinian sources, and are probably somewhat exaggerated.

The allied French and Sardinian forces and the Austrians had met, when the latter were defeated. The battle took place at Montibello, a town in Austrian Italy. The Austrians were over 15,000 strong. They made the attack, and after a severe engagement, were obliged to retreat. The allied army lost 700, among whom were many officers, while the Austrian loss was estimated at 2000. The Austrians, who were commanded by Gen. Stadion, attacked the post of Gen. Baragary d'Billiers, and were driven back by Gen. Forey's division, after a furious combat which lasted four hours. The allies carried Montibello, but did not pursue the Austrians. Two hundred Austrians, including a Colonel, were captured and taken to Mantua. The Austrian account of the battle differs widely from the above. The actual force of the French is not stated, but it is reported that it numbered 6000 men, besides a regiment of Sardinian cavalry.

A bulletin issued by the Sardinian Government announces that the extreme left of the Sardinian army, under Gen. Baldini, had forced a passage over the river Sesia, putting the Austrians to flight. Gen. Giribaldi had entered Pavia with 6000 men, for a revolutionary purpose.

It was rumored that six English men-of-war had entered the Adriatic Sea.

A revolutionary movement was reported in Lombardy.

The King of Naples is dead, and Francis II. has assumed the government of the country.

The British Admiralty had formally invited tenders for the carriage of a monthly mail to and from Australia via Panama.

A general meeting of the stockholders of the Atlantic Telegraph had been called, to sanction the agreement with the Government, and to issue \$2,000,000 of new capital.

The Paris Monitor had announced that France adheres to the abolition of privateering, and that a neutral flag covers the enemy's goods.

The Paris Bourse closed firm.

Consols closed at 91 1/2 @ 92 for money and account.

It is said that a contract for one of the great iron ram steam vessels, to be built for the English Government, has been obtained by the Thames Iron Works Company. She will be of 6000 tons burden, with an expected speed of fourteen knots, and will cost nearly four times as much as a first-rate man-of-war.

The elections of England for members of the House of Commons were concluded, and the ministerial papers claim that the Derby party has been strengthened by the addition of twenty-three members.

The Queen's speech to the new Parliament was not expected to be delivered before the 10th of June.

The London News says that the Liberals will insist on taking up the Reform question where it stood at the dissolution.

The eight steamers of the European and American Company have been bought on speculation by Lewis & Howard, of Manchester.

Twenty thousand men have been enrolled in the British navy.

Messrs. Burton & Specke, the African travelers, had arrived at Aden, from Zanzibar. They penetrated into the country about 700 miles from the coast, and surveyed the famous Lake Unyamwezi, and several other lakes in the same longitude. Their researches tend, in some degree, to dispel the doubts which have so long hung over the sources of the Nile.

The sun shone brilliantly into the room where Humboldt died, and it is reported that his last words, addressed to his niece, were: *Wie herrlich diese Strahlen; sie scheinen die Erde zum Himmel zu rufen!* How grand these rays! they seem to beckon from earth to heaven.

The Liverpool Post, in its article declaring that the passage of the Tincio by the French and Sardinian armies would be the signal for an European alliance, and the march of the Austrian troops on Paris, says also that Russia is to join Austria, and his reward for what looks like treachery is to be the cession of Moldavia and Wallachia.

The French government had received information that four Russian corps d'armée had moved to the Austrian frontier.

The digging of the Isthmus of Suez Canal commenced on the 26th April, and the first sod was turned by M. Ferdinand de Lesseps, in the presence of the contractor of the works.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

(Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

## BANKERS, ETC.

**MARK BAGMAGIM & CO., BANKERS,**  
No. 100 Montgomery street,  
SAN FRANCISCO.....CALIFORNIA.

## Sight Bills

Bank of Commerce, - - - - - Boston.  
SIGHT AND TIME BILLS

American Exchange Bank, New York,  
Available in the Principal Cities of the Union and the Canada.

One-half per cent per Month Interest Allowed on our Certificates of Deposit, payable at five days' notice.

Parties desiring to bring funds to California can do so at a reduced rate by depositing to our credit with the American Exchange Bank, New York, for which a certificate will be given for their credit with us in San Francisco. We will pay the same on presentation, together with the two per cent premium.

MARK BAGMAGIM & CO.,  
103

## STOCK HORSES.

The Fine Thorough-bred Stallion  
**Prince Morgan,**  
WILL STAND FOR THE SEASON,  
AT  
**MOORE'S RANCH,**  
San Ramon Valley, Contra Costa County,  
At the following low Rates:  
To insure.....\$30.00  
For the season.....25.00  
Single Service.....15.00

**PRINCE MORGAN**  
Is grandson of Green Mountain Morgan, and sired by the celebrated Plover Morgan. His dam is descendant of Prince Majesty and Tiger Whip. He is four years old, this spring; fifteen and a half hands high, and weighs 1075 pounds. For references as to his qualities, and speed, inquire at Mr. J. S. TAYLOR'S Stable, on Market street, opposite Second.

**Wm. Moore,**  
San Francisco, April 5th, 1859. 10-3m

The Celebrated Trotting Stallion  
**"GENERAL TAYLOR,"**

WILL STAND FOR THE SEASON, commencing the 1st of April, 1859, at HUNTER'S POINT RANCH, four miles from the city, on the San Bruno Road. Terms—\$30 for the season; \$10 for a single service.

**GOOD PASTURE AND STABLING** can be had, if required. One thousand acres in grass, wet and low lands, with abundance of water and feed for brood mares, all of the year. The fields are well fenced, and every care taken for the security and health of stock; but all animals are at the risk of the owners. Pasturing, \$3 a month; Stabling, with grain and hay, \$1 per day.

P. S. HUNTER, Agent,  
Hunter's Point Ranch, San Francisco county.  
N. B.—ORDERS left at the Grocery Store, south-west corner of Mission and Third streets, will be promptly attended to. 12-3m

The Imported Thorough-bred English  
**RACE HORSE**  
**"LAWYER,"**

WILL STAND THIS SEASON (TILL THE 1st of September), at  
**TWELVE-MILE FARM,**  
SAN MATEO COUNTY.

Terms—\$100 for the season; \$50 the single leap.

Good pasturing and stabling, at the Twelve-mile Farm. Pasturing.....\$5.00 per month.  
Stabling.....1.00 per day.  
Well-fenced fields, and every reasonable care taken, but all animals are at the risk of their owners; and all charges must be paid before mares leave the stable, except a lot is offered. For pedigree, or further particulars, apply to

**WILLIAM HOOD,**  
"Los Gullucos," Sonoma county;  
Or, JOHN CUMMING, Twelve-mile Farm,  
or 141 Clay street, San Francisco. 13-4

The Celebrated Trotting Stallion  
**Black Hawk General Scott,**

WILL STAND AT THE STABLES OF  
**F. K. SHATTUCK & CO.,**  
OAKLAND, ALAMEDA COUNTY.

At Fifty Dollars the Season, commencing April 1st, and ending September 1st, 1859—payable in advance.

**GENERAL SCOTT**  
Was imported by F. K. Shattuck & Co. in 1856; was sired by Vermont Black Hawk "Young Prince," his sire Old Black Hawk of Vermont, and dam by Lady Messenger. For further particulars, inquire of the undersigned.

**F. K. SHATTUCK & CO.**  
OAKLAND, April, 1859. 12-3m

**Regular Dispatch Line FOR HONOLULU.**  
THE CLIPPER BARKS  
YANKEE.

**CAPTAIN C. J. LOVETT,**  
**FRANCES PALMER,**  
**CAPTAIN JOHN PATY,**  
and **ADELAIDE,**

Have regular dispatch.....for Honolulu.  
For Passage—having superior accommodations—  
Freight, apply to

**McRUE & MERRILL,**  
Agents,  
47 and 49 California street,  
San Francisco. 15-3m

**THE AMERICAN TRADES COMPANY.**  
WHAT THEY MANUFACTURE:

**The American Smoker.**  
CONSISTING of a great variety of unique and beautiful patterns of CIGAR TUBES; also, several varieties of PIPE TUBES. The peculiarity about the article is that each one is arranged so as to receive a damp sponge, through which the smoke of the burning cigar or tobacco has to pass on its way to the mouth. The damp sponge not only cools the smoke, but extracts from the nicotine oil the poisonous property of the tobacco, which renders the breath less offensive. Smokers will find in the use of these Tubes a luxury never before attained except by using the Turkish water jar. Their use will also greatly promote the health of the habitual smoker and preserve the sweetness of the breath.

**The American Carpet Hook.**  
Is a little contrivance for putting down carpets without tacks. It is a new article, which has never before been upon the market. But it possesses the merit of enabling a person to put down or take up a carpet of the largest size in general use in fifteen minutes, without any injury to the floor or carpet. It is a very cheap, cheaper in the long run than tacks, and the great facility with which even a servant can take up and put down carpets, without the possibility of a mistake, renders it invaluable to the housekeeper. 15

**WILLIAM THURNAUER,**  
Importer of French and German  
**FANCY BASKETS,**  
English and American Willow-ware,  
Cane and Willow Chairs, Ladies' Work-stands  
**TOYS, ETC.**

No. 92 Battery street, between Commercial and Clay,  
San Francisco. 13-3m

**Table and Pocket Cutlery.**  
**THOMAS DAY,**  
No. 188 Montgomery Street, San Francisco.

**HAS ON HAND,** a large assortment of Fine IVORY TABLE CUTLERY; also common Table Cutlery with a variety of Bone and Stag Handles, etc., suitable for the country trade. Also, a large stock of Building and Grating Lumber, also Bowls, Knives, etc.; received by every steamer, of Wootenholm & Sons, Alexander's, and Edward Barnes & Sons, Sheffield.

For sale, wholesale. 23-3m

**RICE AND CORN DRILLS,**  
**THRASHING MACHINERY,** Wheat and Rice CRADLES, our celebrated two and four horse cylindrical Straw and Fodder Cutters, Corn and Cuck Crushers, Plantation Mills, Plows, Cultivators, etc. For other Implements, see our Descriptive and Illustrative Catalogue, to be had gratuitously on application.

Planters wishing to procure supplies of greater strength and capacity than the Eastern Mills, will do well to examine our stock.

**ROBERT SINCLAIR & CO.,**  
Manufacturers, Baltimore, Maryland.

**Gas Fixtures.**  
**THOMAS DAY,** Importer, is constantly receiving GAS CHANDELIERS, PENDANTS, BRACKETS, Etc., and everything connected with the Gas business. For sale, wholesale and retail.

All goods sold in the city, put up by experienced workmen, and warranted.

**THOMAS DAY,**  
188 Montgomery street (near Jackson street),  
San Francisco. 23-3m

**Rags Wanted.**  
**THE HIGHEST PRICE PAID IN CASH FOR PAPER** Rags at the Office of the Pioneer Paper-mill, No. 25 California street. Our friends in the country are invited to send in their Rags, and send them to us. Printers, publishers, book-binders, etc., can be supplied with extra sized Paper, at short notice.

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JULY 8, 1859.

NUMBER 23.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
Terms.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### Fruits and the Culture of Fruits.

[The following are the remarks of that distinguished friend of Horticulture, Hon. M. P. Wilder, before the fourth Agricultural Meeting of the Massachusetts Legislature, last winter. The facts here presented are important, as the facts from our own State and Oregon are being felt and appreciated by Col. Wilder and others, as will be seen by his remarks. We are pleased to see him urge the raising of seedlings. Our readers will bear in mind our oft-repeated articles on that point.]

Is an interesting discussion at the fourth Legislative Agricultural Meeting, in the Representative Hall, Boston, the subject "Fruits and the Culture of Fruit-Trees," the Chairman, Hon. Marshall P. Wilder, said it gave him great pleasure to make a few remarks on the subject of discussion, which was one of the most important that could be debated. Fruits, as articles of market value, were among the most important of the products of the farm, and as much so to the country as to the Commonwealth. Their cultivation had made great progress among us within the past fifteen years. The crop in Massachusetts, in 1845, was valued at \$700,000. In 1855, its value was \$1,300,000. In 1859, it could not be less than two millions of dollars—more than the value of the wheat, oats, rye, and barley, in the State. Such had been the result of pomological science in Massachusetts, that her exhibitions sustained the highest rank. One gentleman, who had had opportunity of judging, said that he saw more choice fruit at one of our exhibitions here, than he saw at twenty in Europe, where, as in Germany, the greatest encouragement had been given to pomology by the Government. But great as was our credit here, it was eclipsed by that of California and Oregon, correspondence from which region showed that they were blessed with wonderful natural facilities for the growth of fruits of all kinds. Col. Wilder read a letter from a correspondent at Monroe, Oregon, stating that he had forwarded a box containing an apple forty ounces in weight, and twelve others, averaging a pound-and-a-half each! Another correspondent from the same region informed him, that ten millions of nursery trees had been sold in Willamette Valley; and Col. W. added that at Washington, a few days ago, he saw a pear from that place which weighed four pounds! Grapes, when their value was considered, either as an article of luxury or commerce, had important claims on our attention, in respect to the best sorts to cultivate, and best modes of cultivating them. The pear crop in this State was valued at \$100,000 per annum, and also demanded a full share of attention, with respect to kinds best suited to our soil, and to the most approved manner of cultivation. We had among us many varieties of pears adapted to our climate and soil, and of these varieties the Bartlett, Vicar of Winkfield, and others, which he named, were well adapted.

The following were recommended as the six best varieties of Apples: The Williams, Early Bough, Gravenstein, Fameuse, Hubbardston Nonsuch, and Baldwin; and if sweet varieties were desired, the Red Astrachan, Rhode Island Greening, Ladies' Sweet, Porter, and Talman Sweet, might be added. For pears, on their own roots, the following were recommended:

Best six Pears on their own roots: Bartlett, Urbaniste, Vicar of Winkfield, Buffum, Beurre d'Anjou, and Lawrence.

For the best *tree*, add: Rostiezer, Merriam, Doyenne Boussock, Belle Lucrative, Flemish Beauty, and Onondaga.

Best six on Quince roots: The Louise Bonne de Jersey, Urbaniste, Duchesse d'Angouleme, Vicar of Winkfield, Beurre d'Anjou, and the Gloat Moreau.

With regard to the conditions of proper cultivation of fruits, no great success could ever attend the labor of producing them, unless it was conducted with a care equal or superior to what was spent on any other kind of production. One of the primary and most essential conditions had proved itself to be thorough drainage, as through its operation the more troublesome diseases and parasitic affections were obviated. This thorough drainage, Col. Wilder insisted, was an absolute associate of success. He then made a few remarks on the great necessity of keeping the soils of orchards in a rich condition, by manuring, and of planting the various descriptions of trees in the soils best suited to them. He repudiated the fashion of adopting too many foreign trees; for, as a general principle, trees and plants flourished better on the soil of their origin, than they did in localities foreign to them. Col. W. recommended raising seedlings, as on them we would ultimately have our surest dependence for good, reliable fruit-trees. We had, doubtless, a number of fine fruits already native to the soil; at the head of which stood the Baldwin apple, of which fifty thousand barrels were last fall exported from Boston. At a late meeting at Rochester, N. Y., the Baldwin had two marks of merit to one for any other kind, and the others which received the next highest commendations were the Rhode Island Greening, the Russet, and the Tompkins' County King. Col. Wilder went on to give the statistics of apple and peach culture in the West and South, showing that it was much more extensive than was generally believed. He concluded by saying, that he hailed with pleasure the

wide-spread interest now manifested in relation to the cultivation of the grape. The time, he said, was within the recollection of some present, when the Catawba and the Isabella were first brought into notice. Hundreds of cultivators were now raising seedlings, and the day would soon come when our markets would vie with those of Italy, Sicily, and other grape-growing countries, where this luscious fruit is not only a luxury to the opulent, but the food of the humblest peasant. Our native vines were attracting attention in Europe, and, at a late convention in Belgium, our Catawba was pronounced superior to the best varieties of Rhine wine. Our own Concord grape, also, had attained great estimation among wine-growers. We have been compelled to give merely the substance of Col. Wilder's remarks.

#### All around the House.

WERE we always to judge by appearances we should make sad mistakes. The good book tells us not to judge by appearances, but judge righteous judgment. When we ride into the country and see a beautiful location for a "home"—a place really lovely, with fertile soil, and find a plain and simple residence only, and that perhaps not guarded by a fence, no trees, no garden, nothing to break the dreary barren look that is found, to a barn for stock, we sometimes feel angry that any man (except batchelors) should or could live in this way; and when we think of the wife and children growing up without anything to give them a love of the beautiful, we almost feel angry and ready to condemn such a husband, such a father; but often we find upon inquiry that there is sometimes the foundation for an excuse. *Home and the homestead* are dear words, and those spots are dearer still; and if the sentence that says: "Home is where the heart is," be true, then that home will not only be the centre of all our hopes, but of all our efforts, and we shall love it and love to protect, cherish and beautify it.

There are, however, scattered all over our State so many places called homes, that are anything but beautiful, that we are constrained sometimes to doubt whether the residents understand the science of life. We find they eat, drink, and sleep, and that is about all. They do work a little, and that is all; they only stay. Again, there are those whose appearances are the same outside, but within far different. They eat, drink, and sleep, but it is to live. Ever industrious, they prosper, yet they cannot, dare not improve the homestead, for they have no title. They have paid enough to have owned it several times, yet have no title. Fraud and wrong have almost discouraged them, and taken away the heart to beautify or adorn; but we hope the time is not far distant when these trials and troubles will be done away and the hard working and industrious farmer may be able to sit "under his own vine and fig-tree, with none to molest or make afraid." There are, however, a vast number of homes where there is no excuse whatever on the part of the owner, for their desolate and barren appearance. If improvements cannot be made, neatness and cleanliness at least can prevail. The yard "round about the house" can be kept neat and tidy, and this will add to the appearance so much that other improvements will follow until the spirit of beauty shall be aroused, and that which was once so barren and desolate "shall blossom with the rose." We hope a far better attention will be given to this subject, for all should beautify home.

#### Pruning Melons, other Vines, and Vegetables.

ALL Melon vines, Cucumber, Squashes, etc., are much improved by carefully selecting the strong vines for bearing, cutting out all others, and also nipping off the ends of these leading vines, after they have made a moderate growth. By this process, the vines are brought into a vigorous bearing condition, and their product will be larger, fairer, and better, in every respect; they will also mature with more of the rich natural juices which make them valuable, whether as a table luxury, in their natural state, or as a culinary vegetable.

These rules apply not only to the vines that we have named, but to the Tomato; the fruit of which is vastly improved in size, in flavor, and in beauty, by shortening the vines and a better care of them. The Lima Bean, also, instead of being allowed to run eight to ten feet high, and make vines, should be nipped off and forced to make the pod. This system will add much to the flavor of the bean, by making them more vigorous, and therefore richer in their flavor.

By such a procedure, and by studying the nature of the plant, its season and capability, the product of almost the whole vegetable kingdom can be increased in quantity, quality, and flavor.

The scientific plan that is adopted by those who raise melons, and vines of other kinds, for seed-fruit, is to nip off the runner after the third to the fifth leaf; and thus force out an extra number of vines near the root of the vine; keeping these vines short, they fruit near the root, and thus produce larger, and better, than if more distant from the root. Those who desire to raise seed, should always select the fruit nearest the root, and removing others on the vine, give the entire nutrition of the vine to this one specially, which has been reserved for future propagation. A little reflection will show the wisdom of such a plan.

#### Vegetable-Wax Tree—Japan.

Is the N. Y. Ag. Society's Journal, the Secretary notices the receipt of specimens of the wax and seeds of the tree from which the wax is made, from Hon. P. M. Wetmore of New York, and says: We have placed the seeds in the care of one of our best nurserymen, in hopes they may be made to grow. The importance of this acquisition, as will be seen from the annexed article from the American Consul, London, to the Secretary of State, can scarcely be too highly appreciated:

CONSULATE OF THE UNITED STATES, London, April 9, 1859.  
Sir: I am pleased to be able to add another evidence of the forecast, energy, and enterprise, of our commercial marine, in the arrival of the ship Florence, of Boston, Captain Dumaresq, at this port, from Nagasaki, in Japan, from whence she sailed on the seventeenth of December last, with a cargo consisting chiefly of vegetable-wax. This arrival from Japan is the first that has ever occurred in any English port, and it is gratifying to state that there is every probability of Captain Dumaresq realizing cent per cent upon the whole of his outlay. The wax, and the berry or fruit producing it, being previously unknown in this country, and deemed it probable that it would be an equal novelty at your department, I take the liberty of sending to your address, under separate covers, specimens of the wax and berry; the latter growing in clusters, similar to grape clusters, on trees varying from fifteen to twenty-five feet in height. The cost of the wax delivered in London is about eight dollars the hundred weight. The experience of Captain Dumaresq proves that the vegetable wax bears without softening a greater degree of atmospheric heat than any other wax he has experience of. The Japanese mode of preparation of the wax is said to be very rude; the berries being first washed by rude appliances, then boiled, when it is formed into cakes of thirty pounds, and subsequently dried in the sun. Should the labor not be too costly, there is every probability that the tree might be successfully raised and the wax manufactured in the Southern States. I have the honor to be, sir, very respectfully, your obedient servant. ROBERT G. CAMPBELL.  
Hon. Lewis Cass, Secretary of State.

#### Look to Your Fruit Trees.

Now is the time to aid many varieties of fruits in maturing, and, in so caring for them, as to produce larger, fairer and richer fruits. The operation of pruning should be such, that the bearing shoots should proceed immediately from the principal branches; and the consequences would be, that the fruit would receive more sap directly from the roots of the tree. The shortening of fruit-bearing branches by thumb-pruning is of great importance; thus checking woody growth, and throwing the whole sap into the fruit. All fruit grown on the main stems, near the body of the tree, is much finer than that grown upon the ends of the limbs. And orchardists should observe that the quality and quantity deteriorates upon every tree that is permitted to thus run out; for trees that are long neglected, and permitted thus to bear, will run to wood and not to fruit, become diseased and worthless, and die out—the same as humans who grow up in fashion's way, they show leaves and blossoms, but bear no fruit; and the order was, and should be: "Cut them down; why cumber they the ground?"

#### Summer Fallow—Dry Planting.

WE were much gratified to meet with a clear and practical proof of the excellence of the system of "summer fallow," and early or dry planting, which we examined near the Mission of San Jose the last week, at the ranch of Sanford Taylor, Esq. The land was plowed and planted at the time of harvest, last season, and a finer piece of wheat we have never seen. Mr. Taylor approves heartily of the "summer fallow," and assures us that the mountain-sides produced the best grain, and the best proof we had of his opinion, was his practice, as his fields were, in part, on the very high ground. A piece of "volunteer" wheat, that was plowed dry, was also very heavy, and would yield about forty bushels per acre. As a proof of the value of high land, and the faith of Mr. Taylor—his cottage, orchard, vineyard, and garden, were all upon the top of a high, rolling knoll; and he assured us, his trees, vines, and all, were in better condition, and less injured by the frosts, than any garden or orchard on the low ground around him. We ask our farmers and gardeners to note these facts.

#### Strawberries.

I AM opposed to all stimulating manures for the Strawberry, or land over-enriched, as some portions of the gardens are, but I have always preferred land in the best possible condition for a crop, says S. G. Pardee, in the *Cincinnati*, published at College Hill, Ohio. Then apply (continues the same authority) a moderate coating of unleached ashes, lime, and salt; say three bushels of ashes, one of lime, and four or six quarts of salt, and, if need be, prepared muck, or leaf-mold, or turf. Always keep them clean, and not only uniform large crops may be expected, but superior fruit; and all at cost of less than fifty cents per bushel for the mere cultivation, as my own and others observation and experience abundantly attest. If you mulch your beds with tan, the mulch will keep down the growth of weeds near the plant. I would let runners grow, and in the Fall take a fine rake and pull up the weak plants of the runners. This is cheaper than any plan of cutting off the runners, and does not injure the plants. In setting plants, use the plants from the first end of the runners, as the roots are stronger than at the little end of the vine.

#### More Good Horses.

WHEREVER we go we find fine horses, and a large increase of fine young colts. While at San Jose, recently, we called on Mr. Williamson, the owner of "Belmont," one of the fine horses now used as a stock horse for our State. "Belmont" is a splendid bay, twelve years old, of uncommon fine action and grace of movement; he stands fifteen hands and two inches high; weighs 1000 pounds, and may be well classed as among the handsomest horses of the State. We saw some of his colts, one and two years old, that give great promise. "Dashaway," a two-year-old, from "Belmont," owned by Peter Quivey, Esq., is a very fine creature. "Belmont" will show some of his colts this autumn that would astonish the old States. Several other of his colts give great promise. He stands at Quivey's stables, San Jose.

"State of Maine," of which we spoke two weeks ago, is of the old "Messenger" stock, true descent, and not of the horse "Messenger" now here, as might have been inferred by our remarks in that article. "State of Maine," now at Santa Clara, was brought to California by the present owner, Mr. E. W. Grover, together with the "American Hunter," now owned by Mr. Grover's father, at Stockton. "American Hunter" is a dark chestnut, fifteen hands high, weighing 1010 pounds. "Hunter" is a very fine horse. "The State of Maine," a very superior gray, was sired by the "Stone Messenger," a horse of high rank. "American Hunter" was sired by "Royal Oak," and promises to be a fine animal.

#### Horse-Racing at Fairs.

WE are glad to notice the following resolution, introduced and passed by the Ohio State Board of Agriculture, at its last annual meeting, viz:

Resolved, That paying premiums by Agricultural Societies for speed of horses, simply as such, without due reference to qualifications for purposes of general utility, is a perversion of the original design.

Resolved, That such trials of speed have a great tendency to divert attention from everything else; and, what seem to be their inseparable accompaniments, are defrauding and demoralizing; and, therefore, we will not offer such premiums, and will discourage their being offered by County and District Societies.

This is a move in the right direction (remarks the American Agriculturist), and is the more gratifying from having been introduced and warmly advocated by a breeder of fast horses, who, rather than encourage such exhibitions (turning our Fairs into horse-races) would sacrifice his entire stable. [We say, "Amen!"]

#### Thorough Tillage.

At an agricultural meeting in Ireland, one of the speakers remarked—a truth that may be well applied here:

"What brought out the immense agricultural wealth of Scotland? and what enabled the small farmer in Belgium, who, on seven or eight acres of light, sandy land, was able to do better for himself and his family than we can do on twenty or thirty acres of land in this country? It was not by allowing three-fourths of a light tillage farm to remain in poor herbage, and making the other quarter pay the rent. It was because the farmers, in those countries he alluded to, made agriculture a study, a duty, and a pleasure, and because no man there would keep one single acre of land more in his possession, than his capital and his means would enable him to cultivate."

We wish the farmers and cultivators, orchardists and nurserymen, and all connected with agriculture in its various branches, would read and reflect upon the above. We know of some cultivators whose lands are not all in the highest state of cultivation.

A NEW AND DELICIOUS SALAD.—We desire to call into notice a valuable medicinal root used very much by the Italians as a salad, and which is found in many gardens as an ornamental plant, but which we think will soon come into notice and use, being by far superior in many respects to celery, which is now in universal demand. We allude to the *sweet fennel*, called by the Italians "finocchio." It is not common and only grown as a pretty plant in a garden; it has deep green tasseled foliage, used heretofore only as an herb, having a pleasant fragrance. We saw this plant on the table of the students of the College of Santa Clara, and the avidity with which they sought it interested us. We again saw it upon the table of the "Fathers," and had an opportunity to try it. It is a superior salad, and we call attention particularly to it. It is raised from seed and planted like celery, only upon the surface of the earth, instead of in trenches, and grown like beets or carrots, the root being the part eaten. It is white, savory, and very palatable. Eaten with salt, when once tasted, it becomes a favorite. We hope our Italian and French gardeners will soon introduce it into our market.

SANTA CLARA COLLEGES.—The successful exhibitions of several Collegiate Institutes which have recently taken place in San Jose and Santa Clara, which we had the pleasure of attending, have given great credit to the officers of each institution, and we regret we are obliged to postpone several articles intended for this week, but we cannot avoid, by reason of other and important matter.

#### Letter from "Down East."

BY OUR REGULAR CORRESPONDENT.

PORTSMOUTH, N. H., June 4, 1859.

EDITOR FARMER: I must skip our very pleasant trip on the Northern Light, from Aspinwall to New York, our fortnight's stay in Harlem, and take you to the Horticultural Exhibition in Boston.

On the morning of May 21st, B. P. Shillaber, Esq. (Mrs. Partington), called on me and kindly invited me to visit the Exhibition, where he introduced me to many of the eminent horticulturists of Boston and its vicinity, and where I saw a display of Fuchsias, Verbenas, Geraniums, Roses, Early Fruits, etc., etc., that perfectly enchanted me. I must defer particular notice of them; but as the Exhibition proved to be the finest they have had for years, a future reference will not be an *iss*. At the Hall I met many old friends of yours, who heard of you with much pleasure. Among those who wished to be particularly remembered to you was Bowen Harrington, Esq., whose father fought in the memorable battle of Lexington. On these sacred grounds Mr. Harrington now cultivates flowers—fit emblems of the glorious fruits of the mighty struggle there begun. E. S. Rand, of Dedham; Mr. Galvin, of Somerville; Gustav Evers, of Brighton; Hovey & Co., of Boston; Jos. Breck & Co.; J. Fiske Allen, of Salem, and many others, contributed to beautify the exhibition; and although the weather was quite unfavorable, the attendance was large. Mrs. Partington being well acquainted, made me perfectly at home; and being herself an ardent lover of flowers, the call was very interesting. I regretted not meeting Eben. Wright, Esq., who was not present at the time I called, but shall call upon him at a future time.

Madame Biscaccianti gave our good Portsmouth people one of her delightful concerts on Friday evening, May 26th; and although nearly seven years have passed since she sung in San Francisco, I could not detect any change in the sweetness and melody of her fine voice. She intends visiting California some time in the Fall, and I doubt not will receive a cordial welcome.

On my arrival in New York, a month since, the same kind of trees which were in full blossom a month before I left California, were just putting out. Last year the fruit yield in the Atlantic States was very slim, but this year an abundant return is anticipated. Everything in the rural districts I have visited is promising and delightful; and, as the weather is every day becoming warmer, Nature is continually expanding into new forms of beauty.

I wish some of our good New England nurserymen and farmers could have some of our fine California ranches to cultivate, and would spend the care and attention they bestow upon their contracted inclosures upon their broad acres; they could then be able to appreciate California.

In a short time I hope to be able to tell you of many pleasant places in Massachusetts and New York I intend visiting. Excuse this meagre letter and hope for better things. Yours, E.

[We are pleased to hear from Mrs. Partington, via our correspondent; and the more so from it recalling pleasant associations and the days when our own exhibitions at the Massachusetts Horticultural Society were evidence of our own labor as a practical worker in the cause. We are pleased to hear from our old friends and co-workers in this grand cause, and to know of the pleasant interview our correspondent had with such spirits as those named; each and all are earnest workers in the cause of Flora and Pomona. We anticipate many pleasing letters from our correspondent from that quarter.]

#### Food of Bees.

The great increase of the honey bee, and the various plans which are now adopted to increase them, we fear has caused many to lose sight of the means of their support. Bees must be fed, and the food of bees suddenly disappears in many places. The localities of San Jose and Santa Clara, now the greatest places for the stocks of bees, are or were famous for the wild mustard. This is probably the best food of the bee, and lasts the longest. We find that the first and earliest food of the bee is the blossom of the Native Willow; wherever this is found bees thrive. This continues from January to March. Next comes the Fillarea, which continues for a month or six weeks. The Mustard continues till July, which is a hard dry month for the bee, and food should be planted so as to supply this deficiency. Buckwheat, English Beans, the flowery running bean, are all good. August, September and October are good months for the bees to work, for melons, squashes and other vegetables give them abundance of food. Great care should be had to see that bees do not starve for want of water. Although this little worker is truly industrious, but a little check and disease and death ensue. We have fears for those who have practiced the dividing system. We think Nature is the great teacher, and natural swarms do best. A few months, and we shall see the result of many experiments. Many apiarists who are largely engaged, will move their swarms, to pasture them, as with our dairy stock. We shall be glad to hear from all apiarists on the subject of their success. Persons desirous of good swarms, by addressing us can learn of those who have them for sale.

## Horace Greeley's Letters.

We believe the letters of this distinguished editor and traveler will be read with deep interest by every farmer and cultivator in our land. It will be perceived that Mr. Greeley makes particular observations relative to the soil and climate, as well as the productions of the country, through which he passes. This is the best evidence that his journey to California is one of observation as to the character of the country, its resources, and its ability to sustain a population, which, in all human probability, will cover the line of the Pacific Railroad, which will, ere long, unite the Atlantic and the Pacific coasts. Let the farmers of our State and Oregon read the facts recorded of the country and its ability for cultivation, and they will see the settling up of this section of country by means of overland travel, and an opening for our produce along the entire line; and, if they would secure a good trade for a vast amount of the products of this coast, let them aid by every means in their power the building of the Railroad. Then will cities and villages spring up along the entire route, and millions of wealth be poured into the laps of the farmers of the Pacific coast. The valuable facts thus presented us in the letters of Mr. Greeley, induces us to publish his letters almost entire, leaving out only such portions as relate to matters in which we have neither the disposition nor taste to meddle. But to the initial letter:

FROM NEW YORK TO KANSAS.

ATLANTON, KANSAS, May 15, 1859.

I LEFT New York by Erie Railroad on Monday evening, 9th inst., just as our fortnight of bright, hot, glowing weather was closing. Two hours later, the gathered clouds burst upon us in a rain, which continued through the night, though the City was not refreshed by it till some hours later. We had a glimpse of sunshine as we skirted the southern shore of Lake Erie on Wednesday, and some more after a heavy shower at Chicago on Thursday; beside these, cloudy skies, easterly winds and occasional rain, have been my portion since I bade adieu to the hot, dusty streets of New York. But it is breaking away as I write, and I hope to see Kansas for the first time under skies which image her sunny future rather than her stormy past.

Coming up the Erie Road, I tried a "sleeping car" for the third time, and not very successfully. We all "retired" at 10 o'clock, with a fair allowance of open windows and virtuous resolutions; but the rain poured, the night was chill and damp; and soon every orifice for the admission of external air, save the two or three humbug ventilators over-head, was shut, and a mephitic atmosphere produced in which the soul of John G. Saxe might have disported and fancied it daisyland. After gasping a while, like a netted fish on a hot sand-bank, I rose to enter my solemn protest against all sleeping cars not provided with abundant and indefatigable means of ventilation. I tried one, two nights later, on the Michigan Southern road, which served much better, though still far from perfect. It is very true that no arrangement can secure a healthy circulation of air by night in any passenger-car, while the popular ignorance is so dense that the great majority imagine any atmosphere healthful which is neither too cold nor too hot, and rather laugh at the wit than pity the blindness of Saxe in holding up to ridicule a woman who knows (and does) better than to sit all night in a close car with thirty or forty other human beings, all breathing an atmosphere which they in twenty minutes render absolutely poisonous; but the builders of cars have no right to be ignorant of the laws of life with which they tamper; and two or three presentments by Grand Jurors of the makers of unventilated cars, especially sleeping-cars, as guilty of manslaughter, would exert a most salutary influence. I commend this public duty to the immediate consideration of jurors and prosecutors.

Stopping at Hornellsville, at 7 A. M., I took the train for Buffalo thence at noon, and halted at Canisteo to fulfill an engagement to speak at Pike, formerly in Allegany, now in Wyoming county. Here is the substance of the information I gathered with regard to Farming in Southwestern New York: Wheat was moderately sown last Fall and this Spring; but was looking very well until the late hot, dry weather, which caused it to spindly instead of spreading, and would have seriously damaged the fall-sown but for the recent change from a hot to a cold, moist temperature. Of Rye, but little was sown, and that little is doing fairly. Oats have been pretty extensively sown, and promise a good yield. Of Corn, a large area has been and will be planted. Grass would have suffered seriously had the rains, which began last Sunday or Monday in Western New York, been withheld a few days longer. Now, the prospect is good.

I left Pike for Canisteo at 5 on Wednesday morning; took the cars to Buffalo at 7; was in ample season for the Lake Shore train at 10; ran into Cleveland a little after 5; left at 6 for Toledo, where we changed cars between 10 and 11, and were in Chicago at 7 next morning as aforesaid. It was quite dry along the south shore of Lake Erie, but is probably wet enough since. There, as before in our own State, it was plain that the area plowed on or before the 11th of May was greater this year than ever before. With a good season henceforth, the growth of Indian Corn this year in the Old as well as the New States must be far beyond all precedent. And well it may be; for the country was hardly ever so bare of food for man and beast as in this same May of 1859. Flour is higher and Wheat and Corn scarcely lower in Chicago than in New York or Liverpool. Oats nearly the same. Thousands of cattle throughout the Prairie States have died of starvation this Spring, though prairie hay might almost anywhere have been put up last Fall at a cost of less than two dollars per ton; Minnesota, with perhaps the best soil for Winter Wheat in America, is buying Flour in Chicago by the thousand barrels; and I hear from different sections of this great Granary of whole neighborhoods destitute alike of bread and of the wherewithal to buy it. Unpropitious as last season was, it does not fully explain this scarcity, especially of fodder. I trust the like will never occur to need explanation again.

Coming down through Illinois from Chicago, southwestwardly, to Quincy (268 miles), it was gratifying to see how general are the effort and obvious resolve to look starvation out of countenance this year. Though the breadth of Winter Wheat was but moderate, owing to the incessant rains of last Autumn, it is plain that the farmers began to plow and sow as early as possible this Spring—putting in, first Spring Wheat; then Oats; latterly Corn; and they mean to keep putting in Corn and Oats for a month yet. In the Northern part of the State, owing to the dry, warm weather, Spring work was never before so forward; further South it has been delayed by rains; but every hour is diligently improved. If Illinois and Iowa do not grow far more Grain this year than ever before, it will hardly be the fault of the cultivators, for they are bent on doing their utmost. Considering their bad fortune last year, this resolute industry does them credit; but they are generally in debt, out of money and almost out of credit, and are making a final stand against the sheriff. I heartily wish them a good deliverance.

And, despite the hard times, Illinois is growing. There are new blocks in her cities, new dwellings

in her every village, new breakings on this or that edge of almost every prairie. The short, young grass is being cropped by large herds of cattle, whose improved appearance within the last fortnight is said, by those who have observed them from day to day, to be beyond credence on any testimony but that of eye-sight. Here, every horse or ox that can pull is hitched to a plow or harrow, whenever darkness or rain does not forbid; and, by plowing the driest ridges first and seeding them; then taking the next dry day and serving them just so, nearly every cultivator can keep putting in seed, at least four days per week from March till June. Many will plant corn this year till the middle of June, and even later, unless compelling sooner to plant. Then cultivating will require every hour till harvesting begins; and this (including haying) will last till it is full time to plow for Winter Wheat. No busier season was ever seen than this is to be; from the Hudson to the Mississippi, you see four horses or oxen at work to one in pasture; and there are thousands of farmers who would plant or sow a quarter more, if they had grain to feed their teams, than they will now be able to do. There are few traveling in the cars, few idling about stores or taverns, but many in the fields. May a bounteous Heaven smile on their labors!

Illinois is just beginning to be cultivated. I presume she has no railroad along which half the land, within a mile, has ever been touched by a plow. Back from the roads, there is, of course, still less cultivation; probably, less than a tenth of her soil has ever yet been broken. Possibly, one fourth of her spontaneous product of Grass may now be eaten by animals that contribute to the sustenance or comfort of man, though I think one-sixth would be nearer the mark. She has far more Coal than Great Britain; far more than any other State; but has hardly yet begun to mine it. Her Timber is not so excellent; she lacks pine and all the evergreens, but she is bountifully and cheaply supplied with these from Michigan and Wisconsin. Boards are sent through her canal from Chicago to the Illinois, and thence around by St. Louis and up the Missouri, to build houses in Kansas and Nebraska. Her Timber, such as it is, palpably increases from year to year, and will increase still more rapidly, as roads and plowings check the sweep of prairie fires. If her prairies were more rolling, they would be drier and could be worked earlier; but then they would wash more, and probably have less depth and richness of soil. Doubtless the child is born who will see her a State of ten millions of people—one million of them inhabiting her commercial emporium.

I stopped over night at Quincy, and took the steamboat Pike at 7 1/2 next morning for Hannibal, twenty miles below. I had repeatedly crossed the Mississippi, but this was my first passage on it. The river is very high, so that its banks are submerged, and the water flows under the trees which line either shore. Islands covered with trees and shrubbery abound; the bluffs recede some miles on either hand, and are softened to the view by the deep green of the young foliage; hardly a clearing breaks the uniformity of the almost tropical prospect; though here and there a miserable little hut, in the last stages of decay, tells where a chopper of steamboat wood held on, until whisky or the ague took him off. In flood, as it is, the river is turbid, not muddy, and pursues its course with a deliberation and gravity befitting the majestic Father of Waters, to whom, with head bare and reverent spirit, I wave a respectful adieu.

For our good boat has reached Hannibal, the first point below Quincy at which the Missouri bluff approaches the river, and whence the valley of a streamlet makes up through the hills to the broad, level prairie. Hannibal is pleasantly situated on the interval of the creek and up the side of the bluff, so as to be entirely commanded by a steamboat passing up the river. It is a bustling, growing village of some 4000 inhabitants, which the new Hannibal and St. Joseph Railroad has suddenly raised from local to general importance. Like most villages on the Great Western rivers, it has no wharf, and the river is now threatening to eat away a part of the bank on which railroad and steamboat freight is heaped in wild disorder. Its new consequence must soon work a change. I look for a wharf and a great storehouse when I next land or embark here.

The Pike rounded to, and sent us ashore; the train backed down to within forty feet of her; the passengers got aboard the cars and were followed by their baggage, and in half an hour we were steaming up through the woody ravine to emerge on one of the largest prairies on Northern Missouri. Across this—or, rather, along it—we took our course westward almost as the crow flies to St. Joseph on the Missouri, 206 miles distant, which we reached in a little more than twelve hours, or at half past ten last evening. The road was completed in hot haste last winter, in order to profit by the "Pike's Peak" migration this spring; no gravel is found on its line, unless in the immediate vicinity of the Mississippi; and it was raining pitilessly for the second day nearly throughout, so that the road-bed was a causeway of mortar or ooze, into which the passing trains pressed the ties, first on one side, then on the other, making the track as bad as track could well be. A year hence, it must be better, even with the frost just coming out of the ground; after a dry week, it will probably be quite fair; but yesterday it afforded more exercise to the mile than any other road I ever traveled. About one-third of the way from Hannibal, it is intersected by the "North Missouri Railroad" from St. Louis, which city is about 100 miles further from St. Joseph than Hannibal is; the train from St. Louis starting at 5 A. M. to connect with ours, which ought to have left Hannibal at 9. Each road is completed, so that St. Louis as well as Hannibal is within a day's ride by rail of St. Joseph, which faces Kansas almost up to the Nebraska line.

Though the day was dreary, I noted with deep interest the country through which we passed, which disappointed me in these respects: 1. The land is better than I had supposed; 2. It is of more uniform grade—hardly anything worth calling a hill being seen after rising the bluff from the Mississippi till we came in sight of those which inclose the Missouri; 3. There is more prairie and less timber than I had expected; and 4. There is infinitely less population and improvement. Of course, this road was run so as to avoid the more settled districts, and thus to secure a larger allotment of the public lands, whereof the alternate sections for a width of five or six miles were granted to the State in aid of its construction; but I had not believed it possible to run a road through Northern Missouri so as to strike so few settlements. Palmyra, near the Mississippi, and Chillicothe, a hundred miles further west, are county seats and villages of perhaps a hundred dwellings each; beside these, there is no village of any size, unless it be one of those we passed in rain and darkness as we neared the Missouri. For some fifty miles after passing Palmyra, we traversed a level prairie, admirably grassed, but scarcely broken, save where the needs of the railroad had called up two to half a dozen petty buildings. Yet for most of the way timber was in sight on one side or on both, often within a mile; and the soil, though but a thin black mold resting on a heavy clay, therefore not so well adapted to grain as prairie soils are apt to be, is admirably fitted for stock-growing. It seems incredible that such land, in a State forty years old, could have remained unsettled till now. We traversed other prairies fire to twenty miles long, separated by the richest intervals skirting Grand River and sundry smaller streams, well timbered with elm, hickory, &c. Miles on miles of gently rolling ridges, thinly

covered with white oak, and forming "oak openings" or "timbered openings," with a thick growth of young wood, now that the annual fires are somewhat checked by roads and cultivation, coming forward under the full-grown oaks, are interspersed between the prairies, the whole forming one of the most beautiful and inviting regions I ever passed over. They tell me that the rolling prairies near St. Joseph are richer and finer than those I saw; but they surely need not be. With such soil and timber, the Mississippi on one side, the Missouri on the other, and a railroad connecting them, it must be that Northern Missouri is destined to increase its population speedily and rapidly. I am sure beef can be made there at less cost per pound than in any other region I ever visited.

St. Joseph is a busy, growing town of some 10,000 inhabitants. It is beautifully situated on a bend of the Missouri, partly on the interval (which the river is gouging out and carrying away), and partly on the southward slope of the bluff, which rises directly from the river bank at the north end of the town. Other towns on the Missouri may have a grander future; I doubt that any has a finer location. The river bank must be fortified against the boiling current, which sets against the town site with fearful power and effect.

I believe this is further west than any other point reached by a railroad connecting eastward with the Atlantic ports. At all events, the travel, and part of the trade of the vast wilderness watered by the Upper Missouri and its tributaries, seem to center here. At the City Hotel, where I stopped (kept by two New-Yorkers—J. & J. Hunter—from Auburn), some of the guests were of and from Salt Lake; one, an Indian trader from the head waters of the Columbia, who came down the Yellow Stone from the Rocky Mountains last fall in a canoe. Army officers and soldiers for the forts far up the Missouri and its tributaries are constantly arriving and departing. I may never see St. Joseph again, but she will long be to me a pleasant recollection. Elwood, in Kansas, opposite, is a small place, which must grow with the country behind it. The up-river trade is not for her.

I took passage for this place at eight this morning on the good steamer Platte Valley, Capt. Coursey, and defied the chill east wind and damp cold atmosphere, to take my first lesson in Missouri navigation. The distance by water is some forty miles; by land considerably less; the river being here as everywhere crooked and capricious. I regretted to note that it tends, if unchecked, to grow worse and worse; the swift current rapidly forming a bank below every projecting point, and thus setting the stream with ever-increasing force against the yielding, crumbling mold or silt of the interval which forms the opposite shore, which is thus rapidly undermined and falls in, to be mingled with and borne away by the resistless flood. The banks are almost always nearly perpendicular, and are seldom more than two or three feet above the surface of the water at its present high stage, so that the work of devastation is constantly going on. The river is at once deep, swift, and generally narrow—hardly so wide in the average as the Hudson below Albany, though carrying the water of thirty Hudsons. It cannot be half a mile wide opposite the city. Its muddiness is beyond all description; its color and consistency are those of milk porridge; you could not discern an egg in a glass of it. A fly floating in a tea-cup of this dubious fluid an eighth of an inch below the surface would be quite invisible. With its usually bold bluffs, two or three hundred feet high, now opposing a rocky barrier to its sweep, now receding to a distance of two or three miles, giving place to an interval, many feet deep, of the richest mold, usually covered by a thrifty growth of elm, cotton-wood, &c., its deep, rapid, boiling, eddying current, its drifting logs and trees, often torn from its banks by its floods, the Missouri stands alone among the rivers of the earth, unless China can show its fellow.

I have not yet learned to like it.

Atchison gives me my first foothold on Kansas. \* \* \* For the last year, its growth has been quite rapid; of its four or five hundred dwellings, I think, two-thirds have been built within that period. The Missouri at this point runs further to the west than elsewhere in Kansas; its citizens tell me that the great roads westward to Utah, &c., from St. Joseph on the north and from Leavenworth on the south, pass within a few miles of Atchison when thence as far from their respective starting-points. Hence the Salt Lake Mail, though made up at St. Joseph, is brought hither by steamboat and starts overland from this place; hence many trains are made up here for Utah, Green River, Fort Hall, and I hear even for Santa Fé. I have seen several twelve-oxteams, drawing heavily-laden wagons, start for Salt Lake, &c., to-day; there are others camped just outside the corporate limits, which have just come in; while a large number of wagons form a corral (inclosure or encampment) some two miles westward. A little further away, the tents and wagons of parties of gold-seekers, with faces set for Pike's Peak, dot the prairie; one of them in charge of a gray-head who is surely old enough to know better. Teamsters from Salt Lake and teamsters about to start lounge on every corner; I went out three or four miles on the high prairie this afternoon, and the furthest thing I could see was the white canvas of a moving train. I have long been looking for the West, and here it is at last. But I must break off somewhere to prepare for an early start for Leavenworth and Lawrence to-morrow, in order to reach Osawatimiss next day.

## THE HOME OF BEAUTY.

"Creative Genius from thy hand  
What shapes of order, beauty, rise,  
When warms thy potent, mystic wand  
To people oceans, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
And here our gods;  
But they are mortal.  
Around these festooned halls  
The good, the great, the living and the dead;  
And yet they speak—speak all!  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us.  
Creative Genius! raise thy wand  
And gather round us who we stand  
Within these halls, a living throng;  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wordings thousands come;  
Thou spend a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty?  
Behold these flowers that gem the land  
Thou little children in groups they stand,  
While here and there, like angels, eke  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or paired, like jewels rare,  
Are gathered round the gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all the beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

Corner Sacramento and Montgomery streets.

## FARMERS, BEWARE

CALIFORNIA

COMBINED REAPER AND MOWER,

AND

PECK'S SANTA CLARA

HEADER AND HARVESTER!

HAVING LEARNED FROM VARIOUS SOURCES, that Treadwell & Co., of this city, are endeavoring to produce the impression in the Farming community that I am manufacturing the "Manny Machine," I am once more in the field, to assert, that all such representations are UNMITIGATED FALSHOODS.

I am not building the "Manny Machine," nor infringing on the "Manny Patent," nor do I intend to do either; on the other hand, I am building a MACHINE OF MY OWN INVENTION, called the

California Combined Reaper and Mower,

Wholly UNLIKE the "Manny Machine," except in the use of the Reel, on which there is not now, nor has there ever been, a PATENT.

I think I know what I am about. I have had too much experience as a *Practical Mechanic*, and have spent too much money in obtaining Drawings and Specifications from the *Patent Office*, of the various kinds of Reapers which I now have in my possession, not to know precisely the line occupied by Patents heretofore obtained and now in force.

I also learn that I am threatened with prosecutions, and that the Farmers who will buy of me will be prosecuted. This is the old "Manny Game," and has been pretty well "played out" for two years the combined force have been playing upon me, not openly, but secretly and cowardly, behind masked batteries, with a view to the breaking up of "Home Manufacture," that they might the more securely and successfully continue to monopolize the

## AGRICULTURAL TRADE,

and keep up prices at rates ruinous to the Farmer. But thus far, their efforts have been entirely without success, and will continue harmless if I am sustained by the farmer, for whose interest I am steadily at work.

The great secret of their unscrupulous and extraordinary warfare upon me at this particular time, is, that as the season for selling has commenced, they begin to feel as well as see, that my

CALIFORNIA

Combined Reaper and Mower,

IS A DECIDED SUCCESS; AND

and unless that they can intimidate the farmer, and force him to buy from them at a greater cost, Machines much inferior to mine, they will be obliged to hold a large stock over for next year—an unpleasant fix, truly but Fate decrees that they must "grin and bear it!"

Persons who threaten prosecutions, would be much better employed in actually prosecuting and establishing the truth of their assertions, than by sending their hirelings and secret clerks and letters throughout the country, to poison the public mind with stories known to be FALSE.

Why don't they prosecute me, and let the farmers alone? They know full well that they can maintain no action. As I said above, they find the "BUFF-GAME" more successful with the farmer than with me, and consequently the scene of their operations this year has been transferred from this city to the farmer in the country.

I repeat, that I am MANUFACTURING the

California Combined Reaper and Mower, (and not the "Manny").

and I have Purchased the Invention called

"PECK'S SANTA CLARA HEADER AND HARVESTER,"

which I am also MANUFACTURING, and shall continue to do so, many years, both in numbers equal to the demand. And I now say, that persons who may buy either of the above Machines of me, will, if required, receive a written GUARANTEE OF INDEMNITY.

Forward your orders, and they shall be filled. With this I am done. I am now, and ever have been, "ready for the fight whenever the fight opens!"

THOS. OGG SHAW,

No. 33 Sacramento street.

12-3m

BELTING! BELTING! HOSE! HOSE!

THE UNDERSIGNED ARE AGENTS FOR THE SALE OF

Fulton's California Oak-tanned

MACHINE-BELTING

AND

FIRE AND HYDRAULIC HOSE.

WE are prepared to furnish Mill Owners, Miners and Fire Companies with the above articles of a better quality than ever before offered in this market, and at a LESS PRICE.

The superior tanning qualities of the California Oak Bark, and the compact fibrous nature of the California Hide, combine to produce the best leather made for sustaining continued strain and tension.

Both Belting and Hose are made from the solid part of hides, which are selected expressly for the purpose, in the most careful manner by Workmen of long experience in Eastern Manufactories; cold liquors only used in the tanning process.

The Belting is three times stretched by Power Machines, built expressly for the purpose, and is warranted to perfectly conform to the pulleys. We especially call the attention of Fire Companies and Miners to the Hose. We offer to subject it to every required test before sale.

In buying of us, parties may be assured that they will get the real Oak-tanned article, and will not be palmed off upon them an inferior article of Hemlock Belting and Hose.

We defy competition either in price or quality. The above articles constantly on hand or made to order, of the required size, at short notice. THOS. OGG SHAW & CO., 33 Sacramento street.

N. B.—We subjoin the following certificates: CHIEF ENGINEER'S OFFICE, Fire Department, City of San Francisco, May 1st, 1859.

J. J. FULTON, Esq: Sir: From the same tests, to which the two sections of Hose (100 feet) furnished to this Department by you, have been subjected, and from a careful inspection of the same, I am prepared to say that in my opinion, your Hose is fully equal to the best quality of Eastern Manufacture, far superior to that usually obtained. I shall recommend the purchase of future supplies of Hose for this Department, of your manufacture, at the price and upon the terms offered. It is with pleasure I make this statement. Very truly yours, F. E. IL WHITNEY, Chief Engineer of S. F. F. D.

SAN FRANCISCO, May 10th, 1859. J. J. FULTON, Esq: Sir: I have examined your California-tanned and manufactured Belting, and am convinced that it is of quality of leather and thoroughness of Manufacture, unsurpassed if not unequalled by any belting made. I shall recommend it to my customers, and shall purchase for my own use as far as required. Wishing you success in your Pioneer enterprise, I remain yours, &c., PETER DONAHUE.

413m Proprietor of Union Foundry and Machine Shop.

CALIFORNIA TUBS, AND

California Pails! CALIFORNIA WINES, AND

California Ales! COLLINS WADHAMS,

WOULD SAY to those interested in the welfare of California, which is no more than self-interest, to call at

112 Battery Street, SAN FRANCISCO,

And see what "can be done in California," before sending their millions to some far-off country, never to return.

CALIFORNIA BUTTER and CALIFORNIA PAIRS are better and cheaper, in the end. Consider it well. 74c

## NURSERY BUSINESS.

GENESSEE VALLEY NURSERIES, Rochester, N. Y.

Fruit and Ornamental Trees, Shrubs, &c. Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality, any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements, as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

## OF STANDARD FRUIT TREES,

we have an unrivaled collection of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in Bud, One year old from bud or graft, and Two years old.

An immense stock of DWARF FRUIT TREES, in Bud, and one year old from bud or graft, comprising Apples, Pears, Cherries, and Plums.

SMALL FRUITS, &c., in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberries, &c., &c., including all of the new varieties of Fruit, &c., introduced up to the present time, which have been found to be an acquisition.

## In the Ornamental Department,

our assortment and stock is very extensive, including both the Deciduous and Evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our Stock of ROSES is unsurpassed in quantity and variety, occupying over six acres, and embracing more than 500 distinct sorts, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summer, Climbing Roses, &c.

HARDY BULBS furnished of every description, including the finest variety of Hyacinths, Tulips, Crocuses, &c. Every season we make large importations of the finest flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

## FRUIT-TREE STOCKS

we have in large quantities, which promise to be unusually fine the coming autumn. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities SEEDLING PEARS, APPLES, CHERRIES, PLUMS one and two years old; also, QUINCE and MAHALED STOCK, for dwarfing the Pear and Cherry respectively, one and two years old.

## PACKING, &amp;c.

The greatest care and caution are given by us to the packing of Plants, the labor of which is performed by men who have had many years' experience in the business; so that parties can depend upon receiving the articles in good order. The result of our experience in packing plants for California the past season, has been such that our customers have UNIVERALLY expressed themselves very much pleased with the condition in which the plants reached them.

N. B.—ORDERS should be sent as EARLY IN THE SEASON AS POSSIBLE, to be received by us as early as the first of October, that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO orders can be filled satisfactorily to ourselves, which are not received by us PRIOR to the 15th of November.

## Catalogues.

A WHOLESALE CATALOGUE, No. 6, is published in July of each year, expressly for the California trade, containing our lowest rates for trees in quantities, of such size and area as are desirable to be shipped to California from the Atlantic States, copies of which will be mailed free to all applicants.

For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.

No. 1—Descriptive Catalogue of Fruit.

No. 2—Descriptive Catalogue of Ornamental Trees, Shrubs, &c., &c.

No. 3—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.

No. 4—Wholesale Catalogue or Trade List.

No. 5—Descriptive Catalogue of Flowering Bulbs, &c.

A. Frost & Co.,

Genessee Valley Nurseries, Rochester, N. Y.

18-3m

POLAR OIL.

30,000 GALLONS

REFINED POLAR OIL,

In Barrels and Cases,

FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our

establishment, before laying in their winter stock.

We will guarantee to suit ALL as to quality and price.

LARD OIL, is also offered at greatly reduced rates.

WINTER Sperm OIL, Warranted to stand the test of the coldest weather.

BINKALE OIL, Warranted to burn a lamp dry without trimming.

CAMPENE, Distilled fresh every day.

ALCOHOL, In Barrels and Cases, 95 per cent.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, JULY 8, 1889.

**A Special Agent in the Eastern States.**  
Mr. E. A. HAW, who left here in the steamer of the 5th April, on a visit to his kindred, to carry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.  
We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.  
We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

**The Farmer—Our City Carrier.**  
HAWK employed Mr. J. F. LARABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, at the places they desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry." It will be left to the friends desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

**SEND THE FARMER AHEAD.**—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

**Direct our Letters and Exchanges.**  
Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us?

**OUR BILLS DUE.**—We will feel very thankful to our friends and patrons if they will make prompt remittances for dues to this office, as we soon commence our Twelfth Volume, and desire to make still greater improvements in the Farmer every volume.

**PARTICULAR NOTICE.**—In consequence of frequent mistakes occurring, we desire to inform those who are not aware of the fact, that Col. Warren, editor of the Farmer, is not J. Q. A. Warren, and that the latter has no connection with this journal. Those communicating with us will please address, Col. Warren, Editor California Farmer.

**AUGUST ELLIOTT** is not the agent of the CALIFORNIA FARMER, nor authorized to receive money on account of this journal.

**LETTERS BY OVERLAND MAIL.**—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

### Hook Farm.

"He entered in his house—his home, no more,  
For without hearts there is no home, and felt  
The solitude of passing his own door  
Without a welcome."

The journals of the day announce the fact that "Hook Farm" has passed from the "Old Pioneer," Gen. Sutter, into the hands of his son, W. Alphonse, and that it is to be converted into a public tavern. To us, this seems like desecration, and deeply do we deplore any circumstance that may have led to it. If misfortune has fallen with its dark and blighting influence and made this a necessity, so much more is it to be deplored, and we would ask if there is not sufficient sympathy and humanity in our State to reserve that spot from the blighting effect of penury, and the destroying influence which will soon efface another of the landmarks of California. "Sutter's Fort" is no more. Over that spot the up-turned furrow has almost removed the outlines of what was once dear to many. A few ruins; here and there the brier and tangled weeds, and the wreck of what was once a shrine to the traveler, is now marked by ruin and desolation. Alas! how speak such things for the history of our State? We have spent millions for State Prison walls, and wasted it upon reckless politicians. Cannot our State spare a trifling sum to preserve those spots that are identified with the history of our State. We do not ask, nor do we expect a gift for the brave Old Pioneer, for humanity's pulse has been chilled by a love of gold. But we would invoke an interest in those spots sacred to history, and if we cannot restore Sutter's Fort, and make it a landmark for coming time, in heaven's name let us preserve Hook Farm from now becoming a place where noise and drunkenness shall run riot. Deeply as our sympathies have always been awakened to the Old Pioneer for his many good and generous deeds in days of prosperity; and quickly as we would pass by any shades in his character (the sun has spots), we would now plead in the name of our State, its history now and in coming time, and for truth's sake, let us preserve this last relic of one who, in a few brief years at most, will pass from his sorrows and trials, and then he will be remembered better than he is now. We know that regrets will arise that these places were not preserved, and that justice was so slow in awarding to Gen. Sutter a mead of honor and praise for the good he has done.

### The Glorious Fourth.

THIS DAY was celebrated in all our principal cities and towns with becoming joy and regard. The bells sent forth their merry peals, the cannon roared, bonfires and rockets lit up the sky, merry children crowded the streets, and the usual hurry and bustle gave assurance that it was INDEPENDENCE DAY! Everybody was independent and everybody seemed happy. The procession made a fine display. Marshal Johns was prompt and executed his part exceedingly well and with dispatch. The cars containing the children might well be called the "Golden Cars of California," for they held the treasured hopes of our State; they contained the future Fathers and Mothers of California. These cars were emblematical of our future. Perfect order was observable everywhere; the day drew out an immense assemblage, on the Plaza, to witness the Fire-works, which were very excellent, particularly the last, the "Liberty piece." Thus may the day always be kept—in joy, in peace, and in mutual good will and happiness, by the people of our land.

### Stock Committees at Fairs.

THE vast increase of valuable stock in our State demands of all who feel an interest in our prosperity more than a passing notice. The fine stock that is now an honor to our State, and a high credit to the owners, should have a perfectly just estimate and true character at the approaching Fair, in order to have it duly appreciated by the public, and to awaken a true interest in its value, which now amounts to a sum far beyond any conception that can be put upon it. When it shall be remembered that California can boast, the present year, of something like four thousand fine colts, all from stock horses of value, many of them of the "Black Hawk," and the fine racing stock of the Union, some idea may be had of the value of our stock of horses.

In addition to this, our Dairy Stock has largely increased, and has been improved by the introduction of some of the finest stock of Durham and Devon blood known; and the present year will add some two thousand young stock, all of the highest order.

When we speak of Sheep, we think our State can well boast of advancing in this branch of stock. No State in our Union, in fact no place in the world, has accomplished so much in so short a space of time in improving and increasing the interest of sheep raising and wool growing, as our own State. The French Merino flocks, and the Southdowns will compare favorably with the best of Europe or America; and although not so great in numbers, yet the animals born in our State show the advantage we possess here; for half-breds appear to the eye equal to the original type. The exhibition of Sheep at the approaching Fairs will surprise every one.

In Swine there is not so marked an improvement. We have too many still of the long-nosed gentry; but there are a few fine Berkshires, Suffolks, and Irish Graziers, that will command admiration. In this department there is room for improvement, and fortunes will be made, for no country can excel ours for climate or facility in this respect.

Such being the facts connected with this valuable branch of our industry, it is all important that the Committees at the State Fair and at all the County Fairs should be men fully qualified, by a knowledge of stock in all its features, to judge correctly. They should be men, too, who will act disinterestedly. No man should serve on a Committee who is interested in the class of stock of which he is called to judge, nor should he be under any bias, the great and grand object being to decide upon the true merit of the animals exhibited. Where so much depends, as in the case of breeding stock, to which thousands are looking for future use, it is all important that Committees fully qualified to act should be appointed months before the exhibition, so that they may be known to the community; and that the Committee, either in a body or by their chairman, may gather information of the stock upon which they are to act, and to visit it, and thus prepare themselves on these points. The chairman, too, of all important Committees, should have power to fill vacancies in his Committee. By such means Committees can gather much information previous to the exhibition, and come prepared to act with greater efficiency, and accomplish much more for the good of all interested.

We sincerely hope this matter will receive early attention from those who appoint Committees, as great complaints have always been made relative to the qualifications and judgment and decisions of Stock Committees, and unless a better system is adopted, many who have fine stock will not exhibit at all. We speak from knowledge of facts. Every State Agricultural Society but California has long since sent forth its Premiums and the lists of their several Committees, and why should California be behind others in this matter, when her advantages are greater.

### Reclamation of Land at Santa Clara.

Those familiar with the lands along the Almaden road, leading from Santa Clara to San Jose, will remember the large amount of wet land that formerly existed, covered with lakes here and there, and almost bottomless bogs. By the change which has taken place, resulting, as we believe, by means of the draining off this large quantity of water by the innumerable artesian wells of that section, large and valuable tracts of lands have been reclaimed and brought into a high state of cultivation.

"Cook's Cottage" is one of the "beauty spots" along that beautiful drive. It is, indeed, one of the prettiest places for a summer hotel that can be found in that region, and we wonder the proprietor does not make it a place of resort for all who love a quiet and lively rural retreat. It was beneath this grove that the late Collegiate exercises of the University of the Pacific were held.

"Fenton Ranch" is another redeemed spot, and the truth that "Industry makes the country" is verified by the great improvements made on this once wild place, by the untiring industry and persevering labor of an old citizen of San Francisco, now the happy resident of a very highly improved farm, the result of his own honorable industry and labor. "Show me an industrious man and I will show you a prosperous one," is here verified; and we are firm in the faith that it is our working-men of this character after all that will "enter on and possess this land;" after all the idlers and politicians have died off; for the "Vine and fig tree" are growing, and ere long the working-men will enjoy the fruit of their labors, and eat from the well-stored hives when all the drones are destroyed.

**SOUTHDOWN SHEEP.**—J. C. Taylor, of Holmdell, N. J., writes us (says Sec. N. Y. Ag. Society) that he has sold from his fine flock of Southdown sheep, since November last, quite a number of his choice sheep for California, all of which have arrived safe, and are giving great satisfaction. Mr. Taylor has imported the prize buck at the Paris Show, of Jones Webb, which arrived out in August last, and proves a first-rate stock getter, and although costing £400 (\$2000), will prove a most fortunate investment for Mr. Taylor. Mr. Taylor purchased largely at Col. Morris' sale of Southdowns of the choicest sheep, and he has no occasion to regret the liberal investments he has made.

### Crying Children and Tobacco.

PERHAPS two subjects so widely different in their use and value, yet equally annoying when out of place, may induce a more careful reading of this article than it might otherwise receive, if placed under separate heads.

Children and Tobacco are, under the circumstances in which we now place them, inharmonious and discordant elements in the social institution. Our object is to speak of them, as we say, *when out of place*; consequently, "out of time" and "out of tune."

The College exercises at San Jose and Santa Clara, the present year, were more largely attended than at any previous year, numbering hundreds of ladies; among them, many mothers and little children, and some infants. Here, these children were out of place, and, if we have any music in our soul (much as we love children), we must say they were "out of tune," and most discordantly so.

We select these cases at San Jose and Santa Clara, with reference to "children out of place," from the very fact that very large audiences were repeatedly and constantly annoyed by crying babies and fretful young children; and we earnestly desire, for the good of these children, the comfort of the mothers, and the success of all Exhibitions of Colleges and Schools hereafter, that the directors of such institutions shall cause a placard to be posted on the doors of the Colleges and Schools, and inserted in the advertisements with the following words: "Children in arms, and those incapable of understanding the Exhibition, or not under a proper control of parents, not admitted." We would except, however, all obedient children of early years, and have them wear blue sashes, as marks of honor and obedience.

We have thus spoken upon the subject of taking little children and infants to such places, from a sense of duty we owe to the cause of education. In all its features, it is exceedingly annoying to an audience to be interrupted in the most interesting portion of the ceremonies, and, as Richelieu says, of one who "knew how to applaud in the right place," so these little musicians know how to cry in the wrong place; for it almost always happens, that in the most interesting scenes or speeches, they break out with their speech. Besides the great annoyance to large audiences, those who have charge of them cannot enjoy the occasion; and besides, it is not good for such little ones to be in a crowd, the atmosphere, the position in which they are held for a long time, as well as all the circumstances, militate against their well being; and, above all, the persons who take them have no moral right thus to infringe upon the rights of others. If parents cannot so arrange as to provide proper care for them at home, while they are absent, they should remain with them. It may appear hard, in some few cases, but the great good of the public demands the sacrifice of a little by each individual. In thus urging a correction of this great annoyance, we believe we shall be joined by thousands. We seek the good of the masses; and we know that complaints have frequently been made to us of these annoyances, and visiting Schools and Colleges, as we often do, we have thus spoken from a high sense of duty in this matter. And now close with a brief allusion to the other evil—Tobacco, and the use of it in public assemblies.

This offense (the use of tobacco) against comfort, decency, and good breeding, which is manifested in public assemblies by those who, from the inveterate use of it, in its worst form, destroy the health-giving properties of the atmosphere around them by their breath, as well as the dresses of visitors by their habits. We have seen the floor of a public assembly-room so offensive, that ladies could not enter with any safety. And what notice should be given by the officers of a College to prevent such an evil, we leave them to devise; but, by all means, we would have it in all the languages, so that all may read. With a hope, that this essay may not be misunderstood, but taken as intended, with the best motives, for the good of all, we hope the little ones, in all our Schools and Colleges may, as they grow up, avoid the fault and censure arising from the last reproach, for "As the twig is bent, the tree's inclined."

**WARM SPRINGS, MISSION SAN JOSE.**—The residents of our cities are so apt to be engrossed in the accumulation of wealth as not to enjoy any portion of the blessings of life that are within their reach. The Warm Springs, near the Mission of San Jose, is one of finest retreats, either for health or pleasure that can be found in the State, and we desire to call attention to it that it may be better known. The Warm Springs Hotel is announced in another column of this paper, and is one of the best and most genteel hotels of the day, fitted up in elegant style, with spacious saloons, fine hall, dining-rooms and sleeping-rooms. The table is always supplied with every luxury. This retreat is one of quiet rural beauty: gardens, walks, fountains, rides and drives, fishing and hunting, with an atmosphere genial enough to restore the sick, without medicine. The baths alone are a luxury, and the waters as a beverage highly restorative. Mr. Davidson, the proprietor, acts the host in that most happy way to make one feel at ease and happy. Mr. Johnston, his gentlemanly cashier, will always please. Billiard-rooms and stables are attached to the hotel, so as to afford every facility for recreation needed. We esteem the Warm Springs Hotel one of the best in the State, and worthy a liberal patronage.

**THE GREAT HARVESTER.**—"Peck's" great header is now at work among the grain fields of the great county of Santa Clara. Like the scythe of old father Time

"It sweeps down all,  
Both great and small."

Persons can hardly imagine the execution one of these harvesters will perform unless they should see one at work. From sixteen to twenty and twenty-five acres in a day of grain are cut, thrashed, cleaned, bagged and sewed up. The harvesters are now made and sent from the agricultural implement works of T. Ogg Shaw, and the demand for them far exceeds the supply. Shaw could have sold thrice the quantity, if he could have made them.

### Horace Greeley.

THE following rancorous exhibition of feeling is too unworthy, and too unmanly, to have originated in any journal laying claim to respectability:

"A number of flunkies in this State are endeavoring to get up a reception for Horace Greeley, an Abolition editor from the East, who is soon to arrive in our midst. We trust no Democrat will be seduced into giving his countenance to any proceedings in honor of this low demagogue. There is no man in the United States who has tried to do so much harm, who has uttered so many malignant falsehoods as this fellow, Greeley, in his crusade against the Constitution and the Union. We will mark the men who are prominent in doing honor to this wretched fanatic."

We have copied the above paragraph, which appeared in the San Francisco Herald, and feel called upon as an editor of a journal devoted to the workingman's interest, to say we regret most sincerely to know that a long-established journal, like the Herald, should permit so unworthy a paragraph to appear in its columns.

Horace Greeley may be a political editor; but Horace Greeley can be, and has been, the bold and fearless champion of a goodly number of measures to aid our State. He has always been the advocate of the Pacific Railroad; and, by his voice as well as his efficient pen in the columns of the Tribune, has been the unflinching friend of the Industrial Interests everywhere; and the workingmen, in every part of the Union, love and acknowledge him as such.

The columns of this journal have never been used yet to advocate any partisan doctrine, or partisan leader, but it has always been bold and free to speak of the good deeds of every man, without regard to party or sect, or whether of the North or of the South; and when we see a man, a set of men, a party, or a journal, strike a blow for California, we will bless them for that blow. We have watched the course of the Tribune, and have often applauded its generous interest for California; and when we heard of the intended visit of the talented editor of the Tribune to our State, we hailed it as a good omen. We believed that no other man in the United States could do more to make known the vast resources of California, and we believe so still.

Possessed, as Mr. Greeley is, with great perceptions, vivid imagination and glowing thoughts, he will throw the electric fire of a Californian atmosphere into his pen, and the columns of the Tribune will send world-wide those conceptions of his mighty mind which shall awaken tens of thousands of persons in every part of the world to the greatness of our resources as a State. "Let us speak of a man as we find him." Do we wish well to California? Then let us encourage and honor those that labor in her behalf.

We rejoiced to know that the press of California were about to pay a becoming mark of respect to one most truly deserving such a token; there is as much honor in paying a just tribute of respect to another as in receiving it from another. "It is more blessed to give than to receive," and we know and believe that with very few exceptions, the editorial fraternity of California will so far show their just and true appreciation of merit, and their freedom from all selfish or partisan bias, as to receive our truly distinguished editor in a truly becoming manner.

The greater facilities that shall be offered to Horace Greeley to acquire all needed information of our resources as a State, the greater will be the benefit our State will receive. We are perfectly willing to have a mark placed upon us as the advocate of the workingman's interest, and to have it known that we would honor merit, wherever found. We publish in this number of our journal the letter of Mr. Greeley. It is worth reading many times; it speaks for itself, and shows the object of his visit. We shall do all we can to facilitate all such enterprises.

Horace Greeley comes to California as a statesman as well as an editor, and he will not sleep on his way. Horace Greeley wields a pen, and can make his mark; and his mark will stand too. He will show the world a picture of California that shall bring to our shores not only thousands but tens of thousands; and shall we not welcome such laborers to our state? We think we know the spirit that is abroad, and we venture the assertion that Horace Greeley will have such a reception as will be acceptable and flattering to him, and most honorable to the editorial fraternity of our State.

**SEWING MACHINES.**—Now readers, in this instance we do not mean Dr. Hewitt's Grain Sower, but something that *sews much finer stitches* than any doctor ever took in his life, and they do their work just as true as the needle is to the pole. We spent a few moments yesterday in the new rooms where the "Grover & Baker" machines are now operating, and we saw some of the handsomest finished machines ever yet imported. To show the ease with which they are worked, we saw a little Miss, of thirteen, at work, and within her first two hours trial she could hem a linen cambric kerchief very neatly. This was under the direction of that most excellent directress of these machines, Mrs. Rogers, who is ever present at these rooms. We learn that Mr. Brown, the efficient agent, has sold nearly one hundred machines within the last month, and that all of them are giving great satisfaction.

**THE TULARE RECORD, No. 2.**—Right pleased are we to receive this paper from one who has been in our employ as a type. Faithful to us as a journeyman printer, we know he will be true to his patrons and friends as an editor and proprietor, and we wish him the highest degree of success and prosperity in his new position. We find in No. 2, the following item:

**Genius.**—Genius is well defined to be the power of making effort, the ability to try, and the patience to keep trying.

Our friend Carpenter as editor and proprietor of the Record, we know to be a genius of the right kind. He has ability and patience in ample supply. He will not only try to please his patrons, but will keep trying, and we hope the citizens of that region will all try in earnest to give him a handsome support.

### Public Fairs—Public Exhibitions.

THERE is one great annoyance; nay, we will call it by its right name, *evil*, and a serious one too; an imposition upon courtesy and generosity that has always been practiced upon the managers of Public Fairs, and also upon the proprietors of any Artistic Exhibition, that has now reached the very height of wrong; so much so, as to become unbearable; and unless it can be checked, can be rebuked down, all courtesies of this kind should be held back. We allude to the wrong practised by those who receive complimentary tickets. These courtesies are intended only for those to whom they are addressed; and any person, who having received a courtesy and kindness of this kind and abuses it, by "passing" others with it, is guilty of a flagrant wrong; taking from the proprietors so much money wrongfully, as the number of persons they thus stealthily pass with a "complimentary ticket?" and the same rule will apply to a "season ticket." And we venture the assertion, that at every Fair and Exhibition that is held the loss that accrues, by means of this fraud, is greater than any gain arising from their sale; and we have recently heard those who have made estimates upon this point, declare that they felt confident by actual observation, that they lost more by those who came in under this guise than the value of the original tickets. This fact once established, and all season tickets should be abolished; and persons who, often thoughtlessly and without reflection, use the privilege of a card of invitation to convey a dozen outsiders, should receive a rebuke that will be remembered.

There are other evils that it is necessary to remedy: The too free use of Tobacco in crowded assemblies, where ladies' dresses are frequently spoiled, their health affected, and their comfort interrupted; and "crying children." Of these we will speak in another place, or at another time. We hope the first evil will be remedied.

### Solomon's Temple.

This great work of art and genius will remain in this city, one week longer, and will open on Monday at the low price of 25 cents each, to enable all to visit it who have not either had time or felt able to do so before. It is to be hoped that all who feel any interest in this great work will bear in mind that as this temple is to be removed so soon to the States and thence to Europe, this will be the last chance, it all human probability, of seeing it in our natural lives. Persons in the interior will not regret a special visit to our city to see it. Parents should take their children, by all means, before the opportunity is gone for ever. We have received a sketch of the temple from a young lady of Sacramento, after a visit to the same, which will appear next week.

**FAIR COMMISSION HOUSE.**—The present time and the approaching fruit season of peaches, apples and pears, as well as the great product of our own vineyards, requires that the growers of fruits have some established commission house, where their fruit can always be found in good order, at wholesale. To this end, we take great pleasure in calling attention to the firm of Graves and Williams, on Merchant street, who have now been thus established for two seasons, and have done a large and satisfactory business for their patrons, giving universal satisfaction, so far as has come to our knowledge. We know that they give strict attention to the interest of those who consign goods to them, and they do only a commission business, thereby insuring a ready and just sale to all goods consigned to their charge. We take pleasure in commending Messrs. Graves and Williams to all the fruit growers of our State.

**EXHIBITION OF EMBROIDERY, NEEDLEWORK, ETC.**—One of the best exhibitions of embroidery, Needlework, Worsted-work, etc., ever shown in this State, was made at the "Academy of Notre Dame," at their late exercises. The collection completely filled a large exhibition-room, covering the sides and ends of it with embroideries and works in frames, and filling two large tables with very choice specimens of this most honorable evidence of the skill of the young ladies of California. We counted the various specimens, and they numbered three hundred and thirty-four; all so creditable, and several of them really so beautiful, that we had rather class them all together, as a monument to female taste and skill, than to be partial and particularize, where all have done so well.

**TOWNS OF MILPITAS.**—This quiet, but industrious and thriving place, is about six miles from San Jose, and situated upon a broad and rich belt of prairie land, cultivated by earnest and practical farmers. There are, however, many Spanish-Californians and foreigners, who are in possession of land that is not in so high a state of cultivation. Recently a new hotel has been fitted up by Mr. J. B. Keeney, who will do his best to entertain travelers. Rathbone's store has been enlarged; a billiard-room and hall attached, where, on the Fourth, the day was celebrated by a ball. Mr. Rathbone is one of the permanent men of the place, highly esteemed, and doing a thriving business. Excellent farmers and excellent farms show real prosperity.

**MRS. ELIZA W. FARNHAM.**—We were honored, at our sanctum, by a call from this distinguished lady, who has just arrived by the Uncle Sam. Most truly do we welcome the lady to California. As an earnest and true friend of her sex, she has labored by her pen, by word and deed, to elevate Woman to her true and appropriate sphere. Mrs. F. is not an advocate of "Woman's Rights," as the slang phrase would intimate, but to place her in the relation God intended her to occupy—the educated friend, companion, and solace of man. In this work all true hearts will bid her, God speed!

**NEW SCHOOL.**—We take pleasure in calling the attention of the public to the card of Rev. Albert Williams, in our columns. Mr. Williams is one of the early pioneers in the cause of religion, morality, and human progress. He has been absent, in the old States, studying their systems of education, and returns to put in practice the best methods. We trust he will be liberally sustained.

## DOMESTIC SUMMARY.

The Big Tree route from Murphy's to Carson Valley now clear of snow, and passable for heavy freight wagons.

Thousands of dead crows, says the Marysville Democrat, may be found lying on the plains and under the trees in Sutter county, killed by the heat a few days ago.

Jacob Levy has been arrested at Tehama, and committed to prison in default of \$2000 bail, on a charge of arson, in causing the great fire at Tehama.

Lange and five apples which were grown on the premises of Mrs. Wheeler, in Martinez, are reported by the Gazette of the 24 instant.

A quantity of hay was destroyed in San Mateo county, by fire caused by using phosphorus to kill squirrels.

In the San Gabriel Gold Mines are about two hundred and fifty men engaged in mining, and in preparing races and sluices. It is estimated that those now at work are getting from four to eight dollars per day.

A Soap Manufactory has been established at Los Angeles, by A. M. Dodson & Co., which produces different varieties of very superior soap, in quantities sufficient to supply not only that but other markets.

The Alameda County Agricultural Society have decided to hold a fall Fair in the city of Oakland, commencing on Tuesday, the 4th day of October, 1859, and to continue for ten days.

The Sonoma Journal claims that Petaluma Engine, No. 1, was the first who hoisted a thirty-three star flag. The occurrence took place June 23, in honor of Oregon, that day being the one on which her general election was held.

The excessively warm weather at North San Juan, says the Hydraulic Press of July 23, does not seem to check the operations of our industrious miners, who labor on with their usual energy and success, and we hear of good gold yields from every locality.

The weather at North San Juan, says the Press of the 24 inst., since our last issue has been quite breezy and endurable. A most grateful change. Several heated days in succession, such as we suffered from lately, always produce a breeze in the end.

As apricot ripened June 28th, in Stockton, measuring 6 1/2 inches in circumference. Peaches and apples are said to be abundant, and will be in market in a few weeks almost as cheap as potatoes. Pears are a drug, and so are blackberries—three pounds for fifty cents.

The July term of the Supreme Court of California has been adjourned to the first Monday in October. The Court give notice that cases may be submitted, by consent, on written arguments, at any time in the interval, by filing stipulations in writing to that effect with the Clerk of the Court.

Rich gold discoveries are reported on Walker River. The new diggings are apparently in the debris of the old quartz lode, which is so effectually decomposed that the quartz is rotten and crumbles like pipe clay. Several of the claims which are now being worked in this old lode are yielding from \$50 to \$500 per day to the hand. The vein has been traced to a considerable distance, and there is reason for believing that the diggings are extensive, as well as marvelously rich.

The Marion Rangers, composed of the yeomanry of Bodega, Anny, Bloomfield, and the surrounding country, and which was called into existence by the late aggressive acts of Mr. Curtis in Sonoma county, celebrated the Fourth in Petaluma, under the command of N. L. Allen. Although hastily called together, and necessarily acting without any regular organization, the Rangers turned out upon this occasion about one hundred well-mounted men, uniformed in gray woolen shirts, black pants, and blue cloth caps. It is the intention of the Rangers to effect a permanent organization, and for the accomplishment of this object, a meeting will be held at Bloomfield on the last Saturday of this month.

The Union states that John Alexander, a practical geologist, has been experimenting on a vein of coal on the eastern border of Sacramento county, and proved it to be extensive and valuable. The seam is fifteen feet thick, variety of coal brown and highly bituminous, burns with a brilliant flame, and is admirably adapted for generating steam and for parlor grates and stoves. Fossil resin exists in the coal, and is easily distinguishable to the taste as well as to the eye.

The steamer Anna, built at North Point about a month ago, returned on Monday, the 4th instant, from a voyage up the Sacramento, some fifty miles above Red Bluffs, and within ten miles of Shasta, under the command of Captain Trueworthy. We believe, says the Call, that the only instance on record of a steamer successfully navigating the Upper Sacramento as far as Shasta, was when, in 1852 or '53, the little Belle steamed through the Iron Canon, and finally reached that point.

Mass in Tulare county, the Record says, will be very plenty this year, so that the Gentile world may well rejoice and be glad, for the quantity of fat pork will undoubtedly be much greater this fall than heretofore; indeed in some places the trees are so loaded with acorns that the limbs are falling to the ground, unable to support the weight of their own fruit. In front of Billap's hotel some evenings since, a solid limb, some six inches in diameter, broke off near the trunk of the tree, and it was found on examination that it contained an almost incredible amount of acorns. The raising of pork is considered here as the most profitable investment of capital which can be made. And there are probably at present in this country more than fifty thousand hogs, which will be ready for market this fall, hence this season appears to be particularly favorable to dealers in this kind of stock.

Encke's Lake Ditch Company's reservoir, at the head of Canon Creek, gave way last Monday week, and sent pouring down the South Yuba a flood of water which carried everything before it, and was not exhausted for several hours. The flood is described to have traveled like a tide, with a breast to it six or seven feet high, when many miles below its outbreak. Tree trunks a hundred feet long were tossed on it like toys, and shot by with the greatest velocity. At Mexican Bank, about a mile below Missouri Bar, three men who were constructing a dam in the river were carried off and drowned. The reservoir which gave way was dammed to a great height and covered a surface of about a mile square.

At Red Bluff the farmers have mostly finished harvesting, says the Beacon of the 6th inst., and quite a number are engaged in thrashing their grain. The yield will be a little over an average one. Some crops are very heavy, while others are scarcely worth cutting. On the whole there is not near so much smut as last

year, but still some crops are nearly ruined by it. Owners of thrashing machines are charging ten cents a bushel for thrashing. Wheat this year is twenty-five per cent cheaper than last, yet thrashing is the same price. It should be reduced to eight cents in order to make things on an equality. Our friend, Mr. A. G. Toomes, presented us a few days since, a branch of an apricot tree containing forty-nine apricots in a cluster, all in a space of less than ten inches. The weight of the fruit, though not more than half matured, broke the limb. Truly our country is one of the most prolific on the earth.

## Walking Horses.

While a great and commendable zeal is everywhere being manifested for horses having great speed and bottom, and for all the best points of a roadster, there is one characteristic or trait in the horse that should not be lost sight of; we mean fast walking horses. We hold this to be one of the greatest desiderata that should be in the minds of our horse-breeders. The thousands of acres of our broad prairies that are to be annually plowed, and that too by horse-power until the steam-plow shall be successfully introduced, should lead us to a just calculation of the difference between a horse of strong muscular power and a great walker, and one who though a good horse and willing worker, can only get over one-half or three-fourths the same ground per day of another and better animal. We hope this subject will demand the thought and action of the several county agricultural societies as well as the State Society, and that premiums will be offered for the best walking horses as well as the best trotters and racers.

RECEIVED.—Prospectus of the Santa Clara College, Santa Clara, for the year 1858-9, list of officers and students, and distribution of premiums, showing the success of this excellent institution. Also, Prospectus of the Academy of Notre Dame, San José, with names of pupils and distribution of premiums. This institution is in a very flourishing condition also. The catalogue and list of pupils of the Bascom Institute, which is among the prosperous schools of knowledge for our State. Such are the Beacon lights for California.

The work on "Physical Perfection" we desire to call to mind again, as one of the best books ever published.

For the cause of Agriculture we have received the Annual Circular of Premiums of Maine State Agricultural Society; also, Pennsylvania State Agricultural Society. Each of these, and all other State Society publications we have received, contain the lists of Awarding Committees. So it should always be.

We have been favored with Catalogues of the nurseries of Messrs. Vilmorin, Andrieux & Co., of Paris; A. Frost & Co., Ellwanger & Barry, and H. E. Hooker & Co., of Rochester, N. Y. Also, the Catalogue of D. M. Dewey, horticultural bookseller and dealer in colored fruit plates, Rochester, N. Y.

TO CORRESPONDENTS.—We must ask the very kind indulgence of our correspondents and readers for any seeming neglect of their generous favors, for during our temporary illness our table has been piled up with many valuable gifts, solid and literary, which will demand due acknowledgment. We have several very valuable and interesting essays from the several colleges for publication, which will all appear. We have also several letters from our esteemed lady correspondents on file, all duly accepted. Some of these we had hoped to have published ere this, but matter of a very pressing kind, that would not do to delay, prevented us. We return our sincere thanks for the testimonies of appreciation we have received, and the goodly lists of names received as new subscribers, within the last few weeks. We shall place them all for our new volume, beginning with volume XII, number 1, the present numbers being gratuitous. We still hope the friends of this journal will forward generous lists, so we may commence volume XII with a heavy issue.

New Music.—We have received new music from the house of Waters & Co., of New York; and also from Kohler & Co., of this city; from the latter the new and beautiful ballads, "You'll soon forget Kathleen," by J. G. Hiller, and "When the stars in splendor golden," by W. Langton Williams, both choice and beautiful ballads.

ARRIVED.—The steamer Washington, a mate of the unfortunate steamer Herman, arrived at this place, after a passage of 257 days from New York. The steamer touched at St. Catherine's in Brazil, Jamaica, Valparaiso, Panama, Aspinwall, and other places.

SAN JOSE MISSION CLAIM REJECTED.—The claim to 30,000 acres of land at the Mission of San José, has been rejected by Judge Hoffman of the United States District Court.

INSTINCT OF THE HEN.—A friend has just related the following amusing incident (says New York American Agriculturist), which occurred in his fowl-house, in Brooklyn, showing more perceptive power in the hen than she is usually credited with. The family, when boiling eggs for breakfast found a cracked one in the water, which, upon examination, proved to be bad. It was taken to use for a nest-egg, but a hen, when going to lay, spied it, and at once, with feet and bill, threw it out upon the floor, and proceeded to demolish it by pecking and scratching, not eating it however. She then resumed her place, and after very carefully looking over a new egg, placed in the nest, proceeded to business, and was soon cackling over her success.

## ARRIVAL AND DEPARTURE OF MAILS, AT THE POST-OFFICE AT SAN FRANCISCO, CALIFORNIA.

Sacramento—Leaves daily (except Sundays), at 3:30 PM. Arrives daily (except Sundays), at 10:30 PM.  
Stockton—Leaves daily (except Sundays), at 3:30 PM. Arrives daily (except Sundays), at 10:30 PM.  
San José—Leaves daily, at 8 AM. Arrives daily, at 3 PM.  
Petaluma—Leaves daily, at 8 AM. Arrives daily, at 3 PM.  
Oakland—Leaves daily, at 8 AM. Arrives daily, at 3 PM.  
San Diego—Leaves on 3d and 5th of every month, at 9 AM. Arrives on 5th and 7th of every month, at 3 PM.  
Atlantic via Panama—Leaves on 5th and 20th of every month, at 9 AM. Arrives on 7th and 22nd of every month, at 3 PM.  
Overland via Salt Lake—Closes every Thursday, at 3:30 PM. Overland via Los Angeles and El Paso—Closes every Thursday, at 3:30 PM.  
Oregon and Northern Coast—Leaves upon the arrival of the steamer from Panama.  
Three cents will pay the postage on a single letter, via Overland, as far as Chicago, Ill., and Cincinnati, O. Beyond those points, the postage will be ten cents.

RAIN ON THE FOURTH.—There was a slight fall of rain in this city, during the forenoon, just enough to cast the atmosphere and make it comfortable. The same event was noticed elsewhere; in Stockton there was quite a shower in the afternoon.

## SPECIAL NOTICES.

The Bascom Institute, San Jose.—The Summer session of the Bascom Female Institute, will commence on Wednesday, 27th July.  
MRS. R. C. HAMMOND, Principal.

A Card.—The undersigned, in view of an open and inviting field, and desiring in accordance with the expressed desire and flattering encouragement of others, takes pleasure in announcing his purpose to devote himself to the effort of rearing in this city a University upon a broad and permanent basis, to supply to young gentlemen the highest order of educational training for professional and scientific pursuits. The selection of San Francisco as the seat of the University, has been made in view of the fact that great cities are grand centers of intelligence, wealth, and power, and hence the legitimate patrons of institutions of learning. It will be the steadfast aim of the undersigned to present to his fellow-citizens, in the unfolding processes of his plan, a scheme of education which may command their confidence and favor.

With this ultimate object in view, a preparatory Grammar School will be opened on the 11th inst., in the Chinese Chapel, corner of Stockton and Sacramento streets. Parents and others interested, wishing to place their sons or wards in this school, may make application by letter or in person.  
ALBERT WILLIAMS.

ORIENTAL HOTEL, San Francisco, July 6th, 1859. 23m

Patent Office Business.—All persons having inventions or improvements upon inventions, and desiring of securing a Patent for the same, can be greatly aided in expediting the same by calling on us; having received from Messrs. MUNN & CO., of the Scientific American Office, their rules of procedure in all cases, so that expedition and safety may accrue to inventors.

Letters addressed to us will receive immediate attention.

Superior Sheep Dogs.—We have some superior Sheep Dogs for sale, from original French stock. They are now of the right age to take away, and are the best and handiest dogs that have ever been offered for sale. Apply to the editor of the FARMER. 23

Importation of Stock.—The wonderful advantages of our climate for the breeding of stock and the certain success which has attended all the efforts made to improve the different races of animals have elicited a more particular attention to this subject from the best stock-raisers of Europe and America. To secure to themselves the market of California for a sale of valuable breeds of horses, cattle, sheep, and swine, they have addressed us letters of inquiry, and have already sent us their catalogues of stock, together with the pedigree of the finest animals now for sale. We shall prepare a list of the same so as to have it completed by the time of the autumn Fair, when those parties desirous of purchasing the best blood stock of the world, will have an opportunity of doing so. We therefore invite stock-raisers abroad who have not already done so, who have fine stock for sale, to send us their lists that we may register the same. A full pedigree, with all particulars of the stock and the cash price, will be registered and offered for sale. We have already about one hundred head of stock registered, that can now be purchased and guaranteed a safe delivery here at a given time. Those who want will do well to make early application.

Address Editor California Farmer, San Francisco.  
SWARMS OF BEES.—Very full and excellent Swarms of Bees, now ready for delivery, can be had on application at the Office of the FARMER. These Swarms are of a very extra quality, and such as are not to be had very often. Persons in want of Bees will do well to make early application, as good Swarms are not plenty. 19

## To Nurserymen.

We would call the attention of Nurserymen and others in California and Oregon, who purpose to plant largely, to our

California Wholesale Catalogue, No. 6, for 1859, which will be published on the 15th of June. This Catalogue will give the prices and description of

Seedling Apple, Pear, Cherry and Plum, as well as

QUINCE AND MAHALEB STOCKS,

which we can furnish in any quantity. Also,

STANDARD AND DWARF

Fruit Trees in bud, or one year from bud or graft.

## SMALL FRUITS

In great variety, as well as an extensive stock of

## ORNAMENTAL TREES, SHRUBS, ROSES,

BULBS, HERBACEOUS PLANTS, ETC.,

of small size, suitable for transplanting.

For further information concerning our stock, etc., would refer parties to our general advertisement in another portion of this journal.

Our Catalogue will be mailed FREE, upon application, as well as our more general Catalogues Nos. 1, 2, 3, 4, and 5.

A. FROST & CO.,

Proprietors of the Genesee Valley Nurseries, ROCHESTER, New York.

18-3m

The Ladies' Electro-Chemical Bath—

Exactly so—as a suite of Baths, with a well furnished reception room, has been assigned exclusively to the ladies who patronize his institution, by Dr. BOVANT, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A skillful, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as aids to cure neuralgia, rheumatism, and the other "ails that flesh is heir to," as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than "sugar-coated pills," and how much better, those can most truly tell who have "thrown physic to the dogs," and cleave to these health-giving baths. 16

MRS. P. E. ROGERS—Family Sewing.

We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the state, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

THE GENUINE PITTS' MACHINE.

T. OGG SHAW, is the only place where the Genuine

Pitts' MACHINE, made by John A. Pitts, can be had.

Farmers will please note the above, and call at my Agricultural Implement Manufactory, corner of Davis and Sacramento streets. [13] T. OGG SHAW.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photography; we are ahead of the world in Daguerotypes. We have documents to prove the whitewashing of an unprincipled committee at Marysville, notwithstanding the palms of whose lands, I presume, were peculiarly sensitive to the touch of "Vergil."

My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brings so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest artists.

R. H. VANCE.

Corner Montgomery and Sacramento streets.

1

## FRENCH-MERINO BUCKS.

THE undersigned, being informed SHEEP RAISERS, that he is now permanently located on the SALINAS PLAINS, AT DEESE'S RANCHO, and is now prepared to supply them with MERINO BUCKS from the celebrated Bucks "Samson," "Louis Napoleon," and "Brigham Young," imported into this country by Messrs. SEARLE & WYNN, and purchased by them of J. D. PATTERSON, Esq., of Westfield, Chautauque county, N. Y. The RAMS can be contracted for either delivered here or on the Rancho.

J. B. WYNN, At Messrs. FALKNER, BELL & CO'S, California street.

San Francisco, July 8, 1859.

N. B.—COL. WARREN, Editor of Farmer, is authorized to contract for the sale of these Bucks.

## WARM SPRINGS HOTEL.

Twenty-eight Miles from Oakland.

THE undersigned, having leased for a term of years the hotel and premises known as the Warm Springs, situated in Alameda county, near the Mission of San Jose, respectfully informs the public that he has re-furnished the house throughout, in the best style, and is now open for the reception of visitors.

No pains nor expense will be spared to provide most amply for all the wants of the guests of the house. The table will be abundantly supplied with every delicacy in its season—fruits, berries, game, etc., and every effort will be made to render this house the most pleasant and agreeable place of resort in the State.

The waters of these Springs are unsurpassed for bathing purposes (for which extensive facilities exist), and their medicinal and sanative qualities have been long and firmly established.

The proprietor hopes that by strict attention to the comfort and accommodation of those who may visit his house, to merit a liberal share of patronage.

A Livery Stable is connected with the house.

PETER DAVIDSON.

## SOLOMON'S TEMPLE.

This Magnificent Work of Art,

NOW COMPLETED

According to the most perfect style of architecture, as described in Sacred History,

will be opened for the approval of the public, on

MONDAY EVENING, MAY 30th,

AT 8 O'CLOCK.

The proprietors believe they can claim for the public their deserved approval and support.

When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement, have seen that it should be completed whatever the amount of labor it should require, or the cost it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

EXHIBITED IN THE PAVILION

Recently occupied by the

MECHANIC'S INSTITUTE,

On Montgomery street, near Market street.

The whole interior of the Pavilion has been handsomely fitted up with

## SKETCHES OF THE HOLY LAND

which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate handbills describing minutely this temple. Suffice it to say that all and

EVERYTHING RECORDED IN THE BIBLE

will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. Slabough, as master builder, competent artist for carved work, A. Moline glider and finisher, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows:

Season Tickets admitting a gentleman and lady... \$5 00

Single Tickets..... 50

Children under 12 years, half price.

The Pavilion will be open from 10 o'clock A. M. till 10 o'clock P. M.

P. S.—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Byrne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions.

17-3m MRS. C. SHADE, Proprietress.

## THRASHING MACHINES, HALL &amp; WOODBURY'S SEPARATORS,

With Hall's Improved 10-Horse IRON-POWER.

THESE MACHINES HAVE been enlarged and many valuable improvements added to them the past season.

They are now as they always have been, THE BEST MACHINES IMPORTED.

Purchasers will do well to call and see these Machines before purchasing, as they will be sold low.

EXTRA CASTINGS, of all Descriptions, for repairs.

For prices and particulars, apply to or address

WM. LYNE,

118 Front street, corner of Oregon, SAN FRANCISCO.

## THE APIARIST.

THE undersigned, Agent for the sale of the Harbison

Bee Hive, would take this means of informing the citizens of Santa Clara Valley, that he is prepared to Sell Rights to persons to use this very best Hive. He is also prepared to give full and complete directions relative to the Care of Bees and the use of these Hives.

Having given much study to the nature and habits of the Bee, he is able to give such directions for their care, and their propagation, as will be of great service to the grower of Bees.

The undersigned will visit, professionally, all who desire his aid in this County. Hives for Sale.

H. HAMILTON, near the College, Santa Clara, Santa Clara county.

19-3m

## The Genuine DRY PULU

IS IMPORTED FROM THE SANDWICH ISLANDS, AND SOLD ONLY BY

JACOB SCHRIEBER,

180 Jackson street,

Next door to International Hotel.

DRY PULU is the Healthiest, Softest, Cheapest, and most Durable material for Bedding now in use.

Please will not live in Peru Bedding. 25-3m

Budding Knives.—Those who desire a very superior Budding Knife, can secure one by sending \$1 50 to our Office.

## AGRICULTURAL. 125 McCormick's Chicago Reapers!

Three Sizes—5 1/2, 6 and 7 feet Cut.

WITH EXTRAS FOR ALL THE DIFFERENT PATTERNS, from 1852 to 1859. [Agent for the Manufacturers for the Pacific Coast.]

2500 sold in 1855, 4000 sold in 1856, 4000 sold in 1857, 4900 sold in 1858.

15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim to have manufactured and sold anything like so large a number of Reaping and Mowing Machines during the same time, while my experience dates back to the origin of my machine in 1834, having been actively and exclusively engaged in their manufacture for the last fifteen years. I am now more largely engaged in the manufacture of these machines than ever before, and, with my improvements for 1859, do not hesitate to warrant my machine as a Reaper, Mower, and cutter, superior to any other for simplicity, durability, and perfect working; and further to say, that farmers who may desire it are at liberty to work my machine through the harvest with any other, and keep and pay for the one preferred. The position of the Reaper in my machine (as patented), upon the main frame, where there is great strength, and where the weight adds to the power of the machine, is the only right one. Other makers have to haul their Reapers on the platform, where he must submit to having the dust thrown in his eyes by the operation of the reel, and to being jolted over the wheels of the little platform wheel, which makes the ride, necessarily, rather a disagreeable one. This accounts, in part, for the great durability of my Machines as compared with others.

Great Council Medal awarded my machine in London, in 1851.

Grand Gold Medal of Honor at Paris, in 1855.

Highest Prize at the French Universal Exhibition, in 1856.

Highest Prize of Royal Agricultural Society of England, in '57.

Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the Massey

machine, claiming the highest honors, etc., at the French Universal Exposition, in 1855, are known by them to be FALSE.

## Miscellany.

## SCATTER THE GERMS OF THE BEAUTIFUL.

Scatter the germs of the beautiful  
By the way-side let them fall,  
That the rose may spring by the cottage-gate,  
And the vine on the garden-wall;  
Cover the rough and rude of earth  
With a veil of leaves and flowers,  
And mark with the opening bud and cup  
The march of summer hours.

Scatter the germs of the beautiful  
In the holy shrine of home;  
Let the pure, and the fair, and the graceful there,  
In their loveliest later come;  
Leave not a trace of deformity in  
The temple of the heart,  
But gather about its hearth the gems  
Of Nature and of Art.

Scatter the germs of the beautiful  
In the temple of our God—  
The God who started the uplifted sky,  
And flowered the trampled sod  
When He who built a temple for himself,  
And a home for his priestly race,  
He reared each arch in symmetry,  
And carved each line in grace.

Scatter the germs of the beautiful  
In the depth of the human soul;  
They shall bud and blossom, and bear the fruit,  
While the endless ages roll;  
Plant with the flowers of charity  
The portals of the tomb,  
And the fair and the pure about the path  
In Paradise shall bloom.

## Hints for Husbands.

There is an article afloat in the papers entitled "Golden Rules for Wives," which enjoins upon the ladies a rather abject submission to their husbands' will and whims. Iron rules, not golden ones, we should call them. But the art of living together in harmony is a very difficult art; and, instead of confining the positions of the author of the rules aforesaid, we offer the following as the substance of what a wife likes in a husband:

Fidelity is her heart's first and most just demand. The act of infidelity a true wife cannot forgive—it rudely breaks the tie that bound her heart to his, and that tie can never more exist.

The first place in her husband's affections no true wife can learn to do without. When she loses that, she has lost her husband; she is a widow; and has to endure the pangs of bereavement intensified by the presence of what she no longer possesses. There is a living mummy in the house, reminding her of her loss in the most painful manner.

A woman likes her husband to excel in those qualities which distinguish the masculine from the feminine being, such as strength, courage, fortitude and judgment. She wants her husband to be wholly a man. She cannot entirely love one whom she cannot entirely respect, believe in, and rely on.

A wife dearly likes to have her husband stand high in the regard of the community in which they reside. She likes to be thought by her own sex a fortunate woman in having such a husband as she has. She has a taste for the respectable, desires to have a good-looking front door, and to keep up a good appearance generally. Some wives, it is said, carry this too far; and some husbands, we know, are dangerously complaisant in yielding to the front-door ambition of their wives. But a good husband will like to gratify the ambition of his wife in this respect, as far as he can, without sacrificing more important objects.

Perfect sincerity a wife expects, or at least has a right to expect, from her husband. She desires to know the real state of the case, however it may be concealed from the world. It wrings her heart and wounds her pride to discover that her husband has not wholly confided in her. A man may profitably consult his wife on almost any project; it is due to her that he should do so, and she is glad to be consulted.

Above most other things, a wife craves from her husband appreciation. The great majority of wives lead lives of severe and anxious toil. With unimaginable anguish and peril to their own lives, they become mothers. Their children require incessant care. "Only the eye of God watches like a mother's," says Fanny Fern in that chapter of "Ruth Hall" which depicts with such power and truth a mother's agonizing anxieties. And besides her maternal cares, a wife is the queen-regent of a household kingdom. She has to think, and plan, and work for everybody. If, in all her labors and cares, she feels that she has her husband's sympathy and gratitude—if he helps her where a man can help a woman—if he notices her efforts, applauds her skill, and allows for her deficiencies, all is well. But to endure all this, and yet meet with no appreciating word, or glance, or act from him for whom and whose she toils and bears, is very bitter.

A wife likes her husband to show her all due respect in the presence of others; she cannot endure to be reproved or criticised by him when others can hear it. Indeed, it is most wrong in a husband thus to put his wife to shame; and we cannot help secretly admiring the spirit of that French woman, who, when her husband had so wronged her, refused ever again to utter a word, and for twenty years lived in the house a dumb woman. We admire her spirit, though not her mode of manifesting it. Husbands owe the most profound respect to their wives, for their wives are the mothers of their children. No man has the slightest claim to the character of a gentleman who is not more scrupulously polite to his wife than to any other woman. We refer here to the essentials of politeness, not its forms; we mean kindness and justice in little things.

A wife likes her husband to be considerate. Unexpected kindness and unlooked-for favors touch her heart. She appreciates the softened tread when she is sick; she enjoys the gift brought from a distance, and everything which proves to her that her husband thinks of her comfort and her good. Husband, reflect on these things. Your wife has confided her happiness to you. You can make it unspeakably wretched if you are ignoble and short-sighted. Let the contest between husbands and wives be this: Which shall do most for the happiness of the other.—[Life Illustrated.]

IMPORTANT DISCOVERY AT BABYLON.—A London paper states that Col. Rawlinson has just discovered among the ruins of ancient Babylon an extensive library, not indeed printed on paper, but impressed on baked bricks, containing many and voluminous treatises on astronomy, mathematics, ethnology, and several other most important branches of knowledge. These treatises contain facts and arguments which, in his opinion, will have no small operation on the study of the sciences to which they relate, and which throw great light upon biblical history and criticism, and the history of our race.

**American Farmers' Daughters.**  
In his "North America: its Agriculture and Climate," Robert Russell, a Scotch farmer of great intelligence, though a bachelor, is frequently constrained to compliment American farmers' wives and daughters, not only for their beauty and accomplishments, but also for their intelligent and skillful performance of household duties. In company with Professor Holmes, he visited the farm of the President of the Michigan State Agricultural Society, at Prairie Round, and says:  
"The President was from home; but his daughter, a pretty and intelligent girl, acted as hostess. As all rise early in America, dinner is usually served up about noon. The Americans are commonly good cooks, and great mechanical skill has been displayed in adapting the kitchen stoves for cooking. I do not think our fair hostess had any help to prepare our excellent dinner, with a great variety of dessert; but things went on so smoothly, that one could hardly believe that both the cook and the lady were combined in the same person. After having had some good music and native airs from our entertainer, Mr. Holmes and I found our way in the dark to Kalamazoo, highly pleased with our visit to Prairie Round."

**LADIES SHOULD READ NEWSPAPERS.**—It is one great mistake in female education to keep a young lady's time and attention devoted to only the fashionable literature of the day. If you would qualify her conversation, you must give her something to talk about; give her education with this actual world and its transpiring events. Urge her to read newspapers and become familiar with the present character and improvement of our race. History is of some importance; but the past world is dead, and we have little comparatively to do with it. Our thoughts and our concerns should be for the present world, to know what it is and improve its condition. Let her have an intelligent opinion, and be able to sustain an intelligent conversation concerning the mental, moral, political, and religious improvements of our times. Let the gilded annals and poems on the center-table be kept part of the time covered with weekly and daily journals. Let the family—men, women, and children—read the newspaper.—[Exchange.]

**DRINKING.**—The Philadelphia Sun says indiscriminate drinking among young men eventually makes its mark upon the population of our cities. We can see it betraying itself in the rising generation. It is impossible for any man to drink even pure liquors six or seven times a day without suffering severely in constitution. And when he transmits this impaired constitution to his son, who in turn imparts it still further by the same course, it requires but little foresight to see that we are preparing a population for our cities that will not in physical frame be much better than the wretched Aztecs. This love of drink and bar-rooms is every day increasing. Every day sees our youth becoming more and more the victims of this habit; for we really think it more a habit than a passion. It is no love of joviality that tempts them, except in a few cases. It is not the hot exuberance of youth; it is not the evanescent impulse of the gay young fellow who is sowing his wild oats. It is, as has been said, a cold, deliberate, confirmed habit. No atmosphere of recklessness surrounds the drinking group, except on occasions; and no peals of merriment alone for the act by proving that it is at least unusual. A grim and melancholy air pervades each countenance. The drinks are poured out; the glasses are raised and touched with a loathsome air of custom, and each man swallows his portion with the same impassive countenance he would wear if he were drinking a glass of plain water. All the concomitants that partially redeem or excuse, are wanting in this sad and formal ceremony.

**FACTS ABOUT COTTON.**—The quantity of cotton wool consumed in 1850 by the chief cotton manufacturers of the world, was 795,000,000 pounds, more than half of which was used up in Great Britain. The total value of the latter, when manufactured, has been stated by Mr. Henry Ashworth to be \$307,400,000, of which only about one-third may be estimated as the value of the raw material; the cost of labor, machinery and profits, being estimated at about \$187,500,000. The effect of a temporary cessation of the wanted supplies of cotton would be to throw hundreds of thousands into beggary; and all the landed property in the north of England would soon be swallowed up to maintain the population thus thrown upon the poor-rates for support.

THE "NE PLUS ULTRA"  
OF  
SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE.  
(Under Howe's License).  
MANUFACTURED BY THE GLOBE MANUFACTURING COMPANY,  
**339 Broadway, New York.**

MAY BE TRULY REGARDED as the "Ne Plus  
Ultra" of Sewing Machines, and all who are wish-  
ing to find a Machine which is capable of doing any  
kind of Sewing for Tailors and Housewives, with a sat-  
isfaction heretofore unknown—should lose no time in  
ordering one of the PATENT LEVER MACHINES,  
which are to occupy a similar position towards other  
Sewing Machines, that a PATENT LEVER WATCH  
(and every one knows its value) occupies towards a  
Locket or other second-rate watch.  
This Machine makes the "Lock Stitch," which looks  
the same on both sides of the fabric, and which cannot  
be ripped.

**PRICE \$50.**  
In all respects equal to Machines heretofore sold at a  
hundred dollars and upwards.  
Specimens of Sewing done by the PATENT LEVER  
MACHINE, will be forwarded to any part of the country,  
upon the receipt of a postage stamp.

N. B.—An energetic and reliable Agent is wanted in  
every town and village of the United States and Cana-  
da, to sell the above named Machine. An advantageous  
arrangement will be made with the right kind of Mer-  
chant who is willing to have the exclusive agency.

**Stock's New Galvanized-Iron**  
**LIFTING-PUMP.**  
PATENTED VALVES AND PLUNGERS.

**T. & J. STOCK, - - SAN JOSE,**  
Desire to call the special attention of  
**Farmers, Stock-Raisers, Vine-Growers, and**  
**ORCHARDISTS,**

to the newly arranged Pump, for which they have re-  
cently received the patent of the United States. This  
valuable improvement, for which they have received the  
patent, consists in the form and working-power of the  
pump valves and plungers, by which an immense vol-  
ume of water is easily raised in a perpetual stream. This  
pump was exhibited at the recent Fair, and carefully  
examined and awarded the award of the Industrial Society  
of this country. This pump can be adjusted to Artesian  
wells that fall, or to any well. The Pumps are made of  
galvanized-iron, the valves with the plungers being  
attached at the lower end of the pump. Thus arranged,  
they can freely lift water from any depth even to two  
hundred feet.

A No. 3 Pump will give from 30 to 40 gallons a minute.  
" 4 " " " 50 to 60 " "  
" 5 " " " 70 to 100 " "  
" 6 " " " 100 to 125 " "

These PUMPS are so SIMPLE and thoroughly  
made that every person can take them apart and put  
them up and keep them in order themselves. The very  
best references can be given of their excellence.  
The cost of these Pumps is very moderate, being only  
from 75 cents to \$1.25 per foot, according to the size of  
the pipe—the valves extra.

All persons are hereby cautioned against infringing  
upon the patent rights of the undersigned.  
Made to order—GALVANIZED IRON PUMPS, Artesian  
Well Pipes, and all needed materials for Artesian wells  
always on hand or made to order.  
San Jose, June 17, 1859. T. & J. STOCK.

MANUFACTURERS OF MACHINERY, AGRICULTURAL  
Machinery, Seed-machines and Reapers.—All such who desire to  
make their business known over the entire State of California,  
should send their business advertisements to us, and we can  
spread the news for them.

10-3m No. 81 Clay street, above Front

**CHEENEY'S**  
**IMPROVED FIELD FENCE.**  
PATENTED JANUARY 25, 1859.

**PERMANENT OR PORTABLE.**  
It is made of boards or rails in the following manner: Take  
two sticks or posts of timber 2 1/2 inches square, and about  
6 1/2 feet long, either sawed or split, their length may be va-  
ried according to the height intended for the fence. Lay them  
across each other in such a manner that the ends which rest  
on the ground, will be about 5/8 of 6 feet apart, leaving about  
18 or 20 inches of each post above the point of intersection to  
receive the top-rail, board, or pole. They may be fastened at  
the point of intersection by having and nailing; or if the  
posts are split, by bolt and screw. A mixer box may be used  
to saw and split the posts. Next take two cleats about 1  
inch thick and 3 inches wide; nail the short cleat across  
from one post to the other, so as to leave a triangular space  
large enough to receive the rail or board. Then nail the long  
cleat to the posts parallel with the short one, and about 12 or  
14 inches below it. These cleats serve to strengthen the post,  
and the rails or boards rest on them.

For board fences use a stick 2 1/2 inches square and 2 1/2 feet  
long; nail it to the cleats, also to one of the posts about one  
inch from the point of intersection; this is to stand perpen-  
dicular, and the boards are to be nailed to it. For rails, two  
perpendicular strips of board about 2 inches wide should be  
nailed to the cleats to keep the rails in place, or a loop of  
wire attached to the posts or rails, can be used if preferred.

The lower rail may be suspended, and in place, or a loop of  
nailed to the cleats to keep the rails in place, and brace the posts;  
thus enabling the fence to withstand the effects of wind, and  
preventing it from being thrown down by animals, and making  
it stronger. Where fencing timber is scarce, the rails may  
be dispensed with by substituting a low mound of sod or  
turf, or stone wall.

Expenses per 12 feet: lumber \$10 per 1,000; rails, \$3  
per 100; posts, including lumber (8 feet) nails and making,  
14 cents each; five rails at 3 cents each, 15 cents. Cost per  
12 feet, 30 cents; or if two boards, six inches wide, and three  
rails are used, the cost will be about 55 cents per twelve feet.  
Cost per rod, from 30 to 50 cents.

The superior method of hanging a gate to one of these posts  
is worthy of special notice.  
A few remarks may here be proper in respect to the general  
principles of my improvement. A careful inspection of the  
mode of drawing or of the fence itself, will show that the  
particular form and construction of the posts and rails has  
been adopted with reference to their simplicity, economy,  
strength and durability. The posts are started on the ground, not  
in the fence; hence, no digging or post-holes or rotting of posts,  
or sagging over; it is not effected by frosts or winds. This  
fence is believed to be the best—all things considered—ever  
offered to the public.  
Town, County, or State Rights, for sale on the most favorable  
terms. Address  
Klamath, Chem. Co., N. Y., Patentee.  
H. WINCHESTER, Iowa.  
Agent for California.

Letter from France. BY OUR REGULAR CORRESPONDENT. The War in Europe—Cause of the War—France disavows the desire of conquest—Russia will unite with France—Character of the Austrian Government—Its Tyranny—Respect to the King of Sardinia—Final freedom of Italy.

PARIS, France, May 29, 1859. EDITOR FARMER: The game is made. The war has commenced. The Austrians have crossed the Ticino; they have invaded the territory of Sardinia, and France is rushing her legions to the rescue. Each Emperor has issued an address to the people. That of Napoleon to the French is short, simple, and to the point. Austria, he says, has violated treaties, has broken the law of nations, has acted against the protest of all the great Powers, and by force and secret alliances has extended her power over the whole of Italy, from the Alps to the gulf, and from the Mediterranean to the Adriatic. France disclaims any intention of conquest, or of aggression upon neutral States. The object of the war is to restore Italy to herself and not a change of masters, as his enemies pretend to believe. The facts stated in this manifesto, are true, and well known throughout Europe.

The proclamation issued at Vienna, by the Emperor, Francis Joseph, is neither concise, simple, nor truthful. Indeed, it is said to contain more than one direct falsehood, as where it says: "The mediation of the friendly powers failed because Sardinia made the conditions unacceptable," whereas the truth was, Austria having assented to a Congress and a general disarmament, took the responsibility of dealing with Sardinia separately, justifying herself, and annulling all the efforts of the great Powers to obtain a peaceful settlement. Russia will side with France, and assist Sardinia when it becomes necessary. A treaty to that effect is already in existence.

Germany is all alive, and the Federal Diet has received official notice of the declaration of war, from Austria, but has not yet decided what course to pursue. England, Prussia, and the Swiss have each declared themselves neutral for the present, at the same time placing their entire soldiery on a war footing.

The war has made but little progress yet. No battle has taken place; each one is maneuvering and concentrating its forces on the Po and its tributaries.

The Grand Duke of Tuscany and the Duchess of Parma have both abdicated and taken themselves off to Vienna. They were advised to leave by both the people and the army. There was no bloodshed, no rioting, and business was not disturbed. The Tuscan army joined the Sardinians, and many thousands of volunteers from Rome and Naples, indeed, from all parts of Italy, have rallied around the standard of Victor Emmanuel.

Austria is the most detestable government in Europe, the open and armed enemy of constitutional liberty and the rights of the people. Its subjects are composed of six or seven distinct nationalities, Germans, Hungarians, Bohemians, Italians, many of whose capitals and chief cities have been bombarded, their nobles hung, their men shot, their women flogged, and political prisoners tortured in chains and dungeons.

The King of Sardinia is the most respected and enlightened sovereign in Europe; faithful to his word, true to the constitution of the kingdom, he is trusted by the Senate and the people to the fullest extent. That he may be equal to the task of freeing Italy from the political and ecclesiastical tyranny under which she groans, must be the prayer of every man of intelligence, and who hates oppression.

Le Docteur.

From the Atlantic Side.

LETTER BY OUR REGULAR CORRESPONDENT.

NEW YORK, June 6th, 1859.

EDITOR FARMER: Time is precious with me at this moment, and my letter must be short indeed. The general aspect of matters on this side is about the same as per last advices. The weather is warm and reasonable; plenty of rain, but not too much. There was a prospect of a dry May; the first of the month was quite free from moisture, but then our good friends, the Quakers, had to have their meeting in that month, and so we had plenty of rain. The Hicksites had a dry meeting, but the old Orthodox wing could not get along without rain. Well, it came, and so did any quantity of oil-silk bonnet-covers and blue cotton umbrellas from the country. The Quakers after all are a very useful institution. If you could get enough in California, so that they could have a real old-fashioned "yearly meeting" every month in the summer, you would be pretty sure to have plenty of rain. Suppose you try it.

In every section of the country, and New Jersey, the crops are looking finely, and promise an abundant yield.

Our specie is going to Europe very rapidly; some three or four millions per week. Never mind, they will be obliged to buy their bread of us before the close of the year, and we shall make them pay as they go in time of war, as it would not be right to trust them when they may become bankrupt any moment, and shut up shop, and leave all creditors to whistle Yankee Doodle or Old Hundred, as they may choose.

THE WAR IN EUROPE.

Has begun in earnest. One battle has been fought. The Austrians have been defeated in their first conflict. The allies have driven them from the most important points of the base of their operations, and they will be obliged to re-construct the plan of their campaign, or do worse. There is no telling where this contest will end. It is the general impression here that the house of Hapsburg will be upheaved from its lowest foundation, and perhaps the whole of Europe revolutionized before the olive branch of peace will be seen waving around Europe's trembling thrones. There is little doubt but Prussia, Germany, and Russia will soon buckle on their armor and go forth to the conflict. Hungary will make her mark in the general melee.

In the mean time the Danubian Provinces, Wallachia, Bosnia, and others, are showing symptoms of revolt. The Sultan will have work to do to

hold them in check. Russia may seize upon the rickety empire of the Sultan, who will be content to hear from the clustering minarets of Constantinople, the shout that "God is great and Mahomed is his prophet."

But it is useless to speculate on what may be, when I have not time to tell half of what is already known; and so I will leave the Austrians smarting under their discomfiture, and the French rejoicing over their victory, and promise to write more next time, if I have the time. Adieu. B.

INTERESTING TO SETTLERS.—The maps of township 5 north, of range 7 east, and of township 7 north, of range 1 west, were received by the Stockton Land Office, from the California United States Surveyor General's office, on the 25th May, says the Republican. That settlers may fully understand what course to pursue in regard to their claims, we give the following:

Settlers upon unsurveyed lands, who settled previous to March 1, 1850, are required by the act of Congress of March 3, 1853, to file their declaratory statement within three months from the date when the maps of the survey are received at the office in their district. Those who have settled upon public land after it is surveyed, and which public land has not been offered for public sale, must file their declaratory notice within three months of the date of their settlement. Those who have settled on land which has been offered for sale, must file their preemption notice within thirty days from the date of their settlement. This latter class have twelve months from the day of settlement, in which to pay for their land. Others can pay for their land at any time before the day of sale. A sale is always advertised six months before the day appointed for the sale.

TOBACCO MANUFACTURES.—The Call says there are now engaged in the manufacture of cigars in this city, one hundred and twenty men, who work up from 3,000 to 3,500 pounds of tobacco per week. There are also manufacturers in active operation in Sacramento, Marysville, Columbia, Grass Valley, Nevada, and Los Angeles; but we have no data whereby to judge of the amount of tobacco consumed by them. It is highly probable, however, that all the others combined, use on an average, as much as San Francisco, making a total of 7,000 pounds worked up every week. Each cigar-maker will turn out on an average, 2,000 cigars a week, so that the total weekly manufacture in the State cannot fall far short of 240,000 cigars. The average price at which these cigars are wholesaled (for it must be remembered that only the best tobacco can be profitably used here) is \$40 a thousand. In this little article of manufacture, therefore, there is a sum of \$8,400 saved to the country per week, and this is exclusive of one-eighth of the whole, which goes to pay for the raw material imported. The keenness of the pioneer manufacturers foresaw the importance of this branch of industry, and about a year since organized into a corporate association under the Statute of Incorporations.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

(Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JULY 15, 1859.

NUMBER 24.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
Terms.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

[For the California Farmer.]

#### PRACTICAL HUSBANDRY—No. 1. Summer Fallowing.

EDITOR FARMER: The practice of plowing late in the Spring, for the purpose of sowing the land so plowed, next winter, as followed and recommended by Mr. Henley, Mr. Morley, and others, is an advance in our agriculture which has much to plead in its favor, and which, it is to be hoped, will not stop till it has introduced entirely different views, in regard to so important matters as the utility and proper management of Summer Fallows. At present, it would seem that many regard the advantage thus secured as confined to the accomplishment of so much labor, at a season when there is more time for performing it than in winter; and some view with distrust a practice which, it is feared, will not so cover up the natural weeds of the soil but that they will grow up again during the Summer; and, consequently, they anticipate that the whole work of plowing will have to be done over again.

In this dilemma, we feel disposed to look across the Atlantic, for the purpose of ascertaining the practice of Europe in regard to Fallowing land; and also would inquire, if philosophy can assign any reason for the continued working of such lands, which is there prevalent.

When a field is subjected to a naked Summer Fallow in England, no one supposes that one plowing would keep down the weeds during a whole season. It would be a very poor soil, indeed, where it would. The greater the natural disposition of a field to grow weeds, so much the greater its natural fertility; for they are its indigenous productions. It is not the having a soil where weeds show little disposition to grow that is to be desired, but having by our industry succeeded in subduing them. The English farmer plows and harrows, and re-plows and re-harrows, his Fallow land throughout the Summer, as often as he perceives weeds making their appearance, and is rather gratified at seeing so evident an indication of its fertility. To this it may be objected, that his case is not applicable to California, where the expense of labor is so much greater than in England, as must interpose a barrier against the introduction of so refined a practice here.

If we could grow wheat and weeds simultaneously, without the growth of the latter impeding or diminishing the crop of the former, the objection would have more force; but, if for every weed which we exterminate another stalk of wheat may be grown, we are induced to suppose that an additional plowing of our Fallow lands might well repay the labor; nay, that in some cases, it might be advantageous to plow and harrow such land (in English fashion) so long as weeds make their appearance. Let us suppose that the cost of plowing and harrowing an acre of land is equal to the price of three bushels of wheat, and that the use of the money thus expended, till the crop is brought into market, is worth to the farmer one bushel more. If on such acre of land he can grow, by his superior husbandry, four bushels of wheat more than when it is cultivated in the usual way, he is repaid. If he can grow five bushels more, he is the price of one bushel a gainer. I believe, where the soil shows a disposition to throw up weeds during the Summer, by keeping them perfectly under, he might calculate on having at least ten bushels more per acre.

But the benefit of Summer Fallowing is not confined to the extermination of weeds. By such means the original vigor of the soil is restored. Paring and burning, though a practice as old as Virgil, who takes notice of it, is not much in favor with practical farmers, because, by such means, much vegetable matter is destroyed; and yet, it must be admitted that the advantages thus derived are so conspicuous, as to make us hesitate in condemning it. The benefit thus derivable, in addition to the ashes thus furnished as manure, is, owing to the half-burnt soil being more absorbent of the ammonia and fertilizing gases of the atmosphere, which are washed down by every shower of rain, and contribute to the immediate nourishment of plants, as well as the liberation of potash from the crumbling fragments of rocks in the soil, by which in its turn its silica is rendered more soluble; by which means, dormant and half-exhausted soils are invigorated. The turning over and over, to the rays of our intemperate suns, the half-dormant soils of fields which have become full of weeds from negligent cultivation, has a similar effect, with this advantage, that the vegetable matter in the soil is preserved in a dried state for future use, instead of being evaporated by combustion.

By a well-wrought naked Summer Fallow, the

soil is thus not only rendered more capable of absorbing those gases from the atmosphere, which tend so much to its productiveness, but its own mineral constituents are provided and accumulated to an extent which otherwise it would have taken years to accomplish; and besides, it is in a proper condition for growing crops, for which it was formerly less suited, as I shall endeavor to point out next week.

AGRICOLA.

Millerton, July 5, 1859.

[For the California Farmer.]

#### Experience with Bees.

EDITOR FARMER: I promised you, when you was at my Apiary, that I would give you a brief sketch of the history of my success in the bee business: Three years since my partner (Mr. Hopper) bought three hives of bees, and let them to me on shares. The first season I saved nine swarms; two went to the woods. From that stock, last season I saved twenty-seven; three of my first swarms went to the woods. I then had a man to assist me, who professed to understand bees. He went into the "dividing system;" and I lost five, that went off, and in the winter four others—the families being too small to lay up a sufficiency of food for winter; I had to feed several others. I then gave the man I had employed two hives, that were in good condition, and two others, that he afterwards lost. So by this operation, I consider I was damaged not less than two thousand dollars, owing to losses of bees, feed, trouble, etc.

This season, from twenty-seven swarms, I have saved, up to this time, ninety-four. My practice is to let them have their own way, pretty much. I have had as high as nine swarms from the old stock, and as high as three from several of my first swarms; and, in one instance, a swarm from the first swarm's swarm.

I am of the opinion that the All-wise Creator made the bee the most ingenious being that he made on the earth; at least, they are the most industrious, and the best mechanics on the face of the globe.

I would have "backed down" from this task of writing you, had I not made the promise to you I did.

P. C. EASLEY, of Hopper & Easley.

San Jose, California, July 6, 1859.

[We are pleased to receive the above note; for it is just what we want—the simple, practical story of the Apiarist. We wish to know of the success of these enterprises; and here we have the practical results of two years' trial—one on the "dividing system," and one following nature. And, as we have said and believe, we think God's plan with the bees is the best, decidedly. We should think the natural increase is abundant enough to satisfy the most craving desires of man for gain; but, if like the fable of the "goose that laid the golden egg," the lovers of money will have the eggs faster than the natural way, let them kill the goose, and try it!]

#### Grasshoppers and Crickets.

The grasshopper, langosta or chapulin (chapule singular, and chapulis plural in California), was called in the different Indian languages of Alta California as follows, as ascertained from some of the Indian vocabularies we have collected: The Indians of Orleans Bar and vicinity, on Klamath River, Klamath county, called it *Chans*. Those of San Luis Rey Mission valley called it *To-mow*. Those of Ynez Mission valley (Cas-cil), in Santa Barbara county, call it *Tuk-ha*. Those of the vicinity of Tehama, on the Sacramento river, called it *Wec-tik*. Tehama is the Indian name of the Sacramento river. Those of the Mission of San Gabriel (the Tobiscanqas) call it *Way-et*. Those of the island of Santa Cruz (native, Limoo), opposite Santa Barbara, call it *Pana-washoo*. They speak nearly the same language as those of Santa Barbara. Those of Carmelo and Monterey (the Ealenes) called it the *Po-to-kus*. Those of Campo Seco and vicinity of Stanislaus river, in Calaveras county (the Taa-kins), called it *Lima-nuk*. The Yo-bios, of Petaluma and vicinity, in Sonoma county, called it *Cha-ko*.

In some notes on the Indians of California, published in the April, 1859, number of Hutchings' California Magazine, it is stated that, "Grasshoppers are a great luxury to the Indians (particularly those of the Sacramento and Sierra Nevada Valleys), and are used as meat, and eaten in various ways. Sometimes they are caught, threaded on a string, hung over a fire until they are slightly toasted, and then eaten from the string. At others, the grass is set on fire, which both dries and cooks them, when they are picked up and eaten, or laid aside for future use. The most popular method of providing these, however, and which we have seen most frequently, is, in first digging a hole deep enough to prevent their jumping out; after which a circle is formed of Indians, both old and young and male and female, who, with a bush in each hand, beat from side to side, now with the right then with the left, when the insects keep jumping toward the hole, into which they fall and are caught. They are then gathered into a sack and saturated with salt water. A trench is then dug and in it a fire is built, after which the ashes are cleaned out, and the grasshoppers put in, and then covered with hot rocks and earth until they are cooked. They are then taken out and eaten in the same manner as we eat

shrimps; or put away to mix with acorn or seed meal, after being ground into a paste."

In June of the present year the grasshoppers made their appearance in Honey Lake, Carson, and other valleys of Utah, at the eastern base of the Sierra Nevada, and committed great destruction to the crops of the American settlers, and injured the cattle pastures very materially. They have been also found, this summer, very destructive on Cache Creek and the country around Tehama.

The editor of the Yreka Union says that crickets as large as mice, and twice as destructive and ravenous as grasshoppers, have been extremely abundant and annoying in the Shasta valley during the month of June.

#### Artesian Wells a Curse.

We speak in strong language, yet we mean what we say. Artesian wells rightly used, were a blessing, but abused, they become a curse. The agriculturists are now beginning to find that the doctrines we have advanced in the "FARMER," against this unnatural irrigation, this flooding orchards, gardens, etc., has proved and will prove the greatest curse that has ever afflicted a people to whom God in his good providence had committed a "rich inheritance." The valley of Santa Clara is one of the finest valleys in all California, or it was before the advent of "artesian wells," with a soil and climate equal to any county in our State, and superior to many. If the cultivators had well and wisely understood the command of God when he said: "Thou shalt dig the earth an *subdue* it;" if those to whom was committed the many "Eden spots" of that lovely section had cultivated instead of irrigated, the many places which now look so dry and desolate, would have been "blossoming with the rose." But alas! man in his avarice, dreamed that heaven had sent a new and unlooked-for blessing in the artesian well, so that he might "rest from his labors;" that the "earth would yield her increase" without the "sweat of the brow," and thus with this plan the "rivers of water" have been turned over the "dry land." But alas! not being *subdued*, the earth is "parched and baked," and a famine is in the land. Perhaps we speak in riddles, but that we may be understood, we would say we have made critical examination of the result of this flooding the land, this profuse irrigation, and not a solitary instance have we found where we do not see a blight in some degree, and it is rapidly increasing. We venture the assertion that within two years many fine and flourishing garden spots will have become so diseased as to literally die out. This system as now practiced, is contrary to all principles of science, and we hope most earnestly that the cultivators of that great valley will communicate with us freely and fully upon this subject, giving us all important facts relative to artesian wells and their influence. We know this fact: The fruit raised by the irrigation system is neither so high colored or so rich and juicy; and the trees that produce the fruit look succulent in their branches; they do not ripen their wood well and thus become subject to be destroyed by cold and frost. Trees and plants raised under this system make long naked "tap-roots," and consequently bear fruit upon the extremities of their limbs. We ask cultivators to examine our statements, and they will find them so. We do not believe there is a single gardener, nurseryman, or orchardist that will not soon deplore the error he has committed in thus being led into this unnatural system. God said "fountains shall spring up in the desert;" across which in his own time he will "make a highway for our God;" and then across the desert will long be found for the coming thousands to our land, the artesian well, and there they will be a "blessing for man and beast;" and here too, they would be a blessing were it not for man's avarice. Artesian wells, if here and there only, would be well enough; but the system of irrigation should only be in accordance with nature's plans; the earth must not be deluged; gentle showering over the foliage at the evening hour to cleanse and refresh, is always good, and that is about all that is needed. But there is a great evil that will soon be felt at Santa Clara; in fact, it is now felt. The earth is parched up, and bitter and grievous complaints come from all quarters, for it is found that the evil is increasing. And yet, "men have eyes, but they see not." All the surface water of the entire county is drawn off by means of artesian wells—drawn down to their channels and then sent up again in one stream instead of ten thousand through all the pores of the surface earth, and then carried off into the bay. Millions of gallons of water are hourly carried from the surface earth of Santa Clara Valley, and emptied into the bay, thus changing all the plans of the Deity, impoverishing and drying up the earth's surface, and unless this system is banished, the land of that famed valley will become almost worthless. We feel this subject to be one of vital importance, and we ask for it a careful consideration, and hope our numerous patrons in that valley will communicate freely with us, giving their experience and belief.

COPY DEFERRED.—We have a large amount of copy prepared, intended for this issue, which we are obliged to defer, so that we may insert the PREMIUM LIST of the State Agricultural Society. This must be our apology for deferring valuable matter,

#### Gardens and Fountains.

Nature serves so much to beautify a Garden, that is well designed and kept in good order, as a handsome Fountain, from which, in the quiet of evening, the streams of spray shall send forth its cooling and refreshing breath; in addition to which, in our climate, every plant and shrub within its influence feels its restorative power. Not only does the vegetable kingdom receive new life, but all the humans within its atmosphere inhale the freshness of its cooling breath. How little do the denizens of cities and towns dream of the real economy of such "beautifiers of Home!" Money-loving, they dream of the cost in money only, and deny themselves and their families these blessings, but pay double the cost in doctor's bills, by living in an atmosphere burned up by the long, hot days of our summer.

We rejoice to know that we are improving in this respect, and that many of our wealthy citizens, and those even in humbler circumstances, are realizing what Home should be, and are now giving their means and energies to this sanctuary of hope and happiness. Would that we could see it so everywhere!

Many persons who now suffer in comfort and health, by reason of heat and dryness, even to a serious degree, could be restored and refreshed by means of this highly valuable invention and ornament; besides, there is no excuse, by reason of exorbitant cost of these fountains. They are now made here by our own citizen-mechanics; and we had the pleasure to examine some beautiful patterns, now building at W. H. Moore's Brass Foundry, near the American Exchange; and, what is highly important, Messrs. Moore & Brother can get up handsome styles than any imported, and adapted to our tastes and wants, and at a less price than the New York patterns. The handsome fountain in the Hall at the Young Men's Christian Association Fair was the work of the Messrs. Moore, voluntarily placed there for the cause.

We ask, at this season of hot weather, a due consideration of this all-important subject. By means of a Fountain, and the cisterns to supply, a great benefit arises to all the adjacent grounds, increasing their beauty and fruitfulness, while adding largely to comfort, health, beauty, and happiness. We shall note the residences where they are found hereafter, and the practical good resulting from them.

#### Fox's Nursery, San Jose.

We know not when we have been more highly gratified than at a recent visit we paid to the Nursery of Mr. B. S. Fox, near San Jose. Whatever we may have said, in our earnestness, of the rapid progress of the Agriculture and Horticulture of California, was more than verified, from evidence before us, in our visit and careful examination of the Fruit-trees and Garden-plants, from the first deposit of seed to the tree in full bearing. Without the least disparagement to any other Nursery in our State, we know for extent, for excellence of culture, for variety, and true scientific and systematic arrangements, this Nursery cannot be surpassed, if it can be equaled.

Mr. Fox was long engaged in the extensive Nurseries of the Messrs. Hovey, of Cambridge, Mass. He is himself an educated Nurseryman, fully understanding his business, and the climate, soil, and materials of nature, which are under his control. Mr. Fox needs no other word from us, to prove his capability and the excellence of his Nursery-stock; than for us to invite all persons to his Nursery. There his works will praise him.

We wish the Messrs. Hovey, and other eminent Nurserymen of the Old States, could come and see this Nursery, and other excellent establishments that are scattered over our State. All would bespeak the coming triumphs of California in this science. We think it would startle experienced men abroad, if we should say to them that a Nursery of nearly a million of trees could be found, the greater portion of them (say more than half) were ready for market, upon ground that was uncultivated a little more than two years ago; yet, such is the fact.

The grounds of Mr. Fox is laid off in squares; each variety in the soil and situation most appropriate for them—pears, cherries, apples, plums, and other kinds. We have never seen them excelled, and rarely equaled, in beauty of form and thriftiness of growth. Mr. Fox has taken great pains to grow the best varieties. His ground covers about forty acres—a deep, rich alluvial, perfectly free from weeds, and highly cultivated. Its excellence of condition is the mark of the true Nurseryman. Mr. Fox is a workman himself, and he has every reason to be proud of his work.

We saw many new varieties of trees, plants, shrubs, roses, etc.; all of high character. We can only repeat, Go and see this Nursery.

FINE MERINO BUCKS.—We invite the particular attention of all who desire to purchase extra Merino Bucks, from the stocks now advertised by us, to call and see our lists: Those from the splendid Bucks Samson, Louis Napoleon, and Brigham Young; the first of which produced the great sample fleece of thirty-two and one-half pounds (which can be seen at our office), are of extraordinary excellence. The half-bloods being, to the eye, equal to many full-bloods in the older States. The entire lists we have now for sale have never been equaled.

#### Temperance.

We give place in our columns to the appeal of the Dashways with sincere pleasure. The noble efforts now making to redeem and restore the fallen, and save the erring, is worthy of all praise, and we hope a generous response will be given to the call of those who ask the aid of our citizens. These are the institutions we should build up. Save men from intemperance, and we save men from crime. Build up the Home for the Inebriate, and we shall not need to build prison walls for the criminal. Intemperance is the source of crime and misery all over our land. Every generous and humane heart will respond to the call, we trust; and soon will the song of the reclaimed echo over our land, and wives and children bless God for a new Home to them, in a reclaimed husband and father. Here follows the document:

#### ADDRESS TO THE PEOPLE OF CALIFORNIA.

THE undersigned desire to make known to the public the progress they have made in establishing and organizing the Home for the Care of the Inebriate, in order that they may fully appreciate our efforts in this movement, that we believe will result in great relief to suffering humanity, and the decrease of crime throughout our City and State.

Through the generous aid of a few of our citizens, we have been enabled to rent a house and make sufficient preparations to accommodate a limited number of persons, who, through the excessive use of alcoholic liquors, required our aid; and have already been the means of relief to several such persons, who are now restored to society free from the disease of intoxication, and bid fair to become, as they were formerly, good and useful members of society.

Our interior arrangements are so far completed, as to be provided with a suitable Superintendent and Matron, to take care of and watch over the sick; also, a Medical Board has been established, through the voluntary tender of services of Drs. Aldrich and Woodland, that guarantees the medical attendance that is necessary in such cases.

We have but commenced the great work of reformation, but are satisfied from its workings thus far, if our good citizens will continue to aid us by their contributions, that in a very short time we shall be able to show the results of our labor to be of such general good as to establish the Institution as a permanent one in the State.

We are satisfied that no movement of a philanthropic character appeals more strongly to the sympathies of our people than does this, having for its sole object the restoration of lost persons to their families and society; thus causing a diminution in crime, as well as a reduction in the expenses in the administration of public justice.

Already, from the efforts of the Institution (the Dashways) from which this one springs into existence, the effect is observable in the falling off of business in the Police Court and the quiet that reigns in our streets, and when the uses of this one are known, and our citizens will assist us in taking the unfortunate inebriate to this Home, in lieu of being thrown into the city prison, amongst criminals of every dye, we may reasonably look for a still greater change to take place; and San Francisco, from being the receptacle of the most abandoned persons, will compare favorably with the best regulated cities in the Union.

Now, that we are ready to receive patients in the Home, we earnestly call upon all good citizens to come forward, witness the commencement of the work, and assist us in carrying out the design by donations of the sinews of war, for without the necessary means, our exertions will be of little avail, and instead of producing a great and permanent good, but little benefit will be derived from it.

San Francisco being the great metropolis of the State of California, it is natural that here a greater necessity obtains for such an institution than at any other point, as business and pleasure calling so many of our neighbors here, where all kinds of amusements are thrown before them, to lead to their ruin, we may reasonably expect a large share of our care to be bestowed upon them. We, therefore, earnestly appeal to our neighbors throughout the State to assist us by donations of money, assuring them that they shall ever be remembered by those whose only object is the amelioration of their fellow-men.

In accordance with the above, we respectfully invite the public to visit and view the premises dedicated to this work on Wednesday, the 19th, between the hours of 11 A. M. and 3 P. M.

F. B. R. WHITNEY, M. R. ROBERTS,  
JAS. E. WAINWRIGHT, JAS. DONAHUE,  
WM. H. JONES, HENRY M. HALE,  
JOHN B. URM, M. HALL, JR.,  
Board of Managers.

#### Guide-Boards in the Country.

We desire to call public attention to the necessity of guide-boards in the country. We believe it to be as much the duty of the Supervisors of a County to see that guide-posts are erected upon the high roads, pointing out to the traveler the course of the several roads as it is to build those roads, or to build bridges or any other public work for the County. The present unsettled titles to land, has caused many large valleys to be thrown open by the removal of fences, from occupiers having gone to some better place, where they could establish Homes; and thus it is often found that persons who are called to pass such places, may find a valley of ten miles in extent, with a score of cross-roads, and not a possibility of knowing whither any one leads. We know, too, that the masses of people are so engaged in their own pursuits, that they do not learn the topography of their own neighborhood; and it is very difficult for a stranger to gain the necessary information of the direction of towns and places by inquiring; and the cost of suitable guide-boards would be trifling to each County, while the public benefit would be very great. We hope each County will act on this suggestion, and voluntarily carry out so good a measure; if not, we hope the next Legislature will pass a Law that will require the officers of each County to do so.

### Massachusetts Conservatory of Art, Science and Historical Relics.

Massachusetts is now preparing to open an Institution bearing the above name, which shall be an honor to her and to the whole Union. The work has been commenced in earnest. It was ably presented to the Legislature of Massachusetts the last winter by Gov. Banks [we published his noble appeal], and memorials poured in from all classes and bodies of men by the thousands and tens of thousands. All the various Scientific Societies, the Clergy, Christian Associations, Merchants, the shipping interest connected with all parts of the world, the Manufacturers, Mechanical, and Agricultural Societies, and citizens from nearly every town in the State sent in their memorials asking the State to grant the prayer of the people, and build such an institution where all the "natural histories" of the State, by specimens in every department, could be gathered and there made the means of instruction to the people, and an honor to the State. A paper called the "Conservatory Journal" has been established at Boston, numbers of which have been sent us, which contains the organization of the Society, from which we take the following as the doings of the preliminary meeting, which shows the glorious enthusiasm in this cause:

"A meeting of gentlemen representing the Associations of Agriculture, Art, and Science, and various Industrial, Educational and Moral Interests of the city, was held at 3 1/2 p. m., on February 18th, at the library of the Boston Society of Natural History. The meeting was organized by the choice of Hon. Marshall P. Wilder as Chairman, and Dr. S. Kneeland Jr., as Secretary.

"The Chairman stated that the object of the meeting was to take steps for memorializing the present Legislature for a grant of land belonging to the Commonwealth, in aid of a plan for a Conservatory of Art and Science, and he invited the representatives of the different interests to state their views. A reading of a portion of the Governor's message, in which he refers to the value of the public land, and advises a certain disposition to be made of it, brought the subject fairly before the meeting.

"Hon. A. H. Rice gave a sketch of the rise and progress of education in this community, and traced the connection between education and science and the mechanical and fine arts. He considered that some such plan as the one presented, for the enlargement and practical application of science in its various branches to the useful and ornamental arts of life, was imperatively demanded as an educational measure. Boston must have it: he considered it not a question of fact, but merely a question of time. He considered the present a favorable opportunity to make application to the Legislature in aid of a plan which would be of great advantage to the State in an educational point of view, and which would add to the value of the public land. He thought the mercantile interest especially concerned in the object contemplated in this plan, which could not fail to make Boston doubly attractive to strangers.

"Prof. Agassiz spoke in favor of the plan, which he thought of great importance, as occupying the middle ground between abstract science and its practical application. Science, in the abstract, must go alone, not hampered with any considerations of practical application, assisting, but not interfering with each other; the moment they are combined in the same association, science must languish. Hence the importance of some institution occupying the ground of an interpreter between the two, which he thought the plan proposed would do.

"Mr. M. D. Ross said that the cause of the present movement was the fact that this unoccupied Back Bay land was in the vicinity of the city; in order to make valuable what now is mere water it must be developed by the citizens, must be used for some purposes of public improvement. From conference with persons owning land in the neighborhood, he thought that they would generally cooperate in the carrying out of a plan of the kind, for uniting the various associations of art and science. He thought the main thing at the present time was to secure ample territory, a like opportunity to obtain which would never occur again. Its value must depend on the use made of it, and he knew of nothing which could so enhance the value, as the reservation of space for the educational, scientific, artistic, and other practically useful purposes embraced in this plan.

"Rev. Dr. Blagden expressed his approval of any plan which promises to develop the relations between science and art; such an institution as the one proposed he thought would elevate the intellectual standard in the community, and meet a great public want.

"Dr. A. A. Gould alluded to the frequency of such institutions in Europe, and thought they were imperatively demanded here; he mentioned particularly the Museum of Practical Geology and the Kew Gardens—the one presenting the wonders of the mineral and the other of the vegetable world to public observations; such are not only attractive to strangers, but exceedingly useful to every citizen. He mentioned the project of a magnificent gentleman of St. Louis, who intended to make for that city a miniature "Garden of Plants" solely at his own expense.

"J. D. Philbrick, Esq., President of the American Institute of Instruction, spoke in favor of such a plan as an educational agent; he thought a collection of objects illustrating education, from the primary school to the university, a most desirable thing. Such an one has been commenced in Toronto, Canada. There was no Polytechnic Institution in America worthy of the name, and he hoped Boston would take the lead in this, as she had in the primary and high schools.

"Wm. E. Baker, Esq., said that he had conferred with various parties interested, and he thought all would favor this plan. The Water-Power Company would be disposed to favor it, taking other land in exchange for their own, if the site selected were upon their domain; and he saw no insurmountable difficulty in carrying it out. In order to act as speedily as possible, he moved that a committee of seven be appointed to prepare a memorial to the Legislature, in favor of the reservation of a sufficient space of the Commonwealth land for the purpose of the contemplated Conservatory of Art, Science, and Historical Relics. The motion was adopted. The following gentlemen were chosen by nomination: Messrs. Marshall P. Wilder, Geo. W. Pratt, Samuel H. Goodkin, A. Ordway, Wm. E. Baker, B. F. Edmonds, and M. D. Ross.

"In addition to the gentlemen named above, parties having a large interest in the Boston Water-Power Company, the Mill-Dam Corporation, the contractors for filling the Back Bay, and many others representing the mercantile interests, were present, and great harmony and unanimity of feeling existed as to immediate and decided action.

"The Committee appointed by the Boston Society of Natural History, who had presented a memorial to the Legislature for the reservation of land for these general purposes, and the general Committee of seven above mentioned, had a hearing before the Committee on Back Bay lands at the State House on March 10, 1859.

"Hon. M. P. Wilder opened the hearing before the Committee on behalf of the interests of Agriculture, and spoke of the increase of agricultural

colleges, and the need for something practical to be presented to the people. Mr. Wilder, in the course of his remarks, spoke of the value of an agricultural museum, and the lead Massachusetts had taken in the establishment of valuable societies. The Horticultural and other societies stood ready to build; and when it was known that land could be had, probably building after building would go up, and where one society could not build, two or more might unite to erect one. Many societies might thus be located, and yet there be room for more.

"Mr. Joseph F. Breck, President of the Horticultural Society, appeared on behalf of the Society, and spoke of the objects which they had in view; they did not wish to establish a nursery there; it would take too much room; but they certainly needed room for exhibition and library rooms, and whatever land was granted, could be put to excellent use for the exhibition of rare and beautiful plants of native origin. There were many splendid plants which were native here, but had been taken abroad and cultivated and then brought hither, as rhododendrons, phloxes, and the like. This Society had already been of great benefit to all parts of the country in disseminating information, and the presence of its collections here would have a beneficial effect on the moral tone of the city.

"Dr. Cabot, on behalf of the Natural History Society, spoke of its need for increased accommodations. The botanical collection consisted of some hundred thousand specimens, at present badly stored, and in danger of mould. The collection of birds had increased from 500 to 3,000. There were many collections in the hands of private individuals, and our collection would double in a week if we had a suitable fire-proof building. Some of the collections were unique—as the fossil sand-stone of the Connecticut Valley, the foot-prints of the past, which if destroyed, could never be replaced; and so it might be said of other collections. Some of the collections were from men of great celebrity of our own and other countries, all obscured, hidden, or stored for want of room.

"Dr. Charles T. Jackson supported the remarks of the previous speaker in reference to the value of the collections of the Society, and of its services to science. The Society consisted of 300 active resident members, 200 corresponding members, and 100 honorary members. Dr. Harris' magnificent insect collection was spoken of. The inclosed nature of the present building rendered it damp, and the Society's richest treasures had to be kept in private hands in sunnier locations.

"Dr. Kneeland, the Secretary of the Society, spoke of the fine private collections which would be presented to the Society by friends, and of the facilities of the institution for educational purposes. They would like, if they could obtain, an institution like the *Jardin des Plantes* of Paris.

"Mr. Flint, the Secretary of the State Board of Agriculture, stated that the rooms in the basement of the State House, containing the beginning of a collection of the natural history of the State, were already crowded, and there were 2,000 species of insects, 200 of birds, and it was intended to make a complete collection at some future day.

"They based their application on the fact that the institution proposed would form a grand and much needed educational establishment for all classes and interests of the State; and also maintained from the experience of Boston and other large cities, that the leaving of open spaces rendered the adjoining land so much more valuable than it otherwise would have been, that it really amounted not only to not giving anything away, but would actually add to the total value of the Commonwealth land.

"The Horticultural Society had already prepared a memorial in aid of the general one; and other associations would come in due time to its assistance; the State Board of Agriculture was also represented by its Secretary, Mr. Flint, who approved highly of the plan."

We give also the excellent remarks of Geo. B. Emerson, Esq., at the second meeting, which are worthy of a careful perusal.

"George B. Emerson, Esq., thought that the Legislature would be false to the feelings of the people, and to the spirit of our legislation for the last twenty-five years, if they should neglect the present opportunity to raise the standard of practical education in the Commonwealth.

"The Legislature of Massachusetts gives liberally every year, \$40,000 or \$50,000, for the aid of the Common Schools, for the education of all her citizens. What do they do in return? They voluntarily tax themselves, as they did last year, twenty-nine times as much as the State gives them for this purpose. So it has been wherever the State has given. For Harvard College, for example, though the State has done well, private munificence has done twenty times as much. And so it will be in this case, if the State will give the land asked for. We may trust to the well tried generosity of an enlightened public to give, in buildings and collections, over many times the value of the land. And this treasure of science and art so collected, will be open, not only to the inhabitants of Boston, but to members of the Legislature and to all strangers.

"A most important object, in a comprehensive system of education, is to bring the powers and resources of the highest science within the reach of those who are engaged in the practical arts of life. This great object the Legislature have now the opportunity and the means of attaining; and such an opportunity may never present itself again. Men of science almost necessarily live in cities. They can act with the greatest efficiency only near the collections and museums which exhibit to the eye, not only objects of nature, but conclusions from the observations and experiments of many observers for many years. Science thus being naturally in cities, can be made freely accessible to the people who need it, and are asking for it, through the agency of such institutions as those contemplated in the memorial.

"This is true, even of those sciences which have for their object the improvement of the processes for the cultivation of the earth, and the working of mines. The largest and most valuable collections of whatever relates to the culture and products of the soil are in, or very near to, Paris and Berlin, and the other great capitals of the Old World. Mr. Emerson mentioned particularly a course of lectures upon the cultivation of fruit trees, which he attended at the *Conservatoire des Arts et Metiers*, in Paris, by Du Breuil, who unites to the most exact and comprehensive science, great and intimate practical knowledge of the subject of his lectures. Half of the audience consisted of strangers like himself, from all lands, attracted by this rare and beautiful combination of the treasures of science and the methods and resources of art. He sat by the side of two gentlemen from South America, and saw about him Spaniards, Russians, Swedes, Italians, natives of the British Islands and of the United States. The remaining half of the audience was made up of working-men, farmers, gardeners, nursery-men, who had come to get a practical lesson in their own art. For illustration, the lecturer had, opening from his lecture-room, vast halls of specimens and life-like models of all the fruits and other products of trees, and of all the tools used in cultivating them—everything which could have been furnished, if the lecture had been given in the middle of the largest garden in the world.

"The present Legislature has the opportunity of laying the foundation for precisely such lectures, and for lectures of a kindred nature upon kindred subjects, which shall be accessible to their suc-

cessors in future years, many of whom will be representatives of the agricultural population of Massachusetts, and to multitudes of others, who will flock in from distant parts of this State and from other States. What an added value would such an institution, or rather such an association of institutions, so established, lend to the pleasures and advantages of a great city. There would naturally grow up, not only courses of instruction upon the arts which aim to beautify and render more delightful the surface of the earth, and more easy and productive the labor bestowed upon it, but courses which would make more interesting and intelligible the processes of every other practical product, and lighten every form of toil, from the mining of iron to the search for stars in the skies, with ready access to the collections which would be formed, and to the instruction for which they would furnish the occasion and the means, a winter's residence in the capital of Massachusetts would be rendered more pleasurable and more profitable, not only to every person interested in any of these useful pursuits, but to all who sought to elevate and dignify the leisure of prosperity, or of age, by indulging their love for the beautiful in nature or in art.

"Mr. Emerson stated that 340,000 persons visited the Kew Gardens last year; the greater part of these passed by the Conservatory of rare and costly plants, to examine the practical applications of the products of the earth to the purposes of common life."

We ask our citizens, why California shall not have a Conservatory of Art and Science? No State in the Union could equal ours. We shall speak further on this theme.

### About Strawberries.

At a meeting of the Cincinnati Horticultural Society, the following letter from the veteran vine-grower and wine-maker of Ohio, was read upon the subject of the strawberry. Many points are of interest and it may lead to a better knowledge of their culture, therefore we publish it:

CINCINNATI, April 9, 1859.

To the Cincinnati Horticultural Society:

GENTLEMEN: As the English gardeners raise many strawberries under glass, I should not blame them for casting aside pure pistillates, from experience I have had in my grape-house this Spring. On an upper bench I had all hermaphrodites; on the lower, all pure pistillates. I have a hive of bees on the outside of the house. The weather has been so cold that some days no bees were seen and on many others but few in the house—then only in the middle of the day. The pistillates are Schneck's Seedlings; the blossoms very small—half the size of the hermaphrodites. On examining the plants, three days since, to my surprise, I found not one of the pistillates in twenty impregnated. In the hermaphrodite, not one in twenty that was not fully impregnated, and some of the berries ripening. I believe there are two reasons for this: one, that the large, handsome blossoms of the hermaphrodite leads them to light on that, and where they do, then go to the pistillate blossoms. The farina attached to their feet from the hermaphrodite blossoms, is apt to drop off before they reach the pistillate blossoms. Horticulturists, in England, did, for some time deny our doctrine of pure staminate and pistillate blossoms. They now admit that we may have them, but say this change is produced by our soil and climate; that if our pure staminate and pure pistillates are planted there, they would become hermaphrodites. If they will raise seedlings, they will find some pure staminate and some pure pistillates. They should be convinced without this evidence. If they refer to proceedings of their Horticultural Society, they will find a letter from their great strawberry cultivator, Mr. Kean, who raised their famous Kean's Seedling, saying: That some new seedlings of his, in a small bed, bore no fruit; that on examining the blossoms he could find no perfect stamens to impregnate them; that he put some of his other seedlings in the paw, when every blossom bore a perfect fruit. The subject has there rested since.

European gardeners assure me that their fine large-fruited hermaphrodites do not average much more than half a crop of perfect fruit; that many blossoms bear none, and some, defective fruit. Such is our experience with them. I would advise them to cultivate our Hermaphrodite Prolific. Where insects can reach the blossom, every one will bear a perfect fruit of good size. If they will raise many seedlings, they may find one in a thousand of this class. I have six hundred seedlings from our best Hermaphrodites and Pistillates, and some from English seed, that will show their character this season. If one shall prove perfect, in male or female organs, in all the blossoms, I shall be content. I write this, believing that for early forcing we should use Hermaphrodites only, and to inquire whether you have seen a like result. Certain it is, that under glass, where there are no insects, Hermaphrodites will bear no fruit unless impregnated by hand.

Respectfully,

N. Loxworth.

Mr. Graham remarked that he differed from Mr. Loxworth, that bees or insects were alone necessary for the fructification of the blossoms. The wind, no doubt, carried the fine pollen from the stamens to the pistils. He had planted pistillate plants without any staminate near, and he never then had any fruit. This system was known and practiced by Knight, in England, many years ago.

EGYPTIAN WHEAT.—Mr. T. J. Armstrong, of Ione Valley, left at our office (says the *Amador Sentinel*), of July 9th) five heads of wheat, which weighed one pound. This wheat is a peculiar kind, and the first of the sort we have ever seen. It is called the "Seven-headed, or Egyptian Wheat," and was introduced into this county by our fellow-townsman, B. D. Styles, Esq. The main head, or stem, is about six inches in length, and well filled with large, full grains of wheat; from the main stem, and forming a part of it, as it were, are thirteen auxiliary heads, about an inch in length, and also well filled with healthy grain—making the main head about two inches in width. Mr. Armstrong has a small patch of this wheat growing on his farm in Ione now. The seed from one head of this wheat was sowed on the farm of Mrs. Cheney, in Ione, last year, and nineteen bushels of wheat raised therefrom. Our authority for this statement is Mr. Styles.

Through the labors of the Rev. Prof. Huntington, of Harvard University, a liberal-minded gentleman, whose name is not given to the public, has made a donation of \$20,000 to that institution for a gymnasium. The building, in the form of an octagon, fifty feet in diameter, has been completed at a cost of \$80,000, and Mr. Cabot, of Boston, is about fitting up the apparatus.—[Exchange.

### Hunting Wild Bees.

H. L. Cousin, Oneida Co., N. Y., sends to the American Agriculturist a description of a contrivance for catching the bees, which we think the best of any, as we know it is simple and effectual. It is simply a small box about three inches long, two inches wide, and two inches deep, open at the bottom. A partition, parallel with the bottom, divides the box into two parts. The top of the box is covered with a small square of glass. In the partition is an opening about an inch square, with a slide over it extending to the outside of the box, so that the hole in the partition may be opened or closed at pleasure. The bee-hunter provides himself with a basket containing the box, a few pieces of dry comb, and a vial of honey and water, mixed in equal quantities.

Having found a bee at work upon a flower, the box is placed over him, and the bottom covered with the hand, when the bee will pass up through the opening in the partition toward the light, to escape. The slide is then closed over the opening, and the bee is fairly caught. A little of the honey in the vial is then poured upon a piece of comb, on a board or dish, and the box set over it, with one edge raised a little to admit the light. Then if the slide be drawn and the top darkened with the hand the bee will descend, and coming in contact with the tempting morsel, will go straight to work to load up, for he generally has an eye to business, however he may be situated. The box may now be gently raised, and his flight observed. After catching and liberating several bees from the same locality, one line of direction is soon found. Then a number more may be captured and carried to some distance before freeing them, by whom another line is formed, crossing the first, or rather running to it. It is then only necessary to observe a few insects in each line of flight, to find where the two lines will meet, which will of course be at the point where the common store-house of the bees is located.

### To Obtain Fruit from Barren Trees.

I wish to describe to you a method of making fruit trees bear that I blundered on to. Some fifteen years ago I had a small apple tree that leaned considerably. I drove a stake by it, tied a string to a limb and fastened it to the stake. The next year that limb blossomed full, and not another blossom appeared on the tree, and as Tim Bunker said, "it set me a thinking," and I came to the conclusion that the string was so tight, that it prevented the sap returning to the roots; consequently, it formed fruit-buds. Having a couple of pear trees that were large enough to bear but that had never blossomed, I took a coarse twine, wound it several times around the tree above the lower limbs, and tied it as tight as I could. The next Spring all the top above the cord, blossomed as white as a sheet, and there was not one blossom below where the cord was tied. A neighbor seeing my trees loaded with pears, used this method with the same result. I have since tried the experiment on several trees, always with the same result. I think it a much better way than cutting off the roots. In early Summer, say June or July, wind a strong twine several times round the tree, or a single limb, and tie it, the tighter the better, and you will be pleased with the result: the next Winter or Spring the cord may be taken off.—[Jas. R. Russell in Am. Agriculturist.

[Try this experiment now to increase the size of the fruit.]

### The Agricultural Fair at Marysville.

The public will no doubt be gratified to learn that the prospects of having a fine exhibition at Marysville, says the *Express*, are of the most encouraging and gratifying character. Much interest is manifested in the enterprise, not only by our people here, but by the good people of the adjoining counties. The officers of the Society are bending all their energies to make the enterprise not only successful but to have an exhibition here, such as has never been equaled in the State. They have been actively engaged in placing the matter properly before the people and have aroused a commendable interest among the farmers and other classes throughout the adjoining counties, so much so that they regard the success of the enterprise as beyond a doubt. We understand that the Visiting Committee will visit all the farms, orchards, &c., which have been entered for exhibition, within the next two weeks, and make the necessary examinations with a view to determine as to their respective merits. We are informed that the managers will appoint the various committees in a few days, and that the persons appointed will be immediately notified thereof, so that they may enter upon the discharge of their respective duties. Arrangements are already being made for fitting up the cattle grounds. Napoleon Square will be used for that purpose. It is the same location used by the State Fair last year for that purpose. The Pavilion on Cortez Square is also about to be enlarged and decorated preparatory to the Fair. We are assured no pains will be spared to render every thing in connection with the Fair pleasant and agreeable and make it interesting and attractive.

In view of these facts we hope our farmers, fruit-men, stockmen, mechanics, miners, &c., will lend a helping hand to the enterprise and strive to place something on exhibition.

We regard this as an enterprise second in importance to none to our portion of the State, for nothing is better calculated to develop the resources and advance its interests. All that is necessary is that the proper interest should be manifested in its behalf. We are, therefore, pleased to learn that although in its infancy, being a mere experiment, it has every indication of success.

### TRANSPLANTING RUTA-BAGAS—LARGE YIELD.

Wm. J. Pettie, Salisbury, Ct., writes that he has tried sowing ruta-baga turnips on a bed thickly, about the 10th of June, and when the plants are of proper size, transplanting them to the open field. He is pleased with the plan, as it saves the first weeding, and also the thinning. Taking into account the labor involved in re-setting, and the check they will receive in the process, it would not pay to do this upon a large scale, we suspect. The seed is cheap and may be sown freely, and the plants may then be easily thinned with a hoe after they have become well established. The plan would work better with plants having a shorter tap-root. Mr. Pettie says he gathered 900 bushels of ruta-bagas from an acre. The best quarter acre produced 325 bushels, or at the rate of 1,300 bushels to the full acre.

ELECTRICAL EXPERIMENT.—Take a sheet of coarse brown paper, and after holding it before the fire until it is perfectly dry, fold it up into a large strip of about two inches wide. The magnet is now complete. To exhibit the attractive power, cut some strips of writing paper about three inches long and about as wide as one of these lines; place them upon the table, three or four together. Now take the magnet and draw it briskly under the arm two or three times; its electro-magnetism is instantly developed, and becomes apparent when held over the small strips of writing paper, veritably by the wings of lightning.

### SPECIAL NOTICES.

MRS. P. E. ROGERS—Family Sewing. We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at the Fair been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 119 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art. **ROTTING CLOTHS** prepared for Flouring Mills, with neatness and dispatch.

The Ladies' Electro-Chemical Baths.—Exactly so—as a rule of Bath, with a well furnished reception room, has been assigned exclusively to the ladies who patronize his institution, by Dr. BOWMAN, on Sansome street, opposite the St. Nicholas Hotel, where order, neatness and cleanliness predominate in every department. A skillful, kind and attentive lady has charge of this department of the Doctor's business, and our lady friends assure us that we cannot too highly praise nor too highly recommend these baths to universal use by our lady readers, whether as aids to cure neuralgia, rheumatism, and the other "ills that flesh is heir to," as for the purpose of promoting comfort, enjoyment, and the continuance of good health. They are indeed a luxury; and to one suffering from disease, sweeter far than "sugar-coated pills," and how much better, those who can truly tell who have "thrown physic to the dogs," and clove to these health-giving baths.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose lands, I presume, were peculiarly sensitive to the touch of "vera." My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brings so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles. K. H. VANCE, Corner Montgomery and Sacramento streets.

Patent Office Business.—All persons having Inventions or Improvements upon Inventions, and desirous of securing a Patent for the same, can be greatly aided in expediting the same by calling on us; having received from Messrs. MUNN & CO., of the Scientific American Office, their rules of procedure in all cases, so that expedition and safety may accrue to Inventors. Letters addressed to us will receive immediate attention.

Superior Sheep Dogs.—We have some superior Sheep Dogs for sale, from original French stock. They are now of the right age to take away, and are the best and handsomest dogs that have ever been offered for sale. Apply to the editor of the FARMER. 23

Importation of Stock.—The wonderful advantages of our climate for the breeding of stock and the certain success which has attended all the efforts made to improve the different races of animals have elicited a more particular attention to this subject from the best stock-raisers of Europe and America. To secure to themselves the market of California for a sale of valuable breeds of horses, cattle, sheep, and swine, they have addressed us letters of inquiry, and have already sent us their catalogues of stock, together with the pedigree of the finest animals now for sale. We shall prepare a list of the same so as to have it completed by the time of the autumn Fair, when those parties desirous of purchasing the best blood stock of the world, will have an opportunity of doing so. We therefore invite stock-raisers abroad who have not already done so, who have fine stock for sale, to send us their lists that we may register the same. A full pedigree, with all particulars of the stock and the cash price, will be registered and offered for sale. We have already about one hundred head of stock registered, that can now be purchased and guaranteed a safe delivery here at a given time. Those who want will do well to make early application. Address editor California Farmer, San Francisco.

SWARMS OF BEES.—Very full and excellent Swarms of Bees, now ready for delivery, can be had on application at the Office of the FARMER. These Swarms are of a very extra quality, and such as are not to be had very often. Persons in want of Bees will do well to make early application, as good Swarms are not plenty. 19

### THE HOME OF BEAUTY.

"Creative Genius from thy hand,  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"  
What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—to our vision, live before us models of themselves.

Here is our castle,  
And here our god;  
But they are mortal.  
Around these footstools bays  
The good, the great, the living and the dead;  
And yet they speak—speak as we speak  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent.  
While they speak, and gaze on us  
Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng;  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art.  
Creative Genius! here's thy home!  
And here shall worded thousands come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty  
To worship at the shrine of Beauty?  
Behold these flowers that run the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
The Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O! let him stand  
Before us, him who all this beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

### Daguerrean Gallery,

Corner Sacramento and Montgomery streets.

The Oxygenated Bitters.—For the cure of DYSPEPSIA OR INDIGESTION, Liver Complaint, Asthma, Cough, Headache, Loss of Appetite, Fever and Ague, Heart Burn, Watery Brash, Acidity, St. Sickness, Scoury, Nausea, Headache, Excess, and General Debility, or any disease having its origin in imperfect digestion.  
These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Politicians, Farmers, and others testify are the only safe, certain, and scientific remedy for the immediate relief and permanent cure of the many cruel complaints which, in some phases or other of Dyspepsia, afflict our race.  
These Bitters were discovered by Dr. George B. Green, and their formula differs entirely from that of any other preparation of Medicine. Containing no alcohol—no minerals—no poison—no noxious drugs; in their nature tonic, not stimulating; retaining their virtues in every climate; they are a "renewing" and a "form" indeed, of Medicine, and restoring the system to its pristine vigor and health. No matter how long standing, or how induced or chronic in its character, the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will send the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.  
For sale by—HARRIS MORRILL, HENRY JOHNSON & Co., and RICHARDSON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine every where. 23

## THE NOBLEMAN OF EARTH.

The truest nobleman of earth, is he who loves to be  
The first companion of the good, the hero of the free,  
Who works undaunted for the poor, who sees no rank in  
names;  
Whose hopes ascend to heaven in crowds, as sparks fly  
up from flames!  
Give me that nobleman of mind, who loves a noble cause;  
The right of labor's sturdy sons, and freedom's right-  
eous laws!  
The hater of each evil scheme a tyrant may advance;  
A giant's strength about his heart, thoughts brilliant in  
his glance!  
I love the nobleman of earth, who strives to bless the age;  
And leaves a glory that is caught on history's faithful  
page!  
Whose name the millions love to lip, Truth's sure un-  
flinching guest;  
Who shines in love as does the sun in palace of the West.  
He's deathless as the mighty skies, when jeweled through  
with stars;  
Could feel God's beauty in a blaze burst through his  
prison-bars!  
No mandate from the tyrant breaks his spirit's upward  
bound;  
While high on every liberal creed his name is blazoned  
round!  
And perished kings may pass from earth, their pomp and  
luster fade;  
But Nature's nobleman undoes the cruel laws they've  
made.  
His worshiped monarch is his God, he leaves a name  
behind,  
Flushed with effulgence that reflects his majesty of mind!

## Horace Greeley's Letters.

NUMBER TWO.—NOTES ON KANSAS.

LAWRENCE, KANSAS, May 20, 1859.  
It resumed raining in Kansas, after a few dry  
days, on Thursday the 12th inst., and rained "off  
and on" till Saturday night. Sunday the 13th was  
cloudy and chilly, but without rain, until evening,  
when thunder-showers came up from every side,  
and kept flashing and rumbling and pouring nearly  
throughout the night. Kansas brags on its thunder  
and lightning; and the boast is well founded. I  
never before observed a display of celestial pyrotech-  
nics so protracted, incessant and vivid as that of  
last Sunday night. The country, already saturated  
with water, was fairly drenched by this deluge,  
which rendered many streams ordinarily insignifi-  
cant either dangerous or for a season impassible.

At 6 A. M. on Monday morning, four of us left  
Atchison in a two-horse wagon, intent on reaching  
Oswatimie (some eighty miles rather east of  
south—one hundred by any practicable route) next  
evening. The sky was still threatening; we knew  
that the streams were swelled beyond reason; but  
our pilot was a most experienced pioneer, who had  
forded, been ferried over or swam, every stream in  
Eastern Kansas, and was confident of his ability  
to go through by some route or other. So we went  
ahead in a southerly direction, across swells of  
prairie rather steep-sided for Kansas, and through  
ravines in which what were usually rills were  
swelled into torrents. From the high level of the  
prairies little but a broad sweep of grass on every  
side was visible; but soon we were descending  
into a new ravine, and now belts and spurs of  
timber were seen, generally widening as they de-  
scended. I noted that these wood spurs, composed  
mainly of Black Oak and Cottonwood (the latter  
a very poor but quick-growing timber, ranging  
somewhere between Poplar and Basswood), began  
to extend on every side wherever the annual fires  
were repelled from the adjacent prairie, whether  
by the interposition of a road or otherwise, and  
that the young trees that thus spring up along the  
sides of the ravines and run out into the level  
prairie, are quite often Hickory, White Ash, &c.,  
even where none such are visible among the ad-  
jacent timber. I was fully convinced that wood  
grows more abundant with the progress of settle-  
ment and cultivation. Of course, there is timber  
enough to-day in the Territory; but the better  
portion of it is too generally confined to the inter-  
valles of the larger streams, too far for their com-  
fort from most settlers on the prairies. Could  
prairie-fires be wholly arrested, the increase of  
timber would overbalance tenfold the annual use  
and waste; and the quality improves even faster  
than the quantity. This is real progress. For,  
though there is quite enough in the Territory, and  
a pretty good variety of all species except the ever-  
greens, which are lamentably deficient, there are  
points at which none is within two or three miles  
—the little that formerly ran up the small ravines  
which cut in upon the great high prairies being  
soon exhausted by use for building, fuel and fencing,  
and requiring years for its reproduction.

Twelve or fifteen miles south of Atchison, we  
struck the great California trail from Leavenworth,  
and thence followed it east by south into that city,  
some fifteen to eighteen miles. I should have liked  
Gerrit Smith as one of our party, that I might  
show him the practical working of his theory that  
Government has no other legitimate business than  
to keep one man's fingers off another man's throat  
and out of any pocket but his own. The great  
California trail, like the Santa Fé and all other  
primitive roads through this prairie country, keeps  
along the highest "divides" or prairie swells, avoid-  
ing the miry "bottoms" of the streams and (so far  
as possible) the ravines which the water falling on  
the high prairie has cut down to them, of course  
winding considerably, but making the best and  
most serviceable natural road that can be, and one  
that in dry weather is excellent, and in wet as  
good as possible. But each settler along this  
trail, in the absence of any legal establishment  
of the trail as a highway, is at liberty to run his  
fences right across it as the line of his land runs,  
and so crowd it off the high "divides" into all  
manner of angles and zigzags, across this ravine  
and into that, until the trail is fast becoming  
the very worst road in all Kansas. I have had  
a pretty full experience of bad roads during this  
week; but the very worst and miriest was that  
portion of the California trail (and United States  
military road from Fort Leavenworth west to other  
forts) which works its sinuous way through the  
region generally settled by thirty farmers, lying  
directly west of Leavenworth. And the worst hill  
for teams I have seen in Kansas is traversed by  
this road within five miles of Leavenworth, be-  
tween the Fort and the rich but miry valley of Salt  
Creek on the west. This road, unless it can be  
restored, will soon have to be abandoned, and  
thence Leavenworth must suffer.

As we neared the California trail, the white cov-  
erage of the many emigrant and transport wagons  
dotted the landscape, giving the trail the appear-  
ance of a river running through great meadows,  
with many ships sailing on its bosom. Most of the  
independent wagoners were still encamped by the  
wayside, unable or unwilling to brave the deep  
mud; their cattle feeding on the broad prairie;  
the emigrants cooking or sitting beside the wagons;  
women sometimes washing, and all trying to dry  
their clothing, drenched and soaked by the pour-  
ing rain of the past night. One great wagon-train  
was still in *corral* with its cattle feeding and men  
lounging about; the others might better have been,  
as it was clearly impossible to make their team,  
wild-looking oxen (mainly of the long-horned  
stripe, which indicates Texas as their native land,  
and which had probably first felt the yoke within  
the past week) draw them up the slightest ascent  
through that deep slippery mire. A great deal of  
yelling, beating, swearing, was being expended to

little purpose, as I presume each train corralled for  
the ensuing night within a mile of the point it left  
in the morning. These contractors' wagons are  
very large and strong, each carrying a couple of  
good extra axles lashed under a heavy jerk;  
in case an old one gives way under a heavy jerk;  
the drivers are as rough and wild-looking as their  
teams, though not so awkward at their business;  
but to keep six yoke of such oxen in line in the  
road, and all pulling on the load, is beyond human  
skill. It is a sore trial to patience, that first start  
of these trains on their long journey—to Utah,  
Fort Hall, Green River, and some of these to New  
Mexico, though this is not the Santa Fé trail. The  
loads are generally fifty hundred weight; the wag-  
ons must weigh at least fifteen hundred each; and,  
though this would seem moderate for twelve oxen,  
it must be remembered that they are at this season  
poor and at first unbroken, and that the road is in  
spots a very bad one. A train consists of ten to  
twenty wagons; each train has its reliable and  
experienced master or director; and when a team  
is stalled another is unhitched from its own wagon  
and sent to the aid of the one in trouble. The  
rate of progress is of course small-like; these trains  
will do well if they make twenty miles the first  
week, considering the weather. But then the feed  
of the teams (like the lodgings of the men) costs  
nothing, as they live on the broad prairie, and  
though they will often be fearfully hungry or dry  
in traversing grassless tracts on their route, they  
are said generally to gain in flesh (for which there  
is ample room) during a journey of three or four  
months. Of course, they improve in docility and  
effectiveness, being at first so wild that, in order  
to be yoked, they have to be driven into the *corral*  
(formed, as I may have explained, by the wagons  
closely ranged in hollow square, the tongue of  
each being run under its next neighbor, for defence  
against Indians or other prowlers). Very few  
wagons or cattle ever come back; the freighting is  
usually sold at or near their point of destination  
for whatever they will fetch—to be taken to Cali-  
fornia or disposed of as they best may.

We drove into Leavenworth City about 11 A. M.,  
and found that the delegates from this county had  
generally given up the idea of reaching Oswatimie,  
judging that the Convention would have to be  
adjourned, or postponed, on account of the  
swollen streams being impassible. Stranger Creek  
barred all egress by way of Lawrence, which we  
had intended to make our resting-place for the  
night; a creek, nine miles south of Leavenworth,  
had turned back the stage running in that direc-  
tion; in fact, no stage made its way out of Leaven-  
worth that day in any direction which was not  
forced to return, hampered by the high water. So,  
at 3 P. M., we shipped our horses and wagons on  
board the steamboat D. A. January, and dropped  
down the Missouri, some fifty miles, past the bleaching  
bones of several dead cities (not including Quindaro,  
which insists that it is still alive) to Wyandot,  
in the lower corner of Kansas, with Kansas  
City, Missouri, three miles off in plain sight, across  
the mouth of the Kansas or Kaw River. Wyandot,  
though hemmed in and impeded, like Quindaro, by  
an Indian reserve back of it, is alive, and is be-  
coming what it ought fully to be, the outlet and  
inlet between Southern Kansas and the Missouri  
river. It has a beautiful location, and decided  
natural advantages over Kansas City. We halted  
at Wyandot over night, and set forth at 6 next  
morning for Oswatimie (forty-six miles a little  
west of south by a bee-line, but over fifty by any  
practicable route), which we were desirous of  
reaching before night, as the Convention was to  
be held next day.

Our route led south-west over rolling woodland  
through the Wyandot Reserve, descending into the  
bottom of the Kansas or Kaw river; said bottom  
being from one to two miles wide, and very heavily  
timbered with Elm, Yellow Oak, Black Walnut,  
Hickory, Cottonwood, Sycamore, Basswood, &c.  
Nearly all the rivers and larger creeks of Kansas  
run through similar bottoms or intervals, from  
half a mile to three miles wide, and timbered much  
like this. These intervals are composed of a dark,  
rich mold, often over ten feet deep, but they are  
not so level that they could hardly be  
cultivated without drainage, even were it ad-  
visable to strip them by wholesale of timber, as it  
decidedly is not. The houses and barns that shall  
yet thickly dot the adjacent prairies are now mainly  
growing in these bottoms, and should stand there  
as trees till they are wanted. When cleared and  
drained (and in some places the rotting out of the  
stumps, and thorough plowing thereafter, will go  
far toward effecting the drainage required) they  
will yield bounteous crops of almost anything that  
does not dread frost. Though it seems hardly  
possible that their soil should be richer than that  
of the prairies, it is deeper, and probably contains  
a more varied and choice admixture of the elements  
of vegetation. But the Kansas or Kaw bottom was  
not only soaked, but covered with water; for it  
had rained here smartly only the preceding morn-  
ing, after it ceased at Atchison, and the bottom  
was, for the time, an all but impassable morass.  
I trust the citizens of Wyandot will not long leave  
it thus.

We crossed the Kaw on a fair wooden toll-bridge,  
twelve hundred feet long, just erected; or, rather,  
not quite completed. In default of a toll-house or  
gate-keeper, a man at work on the bridge in his  
shirt-sleeves took the toll. I believe no other  
bridge across the Kaw is now standing, though  
there has been one at Topeka, fifty miles up, and  
perhaps at other points. Bridges are sorely needed  
throughout Kansas, not only because the streams  
are addicted to rapid and vast augmentations from  
thaws or rains, but because their banks are almost  
perpendicular, and often miry toward the bottom,  
while the streams are nearly as deep at either  
shore as in the middle, making the attempt to ford  
difficult, even when it is not dangerous.

The Kaw was, of course, nearly full (all the  
rivers of Kansas have low banks), and was run-  
ning very swiftly; still, it seems of moderate size  
for a river three hundred miles long; but all the  
rivers of this region, the Missouri included, seem  
small, considering the area drained by them. The  
facts that they run rapidly, are apt to be deep, and  
that their depth is nearly uniform from side to side,  
account for this appearance.

Half an hour after crossing the river, we emerged  
from the road and the Reserve upon the high prairie,  
the clouds of the morning broke away, and the  
day was henceforth perfect. The young grass of  
the prairie, refreshed by the heavy rains, appeared  
in its freshest, tenderest green; the delicate early  
flowers were abundant, yet not so numerous as to  
satiate the pleasure of looking at them, and the  
panorama presented was magnificent. Passing  
Shawnee, a prairie village of twenty or thirty  
houses with a large hotel, our road bore more  
directly south, and soon brought us in sight of the  
great Santa Fé Trail, with its white-topped emi-  
grant wagons, and three great trains of contract-  
or's wagons, one of them still in *corral*, the others,  
with six pair of mules to each wagon, attempting  
to make progress toward New Mexico—attempts  
it, for the most part, in vain. The mules were  
small, and new to work (to this work, at all events),  
and drew badly; while the wheels cut so deeply  
into the yielding paste beneath them, that little or  
no advance was made. I presume they all *corralled*  
for the night within two miles of the places where  
we saw them.

Crossing the trail almost at right angles, we left  
the smart village of Olathe (county-seat of John-  
son county) a mile or so to the west, and struck  
off nearly due south, over high prairies sloped  
gently and grassed as richly as could be desired,  
with timber visible along the water-courses on ei-  
ther hand. Yet there was little or no settlement

below Olathe—for the next twenty miles that we  
traveled there was hardly an improvement to each  
four square miles of the country in sight. And yet  
if the Garden of Eden exceeded this land in beauty  
or fertility, I pity Adam for having to leave it.  
The earth was thoroughly sodden with rain; so that  
temporary springs were bursting out on almost  
every acre, while the water-courses, including  
those usually dry, ran heavy streams, each of them  
requiring skill in the chariot and good conduct  
on the part of the horses to pass them without  
balk or break. We must have crossed over a hun-  
dred of these "runs" in the course of this day's  
travel, each of them with a trying jerk on the car-  
riage, and generally with a spring on the part of  
the horses. These water-ways have generally a  
limestone bottom not far below the surface of their  
bed; but their banks are apt to be steep, and are  
continually growing more so by reason of the water  
washing away the earth which has been denuded  
of grass and worked loose by hoofs and wheels.  
Traveling by jerks like this, is not so pleasant as  
over a macadamized road, yet our day was a bright  
and pleasant one.

Thirty miles of progress, twenty of them over  
prairie, brought us to Spring Hill, a hamlet of five  
or six dwellings, including a store, but no tavern.  
Our horses needed to feed and rest—for the wagon  
with its four inmates was a heavy drag over such  
going—so we stopped and tried to find refreshment,  
but with limited success. There was no grain to  
sell, save a homoeopathic dose sold us for a quarter  
by a passing wagoner, and thankfully received;  
we gave this to our steeds, regaled ourselves on  
crackers and herring, and pushed on.

Our direct route led due south to Paola, county  
seat of Lykins; but persons we met here assured  
us that there was no crossing Bull Creek on this  
road, and that we must bear away to the west  
through Marysville (a village of perhaps a dozen  
houses, including a store and a tavern), so as to  
cross at Rock Ford, three miles beyond, which  
opened the only chance of getting over. We did  
so, and crossed in safety, with the usual jokes when  
we were over; but I confess that the wide im-  
penned stream, so impenetrable to the eye and so  
far above its average level, wore a vicious look to  
me when we approached and plunged into it. Its  
bottom is here hardly half a mile wide, but is cap-  
tally wooded with Hickory, Oak, Black Walnut,  
etc. Emerging from it, we rode over twelve miles  
more of high gently rolling prairie, with wood in  
the ravines on either side, which brought us to the  
village of Stanton (of twenty or thirty houses, in-  
cluding two stores and a tavern) which we reached  
before sunset, having traveled at least fifty miles  
since we started in the morning. Night and the  
Marais des Cygnes—here brought us to a halt—the  
creek being at this time impassable—and we had  
to forego our determination to reach Oswatimie  
before sleeping. So we halted at the little tavern  
where we found five or six others bound to Osa-  
watimie like ourselves, at least one of whom had  
swam three creeks since the morning. Fifteen or  
twenty others drove up during the evening; we  
had supper, a neighborhood meeting and a Republi-  
can talk at the school-house, and adjourned to  
fill all the beds and floors of the tavern as full as  
they could hold. The kind, active, efficient land-  
lady did her best, which was good enough; and all  
were snugly bestowed except another editor and  
myself, who accepted the kindly proffered hospi-  
tality of a Republican farmer, and were capitally  
entertained at his house, half a mile distant.

As night fell, the lightning had begun to gleam  
and flash nearly around the horizon; by 10 o'clock  
the thunder rolled; at 12, a high gale could be  
heard sweeping over the prairies some moments  
before it struck us. The lightning blazed almost  
incessantly for hours; yet the rain-fall at Stanton  
was very slight. But there were heavy showers  
at Marysville, at Paola, and almost everywhere else  
around us, still further raising the streams so that  
many who had come part way, were unable to  
reach Oswatimie next day.

We were early on the bank (a mile from Stanton)  
of the Marais des Cygnes, which was running  
heavy drift-wood and otherwise misbehaving itself.  
It had buried up the ferry-ropes, without whose aid  
the boat could not be propelled across its sweeping  
current; one of the trees to which that rope was  
attached was now nearly in the middle of the  
stream; and there had been no crossing for a day  
or two. But a new rope had been procured and  
somewhat stretched across the stream; whereby we  
were taken across in our turn, after waiting some-  
what over an hour. A mile or so of well timbered  
and too well watered bottom brought us again to  
prairie, over which we drove rapidly into Oswa-  
timie, which we reached before 10 A. M.

Oswatimie is a village of at most 150 houses  
situated in the forks of the Marais des Cygnes and  
Potawatimie, a somewhat smaller creek, which  
comes in from the south-west. The location is a  
pleasant and favorable but not a commanding one;  
the surrounding country is more considerably cul-  
tivated than any I had passed south of the Kaw.  
The two creeks supply abundant and good timber;  
an excellent steam saw-mill has taken the place of  
that burned; a flouring-mill, tannery, brewery,  
and a large hotel, are being erected or completed.  
I presume there is a larger town somewhere in  
what is known as Southern Kansas, though I do  
not know which it is.

## POLAR OIL.

30,000 GALLONS

## REFINED POLAR OIL,

In Barrels and Cases,

## FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our  
establishment, before laying in their winter stock.

We will guarantee to suit ALL as to quality and price.

LARD OIL, also offered at greatly reduced rates.

WINTER STEAM OIL, warranted to stand the test of the coldest weather.

BINNACLE OIL, warranted to burn a lamp dry without trimming.

CAMPENE, distilled fresh every day.

ALCOHOL, in Barrels and Cases, 95 per cent.

BURNING FLUID, of superior quality.

STANFORD BROTHERS,

PACIFIC OIL AND CAMPHENE WORKS,

48 Front street, near California.

FIRST PREMIUM FOUNDRY.

W. M. H. MOORE,

San Francisco Brass and Bell Foundry,

NO. 88 HALLECK STREET

(Near of American Exchange).

SAN FRANCISCO.

MANUFACTURERS OF

BRASS, ZINC, AND ANTI-FRICTION RUBBER.

Metal Castings, Church and Steamboat Bells,

FORCE LIFT PUMPS.

Gauge Cocks, Cylinder Cocks, Oil Globes,

Steam Whistles, Hydraulic Pipes and Nozzles

FOR MINING PURPOSES.

COUPLING JOINTS of all sizes. July 1

## NURSERY BUSINESS.

## GENESSEE VALLEY NURSERIES, Rochester, N. Y.

## Fruit and Ornamental Trees, Shrubs, &amp;c. Suitable for Shipment to California.

WE the undersigned desire to inform our patrons and the public generally in California, that our stock of FRUIT TREES, &c., for sale the coming fall, is very extensive, far exceeding in quantity and quality, any that we have ever offered before. We have given special attention to the cultivation of improved and reliable varieties of Fruit, &c., suited to the climate and circumstances of California. To those not acquainted with the extent of our business and the facilities which we possess, to fulfill our engagements, as to stock, &c., we would say that our Nurseries contain over Three Hundred acres of land, wholly devoted to the cultivation of Fruit and Ornamental Trees and Plants, etc., in all branches, and we give employment to upwards of two hundred persons.

## OF STANDARD FRUIT TREES,

we have an unrivaled collection of Apples, Peaches, Plums, Cherries, Nectarines, Apricots, Quinces, &c., in Bud, One year old from bud or graft, and Two years old.

## An immense stock of DWARF FRUIT TREES,

in Bud, and one year old from bud or graft, comprising Apples, Peaches, Cherries, and Plums.

SMALL FRUITS, &c., in great quantities, such as Currants, Gooseberries, Raspberries, Blackberries, Grapes (both Native and Foreign sorts), Strawberries, &c., &c., including all of the new varieties of the above species introduced up to the present time, which have been found to be an acquisition.

## In the Ornamental Department,

our assortment and stock is very extensive, including: both the Deciduous and Evergreen Trees, Shrubs, &c., as well as a large collection of new and rare species in the Greenhouse Department.

Our Stock of ROSES is unsurpassed in quantity and variety, occupying over six acres, and embracing more than 200 distinct varieties, including Hybrid Perpetuals, Bourbons, Teas, Noisettes, Bengals, Summery, Climbing Roses, &c.

HARDY BULBS furnished of every description, including the finest variety of Hyacinths, Tulips, Crocuses, &c. Every season we make large importations of the finest flowering bulbs from Holland, so that we can fill any orders however extensive or choice.

## FRUIT-TREE STOCKS

we have in large quantities, which promise to be unusually fine the coming autumn. We have given special attention to the growing of Stocks of every description, and can furnish in large quantities, including PEARS, APPLES, CHERRIES, PLUMS, one and two years old; also, QUINCE and MAHALED STOCK, for dwarfing the Pear and Cherry respectively, one and two years old.

## PACKING, &amp;c.

The greatest care and caution are given by us to the packing of Trees, the labor of which is performed by men who have had many years' experience in the business; so that parties can depend upon securing the articles in good order. The result of our experience in packing plants for California the past season, has been such that our customers have UNIVERALLY expressed themselves very much pleased with the condition in which the plants reached them.

N. B.—ORDERS should be sent EARLY IN THE SEASON AS POSSIBLE, to be received by us as early as the first of October, that we may have time to select and prepare the plants for so long a journey; and with a few exceptions, NO orders can be filled satisfactorily to ourselves, which are not received by us PRIOR to the 15th of November.

## Catalogues.

A WHOLESALE CATALOGUE, No. 6, is published in July of each year, expressly for the California trade, containing our lowest prices for quantities of our stock, and also a list of articles desirable to be shipped to California from the Atlantic States, copies of which will be mailed free to all applicants.

For more full and complete information, we would refer to the following full set of Catalogues, which we publish annually for circulation at home; copies of all will be mailed free to all applicants.

No. 1.—Descriptive Catalogue of Fruit.

No. 2.—Descriptive Catalogue of Ornamental Trees, Shrubs, &c.

No. 3.—Descriptive Catalogue of Dahlias, Verbenas, Green-house Plants, &c.

No. 4.—Wholesale Catalogue or Trade list.

No. 5.—Descriptive Catalogue of Flowering Bulbs, &c.

A. Frost & Co.,

Genessee Valley Nurseries,

Rochester, N. Y.

## CHENEY'S

## IMPROVED FIELD FENCE.

PATENTED JANUARY 25, 1859.

## PERMANENT OR PORTABLE.

IT is made of boards or rails in the following manner: Take two sticks or posts of timber 2 1/2 inches square, and about 6 1/2 feet long, either sawed or split—their length may be varied according to the height intended for the fence. Lay them across each other in such a manner that the ends which rest on the ground, keep about 3 1/2 or 6 feet apart, leaving about 18 or 20 inches of each post above the point of intersection to receive the top-rail, board, or pole. They may be fastened at the point of intersection by halving and nailing; or if the posts are split, by bolt and screw. A miter box may be used to saw and halve the posts. Next take two cleats about 1 inch thick and 3 inches wide; nail the short cleat across from one post to the other, so as to leave a triangular space large enough to receive the rail or board. Then nail the long cleat to the posts parallel with the short one, and about 12 or 14 inches below it. These cleats serve to strengthen the post, and the rails or boards rest on them.

For board fence use a stick 2 1/2 inches square and 2 1/2 feet long; nail it to the cleats, also to one of the posts about one inch from the point of intersection; this is to stand perpendicular, and the boards are to be nailed to it. For rail fence, perpendicular strips of board about 2 inches wide should be nailed to the cleats to keep the rails in place; or a loop of wire attached to the posts or hung on the second rail in which the lower rail may be suspended, can be used if preferred.

Now to set up the fence, set up two posts and put in the rails or boards, nail the boards on one post, the top rail in the crossings of the post. Lock-rails may be used by placing one end in the crossing of the post, the other end on the ground. These serve to keep the top rail in place, and brace the posts, thus enabling the fence to withstand the effects of wind, and preventing it from being thrown down by animals, and making it stronger. Where fencing timber is scarce, the bottom rails may be dispensed with by substituting a low mound of sod or turf, or stones for the post.

Expenses per 12 feet: lumber \$10 per 1,000; rails, \$3 per 1,000; posts, including lumber (8 feet) nails and making, 14 cents each; five rails at 3 cents each, 15 cents. Cost per 12 feet, 30 cents; or if two boards, six inches wide, and three rails are used, the cost will be about 35 cents per twelve feet. Cost per rod, from 30 to 50 cents.

The superior method of hanging a gate to one of these posts is worthy of special notice. A few remarks may here be proper in respect to the general principles of my improvement. A careful inspection of the model or drawing, or of the fence itself, will show that the particular form and construction of the posts and panels has been adopted with reference to their simplicity, economy, strength and durability. The posts stand up the ground, not in a trench; hence, no digging of post-holes or rotting off of posts, or sagging over; it is not effected by frost or winds. This fence is believed to be the best—all things considered—ever offered to the public.

Town, County, or State Rights, for sale on the most desirable terms. Address SETH CHENEY, Kiantone, Chemt. Co., N. Y., Patentee. H. WINCHESTER, Iowa Hill, Agent for California.

Letters addressed to Editor Farmer, will receive immediate attention. 173m

## Table and Pocket Cutlery.

THOMAS DAY,

No. 188 Montgomery Street, San Francisco,

HAS ON HAND, a large assortment of Fine IVORY

TABLE CUTLERY; also common Table Cutlery

with Cocoa Tip, Bone and Stag Handles, etc., suitable

for the country trade. POCKET CUTLERY—Pruning,

reced by every steady user of Wootenbom & Sons, Alex-

ander's, and Edward Barnes & Sons, Sheffield.

For sale, wholesale. 23-3m

## BELTING! BELTING! HOSE! HOSE!

THE UNDERSIGNED ARE AGENTS FOR THE SALE OF

Fulton's California Oak-tanned

## MACHINE-BELTING

AND

## FIRE AND HYDRAULIC HOSE.

WE are prepared to furnish Mill Owners, Miners and Fire Companies with the above articles of a better quality than ever before offered in this market, and at a LESS PRICE. The superior tanning qualities of the California Oak Bark, and the compact fibrous nature of the California Hide, combine to produce the best leather made for resisting continued strain and tension.

Both Belting and Hose are made from the solid part of hides, which are selected expressly for the purpose, in the most careful manner by Workmen of long experience in Eastern Manu-

factories; cold rollers only used in the tanning process. The Belting is three times stretched by Power Machines, built expressly for the purpose, and is warranted to run evenly on the pulleys. We especially call the attention of Fire Companies and Miners to the Hose. We offer to subject it to every required test before sale.

In buying of us, parties may be assured that they will get the real Oak-tanned article, and will not have palmed off upon them an inferior article of Hemlock Belting and Hose.

We do not compete either in price or quality. The above articles constantly on hand or made to order, of the required size, at short notice. THOS. OGG SHAW & CO., 33 Sacramento street.

N. B.—We submit the following certificates:

*[For the California Farmer.]*  
**"JENNIE."**  
*BY W. A. SARGES.*

She is as bright as a Fairy, that dances by moonlight,  
 On snowy white sands by the murmuring sea.  
 She is gay as a bird that is flashing in sunlight,  
 And kissing sweet buds on some dainty tree.

She is singing in free and melodious measure,  
 The song of a happy and untrammelled heart.  
 She is looking at life with the first glow of pleasure,  
 And sings with the freshness of Nature's own art.

She is graceful and quick as the fawn of the mountains,  
 Her laugh rings out clear on the listening air,  
 With a music like dripping of water from fountains,  
 As free from deceit as from sorrow and care.

May the crest of each pleasure e'er sparkle and bubble,  
 Its wine ne'er less spirit and sweetness of taste.  
 May she sail o'er the ocean of Life without trouble,  
 Nor think it at last, but a watery waste.

COLLEGIATE INSTITUTE, Berkeley, July, 1859.

*[For the California Farmer.]*  
**Solomon's Temple.**

Awoke the wonderful and magnificent production of beauty, genius, art, and perseverance, that has ever been constructed in the world, the elegant model of Solomon's Temple, which was planned and executed upon the golden shores of our young California, stands unsurpassed by any production of the older States. It is composed entirely of home material, and it has been pronounced, by the greatest artists of the land, a perfect imitation of the original. It certainly reflects great credit upon those by whom it was built, and is a source of pride to every inhabitant of this young and thriving State.

The Temple was built under the superintendence of Mr. A. S. Lathrop, employing from ten to twenty workmen for nine months, at a cost of twenty-three thousand three hundred and twenty-four dollars; constructed in the proportion of one foot to twenty-one, eighteen inches to the cubit; complying, in every particular, with the most accurate Scriptural details, which is given in first Kings, sixth chapter, and second Chronicles, third chapter. It was commenced and completed in the city of San Francisco, of cedar, olive, fir, gold, etc. The Temple is surrounded by the Court of the Gentiles, entered by nine gates: the gate of the beautiful, two gates of the women; water gate, gate of offering, gate of firstlings, gate of kindlings, Nitzour gate, and the gate of song. In the Women's Court the Law was read to the people. The Court of Women was one hundred and thirty-five cubits (or two hundred and two and one-half feet) square; at the inner corner there were four apartments, each being thirty by forty cubits, called the Court of the Nazarets—one for wood, one for the lepers or hospital, one for oil and wine; men and women both worshipped in this Court; from the Women's Court the Temple was entered by a stair-way of fifteen steps, through the gate called Nicanor; upon the steps were sung the Psalms of Degrees; the gate Nicanor was seventy-five feet high and sixty feet wide, requiring twenty men to open and close it; immediately within the gate was the Court of Israel, which was one hundred and thirty-five cubits long and eleven cubits wide; from this was an entrance to the Court of Priests, of equal length and breadth, surrounded by a railing for a partition between the two Courts; immediately within the Court of Slaughter and Offerings, and in front of the Temple, is the Altar of Sacrifice, twenty cubits square and ten cubits high; at the right was the place of slaughter, where the sacrifices were prepared, with the cattle, goats, sheep, and all the utensils belonging to the slaughter; on each side of the Altar of Sacrifice were five lavers, where the sacrifices were washed. The Temple was approached by three flights of stairs of twelve steps; in the Porch of the Temple stood the pillars, Jachin and Boaz, representative of beauty and strength. Then came the golden gate; immediately within, hung the golden censor; to the right and left were the ten golden candlesticks; near the center, on the south side, stands the seven golden candlesticks, near the Altar of Incense; on the right, the Table of Shew-Bread. This was all within the Holy Temple, in the rear of which was the Sanctum Sanctorum, or Holy of Holies, entered through the golden gates, in which stands the Ark of the Covenant, or Testimony, beneath the wings of the Cherubim and Seraphim. The walls of the Temple are immediately within the golden gates of the Temple; these walls were of blue, purple, and crimson, and fine linen, and wrought Cherubim thereon; gates and walls are all overlaid with gold figures, as described in the Bible.

This splendid Temple should be visited, examined, and encouraged, by all who feel an interest in the future welfare and advancement of California; all the noble daughters of this Western State should respect the name, and admire the perseverance, of their enterprising sister who planned this wonderful model; and they can manifest their interest, and improve their time, in no better way than by visiting this faultless imitation of King Solomon's Temple; and, while we call the especial attention of the fair ones to this elegant piece of workmanship and feminine mind that planned it, we would have both sexes of California's inhabitants remember with admiration, love, and respect, the artistical superintendent, skillful architect, and persevering workmen, who carried out with such perfection and dispatch this magnificent Temple. They used, from the commencement to the completion, only the Bible for their guide.

Again we repeat, that all persons should visit this wonderful structure while it remains here. The Rev. I. S. Diehl is giving lectures every evening upon it, and also renders explanations to persons through the day. We believe it is the design of the proprietors of this Temple to take it to Europe. None should fail to see it—all can be gratified. The common mind and unskilled eye (though unable to enter into the minute and perfect beauty of this Temple) can see and wonder at its magnificence; while those of refined taste and practiced eye, can contemplate and appreciate its transcendent grandeur.

As we gazed with astounded admiration at the

every part of this great work, we could but pause to reflect upon its peerless beauty, and were struck at the remembrance that it was built so long ago, and, ever since its destruction, the greatest artists and architects of the world have been constructing and trying to improve upon the ancient style of building; but, as yet, they have not been able to build any model that can equal in sublimity of beauty, and elegance of style, that of King Solomon's Temple.

*[For the California Farmer.]*  
**She Soulds.**

Aye, play the suffering virtue! recount the petty annoyances! dilate upon stray cat-hairs and disordered corners, until you forget the world is anything but an automaton of acute angles, for your especial discomfort. Then wonder that your hearth is joyless, and your husband moody; that your wayward, high-souled boy loves better the "way-side paths" of error than the quiet walks of understanding; he whose earnest, untold child's nature looked so simply to you for guidance, when he laid his head upon your lap, longing for something he knew not what; something to meet the thirtings of a *deathless* soul; something which your ripper judgment should have been quick to see; how might you have touched unopened fountains of uprightness, till they sent forth fertilizing measures; and you told him only of some little sorrow! Is it a wonder that flowers withered and gold became rust? Where should he find a main-spring for his life, if not at his mother's knee?

When your husband looks in vain for the loving smile, the kindred spirit, the cheerful tone, that should grace his home, is it strange that he loves it less? And yet, you wonder and complain that it is so! How is it, that having eyes we see not? Yet, poor woman, you are more to be pitied than blamed, for you have never told your heart that "God is love!" that from His tender mercy He has clothed the valleys, distilled the gentle dew, diffused the bright sunshine!

You have not learned, that it will never do for a woman to be selfish; never to be ignorant and indiscreet; that to "long suffering," with tender forbearance, is her legacy; patient, loving, wise, she must be, or she will find no "olive branch"—no resting-spot. Many, very many, are the trials a woman meets, known only to those who have experienced them; often augmented by the tyranny or thoughtlessness of man, they come to her as poisoned draughts. Many light hearts have hushed their song, toyed with by idle hands, the bitter desolation viewed alone by the Searcher of Hearts. Yet, that they are bitter portions, does not argue that they may be turned aside; they must be met, borne, judiciously acquiesced. What but a brave mind, a great, noble heart, can make *silent* victories, sup sweet from bitter, forget self, and bearing crosses, win the gratifying music that tells her she is "blessed," when her husband also praises her. So, poor woman, with your narrow mind and stunted heart, how may we pity thee! *IRVINE.*

CASTLE BANCH, June 17, 1859.

**Salt Rising Bread.**

HAVING seen a number of articles in the Ohio Cultivator on the subject of salt rising bread, and one in particular, in which the writer, in her Letters from the Kitchen, manifests a decided preference for hop-yeast bread, I would like to compete with her before a committee of impartial judges, she using her hop yeast, and I my salt rising. If the flour is good and the rising attended to at the proper time (that is as soon as light), it will never become putrid. I will now give you my manner of proceeding with that kind of bread:

Early in the morning, say as soon as five o'clock, take a vessel of about a quart size and fill it one-third full of water milk warm, adding three table-spoonful of new milk, and of salt and sugar, each, as much as you can hold between the thumb and forefinger, then stir in as much flour as will make a thick batter. Set it in a kettle of warm water if the weather is cool, and keep it at an even temperature till fermentation takes place, which will be in four or five hours; then take as much flour as will make two large loaves and a teaspoonful of salt added. Scald about one-third of the flour with water a little below the boiling point (this makes the bread sweet and moist), *the two main qualities in good bread*, then add enough milk and water to make the paste sufficiently cool, so as not to scald the rising, which will bear a pretty high temperature; then mix in your rising and knead quickly and thoroughly. Lay your loaves in good baking pans, set in a warm place, cover with a clean cloth and lay on the top of that a light pillow to keep the warmth from escaping. Your bread will be ready for the oven in about one hour. Bake till it is a light brown color and is thoroughly done.

Now if L. L. will follow my directions (albeit she came from the same direction that the wise men came from), I will guarantee that her "Autocrat" will have no reason to complain of bad bread.—[L. B. Garden in Ohio Cultivator.]

**How We Abuse Our Stomachs.**—No other civilized people, probably, are accustomed to abuse their stomachs so badly as we Americans of the United States. Our food is often badly chosen, still more frequently spoiled in cooking, and almost always eaten in utter disregard of dietetic rules. We eat far too much flesh-meat (and especially pork, in its most objectionable form), and too little bread, vegetables, and fruits. Our hot soda-battered biscuits, hot griddle cakes, saturated with butter, and the hot, black, intolerable coffee, which form the staples of our breakfasts, are, in the way in which they are taken, among the most deleterious articles ever put upon a table. Pies are another American abomination, and have no small share of our ill health to answer for. The mince pie, as it is generally made, is the abomination of abominations. Some one describes it, as "very white and indigestible at the top, very moist and indigestible at the bottom, and with untold horrors in the middle;" even our bread is unwholesome. It is made of the finest of fine flour, and either fermented till its natural sweetness and a large portion of its nutritive elements are destroyed, or raised with those poisonous chemicals, soda and cream of tartar. In either case it is unfit to be eaten. The rich cakes, which our good housekeepers deem so indispensable, are still worse, and so on. Now, add to our badly chosen dishes and our objectionable cookery, the rapid eating and imperfect mastication, and the continually interrupted digestion which our intense and feverish life necessitates, and we have a complication of abuses which would, one must believe, have long since utterly destroyed the vital stamina of any people not originally endowed with marvelous physical powers.—[Jacques' Hints towards Physical Perfection, etc.]

## GROVER & BAKER SEWING MACHINES.

THE GROVER & BAKER S. M. COMPANY HAVING assumed the business heretofore conducted by MR. S. O. BRIGHAM,

For the Sale of our Machines in this City, Take this occasion to announce our REMOVAL from the premises lately occupied by him, to the more

COMMODIOUS AND CENTRAL STORE, No. 118 Montgomery Street, AND WOULD INVITE THE SPECIAL ATTENTION OF Ladies,

And all who have an interest in DOMESTIC ECONOMY, And the Emancipation of the FEMALE SEX from the wearisome and overburdening Slave-work of the NEEDLE, to our varied Styles of

FAMILY SEWING MACHINES, The superior Excellence and unmistakable Advantages of which over those of all other Manufacturers, cannot fail to be apparent to the most casual inquirer. We have lately perfected, and introduced into this market, several

NEW AND IMPROVED STYLES, Which, while embracing all the essential and exclusive qualities secured by the Original

GROVER & BAKER PATENT, Have in addition many New and Valuable Improvements, and are more simple in construction; make less noise, run faster, and perform

A Greater Variety of Sewing, than any other Sewing Machine extant. The capabilities of our Machine are not limited to any particular description of Cloth Sewing, but execute with the most wonderful rapidity and accuracy, Every description of Fine or Coarse Sewing, UPON ALL FABRICS.

A NEW HEMMING ATTACHMENT Can be procured of us, for either Old or New Styles of Family Machines.

That our Machines may dispense their benefits throughout the State, in the shortest possible time, we HAVE MADE A LARGE REDUCTION from our former Rates, and with pleasure announce our Prices—from

\$75 to \$160;

Varying, according to size and finish.

For Bag-making,

And all Manufacturing where Sewing is required, our MANUFACTURING MACHINES stand pre-eminent, and their qualities are too well known to require comment.

Samples of Work and Descriptive Cuts of Machines, Prices, etc., sent per mail. All Machines warranted. All orders for NEEDLES, DUPLICATE PARTS, COTTON, Etc., must be accompanied by Cash. GROVER & BAKER S. M. COMPANY, No. 118 Montgomery Street. R. G. BROWN, Agent. 11-3m

## THE "NE PLUS ULTRA" OF SEWING MACHINES.

THE PATENT LEVER SEWING MACHINE. (Under Home's License).

MANUFACTURED BY THE GLOBE MANUFACTURING COMPANY, 339 Broadway, New York.

MAY BE TRULY REGARDED as the "Ne Plus Ultra" of Sewing Machines, and all who are willing to find a Machine which is capable of doing any kind of Sewing for Tailors and Housewives, with a satisfaction heretofore unknown—should lose no time in ordering one of the PATENT LEVER SEWING MACHINES, which are to occupy a similar position towards other Sewing Machines, that a PATENT LEVER WATCH (and every one knows its value) occupies towards a Lepine or other second-rate watch.

This Machine makes the "Lock Stitch," which looks the same on both sides of the fabric, and which cannot be ripped.

PRICE \$50. In all respects equal to Machines heretofore sold at a hundred dollars and upwards.

Specimens of Sewing done by the PATENT LEVER MACHINE will be forwarded to any part of the country, upon the receipt of a postage stamp.

N. B. An energetic and reliable Agent is wanted in every town and village of the United States and Canada, to sell the above named Machine. An advantageous arrangement will be made with the right kind of Merchant who is willing to have the exclusive agency.

GLOBE MANUFACTURING COMPANY, 12-3m 339 Broadway, New York.

## Stock's New Galvanized-Iron LIFTING-PUMP.

PATENTED VALVES AND PLUNGERS.

T. & J. STOCK, - - SAN JOSE, Desire to call the especial attention of

Farmers, Stock-Raisers, Vine-Growers, and ORCHARDISTS,

to the newly arranged Pump, for which they have recently received the patent of the United States. This valuable improvement, for which they have received the patent, consists in the form and working-power of the pump valves and plungers, by which an immense volume of water is easily raised in a perpetual stream. This pump was exhibited at the recent Fair, and carefully and thoroughly examined and tested, and received the full approbation and award of the Industrial Society of this country. This pump can be adjusted to arduous work, that fall, or to any well. The Pumps are made of galvanized-iron, the valves with the plungers being attached at the lower end of the pump. Thus arranged, they can freely lift water from any depth even to two hundred feet.

A No 3 Pump will give from 30 to 40 gallons a minute.

## BY THE OVERLAND MAIL.

The Overland Mail arrived on Wednesday night, at 9 o'clock, with St. Louis papers to the 19th of June. The news from Europe is of intense importance. Below is the latest dispatch from the seat of war:

## THE BATTLE OF MAGENTA.

A desperate battle was fought at Magenta on the 4th of June, between the allied army under the Emperor Napoleon and the Austrian army under Gen. Hess, in which unlimited forces were engaged on both sides. The Emperor Napoleon, in his dispatches to the Empress at the Tuilleries, claimed a decisive victory, saying that his army took 7000 prisoners, disabled 12,000, and captured three cannons and two standards. He estimates the loss of his own army at 3000, but it was rumored in Paris that the French loss was between 9000 and 12,000. It is reported that there were from 150,000 to 180,000 Austrians and 130,000 French engaged in the battle. The Austrian accounts differ widely from the French. Their bulletins speak of several battles being fought, with varying success on both sides. It was still undecided on the night of the 4th, as to who had gained the victory. Great losses on both sides are reported.

In regard to the Generals of Division, Espinasse, of the second corps d'armee, was killed, and Marshal Canrobert, Commander of the third corps, was mortally wounded. Gen. Maurice McMahon, Commander of the second corps d'armee, has been created a Marshal and Duke of Magenta, as a reward for his bravery on the battle-field. Five of the French Marshals and Generals were wounded. Marshal Count Bismarck d'Almeida had been succeeded in the command of the first corps d'armee by Gen. Forey. Four Austrian Generals and five staff-officers were wounded at the battle.

Later rumors detract from the French claim to the victory at Magenta. [Magenta is a small town about one mile to the east of the river Ticino, where it is crossed by the celebrated Belfor Bridge. It was formerly a city of some note, but has recently degenerated into a village of minor importance.]

There had been a general revolt at Milan, and the people had declared in favor of the King of Sardinia. The Austrians retired from Milan, but the city had not yet been occupied by the French. It was believed that proposals of peace would follow the entrance of the French army into Milan. The city of Paris had been illuminated in honor of the victory of the French arms at Magenta. The Paris Bourse was active, and 3's advanced.

**GREAT BRITAIN.**  
The Queen's speech was delivered in Parliament on the 7th of June. It contains nothing very important. A motion was pending of the want of confidence in the Ministry.

All qualities of breadstuffs had slightly declined. Provision market dull.

Consols were quoted, on the 7th of June, at 93. The American mare (Priores) won the Great Metropolitan Stakes on the 23d of May, at Epsom Downs, by three lengths.

[Later Foreign News, via Telex.]

**LONDON, June 11.**—After the debate on the motion, by the Opposition, expressing a want of confidence in the Government, a division took place, when the Ministry was defeated by a majority of thirteen. It was expected that the Ministry would resign at an early day.

**LONDON, June 12.**—The Derby Ministry handed in their resignation to the Queen, and requested her to select new advisers. The Queen summoned Lord Palmerston, as the leader of the Opposition, to form a new Cabinet. A new Cabinet has been formed, with Lord Palmerston as Premier, and Lord John Russell as Secretary of Foreign Affairs.

A dispatch from Vienna announces the death of Prince Metternich, who, during nearly half a century, was Prime Minister of Austria.

In consequence of the successful laying of the Red Sea Cable, transactions between Asia and Europe will be greatly accelerated. Despatches from India and China will hereafter be anticipated a week.

The Atlantic Telegraph Company have held a meeting and accepted the offer of the British Government, consisting of a guarantee of the capital stock and a large amount of dispatches. The company are determined to raise the necessary capital at once, and have issued shares of £5 each to the amount of £600,000, the holders of which are to enjoy a preferential dividend of 8 per cent.

**WAR NEWS.**—The army of Prussia is mobilized, and it is reported that Prussia is soon to take part in the conflict.

During the retreat from Magenta the Austrians were pursued by the Allies, and when at Melegnano an engagement took place, during which the Austrians lost 1500 killed and 1200 were made prisoners. The battle lasted nine hours, when both armies ceased operations. At the latest accounts they were preparing for a general engagement.

After the engagement at Melegnano, the Austrians retreated to Lodi, on the Adda river (the Bridge of Lodi), and had stationed themselves. The Allies were advancing upon that point.

An Austrian steamer in the Adriatic captured the French ship Raoul, bound from Cuba to Trieste.

The latest dispatches from Magenta state that Marshal Canrobert is not dead or wounded. The Austrian official accounts of the battle of Magenta have been received. The differ widely from the Sardinian and French bulletins. They state that at the battle of Magenta their loss did not exceed from 4000 to 4900. They also state that the loss of the Allies was not less than 37,000. Field-Marshal Baron von Hess has been appointed Commander-in-Chief of the Austrian army.

The Austrian army has withdrawn beyond the Adda, in excellent order, and are continually receiving strong reinforcements from the reserve corps. The army, far from feeling discouraged at the result of Magenta and Melegnano, enjoy excellent spirits, and are longing for a decisive battle. All accounts agree that the glory of Magenta is to be ascribed to Gen. McMahon. He had no orders to proceed to Magenta, but hearing the roar of battle there, he advanced with his division, and arrived in time to turn the fortunes of the fight.

Paris, June 11.—After the entrance of the Allies into the capital of Lombardy (Milan), a grand mass, with *Te Deum*, was sung at the cathedral on the 9th June, when Napoleon and Victor Emmanuel attended. After the church services, their Majesties rode through the principal streets, which were crowded with people. All the houses were decorated, and the greatest enthusiasm prevailed.

Victor Emmanuel has issued a proclamation to the people as King of Lombardy. He promises that a liberal government will be inaugurated.

Five thousand Austrian prisoners have arrived at Marseilles and Toulon.

## DOMESTIC INTELLIGENCE.

**WASHINGTON, June 16.**—The views of the Administration as to the rights of naturalized citizens who may return to Europe, and showing how far they are entitled to the protection of this Government, were yesterday promulgated by Gen. Cass, in a letter from the State Department to A. B. Hofer, of Cincinnati. The Secretary states that this Government will not interfere in cases where individuals voluntarily return to countries to which they owed military service at the period of their departure to the United States.

The sum of \$2,700,000, of the five millions U. S. Treasury loan, authorized by Secretary Cobb, was awarded, on the 21st of June, at 54 to 55 per cent. The balance of the loan is to be apportioned among the various bidders at 6 per cent.

**New York, June 16.**—There was a large attend-

ance to-day at the Eclipse Course, L. I., to witness the great trotting match between Flora Temple and Princess, the celebrated mare that won so much money for her owner, Mr. Teakley, during her short and brilliant sojourn in California. Flora beat Princess in two straight heats of three miles each. She made the second heat of three miles in 7:59. The stakes were \$5000. It was the first of two agreed on matches between these celebrated horses; the other is to be a two mile race.

**New York, June 18.**—In the race which came off yesterday afternoon, on the Fashion Course, between Tar River and Bill Cheatham, the former won the match, for \$5000, in two straight heats of three miles each. Time: first heat, 6:14; second, 6:17.

**New York, June 23.**—The second great trotting race between Flora Temple and Princess came off on the Eclipse Course to-day. The race was for two miles, and was won by Princess in two straight heats. Time: first heat, 5:01; second, 5:02. There was a large attendance on the ground, and money changed hands freely.

The Davenport (Iowa) Democrat says that an official letter from Kossuth to a Hungarian exile at that place, has been received, requesting him to take immediate steps towards embarking for Hungary. From the tenor of the letter, it would appear that Kossuth was engaged in raising an army.

Hon. Henry S. Foote, of Mississippi (recently of California), was married to Mrs. Rachel D. Smiley, of Nashville, on the 14th of June.

**SALTETTER** is found in the mountains in the neighborhood of Jones's on the Los Gatos creek, between Santa Cruz and Santa Clara. Some of the globules or crystals, were collected and taken to Santa Clara, and underwent a chemical process by one of the professors of the University of the Pacific, and the true character of the mineral was determined.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

(Corrected weekly by Loomis & Miller, Commission Merchants, of Washington street, San Francisco.)

July 15.	
Wheat, per cwt. \$2.30-2.40	Potatoes, per cwt. \$1.25-1.50
Barley, .. 1.30-1.37	do new, .. 1.24-1.26
Oats, .. 2.50-2.75	do Sweet, .. 1.00-1.05
Corn, .. 2.25-2.50	do California, .. 2.25-2.50
Best Beans, .. 3.00-3.50	do Onions, .. 2.25-2.50
Flour, per bbl. 7.50-8.00	Squash, per ton, 25.00-30.00
Cornmeal, .. 6.00-6.50	Peanuts, .. 2.25-2.50
Hay, per ton 15.00-20.00	Beets, .. 1.25-1.50
Guano, .. 3.00-3.50	Carrots, .. 1.25-1.50
Turnips, .. 1.25-1.50	Cabbage, .. 1.00-1.25

HIDES, TALLOW, WOOL, ETC.	
Dry Hides, each 3.00-3.50	Sheep skins, wool on 18-25c
Common coarse wool, 6-8c	do plain 12-15c
Best quality, .. 10c	Goat skins, each 3-7c
Extra Merino do 25-30c	Rough Tallow, .. 4-5c

## San Francisco Cattle Market.

July 15.

The market for Beef is still on the decline, although the demand has been better during the past week, a greater number of Spanish cattle have been killed than for some time past. American Beef is so low in price that none are slaughtered, and our quotations are only nominal. Sheep and Pork remain about the same.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 9c per lb. Spanish, 1st quality, 8c per lb; 2d quality, 6c per lb; 3d quality, 4c per lb.  
Mutton—Choice, 10c per lb.  
Lamb—At 9c per lb.  
Pork—Un-dressed, 9c per lb; dressed, 14c per lb.  
Veal—6c per lb.

## Retail Prices at Washington Market.—July 15.

VEGETABLES.	
Potatoes, old, .. 25c	Cauliflower, per doz. \$1.50
do new, .. 30c	Cranberries, per gal. \$1.25
Sweet Potatoes, .. 25c	Horseradish, per doz. 1.00
Lettuce, .. 20c	do do 1.00
Radishes, .. 10c	Pumpkins, .. 25c
do yellow, .. 10c	Tomatoes, .. 25c

## SOLOMON'S TEMPLE.

This Magnificent Work of Art,

NOW COMPLETED

According to the most perfect style of architecture, as described in Sacred History, will be opened for the approval of the public, on

**MONDAY EVENING, MAY 30th,**  
AT 8 O'CLOCK.

The proprietors believe they can claim from the public their deserved approval and support.

When it shall be remembered that this great enterprise commenced amid many doubts respecting the ability of our State to furnish all the requisite workmen and materials, and when it is known that the cost of the Temple has amounted to THREE TIMES the first HIGHEST ESTIMATE, a just appreciation will be accorded to the energy, perseverance, and public spirit manifested by the proprietors, who, from the moment of its commencement ascertained that it should be completed what it should involve. And faithfully has that resolution been kept; and to that public the proprietors believe they can confidently appeal for their appreciation for a generous support. The TEMPLE will be

## EXHIBITED IN THE PAVILION

Recently occupied by the

## MECHANIC'S INSTITUTE,

On Montgomery street, near Market street.

The whole interior of the Pavilion has been handsomely fitted up with

## SKETCHES OF THE HOLY LAND

which will give to the visitors an additional interest, and carry them back to the time and place when, by the mighty genius of Solomon, the original Temple was built. These views have been designed and painted by Mr. C. Rogers, and comprise twenty scenes of the most interesting character, covering over

## TEN THOUSAND FEET OF CANVAS.

The proprietors cannot give a full description of this great work of art, in the limited space of a newspaper, but they will furnish all the details in appropriate hand-bills describing minutely this temple. Suffice it to say that all and

## EVERYTHING RECORDED IN THE BIBLE

will be found completed in this Temple perfectly, and in accordance with its size.

The Temple has been commenced and completed under the superintendence of A. Slough, as master builder, competent artists for carved work, A. Moise glider and finisher, together with about forty of the best mechanics that could be employed.

The prices of admission will be as follows: Season Tickets admitting a gentleman and lady... \$5 00 Single Tickets, .. 25c Children under 12 years, half price.

The Pavilion will be open from 10 o'clock A. M. till 10 o'clock P. M.

P. S.—Tickets can be had at Tyler's Bookstore, Washington street; Kirby & Byrne's, Clay street, and at the Pavilion.

Appropriate lectures or addresses will be had at the opening, and on all suitable occasions.
